# THE LADIES' *Home* Journal

BY HENRY T. WILLIAMS.

VOL. VI

NEW YORK, JANUARY, 1877.

No. 61.

PRICE 12 CENTS.

## A COUNTRY PARSONAGE.

The book-case was already in its place and full, and deserves a passing notice. Of course, no such movable property as Methodist ministers have any right to great, cumbersome book-cases, yet their books are an important item. So *our* book-case was made of packing-boxes, and the boxes were made to fit the books. One box was placed above the other, open side outward, then securely screwed together and stood up against the wall. Where the boxes join, a piece of black walnut, about two inches wide, was screwed on. Two walnut boards the height of the eight boxes, or shelves, as they have now become, were screwed on the ends, a slight cornice over the top, the books placed in their appropriate shelves, and a very handsome black walnut book-case stood forth.

Between the two west windows hung a little cluster of oak leaves, done in pastel, my last Christmas gift to Liddy.

"The home group will hang here," I said, pointing to the only space wide enough for more than one picture, and between the south window and the wall. So the loving father whose face I had not seen for three years, and that I should never again see on earth save as pictured before me, looked down from the wall, and mother's kindly one hung just above, looking as if she would like very much to step down and help. Just beneath father hung the only brother, while at his left was the sweet face of our Margie, who for a year and a half had slept by the side of our father. To the right was our Oracle, and I really think I ought to introduce her, for she forms an important item in our home life. She is the youngest sister of Mrs. Miriam, but the family dignity centres in her. She is a most energetic seeker after bugs, and we call her Orrie, for short. Over the fold-

ing doors hung one of the mottoes so common now; yet I believe they are beautiful educators.

Two or three small pictures, three hanging shelves for books (which I have seen described in the CABI-

NET, and therefore pass by), a mantel-piece full of the inevitable books, a corner closet, with glass doors, filled with that same article, and the walls of our little room were finished for the time being.

BIRD'S NEST.

## DESIGN FOR COTTAGE.

Upon this page is illustrated a design of a cottage in the Italian style of architecture, modified to suit our American climate by a steeper pitch of roof, &c.

This style of design seems to be most appropriate to our cottages of small cost, because of the plainness and consequent inexpensiveness of its details and finish.

The building is intended to be sheathed diagonally and tar papered, thus giving strength and warmth; then to be clapboarded on the lower story and boarded vertically with battened joints above, producing a pleasing variety without additional expense.

The main roof is covered with slate. The interior is, we think, conveniently arranged. We enter a square, well-lighted hall, nine feet wide, containing broad, easy stairs to upper story. We prefer a *square* hall to a long, narrow one, giving simply an *alley* alongside of stairs—the latter generally taking more square feet of space than the former, and being much more cramped.

The parlor and dining-room are connected by large sliding doors. The kitchen is convenient to the dining-room, with passage between. The kitchen is provided with stationary range, with boiler attached for warming water. Force pump to supply tank, sink, &c., complete.

There are three bed-rooms and bath-room on the second floor. All rooms throughout are well supplied with closets. The bath-room has bath-tub and wash-bowl, supplied with cold water from tank in roof.

The cost of this cottage would be from \$2,500 to \$2,800, complete.

DESIGN FOR COTTAGE.

## Floral Contributions.

### MY AFTERNOON AT MRS. BRIGGS.

[This article received first prize floral topics.]

When we commenced house-keeping, Moses and I, our assets were not heavy, and we soon learned that finding a living for two, in addition to the usual outlay necessary to begin a house of one's own, *did lighten* them uncomfortably, especially in the winter, and no work; though M. was skilled in the use of plane and saw. We economized, and several years had passed, bringing with them a reasonable degree of prosperity, yet the old habits clung to him, and he believed, or thought he did, that the mere beautiful should be passed by, mostly, by persons in our circumstances. He was not willing that I should be a breadwinner in any way. "If I attended to my household duties it was enough, he could support us," he guessed. Like a dutiful wife, I acquiesced in all his views and wishes; but I often wished for something to enliven those bare windows and walls, neither very large, but bare, nevertheless. One evening, I saw an advertisement in the *Times*, something like—"10 Beautiful Window Plants for \$1.00. Catalogues Free." How those "beautiful window plants" haunted me. I said to myself, Moses does not care for those things, and I don't think he would be willing to spend much, if anything, for them; but I am going to have them, if it can be done. Fortune favors the brave. Just then Mrs. Ruffle was making a wonderfully extensive trousseau for Miss Precise (aged 36), and she must have the buttonholes very nice.

Now, Mrs. R. can build the most elaborate structure of flounces and puffs and folds, but she cannot make a decent buttonhole. It happens, I have acquired some reputation for excellence in this ornamental utility department; so, stating the situation, she offered me \$1.50 if I would do said buttonholes. I caught eagerly at the chance, for here was the means of getting my coveted plants. Every stitch meant a leaf or a blossom to me; and I enjoyed that work, though the pay was in small proportion to the amount of work, as I found before I got through with it. To lose no time, I had sent for the catalogue, which I examined carefully, and by the time I received my pay I had decided to send for two Fuschias, a double, two single, and one Rose Geranium, a Heliotrope, a Calla and an English Ivy. When they came, they were fresh and beautiful, surely, and there was a bright Coleus added to them. When I went to buy pots, I was astonished at the prices, but was assured that they could be sold for no less; so I concluded to buy two six-inch and one five with what was left of my \$1.50. There were two one-gallon jars I did not need, not good for much else anyway, and I would use some old tin cans. I saw some nice plants in cans in a window as I came down town. Accordingly the gallon jars were filled with mostly manure and a little soil, and no drainage, and the Fuschias put in them. The double and single Geraniums in the six-inch pots, the other single one in the five-inch one, the Calla in a three-pint can, the Coleus, Heliotrope and Ivy in cans holding about a pint apiece. After being thoroughly watered, they were put in the east and south windows, and I watched to see them grow. In a few days the Fuschias began to decay; the leaves dropped off, and they gradually dried up. My sad, longing looks could not save them, and I saw with dismay my Heliotrope turn yellow, then blackness, then the stem looked black too, and soon it, too, was gone. Soon the Coleus followed;

and I fairly cried when I could no longer deny that the Geraniums were likely to perish also. There was one consolation, my Calla was flourishing. That was one ray of hope. I need not follow the course of their lives and deaths, suffice to say, that soon I had left, my Calla, Ivy and two Geraniums, the last with one leaf apiece, about as large as an old-fashioned half dime.

A friend gave me a plant of white-flowering, large-leaved Begonia. I began to think I had watered them too much, perhaps, so tried a new plan with my Begonia. Just a very little was given, on the top of soil, at a time. The result was so unsatisfactory that my husband's sympathies were aroused. "Bella," he said, as he turned away from the half dead remnants, "why don't you ask Mrs. Briggs what to do for the poor things?"—"Just what I ought to have done before; why did I never think of it." The next afternoon found me in her sitting-room, and I do wish I could describe it, but the three to five pages would be filled before I got done, if I tried to; and I would rather tell you what she told me. When she asked me to lay off hat and shawl, I said, with a slight flush I suspect, for it is hard to say one has failed, "Thank you, I will; for I have come for a long talk about plants, if you have the time to spare."—"I always have time to talk about them. While I go for a piece of work for my hands, please look at my pets."—There was one east and one south window, neither very large; the last close by a partition, along which were arranged shelves, so that all the sunshine was used. As Mrs. B. took her seat, she said, "Now, tell me what you want to know about." I told her how unfortunate I was in my attempts at window-gardening; and when I spoke of my Fuschia, I could not help looking at a graceful, drooping one, just laden with its jewels of waxy white and rose; I also saw the shadow of a smile she could not wholly conceal; but she only said, "You made a mistake in putting them in too large a quantity of soil, and it was too rich. For a long time I lost every one of that family I received by mail, and about concluded that it was hardly possible to recover them after being sent in that way; but finally found that no plant small enough to be sent by mail was too large to put in a two-inch pot, and use pure, fresh garden soil to pot it in. When they have got growing again, and made, say, two new sets of leaves, you can transfer them to something larger. A four or five-inch pot will be large enough for a good-sized plant; if they are in a larger one, they will not bloom so soon. The soil should be one-third well-rotted manure (I use that from the cow stable for all my plants) with two-thirds garden soil and, say, three or four tablespoons of sand to a five-inch pot. Some soils do not need any, there being enough in it already. I always wash the sand, if there is any clay in it. They want plenty of light, but are content to get along with very little sun. Unless watered enough to keep the earth moist, they are apt to drop their leaves; yet, must not be allowed to stand with water in the saucers, as no plant suffers sooner from sour soil. I will here give you a word about watering: water when they need it, then withhold until they need it again—whether it is twelve hours, or two weeks. All plants, except Callas (in common culture), love a sweet, well-drained soil. To secure this, drain your pots well, by putting some pieces of rock, pebbles, broken pot, or dishes, or even some straw (fine) in the bottom of the pot, and, if you can procure it, some charcoal, a few small pieces. Now, I usually water from the saucer, especially in the winter, when I use water too warm to put around the stems. Watering from the saucers prevents the soil from becoming hard on the surface.

"After an hour or so, pour out what water may be left in the saucers. The proportions of soil I mentioned are about right for most plants." "But, if I should get the dirt from the roots, I should be no better off than when they came from Post-Office," I said, thinking of changing them from the smaller to larger pots. "Not if you do as I am going to tell you: Have the new pot ready with drainage and soil, half full or more, so that the plant, with the ball of earth around, will not be above the top of the pot, or rather one-half inch below the top; then place the small pot upside down in your left hand, with the stem between your first and second fingers; with the right hand strike gently on the bottom of the pot, when the contents will be deposited in your hand; turn it right side up in the new pot, and fill to within a half-inch of the top."—"I forgot to ask you when you water them, in the morning or evening?" "In the morning in the winter, and in warm weather in the evening; and Heliotrope and Rose Geraniums and Vincas, and all those that need more water, again in the morning. Always give enough to wet the ground through, and when it is dry a half-inch or more from the surface, give again, but do not water when the sun shines hot on them, or you may destroy them." "Now, tell me about Geraniums." "I find that they double-bloom better in three or four-inch pots, and a five-inch is large enough for a large single, and most of them can be successfully grown in a four. They need moderate watering; will stand a good deal of dryness, but do not do well on it. Those of yours you had better take from the pots they are in—the soil has become soured. Take a knife and cut out a ball of three inches in width with the plant; break away the soil carefully until you reach the roots; then take some of those smallest cans, make some holes in the sides, near the bottom, and fill half-full of drainage, and fill in the top of that with pure soil; put your plants in, and water them so as to settle the soil good; then don't touch it while it is wet—you utterly ruin soil to stir or touch it then. After that, let them set until they either grow or show signs of wilting; if the last, water thoroughly, and, if they are beginning to grow, water frequently, but be sure the surplus can run off. Keep them out of the noonday sun until they begin to grow. The flowering, or Zonales, need good soil, moderate supply of water (more when in bud or bloom, as all plants do), good drainage and plenty of sun. The Scented Leaf, as well as the Variegated, need more pot-room, and plenty of sun and water, as it is foliage we want in this case. The Ivy-leaved need a warmer, dryer soil than any of the rest, so are well adapted for baskets in the sun. They do not need near so much root-room as any of the other varieties. So when yours start again, give them the sunniest place you have, but save one as good for the Heliotrope I am going to give you. But put it in one of those empty pots (they are a particular family about the size of their houses), and be sure and draw their water well and often, unless you want the leaves to drop off after they have blackened. Charcoal in the soil is very acceptable to them."—"What are these lovely bells?" "They are Abutilons; that striped one is Striatum; that pure white, Boule de Nilge, that large-leaved, gold and green, is Thompsonii; and those drooping branches so filled with golden and green marbled leaves and yellow patched blossoms with scarlet calyx and a bunch of brown stamens that look like tassels, that is Velillarium Variegatum. There are more new varieties, and when I am rich enough to own a conservatory I mean to have them all. They are so easily cultivated, plenty of root-room, sun and water, and they are so free from insects, which is a great consideration. One must be

sure to pinch the top out; when six or eight inches higher you will see a straight stem and few blossoms, but if pruned right and cared for well they are constant and free bloomers. Those are Cuphea Platycentra and Libonia floribunda, both valuable. The first blooms almost all the time, and from a fancied resemblance of its blending of scarlet, black and white, to the lightest end of a cigar, is sometimes called cigar plant. Its treatment is similar to the Fuchsia. The Libonia is a winter bloomer, and the blossoms resemble those of Honeysuckle, in shades of orange. Like the Bouvardia, it should be grown in the same pot all summer in which it is intended to bloom. I found some dark gray lice on mine last summer, and as it stood somewhat hidden by others, they were quite numerous before I knew it, and I think they injured it.

"Those odd-looking scarlet and yellow flowers are Asclepias Curassavicas. I grew them from seed last spring; I know nothing about them but what I have learned from those. But they have bloomed constantly for several months, and from the number of buds on them I think will continue for a while yet; one thing, they will stand a good deal of bad treatment. I grew those Lantanas from seed also last spring. Are they not lovely, that pure white, that buff with orange centre, and this that opens just like the buff one, but turns to rosy purple, so the cluster when fully open shows all the intervening shades. They need only common care and amply repay me for what they get. This Carnation will soon reward me with a wealth of fragrant, crimson bloom. They must have sun and rich earth and not be allowed to suffer for water." "What ails these plants?" "They are Pelargoniums, first cousins to the French Geranium. They are not of the every day value of their uncle's family. They bloom only in spring and early summer, but the flowers are so beautiful; and they seem like some member of the human family to live so perfectly in the memory of that one grand achievement, that they can only be brought to a sense of duty by lopping off their branches, thus compelling them to replace their lost proportions; this should be done when they are done blooming, and then repotted, shaking off nearly all the old soil; then started and grown as fast as they wish until about three months before you want them to bloom; then give just water enough to keep them from turning yellow or wilting for six or eight weeks; then give more and let them grow, and when buds appear you may give them manure-water."

"I heard you kept your Calla pot out of doors, and lying on the side, during the summer?" "I do; after it is done blooming in the spring, I put it on the side somewhere in the shade, and leave it there about two months, then carefully wash the dirt from the roots; wash the pot clean, too, (by the way, never put a plant in a dirty pot, box, or can), then re-pot in one-half rotten manure, the other half two-thirds dirt, the rest clean sand, with a handful of sand around and under the bulb, water well and set somewhere in the shade. After they get started again, put in the sun and fill the saucer at least once a day with boiling water, and keep water in the saucers all the time. This boiling water plan is a good one for all winter-bloomers. They will need no other watering, but empty the saucers again. Those are Vincas, wandering their own sweet way among the pictures. I had them in a basket, but that was too dry for them, so I put them in that good-sized pot on the bracket, and see how they grow. That English Ivy has grown over seven feet since I took it a little over a year ago and gave it plenty of root-room and warm manure-water, weak. That basket is Senecio Scandens, some-

times improperly called German Ivy. It makes a fine basket in the shady corner there. I keep the ends pinched off, and you can't tell that the root fills an old tomato can. That other basket in the other shady corner is Linaria Cymbalaria, or Kenilworth Ivy. It likes a loose, light soil, good drainage, plenty of water, and no sun. What is it in? A cocoa-nut shell opened near the end. This Othonno is in one, too, and so is this Fragaria, but I must put it in something larger. This Oxalis has something more aristocratic—an old wash-bowl painted green. These last three need sun, and there is, I think, one of the prettiest, that Dewplant, it needs sun, too, but can do with very little water. When you get your plants, I will come and help you pot them."

She did help me and gave me a good many slips, and some day I will tell all she told me about those two things. This was a year ago, and now I have some fine specimens, thanks to Mrs. B. and THE FLORAL CABINET, which she first showed me a copy of. Moses thinks our home is much prettier than it was. So do I.

BELLA DONNA.

**Bleaching Wax—Hair Flowers.**—Will some one be kind enough to inform me, through the medium of your columns, how to bleach wax, and how to harden it and prepare it for making wax flowers, and also how to make wax grapes? Will some one also tell me how to make hair flowers?

EMMA CARSON.

**Painting.**—Perhaps the lady who paints with oils on Bristol board will find the following preparation for ready use, convenient: To any quantity of glue use common whiskey instead of water. Put both together in a bottle, cork it tightly, and let it stand for three or four days, when it will be fit for use without the application of heat. Glue thus prepared will keep for years, and is at all times fit for use, except in very cold weather, when it should be set in warm water before using. To obviate the difficulty of the stopper getting tight by the glue drying in the mouth of the vessel, use a tin vessel with the cover fitting tightly on the outside to prevent the escape of the spirit by evaporation.

AVIS.

**Fringed Gentian.**—Another lady wishes to know something of the habits of the Fringed Gentian. Here in the west it is found in roadside ditches, or in moist unfrequented places, where it will bloom year after year if undisturbed. Its habits are similar to those of the closed Gentian, which abounds in the sloughs of our prairies. We have also the Creeping Gentian, which loves a dry, somewhat clayey soil, but it is rare, and its rich, expanded blossoms are never seen until after the first frosts of October.

AVIS.

**White Worms.**—In what way, without injuring the plants, can we destroy the little white worms that seem to breed in the jars containing old plants? We have some old Fuchsias that we keep in the cellar during the winter, and about two months since we brought them up, and now there are hundreds of buds and blossoms on them, but the earth is full of those little worms. We have tried tobacco tea and diluted ammonia, but they do not seem to have the effect of killing them. An answer through the CABINET would very much oblige

F. D. PERKINS.

Rome, N. Y.

**Answer.**—Bake the earth in an oven and it will kill all animal or insect life—after baking put the plants in.

**Japan Lily.**—My Japan Lily failed to bloom this season: it is now six years old, and never failed before. Shall I divide the roots?

MRS. H. SWAN.

**Answer.**—The original bulb is probably decayed; the offshoot will most likely flower next year.

**Stove Urn.**—One of the CABINET correspondents tells how to make old stove urns useful (I had already found it out), and perhaps it may be interesting to some of your

numerous readers to know how they can easily utilize the cover. First give the outside two coats of brown or drab paint, then take a round wooden box which will just fit into the bottom of the cover (a strawberry box will answer), and treat in the same way; now invert the cover, attach three cords of suitable length, place the box in this, and you will have a very respectable hanging-pot, and something much prettier than a tin basin. Do not omit to make a hole in the bottom of the box for drainage, and place under it, in what is now the bottom of the cover, a piece of sponge or some mess, to absorb any water that may pass through. Will correspondents give their methods of treating Smilax? I have had one for several years, but have never succeeded in making it grow well, and not at all except in the shade; and can any one give me the true name of what is sometimes called "Abutilon Fuchsia"? also the name of the plant commonly known as "Baby's Breath"?

W.

**House Vines.**—What vine can I have in the house this winter that is a rapid grower and has bright flowers? Also tell me the price of the plant and mode of culture.

LOUIE.

**Answer.**—Coboea Scandens.

**Liquid Fertilizer.**—The following works like magic on vegetable life. You can recommend it without fear of failure. Its inexpensiveness and convenience will recommend it to all. Take of ammonium sulphate, 4 oz.; salt-petre, 2 oz.; white sugar, 1 oz. Powder, mix, and dissolve in one quart of water. One tablespoonful of this mixture added to one gallon of water and sprinkled on the plants once or twice a week enriches the soil and imparts health and vigor to the plants. I do not know who is the originator. I have been using a tablespoonful to about one and a half pints of water on an almost hopeless window basket and it has done wonders.

ELLE SCHEREFFLER.

**Splendid Salve Receipt.**—You will confer a kindness by publishing the following for the good it may do. It was sent to my mother to relieve her agony while suffering with a carbuncle on the back of the neck, and afforded her wonderful relief. For boils and sores of almost every kind it will be found of great service: Tallow, 1 lb.; linseed oil, 1 lb.; beeswax,  $\frac{1}{2}$  lb.; Burgundy pitch, 4 oz.; Venice turpentine, 4 oz.; rosin,  $\frac{1}{2}$  lb.; oil of lavender, 2 oz. Mix all together and simmer over the fire for about twenty minutes. As this makes a large quantity, one half of the above ingredients may be taken. I consider this receipt alone worth many times the price of the CABINET.

ANNIE O. SOLLERS.

**Maryland Biscuit.**—One of your correspondents asks for a receipt for making these biscuits, and as Maryland is my native State I can give her very explicit directions how to make them, but whether she will be successful is the question, as the whole secret is in the proper handling of the dough. The fact is that few can make them in perfection except the old colored women who have been brought up as family servants, and who are fast passing away. This is the receipt: Rub in two quarts of flour, one small teacup of lard, and the usual quantity of salt. Mix it up with just enough water to make a stiff dough. Now comes the tug of war. The dough must be worked and beaten from half an hour to an hour. It should be worked until the blisters are constantly snapping and breaking and the dough is waxy. After the dough is once mixed there should be no more flour worked in. When it is all right, if you break off a piece quickly, it snaps off short, and in cutting a piece off with a sharp knife the holes or pores where you have cut it are small and of an even size. Now break off the dough in small pieces, and work each piece into a nice biscuit shape, and press it with the lower part of the thumb where it joins the hand to make the indentation; prick, and bake quickly in a very hot oven. The biscuit should be a light brown in the centre of the top and on the bottom, but not all over, and not hard. I should like to hear if your correspondent is successful in making them.

MRS. M. W.

Waterbury, Md.

## Flower Gardening.

### THE DANDELION.

Gay little "Golden Head" lived within a town  
Full of busy bobolinks flitting up and down,  
Pretty neighbor buttereups, cosy auntie clovers,  
And shy groups of daisies whispering like lovers.

A town that was builded on the borders of a stream  
By the loving hand of Nature when she woke from winter's dream:  
Sunbeams for the workingmen, taking turns with showers,  
Rearing fairy houses of nodding grass and flowers.

Crowds of talking bumble-bees, rushing up and down,  
Wily little brokers of this busy little town—  
Bearing bags of gold-dust—always in a hurry,  
Fussy bits of gentlemen full of fret and flurry.

Gay little "Golden Head" fair and fairer grew,  
Fed with flecks of sunshine and sips of balmy dew,  
Swinging on her slender foot all the happy day,  
Chattering with bobolinks, gossips of the May.

Underneath her lattice on starry summer eves  
By and by a lover came with a harp of leaves,  
Wooded and won the maiden there—tender, sweet  
and shy—

For a little cloud-home he was building in the sky.

And one breezy morning on a steed of might  
He bore his little "Golden Head" out of mortal sight,  
But still her gentle spirit, a puff of airy down,  
Wanders through the mazes of that busy little town.  
AMBER HOLDEN.

[This Article received Second Prize for Floral Topics.]

### FLORAL ITEMS.

In Floriculture, as in most other pursuits, success depends greatly upon attention in little matters. Plants cannot be neglected and thrive. Many who keep their plants in almost sunless windows, wonder why they do not have more blossoms, not realizing that they must have plenty of sunshine to perfect them. A window with southern exposure is best suited to plant-growth; if a bay-window, so much the better. But many fine plants may be grown in ordinary windows, if facing east, south, southeast or southwest; and even in a western window we have seen some excellent plants; while Ivies, hardy Ferns, Tradescantias, and similar plants, will thrive in a north window.

In the cultivation of house plants, much of our success depends upon our choice of plants. Most any of those known as green house plants will flourish in our sitting-rooms, also some called hothouse plants, though not a great many, unless our rooms are kept far too warm for human health or comfort.

One winter I had a beautiful Croton—it barely lived; but barely living did not please me, and though I paid a high price for it, I did not care to try it another year. So, too, with the Torrenia—it was pretty, but I found in order to thrive that it wanted to live a-top of the stove-urn, or over the tea-kettle, and that followed the Croton. So, too, with Bouvardias. I had blooms, to be sure, but not in any such quantities as to render them desirable. In my choice, I wish to select only such plants as are well-adapted to room-culture, doing well in an atmosphere from 60 to 68 or 70 degrees by day, often ranging as low as 40 or 45 degrees at night.

From observation and experience, I find the following plants well-suited to grow in such a temperature; The Calla, Genista, Smilax, winter-blooming Fuchsias, Cupheas, Daphnes, Feverfews, all the different sorts of Geraniums, Jessamines, Pelargoniums, Stevias, Eupatoriums, Primroses, Centaureas, Ivies, Achyranthus, Dracenas, greenhouse Ferns, Cacti, some sorts of Begonia, Veronica Variegata, Petunias, Mahernias, Oleanders, Maurandias, Ageratums, Roses, Carnations, Abutilons, Camelias, Azalias, Sedums, Lobelias, Lantanas, Cyclamen, Mesembryanthemum, Violets, Musk-plant, besides many others. The Heliotrope, too, we all admire for its delightful fragrance; although

classed with hothouse plants, we find that by giving it the highest shelf in the sunniest window, we are rewarded by its sweet blossoms. Then there are the different bulbs, such as Oxalis, Ixias, Hyacinths, Polyanthus, Narcissus, etc., so that any lady can find sufficient variety from which to choose, and be confident of success, if proper care be given them. Make ready for the winter by starting cuttings of the various plants desired, during the summer and autumn. It is best to commence early in the fall, potting and cutting such as we wish to preserve, not leaving too many till there is danger of hard frosts, for then we are apt to work too hurriedly, and may lose some of our treasures after all. Never bring them at once into a warm room, but place in some sheltered spot or cool chamber, where they can have plenty of light and air. John says I have "posies on the brain," and thinks his "pathway actually strewn with flowers," for they are growing "upstairs, and down stairs, and in my lady's chamber." He thinks the cellar may need enlarging to accommodate all my Oleanders, Chrysanthemums, Roses, etc., that go there to rest; (but I have agreed not to crowd the potatoes and cabbages.)

Having many plants to care for, I wish, of course, to make their washing easy, and to save as many steps as possible. I spread down a piece of old carpet in front of the bay-window, set thereon a small table to hold my pail or basin of water. The small and medium-sized plants can be immersed and receive a good washing here, while the larger ones must go to the kitchen sink for their bath. After setting on the table to drip, the pots can be wiped, and the plants restored to their places, while we proceed with others. One lady said in THE CABINET, that she thought washing did more harm than good, because it "stuck the dirt down." I really cannot see how there can be much "dirt" to "stick down," if they are washed weekly. Some persons never smoke their plants, thinking it more agreeable to pick off all intruders by hand every morning. I have no patience with that method, but prefer smoking them. It is very disagreeable, to be sure, but is the only preventative or cure for the aphids and green fly. I recollect telling my manuer of smoking in the pages of THE CABINET some years since; but knowing the paper has hosts of new readers since then, I will repeat it for their benefit:

Beyond the kitchen, in a back room, we have a large old-fashioned sink, beneath which is a capacious closet; into this I set my plants as closely as convenient, leaving a large unoccupied space in the centre. Here I place a large brick, and upon this a piece of iron, several inches square, previously heated red-hot in the stove among the coals; then lay upon it some tobacco cut fine, and rather damp, so as not to blaze, and close the door as quickly as possible. In about half an hour I remove the plants, wash both plants and pots, and carry to their places in the windows. I thus proceed with them all before putting in their winter quarters. Those too tall to stand in the closet, I lay upon their sides. The plants should not remain too long after smoking, before being washed, or the insects (should there be any) might revive. A writer, in THE CABINET, once said that the aphids or green fly appeared only on the most healthy plants. Now, I always thought there was something wrong about mine when I chanced to see any of those insects upon them; that they had been kept too wet, so that the roots had suffered, and become sodden and rotten. I repot such plants, cutting off the rotten roots, and if the pot is too hard baked to allow of sufficient evaporation through its sides, change it for a new one, not forgetting to place in the bottom a handful of broken

charcoal. If placed in moderate sunshine after repotting, and kept there, its health will be restored, and the aphids not likely to appear again, especially if washed every week with carbolic soap suds. Perhaps some of our readers do not know that tobacco smoke, though called destructive to the aphids, will not kill their incipient offspring. To do this, it will be found necessary to smoke again on the second or third day, that is, all such plants as we know to have been infected. This will generally suffice, if the weekly washings are attended to, to keep them free from insects.

When plants seem subject to attacks from the red spider, they should be washed, or dipped in water twice a week or more. Common flower-pots are far more healthy than glazed or ornamental ones, and plants grown in the latter should be more sparingly watered. The temperature of the room should be kept as even as possible, and air given on mild days. Plants at rest, or lately cut back, require little water. In winter use warm water, and remember to give your Callas water much too warm for the hand. Also turn hot water in their saucers. I commence this treatment soon after potting in September, and the last two years buds have appeared in October. Hot water may also be turned in the saucers beneath Fuchsias, Geuistas, Geraniums, etc., when blooming freely or coming into bloom. All new pots should be well soaked in water, and old ones thoroughly cleansed before using. In potting, have your soil slightly moist. Plants, when first brought in, need no stimulants; but later in the season, or when blooming freely, they may be given it once a week. That from stable manure is much safer, especially for the inexperienced. To prepare it, get your "John" or "Isaac," to fit a cheap lead faucet (cost about a quarter) into one side of a tight butter firkin, as near the bottom as convenient. Have a circular piece of board well perforated with large holes for a strainer; nail upon it three small blocks of wood three inches long for legs; but do not have it fit too tightly the sides of the firkin, so as to be easily removed and replaced. This strainer when dropped upon its legs into the firkin, will, of course, leave a space between the bottom and the strainer, the height of these legs. Place upon the strainer a large handful of straw, and upon this several shovelfuls of stable manure; then turn on sufficient boiling water to nearly fill the firkin; place on the cover tightly, and when cool it is ready for use. Keep it where it will not freeze, and have it placed upon blocks, so as to draw off easily. Add warm water to make it the color of weak tea. I find this much neater and more convenient than the usual method. One writer in THE CABINET thinks angle-worms are beneficial to her Callas, while I carefully avoid all insects and worms by baking my earth. Another says, "don't do it, for it takes the life all out of it." Now, it has sometimes happened that in baking my earth, it has really been burnt a little, and I observed that my plants never did better; the Petunias and Pelargoniums that had been re-potted in it, were splendid in growth and perfectly gorgeous in color. Once, owing to an unexpected change in the weather, I had some fine Verbenas, Pelargoniums, and Petunias (kept in a chamber) badly frozen. I plunged them at once into cold (not freezing) water, and had them removed to a dark closet in the cellar, where they remained for two or three days. They were then returned to their places, looking as fresh and well as though the frost had never touched them. This is the only way to restore frozen plants.

MRS. POLYANTHUS PERIWINKLE.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

### CHAPTER IV.

"A young man married is a man that's marred."

A tall, broad-shouldered, brown-haired young man was standing in an elegant little city breakfast parlor, fitted up with the subdued, well-harmonized colors and artistic devices that modern taste delights in, and holding in his hand one of the ominous yellow envelopes of the Western Union Telegraph Company. The centre of the polished hardwood floor was covered by a rich Turkey carpet. The shining, plate-glass windows, draped with heavy striped curtains of Oriental stuff, the jardinières full of growing plants, the gleam of a soft coal fire in the low grate of polished steel, the mirror frame, and buffet, and mantel, all of the most exquisite wood carving, the few excellent oil sketches on the wall, with rare Japanese bronzes and vases scattered about, made this room a perfect setting for the lady seated by the breakfast tray, furnished simply with a fragrant pot of tea and crisp, golden rolls, and dainty pats of butter.

She had lived much abroad, and abominated heavy American breakfasts. You might know she would—so perfect was she from the crown of her head to the tip of her bronze slipper. There is a beauty that does not perfect and mature itself before the age of fifty. It was fresher at eighteen, but less harmonized, less complete. The smooth puffs and bandeaux of this lady's silvery hair, the pale, aristocratic tint of the skin, the clear-cut features, the fine dark eyes that had a depth of passion and intensity time had not subdued, the hands and feet slim and delicate with the distinction that belongs to some old races, the rich lace of the morning cap, and the violet wrapper, with touches of the same lace about the neck and sleeves, enchain and satisfied the eye as rounder contours and brighter tints seldom do.

She was a woman of delicate and perfectly refined charms, like faint, sweet perfumes shaken out of a silk robe. She was a eager woman, intent upon the objects of her life, and with a fire of purpose and energy in her that years could not tame, though her manners had the perfect ease and composure that the best society requires. She had travelled much, had read widely but not profoundly, and had met and mingled with many elegant, high-bred people in different countries, and was a charming companion when her sense of self-respect was bolstered up by fine old laces and beautiful, artistic surroundings. She needed a rich frame, an appropriate background of finely-blended tints and tones, and then she never failed to make a delightful picture.

Now, as she raised the little pot to pour an odorous stream of breakfast tea into a china cup that a collector of ceramics would have coveted, her hand was arrested by an exclamation from the young man at the fireside.

"What is it, Bradley?" and she placed the tea-pot back on the tray.

"He is dead, mother."

"Not the old Judge?"

"Yes, mother, the old Judge."

Mrs. Halcourt subsided into her large, soft, easy chair. She experienced the giving way of physical powers which follows a shock. But the shock was an immense relief—a cause of congratulation and rejoicing, as she acknowledged to herself with the next breath she drew.

In a moment she had recovered from the surprise, and straightening herself, and giving a little shake to the violet cashmere drapery, said, with clear, distinct intonation:

"Bradley, why don't you read me the telegram?"

"Yes, mother, pardon me, I will," he replied, with his eyes still bent upon the bit of paper in his hand, and then he began slowly:

"Judge Braithwaite died at Halcourt Hall, of apoplexy, on the evening of the 25th. The interment takes place on the 28th. Your immediate presence is requested. 'EDGAR SWAYNE.'"

"The telegram is ten days old," he added. "It has been following us about to various places. Of course there were notices in the papers which we missed, as we happened to be out at sea in the yacht; and getting in town late last night there was no one to tell us the news. I see," he added, scrutinizing the piece of paper again, "the telegram was originally sent to Newport."

"And why to Newport?" Mrs. Halcourt asked, a little sharply.

Bradley's face was well bronzed from the sea air—only a strip of white forehead, with the golden-brown locks of hair scattered over it in picturesque confusion, showed what his natural hue might be. He calmly directed his hazel eyes toward his mother as he said, with deliberate slowness:

"Mademoiselle Duval must have told them. I wrote to her that we might put in at Newport for a day or two. We have had some correspondence in reference to her missing uncle."

Mrs. Halcourt appeared to receive the information with a shade of annoyance.

"You take a deal of unnecessary trouble about that girl, Bradley; but come, sit down and have a cup of tea. I do not know why I should be deprived of my breakfast because of the demise of that old man. If I had passed off the stage instead, it would not have affected him to the turning of an eye-lash. In fact, I believe he would have openly rejoiced, and regarded his having outlived me as a victory. He was a dreadful old man. I wonder that any human being can shed a tear over him. But it is strange that when he was taken seriously ill they did not summon you to the Hall. You might have been of great service to your cousin at such a time."

"Oh," said Bradley, stirring his tea, "I presume she had all the aid and assistance she needed from this Edgar Swayne, who signs the telegram. Perhaps he is my fair cousin's chosen swain."

"How can you speak so lightly and make puns, Bradley?"

The young man smiled and showed a beautiful set of even, white teeth.

"I am sure, mother, you do not think it necessary to pull on a long face about the taking off of the old Judge. He was no good to anybody, himself included. He made life disagreeable to all around him by his parsimony and bad temper. He worshipped his money-bags, and believed in nothing else. Such people cannot expect even the hypocritical pretence of mourning. I am sure my poor aunt must secretly rejoice that he is out of the way, and though Winnifred probably felt some natural affection for her father, who humored her one moment and showered imprecations on her the next, she will soon reconcile herself to the independent life of a great heiress. I really cannot see how this event is going to affect us."

"But it does affect you immensely," said Mrs. Halcourt, leaning forward, while the fire burned in her dark eyes; "or it would if you had the natural and proper ambition of your manhood. You are the head of the Halcourt family, and the Halcourt estates ought to go with the name. Your poor father was terribly wronged by this old man, who is lying cold in his grave, while his wicked deeds remain behind him to work their spells on the living. There is every reason to believe that he influenced your grandfather Halcourt's will. The old man stood in mortal terror of him, but was as abject as a whipped dog in his presence. He gained complete ascendancy over his mind after he became weak and childish, and the slave Jeanette, mother of old Nanna, who was devoted to the Halcourt interest, told us, with tears streaming down her cheeks, how the old man would sob and moan and cry for his son when the Judge's stern eye was withdrawn. At last it reached that pass that the Judge would allow no one to approach him. He gave him all his food and medicine to prevent the poor old creature from sending a message to Harold; and when he begged on his dying bed for the privilege of reconciling himself to his son, the boy he had loved so fondly, the Judge, with a fiendishness almost unparalleled, denied his prayer, and kept him locked up like a lunatic. We knew the will was extorted by that wily, wicked man, but there was no redress. The Judge was then on the bench, all powerful in the courts. We could not afford to risk our whole fortune in a legal contest, and so we endured the wrong. Does it not rouse your indignation, Bradley, to think of the manner in which you and your father were robbed?"

Bradley was leaning back in his chair. His clothes sat upon him with easy and unstudied grace. There were golden touches in his beard and hair, and his eyes had a kind of gentle benignity seldom seen in a young man's face. He had taken out a cigar, and was holding it unlighted in his fingers.

"Well, no," said he, turning his gaze, with a lurking smile in it, upon his mother, "I can't say that I am indignant. I suppose I ought to be; but I always seem lacking in emotions proper to the occasion. I do feel deep regret that my poor father's last years were embittered by this unfortunate will; but I haven't it in me to envy that wretched old man, who browbeat and half starved his family. The money, or something else, was a curse to him; perhaps it would have been a curse to us if we had got it; and, as for being Halcourt of Halcourt Hall, that would not weigh with me a rush. You know, mother, that is all moonshine."

"Oh, Bradley, you are exasperating," cried his mother, her consuming anxiety breaking through her repose of manner. "Why can't you be reasonable, and look at things as other people would; people whose opinions you ought to respect. Why, with all your cleverness, haven't you a little of my spirit? It seems impossible to arouse you. You are never prepared to take hold of advantages, because all motive is 'sickled o'er with the pale cast of thought.' It is the not-worth-while that comes in to hin-

der everything. Now your pulses are as even as clock-work, when the opportunity has come to redeem all the past."

He turned his eyes just enough to note the unwonted flush in her pale cheek, and her flutter of excitement, and then he said slowly and seriously, looking down, "I know what you mean, mother. You would have me try for the hand of my cousin Winnifred."

"And why not?" she asked eagerly. "It is an idea that must be familiar to you, for it has been talked of for years in both families; even the old Judge was not averse to it. It would right the wrong, and put you at once in your true position. What possible objection can you have, Bradley?"

Bradley elongated his long limbs, and, putting the cigar in his mouth, sat in silence for a moment, and then withdrew it.

"Oh, it is not worth while to discuss my objections. A man might not like to be disposed of like a bale of goods, or an odd auction lot. He might not care to be led about by a rich wife like a poodle dog by a ribbon. The point is, what objection has my Cousin Winnifred? She is as independent as an heiress can be, with full liberty to bestow herself on the first kuave or fortune-hunter that comes along. I am incapable of deceiving her. She would know my motives were mercenary in proposing marriage to her, and she would either laugh in my face, or scorn me bitterly. How, I ask you, can a man fall in love with a girl he has dreaded as an *enfant terrible*? When I last saw Winnifred, five years ago, she was a lean, brown, meagre, scrawny creature, with great eyes out of all proportion to the rest of her face—a perfect hoyden and mad-cap. She wore me out and exhausted me, strong fellow that I was. She put me directly on my muscle, and challenged me to foot races, and beat every time. Now, I don't fancy marrying Atalanta. I wouldn't take the trouble to drop golden apples in her path."

"She has outgrown the hoyden. She has become a beautiful, clever girl," Mrs. Halcourt rejoined. "Those dark, meagre children, with great saucer eyes, do often develop into rich, ripe loveliness. Mrs. Fortescue, who has spent several summers at Cloverbrook, is enthusiastic over Winnifred's picturesque, fascinating, vivid kind of beauty. She says she flashes about like a red-bird, and is as natural and unspoiled as one, with great shrewdness and spirit. Her father, though diabolical, was a brilliant man of the world; and he has given her a training that will fit her for the position she is to fill. Cleverness and a little eccentricity are pardoned in a great heiress. They add piquancy to her charms, if she has any. We shall see Winnifred day-queening it in society one of these days. It will not take long to polish away any rusticity of manner, and it is fortunate that she has none of poor Susan's beauty. Charley Fortescue has been more than half enamored with her these two seasons past."

"Oh, well then, let Fortescue take her," said Bradley, with a half yawn. "I can't undertake to rival him."

"Oh, Bradley, why will you be so resistant, so blindly, cruelly opposed to your own interest?" She clasped her jewelled hands together in an agony of expostulation.

"Mother," said he, drawing himself up and wheeling round, "what have I to offer her, when we come to that? I know I am a failure; and the knowledge ought to make me miserable, but it does not. Life has been singularly pleasant to me. I have enjoyed the whole of it thus far, but I have always looked forward to my marriage as to the time when trouble was to begin—probably because this thing was hanging over my head, like the sword of Damocles. My book fell dead from the press, though some of the critics did me the favor to say that it ought to have succeeded. My play was damned, though the manager voted the public stupid and purblind not to applaud. Art, and music, and poetry, and numberless things, have lured me with their wiles. My head is stuffed with an odd assortment of lumber that nobody cares for. I should be a conceited ass to offer my incompleteness and miserable failures in exchange for my brilliant cousin's beauty and ducats. I have viewed all my own disappointments with a calm and philosophic eye, because no man is really a failure unless he seems so to himself; but, would it not be the most disastrous failure of all to deliberately approach this girl with mercenary motives? I am not so confoundedly weak-minded as to set myself up on my old blood and lineage, but I do prize my honor, my manhood."

"Why do you take such a high tone, Bradley?" the mother asked, with an anxious wrinkle in the middle of her forehead, that was usually as smooth and fair as ivory. "You are always soaring away out of the reach of common mortals. Do you suppose I would counsel any breach of your honor and manliness? But why is it impossible to anticipate a fair share of happiness in a union with your cousin? You certainly cannot cherish a wild, impracticable dream of love, that would fade away and leave you without any basis of mutual respect or comfort! From what I hear Winnifred is too sensible to have her head filled with such romantic stuff. You ask what you have to offer, Bradley. You have yourself. You are incomparable, and I am a

doting old creature to say so. Ah, Bradley, your father had your golden temperament, but it was mixed with some foibles and weaknesses—some dross you do not seem to have inherited."

He rose from his seat and looked at her with an expression intense, ardent, almost imploring.

"We have always been lovers," he said, as he passed around her chair and took her thin, white hand with a pretty, caressing gesture in both his brown ones; "why do you wish to drive me away, mother? Why should we not live on happily together in the old way? We have enough for every comfort—for luxuries even—and the indulgence of our tastes."

Mrs. Halcourt's face changed as if from some inward pang. "You are as sadly at fault there," she said, in a low, pained voice. "There have been bad investments made; some of the securities I was advised to buy have proved worthless. I found last night on my arrival a letter from my lawyer, with the terrible news that we have only enough left to live on with the strictest economy. I could not break it to you all at once, and this other startling announcement drove it for the moment from my mind."

"So much the better," cried her son, as he threw his arm around her and drew her into a closer embrace. "I will work for you now. I will achieve wonders to make you happy. I have splendid health, plenty of bone and sinew, and energy, too, when it is called out. I will throw off the foolscap and bells, and show myself a resolute man."

"Oh, Bradley," she cried, almost wringing her hands, while real, passionate tears broke through her conventional being. "you do not know me, though you are bone of my bone. I am worldly, I am ambitious, if not vulgarly mercenary. I cannot change my whole nature. For years I have had but one aim, one purpose, to see you righted, to see you in possession of the estate that belongs to you, Bradley," she repeated sinking down, with sobs, upon his shoulder, and lowering her voice to an intense whisper, "if you do not marry your cousin it will break my heart and bring me down a disappointed, miserable old woman to the grave."

All the light, and ardor, and affection, had gone out of his face. It was pale now, and almost stern.

"Mother," he asked slowly, "do you desire this object of your ambition more than my happiness?"

"Why should it be inconsistent with your happiness, Bradley?"

"Because I wish to be free to dispose of my own life, my own heart."

She looked up alarmed, with the tears on her face.

"Do you love another woman?—is that the reason this idea of marrying your cousin Winnifred seems repugnant? Surely, if you are heart free, you might in time come to love a beautiful, spirited creature like that!"

Bradley had withdrawn his arm. He stood back and made no answer to the question for a moment or two. Then he said, with a strange infusion of bitterness, almost of irony, in his tone:

"I will do as you desire, mother, seeing that you desire it more than all other things—that your happiness, your very life depends on it. I will obey the summons to the Hall. I will marry my cousin Winnifred if I can do it consistently with honor—without lying professions of love or an unnecessary display of mercenary meanness. But the result, I must forewarn you, on these conditions is more than doubtful."

She half sprang out of her chair toward him with an unnecessary effusion of gratitude.

"O Bradley, you are my good, reasonable, loving boy. I knew you would come around, for you have never crossed me. I have made myself odious to you, but I am sure the day will come when you will bless me for having secured the happiness of your life."

She would have caressed him, putting her hands upon his shoulders in an old familiar fashion, but there was something repellant and chilling in his air, which she had never felt before in all their years of loving intimacy.

"Now," she continued, trying to resume her sprightliness and old charm of manner, "there is one thing more I must ask of you, Bradley. You know a woman, if you give her an inch, will take an ell. Mademoiselle Duval had better leave the Hall. She ought not to be leading the life of an idle dependent, and Winnifred is too old for a pupil. Virginia has accomplishments that will secure her a good support in her own sphere in life. If you will send her to me I will provide for her future."

"I have no control over Mademoiselle Duval," he answered, coldly. "We cannot move human beings about at will, as if they were pegs in a cribbage-board."

"Nonsense," she cried, still trying to make the spell of playfulness work. "You know that ever since you began to take such a delightfully romantic interest in her affairs, and especially since the search began for that mythical uncle, she has looked up to you as her patron saint and guardian angel. She would be as submissive as a child to any request you might make."

"I cannot take it upon myself to ask her to leave the Hall," said Bradley, as he turned and quitted the room.

Mrs. Halcourt sat gazing after him for a long time. A red, excited spot still lingered on her pale cheek, and many painful chords were vibrating within her. She was a proud woman, and this interview had cost her dear. She sat fingering a fold of her violet cashmere robe with her jeweled hand, while plans and purposes took clear shape in her mind, and then she rose with a half smile on her face, thinking how she would lure her dear boy back again.

In less than two hours Bradley had packed a portmanteau and was on his way to the hill country. The railway journey was devoid of incident, but it was a long one, and afforded too many vacant hours for brooding over troubled thoughts. He sat all night in a corner of the car, wrapped in a rug, and without catching a single wink of sleep, and early on the afternoon of the following day, stepped out, jaded and travel weary, at the little upland station, five miles from Halcourt Hall. Leaving his portmanteau with the station master, to be called for, he set out on foot over the hills to the old Hall. It was a beautiful September day, the air just crisped and clarified with autumnal freshness. The hills were of a deep, dark blue, glorious and strong, as if freshly buttressed and strengthened in their mighty fortresses. Health and vigor came from the aromatic pine forests and acres of sweet fern that clothed the barrens. Bright tints had begun to kindle at the edges of the wood. Every now and again a partridge started up with a great whirr from some copse, and the nut trees were heavy with rich brown clusters, and the streams, swollen by late rains, came foaming and dashing and tumbling down through the hill gorges.

Bradley was delicately alive to every sensation of physical enjoyment, and as he struck out of the main road into by-paths and forest ways that he remembered exploring in his school-day vacations sometimes spent at the home of his ancestors, the blood tingled down to his healthy finger tips, in spite of a sleepless night and a long fast. He remembered the streams where he had fished, the places in deep, mossy glens where he had watched the habits of wild birds and animals, and the glorious weather and the beautiful scenery helped to shift the dull load of foreboding from his thoughts. His young life had thus far been singularly bright and unclouded. He was so little accustomed to mental disturbance that it seemed like a thorn in his hand, which he must pluck out and be rid of. The feeling of bitterness toward his mother was the most unyielding, the most stubborn and resistant. His heart had smarted and burned with a sense of wrong, the conviction that she was ungenerous and cruel to make use of his affection to force him into a position abhorrent to his nature. It was the first time that a dense shadow had fallen between them. Mrs. Halcourt had always been her boy's playful, indulgent companion, using her wit and culture and grace and worldly wisdom to bridge over the disparity of years, that she might charm and fascinate him into the worship she craved, rather than bind him to her by formal ideas of duty and obedience. Bradley was suffering the pang an ingenuous nature feels when a direct ray is thrown upon the fatal weaknesses of a character it has loved blindly. The clear vision of the present moment made his former security and peace seem almost a mockery.

But he was determined to crush out this mental disturbance, to put it under his feet by vigorous exercise. So he chose the roughest road through the woods, leaping over logs and stones and crashing through undergrowth until he had got into a great glow. He noticed the little curling moss at his feet, the red-berried vines twining about gray rocks; the plump ferns in many-shaded tints of green; the tree branches over his head gathering a sunny glow; and glimpses of the azure hills seen through great tree-bolls, and a gleam of the old tranquillity stole back upon his heart. Surely, if his vision was awry, the world was still fair and healthy; the future could not all be hung in sable without a touch of silver lining anywhere.

As he drew nearer to it, he thought of the old Hall as it used to look in his boyhood's days, with sepia touches about the gray roofs and gables, and the long sweep of carriage drive, and the old oak avenue leading up from Glenmere. It seemed to furnish a background for only one picture, the fair, pale face and shy, blue eyes, and sunny hair, and slender figure of a young girl. It came over him for the first time, like a thrill, that he was drawing near to Virginia Duval; that he should see her and hear her speak, and make her look at him in spite of herself, as he had done more than once on the ship. And then he fell into a reverie in which he lived over every little event connected with the young stranger, since she had been thrown so singularly on his care. If a young man, going a wooing, finds the wrong maiden making pictures in his brain, how can he help himself?

When Bradley came to the upper end of Glenmere, the thick woods that clothed its bank were casting dense shadows, and the water lay at his feet in a long, bright line. He remembered peering about this pretty lake in his boyhood on an old raft. He could have gone to the very spot where he had often hidden his poles to prevent his Cousin Winnie from getting drowned in the same kind of

exercise. Now he emerged upon a tiny cove, upon the opposite side of which ran a little green path, turning in and out among the trees. It was not many rods across, and the path was in plain sight from where he stood hidden by the sloping branches of a great hemlock.

As Bradley paused a moment in this place a confused murmur of voices struck his ear. The words were indistinguishable; but a woman was half sobbing or imploring, and when she ceased the sound continued in the heavier tones of a man's voice. The blood rushed back on Bradley's heart, as he seemed to recognize the accents of Virginia, in those low pleadings, from the green path across the little cove. He peeped through the thick branches of the hemlock, and caught the flutter of a light skirt just as it disappeared from view. At the same instant a man emerged from the shadow of the trees. He was tall and slender, with dark hair, and a pale face. He turned and mounted the wooded bank of the lake with a quick, noiseless, stealthy step.

Bradley dashed from his hiding-place, and almost with one bound had struck the path that rounded the little cove like a bent elbow, just where it was joined by a bridle-road that led through the forest, and over the hills, to the Halcourt mines, when Virginia, with her hat off, her hair unloosed, her bosom panting, her face bloodless, and eyes dilated, came flying toward him like a frightened wild bird. In a moment she was almost in his arms, and then she shrank and covered away, exclaiming:

"Oh, Monsieur Halcourt!"

"Virginia—Miss Duval—what has happened? Were you assaulted? I heard your voice in distress, as I thought, and I was running to the rescue."

She covered back still farther, and said, as well as she could, in gasping, agitated tones:

"Oh, no, no. I was foolish, nervous. I—I—that is, it was a man from the mines, who spoke to me, but he did not mean to harm me. I was fearful in that lonely place, and I lost my head."

"The miscreant, did he frighten you? Did he threaten violence? I cannot leave you here half fainting from agitation and alarm, or I would go after him and give him a lesson he would not soon forget."

"Oh, no, no," cried Virginia, in agonized tones. "Do not think of it again. It was all my weakness and folly."

"Did he beg of you, the scoundrel?"

"He asked for money, but I had none to give," she said hastily. "But it was all my fault. Do not speak of it to your cousin; it might disturb her?" And again the trembling and shuddering came on more violently than before.

"Do let me support you; you will fall," said Bradley, in an anxious tone. "The villain has given you a shock that may throw you into a fit of illness. You must not go straying alone about this wild country."

He passed his arm around her waist, and Virginia burst into a flood of passionate sobs and tears.

"At that moment Winnifred, with a brilliant, glowing color in her dark cheeks, and mounted on Thunderbolt, came riding down the road from the mines with Edgar Swayne, who had resumed his clerical dress, by her side.

(To be continued.)

#### MADAME SOBIESKI—A NOBLE WIFE.

During the troubles in Poland which followed the revolution of Thaddeus Kosciuszko, many of the truest and the best of the sons of that ill-fated country were forced to flee for their lives, forsaking home and friends. Of those who had been most eager for the liberty of Poland, and most bitter in enmity against Russia and Prussia, was Michael Sobieski, whose ancestor had been a king a hundred and fifty years ago.

Sobieski had three sons in the patriot ranks, and father and sons had been of those who had persisted in what the Russians had been pleased to term rebellion, and a price had been set upon their heads.

The Archduke Constantine was eager to apprehend Michael Sobieski, and learned that the wife of the Polish hero was home in Cracow, and he waited upon her.

"Madame," he said, speaking politely, for the lady was queenly and beautiful, "I think you know where your husband and sons are hiding?"

"I know, sir."

"If you tell me where your husband is, your sons shall be pardoned."

"And shall I be safe?"

"Yes, madame, I swear it. Tell me where your husband is concealed, and both you and your sons shall be safe and unharmed."

"Then, sir," said the noble woman, rising with a dignity sublime, and laying her hand upon her bosom, "he lies concealed here—in the heart of his wife—and you will have to tear this heart out to find him."

Tyrant as he was the Archduke admired the answer, and the spirit which had inspired it, and deeming the goodwill of such a woman worth securing, he forthwith published a full pardon for the father and sons.

Subscribers will confer a favor, if, when answering Advertisements, they will mention "The Floral Cabinet."

Address B. T. Babbitt, New York City.  
For Sale by all Druggists.

NEW YORK, JANUARY, 1877.

## OUT-DOOR RUSTIC WORK.

When Mildred and I visited the city in May, we spent a considerable portion of our time around the different greenhouses, and returned seriously infected with what father termed the "rustic fever." We had a large grassy lawn dotted with shrubs, roses, and roomy beds filled with thrifty plants. But our hearts longed for baskets and vases. A certain vacant spot was exactly fitted for that forty dollar rustic vase we saw at the florist's, and on each side of the verandah steps was a place for those elegant things in iron we so much admired, and in our roomy verandah could swing a dozen lovely terra-cotta pots. But all these expensive articles were beyond our means.

"If this were a laurel-growing country we might make rustic-baskets," I suggested. "Of laurel roots, cedar and pine branches, we are destitute," answered Mildred, "but we have grape-vine and green briar roots, knotted and tangled, and all the unexplored resources of the woods to draw from; let us see what we can do."

It was June before we got fairly started, but in two or three weeks we worked wonders. We read "Window Gardening," and everything else in our reach on the subject of rustic decoration. We observed, questioned and invented. We ransacked the garret and brought out the trash. We explored the woods and returned loaded. All the odds and ends of the earth were to us available. Wooden bowls split or worn through by vigorous chopping, aged keelers and warped peck measures were treasures. Those of suitable size were turned into hanging-baskets, furnished with grape-vine handles, and covered with grape-vine branches and roots, crooked sticks, knots and the roots of green briar and briar-rose. By cleaning the roots thoroughly and finishing with a coat of copal varnish, we managed without laurel roots to equal the rustic baskets of the florists. Other baskets were made of sweet gum balls. We pierced holes through the centre of every ball, strung them on wire, and beginning at the bottom, shaped the string of balls into a basket

fastening it in place by other wires extending from bottom to the top. Baskets of acorns were made in the same manner and varnished.

Of the larger bowls and measures we made vases, ornamenting them as we did the baskets. For stems or standards we got pronged saplings, cut the prongs off so that they rested firmly on the ground as feet, made the upright stems of suitable length, peeled off the bark and nailed the prepared vase to the top. Then grape-vines were twisted about the stem and prongs, and the whole varnished. A handsome double or two-story vase for the verandah was made in this wise; Brother Rob, to whom we appealed all our difficulties, procured a number of maple sticks three inches in diameter, and split off the four sides. Each end of these split pieces was rounded, one end being made thinner and narrower than the other. Then they were nailed to an oval board, bottom sawed slanting, and the tops tacked to a wide strong hoop on the inside, and the result was a flaring basket, fourteen inches deep. It was finished with a grape-vine hoop tacked on the outside at the top and bottom. A peeled three-inch stick, three feet long, was nailed to the centre of the bottom for a stem for the upper vase. This upper vase was a hexagon box of planed oak, ornamented with pine cones and acorns tacked and glued on, and with a pine cone tassel at each corner. The bottom vase and stem were stained as near oak color as possible, and the whole affair varnished. This was filled entirely with ferns with moss at their roots, and partridge berry wandering over the edges.

Another lovely double vase was entirely original, with us at least. A three-inch square post was set firmly standing three feet above the ground, and surmounted by an octagon box. Then we covered both box and standard with pebbles, stuck in putty, and piled up a small rockery around the base. In the box were Ice and Dew Plants, their succulent leaves harmonizing with the gray pebbles. From a pot, concealed by moss, a small English Ivy vine twined around the standard, and in the crevices of the rocks, well filled with rich earth, flourished Moneywort, Sweet Alyssum, Lobelia, Verbena, Nolana, etc.

Other vases and baskets were formed of rough boxes covered with bark dotted with clusters of lichens and tufts of gray moss. Others were log-cabins made of inch sticks of maple or other wood, with the bark left on and cut into lengths of ten, twelve or more inches, according to the size desired. A gimlet hole was bored an inch from each end of the sticks, and they were laid together, log-cabin fashion, and fastened by passing a wire with a loop on the upper end through the holes and on through corresponding holes in a board-bottom, and clinched on the under side. Because of the interstices, we lined with moss before filling.

Still we had not made anything satisfactory to be placed near the Verandah steps. Something entirely different from the others, and solid-looking, was Mildred's idea. One day she exclaimed, "I have an inspiration! You remember the sanded depot building at L—? If I only could get a foundation to suit me." We needed the aid of a better workman than Rob, and counseled with a carpenter accommodating and inventive. Thrice blest is the woman who can find such a carpenter! In a few days he brought our vases of wood. A handsomely-moulded pedestal supporting an octagonal box, so contrived and finished with moulding as to closely resemble some styles of marble or stone work. We painted them a brownish gray, and sifted fine sand over them while wet. When put in place and filled, our visitors thought that they were of sandstone.

FLORENCE.

## AWARD OF PRIZES.

The Awards of Prizes for Floral and Household Articles has been made as follows:

## FLORAL ARTICLES.

1st Prize—To Mrs. James Stewart, Peabody, Kansas, for article entitled "My Afternoon at Mrs. Briggs'."

2nd Prize—To Mrs. M. J. Giddings, Weston, Mass., for article entitled "Floral Items."

3d Prize—To articles as follows: "Flowers for House and Garden," by Eben E. Rexford. "A Bit of Christmas Green," by Mrs. M. F. B. Atkinson. "My Fern Window," by Mrs. R. L. Carter. "Wintering Plants in Cellars," by F. A. Alling. "Floral Decorations in Our Bay Window," by Ella S. J. helps. "Rustic Work," by Liza Hodgson. "Indoor and Out-door Culture of Window Plants," by L. K. Share.

## HOUSEHOLD ARTICLES.

1st Prize to articles—"Home Furnishing with Small Means," by Mrs. M. Plumstead, Jr.

2nd Prize—"My breakfast Shawl and What Became of It," by Mrs. Edward Higby.

3d Prizes to "Lambrequin," by Mrs. E. R. Barnes. "Our Sitting-Room," by Augusta Delmer. "Our Sewing Bees," by E. M. R. "THE LADIES' FLORAL CABINET," by Maria S. Fergus. "Some Hints to Country Girls About their Bed-Rooms," by A. P. Blankhead. "Useful Elegancies," by Mrs. J. K. Byrnes. "My Room," by Ellen C. Wright. "My Guest Chamber," by Kate Hilliard. "Pictures as Furniture," by Miss M. C. Emmettrout. "How I Improved Our Home," by Bertie Lueproun.

## COOKING RECEIPTS.

The Award of Prizes must be deferred till the February Number. Over 10,000 receipts were forwarded for competition, and it is physically impossible to conclude the work of examination before February. The receipts are all splendid—the best collection ever known to American housekeepers, and we thank our correspondents deeply for their cordial help and interest.

## PUBLISHER'S ANNOUNCEMENTS.

**Back Volumes.**—New subscribers, who are pleased with THE FLORAL CABINET, will find in back volumes an immense fund of delightful reading, pictures, and the choicest of family music; there are single pieces of music so sweet and charming as to be alone worth the price for a volume. We will club these together with subscription for 1877, as follows:

\$2.00 will pay for subscription 1877, the steel plate engraving, and all the back numbers of 1876, January to September.

3.00 will include all of 1877, 1876, and 1875.

4.00 " " " " " and 1874.

5.00 " " " " " " and 1873.

Bound volumes for each year will cost 65 cts. for each volume in addition to above prices.

**Books on sale. Agents Wanted.**—Our Household Books are so popular, and so sure to delight the ladies, that to any subscriber, club agent, or agent, who can sell copies among their friends, we will give special commissions. They may purchase of us, and we will take back all they cannot sell, and refund the money.

**Prizes for Clubs.**—A Prince Parlor Organ, worth \$100, is given to the club agent who gets up largest club for 1877. See Oct. Number and Premium List for other Prizes.

**Back Numbers.**—Many whose subscriptions began with the January Number, and wish back copies from the commencement of the story, "Winnifred's Will," can obtain them for 33 cents.

**No Trial Trip.**—The Trial Trip offer expired Jan. 1st, and is not now open to acceptance. Any one wishing Numbers of this year must remit full price.

## MAGNIFICENT NEW FLORAL PREMIUMS.

**"The Floral Cabinet" Collection of New Seedling Gladiolus.**—This is a new collection, never before offered, grown exclusively for us, which consists of twelve flowering bulbs of Gladiolus, of the finest quality and most exquisite variety of colors. The quality of this collection unequalled, and in every respect, we can safely guarantee them extra choice. The same quality of named varieties of Gladiolus, obtained of reliable seedsmen, would cost \$12. The colors range from the most fiery scarlet to the purest white.

**OFFER No. 1.**—This collection, worth \$12, will be given free to any person who will raise a club of 15 subscribers to the FLORAL CABINET at \$1.30, and also an extra copy of paper 1 year, free to agent.

**OFFER No. 2.**—To any one who will get up a club of 20 subscribers at \$1.30 we will give sufficient bulbs that the members of the club may have each 1 bulb worth \$1, and the club agent the entire set of 12, also with extra copy of paper 1 year.

**OFFER No. 3.**—One subscription at \$3, will give subscriber the CABINET 1 year and collection free, all worth \$15.

This collection is not for sale by any seed house, and cannot be obtained at any other place, and all are new seedling varieties just originated.

**The Floral Cabinet Collection of Balsams.**—This comprises the best strains of Camellia-flowered Balsams ever offered. The Balsam is a great favorite with the ladies. This collection is the very cream of the extra choicest sorts ever raised. Its value may be judged when the seedsmen have offered 10 cents a seed for all that can be spared. We know there is nothing in Europe or America to equal them. The collection consists of 6 packets, pure white, deep rich purple, brilliant scarlet, crimson spotted, velvet violet spotted, and carnation striped. The flowers are so large and perfect as to be almost equal to roses. The set is worth \$1.50 at least, and can be obtained only on the following terms:

No. 1.—A club of 10 subscribers to FLORAL CABINET, at \$1.30, will entitle club agent to 1 set of above packets, \$1.50, and 1 extra copy of CABINET and engraving free.

No. 2.—A subscription of \$2 to CABINET will entitle subscriber to the paper and collection in addition.

No. 3.—A club of 4 subscribers at \$1.30 will entitle agent to the collection free, as a premium.

No. 4.—A club of 20 subscribers, at \$1.30 each, will entitle club agent to enough packets to present each member of the club with the collection, worth \$1.50, also the CABINET and engraving 1 year, (all together worth \$3.80) and the club agent to extra set of paper, engraving, and collection, free.

The supply is limited, and those who desire them will do well to get clubs in as soon as possible.

These collections of Balsams and Gladiolus are named specially after the FLORAL CABINET, and we are very cautious never to send out anything but just as represented. The good name and fame, and honor of the CABINET is the best endorsement of these new floral collections, which are of extraordinary value.

## Household Topics.

[First Prize for Best Article Household Topics.]

### HOUSE-FURNISHING WITH SMALL MEANS.

Many young people nowadays, when they marry, board instead of going to housekeeping, under the impression that it costs less to board. I think this is a mistaken idea. If they are economically inclined they can get along better, and certainly be happier in a home of their own, even if they have to rent a small house, instead of boarding in a large one. There is my friend Kate Grant, who was married a year ago and went to housekeeping. Her father is a well-to-do merchant, and gave her a pretty French-roofed cottage for a wedding-gift, and it was planned to suit her ideas of convenience. It is not every girl who is so fortunate, I know; still, any girl can make a great many things to beautify a home, even if she does not own a house. Kate had some money laid by, as she had taught school several years. Her husband had just started in business, and needed all his money to invest in it; so they wished to be economical in their furnishing.

Kate set her wits at work to see how many pretty things she could make to beautify her house without laying out much money. How well she succeeded you must judge, when I describe them. But first let me describe the house. It stands back from the street about twenty-five feet, giving room for some nice flower-beds cut in the grass. The front door is in the centre of the house, with a cosy little porch covered with Woodbine and Madeira vine; and I must just stop to speak of the beautiful contrast of the Woodbine, just turning red, and the Madeira vine, still a bright green, with its feathery blossoms. The parlor is on the right-hand side, sitting-room on the left, a bay-window in each; the dining-room opens from the sitting-room. Now, I will begin with the front hall and tell you something about the furnishing. Here is a door at the right, opening into the parlor; at the left, into the sitting-room; at the farther end,

into the dining-room. The stairs go up at the right side and curve around near the top. The walls are covered with plain drab paper; a gilt molding is put up next to the ceiling to hang pictures from; then a plain green velvet border; the same just above the base-board. The doors are painted a very light shade of drab, panels a little darker. The carpet is a green mossy pattern on a drab ground; stairs covered with the same with a narrow border. The narrow windows each side of the front door, have plain white Swiss muslin curtains. In every pane of glass is a

a pot of Tradescantia, on the other Coliseum Ivy. Over the dining-room door is the motto, "Welcome," made of ferns in spatter-work. In the corner near the parlor door is a little table with a card-receiver on it, made in imitation coral work, of red sealing-wax. This hall looks very pleasant, and the carpet is the only thing in it that cost much.

Let us enter the parlor. How pleasant it looks! Carpet, curtains, and furniture, all seem to harmonize. Sit down in the easy chair and let us look at the surroundings. The room is about fifteen feet square,

with a bay window on the north side, opposite the door. At the right a window facing east, and the mantle opposite the front window. The walls have the same drab paper as the hall, and the same gilt molding. Just below this is a velvet border of a lovely shade of blue; under this is a narrow gilt beading for a finish, this is repeated just above the base-board. The paint is the same as that in the hall. The carpet is an English Brussels; a light drab ground with figures of blue, black, white, and a little golden yellow, with a border to match. This was a wedding gift from Kate's mother. At the window are plain white shades with drab tassels; over these, lace curtains looped back with blue cord and tassels, finished at the top with a plain gilt cornice. The lace curtains on the bay-window are put up next to the room. Half way up on either side of the casing is a walnut bracket; on it a drab flower-pot, (Made so by a little paint, then a band of silver paper put around the top for ornament.) In it an English Ivy with two branches, trained up

THE CHILDREN'S HOUR.

transparency, made by taking a piece of white tarleton just the size of the glass, and fastening autumn leaves and ferns, and then tacking them to the window at each corner with very small tacks. The tarleton does not show, and the leaves look beautiful through the misty curtains. There is a neat hat-rack, and a couple of rattan chairs cushioned with scarlet rep. On each side of the hat-rack hangs a pretty chromo; underneath each picture is a bracket made of pine wood stained and covered with cones; on one

at the side of the casing until they reach the cornice; then across to the center where they cross and hang down, forming a prettier finish than a lambrequin, I think. The other window has a lambrequin made of white tarleton, cut in three scallops, one large and two small: then pressed green and bleached ferns pinned on, the edge outlined with pressed Hartford ferns. In the bay-window is a fernery, or greenery I should call it, as it is not under glass. It is made of an old-fashioned light

stand with a zinc pan that fits the top, stained and varnished to match the table. It is filled with native ferns, partridge berry vines and mosses; near the edge is planted *Tradescantia*, which conceals the dish. Suspended above this is a hanging basket made of an old-fashioned porcelain gas shade; it has a crocheted cover of stout blue embroidery silk with crystal beads, finished with a handsome tassel of silk and beads; the same for cords to hang it. A small saucer is put in the bottom to cover the hole. It is filled with pressed ferns and long sprays of Ivy put in bottles of water. Near the front window is a bouquet table bought without the marble top; that leaves a hollow place about an inch in depth. Into this is fitted a little wooden tub covered with bark, tacked on; the tacks concealed by bits of moss, glued on; then filled with earth and three English Ivies planted near the outside and twined around the tub, and around the table, until they reach the feet, where they are fastened with green worsted. The surface is covered with moss. In the centre is a tall white vase with the stand broken so it can be pushed into the earth until it stands firm. It is filled with Sweet Peas and Mignonette, and *Maurandia* vines trailing around the vase. Near the bay-window is a similar table; this has a mat fitted into the top made of stout pasteboard, covered with green cambric; then there is moss sewed around the edge about three inches deep; made by knitting shaded green worsted as wide as the moss should be, dampening, pressing, and ravelling it out, then sewing it on to the pasteboard. This imitates moss very well. The dish on it was originally a tall cut-glass preserve dish, but an accident had deprived it of its standard, so it was appropriated to this use. It happened that it broke just where the standard joins the bowl, so it fitted nicely into the mat. There was pounded charcoal put into the bottom, then leaf-mold and sand, and a *Smilax* vine trained around a small green wire cross. Of course this was done last spring, so now the cross stands draped in living green. It is trimmed with red and white Carnations and sweet *Allyssum*; the stem of each is wrapped in a bit of green moss and tied on with green worsted. Kate tells me they will keep fresh in this way several days.

On the mantle (a marble slab supported by bronzed brackets) is a pair of alabaster vases of the antique pitcher-shape, a wedding gift from an uncle; a few feathery pressed ferns, and scarlet bitter-sweet berries, set off the lovely whiteness of the pitchers, and trailing down from the mouth are pressed partridge berry vines. Do you know how lovely these are when pressed? In the centre of the mantle is a photograph framed in blue velvet and gilt, on an easel frame; behind this is a wide-mouthed bottle filled with water, and bits of charcoal to keep it sweet; then long sprays of *Madeira* vine are put in and trained around the picture. Over the mantle is a life-sized chromo of "Beatrice Cenci" framed in gilt. On each side of the bay-window are bouquets of bright flowers painted in water colors on black grounds and framed in gilt. On the side next the hall is a group of chromos, the center one a winter scene; either side a spring and autumn scene. On a bracket below the winter scene is a white vase filled with *Tradescantia*. In the corners on the bay-window side are brackets; on one is a white wax cross wreathed with colored wax flowers, on the other a bust of "Clytie." I declare! I haven't said one word about the furniture. It is black walnut covered with drab rep with blue gimp and buttons. There is a cosy little *tete-a-tete* sofa across the corner between the bay and front window; a large easy chair on castors, opposite side of the front window; a larger

sofa on the side next the hall. Three smaller chairs on castors, and two after the camp-chair style; no parlor chairs. I asked Kate how she dared have a parlor and not have one of the aforesaid chairs? She replied that "she agreed with Rev. Mr. Murray about parlor chairs, that they were ridiculous," and so on. You remember his comical description of his call on some ladies, and sitting on that kind of a chair, and his feelings on the occasion. I shall never get through if I stop to tell it.

I have not told you of the pretty centre table, bought second hand, but not defaced, excepting some scratches on the top. It has a drab broadcloth cover, with an embroidered border, made of scraps of blue velvet and satin, appliqued with gold colored embroidery silk. It is very handsome. In one corner is a round marble-top table, with a group of "Roger's Statuary" on it, "The Favored Scholar." This was presented by Kate's scholars when she left her school. I must not linger here, but pass across the hall into the pleasant sitting-room. Here is another bay window opposite the door facing south; another window in front; a door at the right opening into the dining-room; then the chimney; the other side of that a book-case fitted into the recess made by the chimney. The paper is plain drab again, same molding, scarlet and black border, same above the baseboard. The carpet is common ingrain white, ground, scarlet and black figures. The furniture Kate said was a second-hand set of black walnut covered with hair-cloth, slippery and dismal, but she bought it very cheap, and thought she could cover it. She bought some plain twilled French cretonne, such as is used for covering furniture, made covers, bound them with scarlet braid, and then ornamented them with "spatter work." The large sofa had a lovely bouquet of ferns and trailing vines on the centre of the back. One easy-chair had a bouquet of maple leaves; another, small-sized oak leaves, and so on. The effect was charming, and as Kate said, "Who knows they are shabby underneath?" White shades, with scarlet and golden border, were at the windows. But the crowning glory of this room is the bay window filled with plants. It is arch-shaped at the top and shut off from the room by a glass door, open in the centre. It is boarded across about eight inches across the window sills, and a zinc pan fitted even with the sills; this makes a sort of sink. The bottom is covered with sand, the pots set in and filled in between with sand, and then moss from the woods on top. This is made even by putting the large pots almost to the bottom of the sand and heaping the sand higher under the smaller ones, so they present an even surface at the top. This is better than planting directly in the soil, as is often done; they can easily be changed so they will not grow one-sided, and most plants blossom better in small pots. There is a little door underneath and a faucet to draw off any extra water. Suspended from the centre overhead is a rustic basket, a *Dracena terminalis* in the centre; near the edge, is an Ice Plant covered with its tiny white blossoms. At the side windows are brackets with pots of pink and white *Maurandia* trained up the sides of the window; each side of the centre window are pots of *Cobæa Scandens* and *Tropæolum Minus*. Then there are Tricolor Geraniums, Begonias, *Abutilon*, Chinese Primrose, Carnations, *Ageratum*, *Salvia*, *Cyclamen*, *Heliotrope*, and directly in the centre is a splendid specimen of *Cyperus Alternifolius Variegatus*. Some of the grass tufts measure over three feet in height. They all looked finely and not a bug to be seen. I asked Kate how she managed to keep them so free from insects. She said, "When

the weather gets cold I take a kettle of boiling water and pour carefully between the pots, then shut the door tight. This causes the steam to rise and the air keeps moist a long time, and the red spiders and all the rest of the tribe are nowhere; when the water gets cold I draw it off." Each side of the glass door, about halfway up, is a bracket with a pot of English Ivy on it, trained up until they meet in the centre, where they cross and then are trained straight along on the scarlet border. Where they cross is a bracket with a statuette of Flora on it. The book-case I spoke of is built into the wall in the recess formed by the chimney projecting into the room. It is made of black walnut, glass doors, drawers underneath, is about five feet high, and the top projects a little into the room. On it is a bust of Dickens; behind it is a wide-mouthed bottle filled with *Tradescantia*, which droops around the bust. Near by is an open grate, with its cheerful fire; or, rather, an open stove. It looks so like a low-down grate that one can hardly see the difference, and as Kate said, "One can see the difference in the cost." This is eighteen dollars, and the grate, with its accompanying marble mantle, from fifty to seventy-five dollars. There are white vases with scarlet and gold medallions on the mantle, filled with pressed ferns and sumac. There are pictures and brackets. I came near forgetting the front window. There is a black walnut box fitted to it; in each end are two *Smilax* vines trained on strings across to the centre of the window, where they are fastened; then crossed diagonally, then back, forming diamonds and half diamonds. In the centre of the box is a *Dracena*; each side of that is *Abutilon Thomsonii*; around the edge is *Coliseum Ivy* covering the box; overhead, suspended in his cage, is bright little 'Dick, the canary. Kate has a nice piano she has had several years. Over it on a bracket is a vase of something, I could not make out what. She said, "I partly manufactured it and it is partly natural." I took some sprays of oats that had been bleached in the sun, gathered some milk-weed pods before they began to fly open; began at the top of the spray of oats, taking a milk-weed seed with its winged attachment; put a drop of mucilage on it; then held the husk of the oats apart and inserted the seed out of sight, and so on until all was done. I then filled the vase with sand, so that I could arrange them gracefully and keep them steady. They look as if they would fly with every breath of wind, but they can't. I think my room will look warm next summer, there is so much scarlet about it. I'll tell you what I mean to do: After my carpet is shaken and put down again, I will lay down some heavy carpet paper and then some white straw matting; that will make the room look cool and be easy to sweep. Quite a consideration in hot weather, especially when one has to do their own sweeping; in the fall all I will have to do will be to take up the straw matting and paper and my room will be clean.

The dining-room has two windows facing south and one west. There is plain buff paper on the wall; wood-work, chestnut, oiled; floor, chestnut and black walnut, in stripes; the chairs are black walnut with dark green leather covers, studded with brass nails. Kate said they could not afford a woolen carpet and nice chairs, so she chose the latter, they are so durable, and the floor was so easy to keep clean. There is a woolen drugget of oak and green under the table. The window shades are light buff. At one window is a hanging basket made of an old tin pail covered with birch bark and moss filled with German Ivy. At the other window is a white-lead bucket, holding about a quart, painted scarlet, hoops black, filled with Saxi-

frage or Wandering Jew. On the side next the kitchen is a door into the back entry. Here is a washbowl and water faucet; over this is a looking glass: underneath a little closet for boots and rubbers: behind the outside door is an umbrella rack made of a three cornered piece of pine board with holes large enough to admit the umbrellas. A little further along on the same side is a small sliding door that opens into the dish closet, which is in the kitchen; under this slide is a broad marble slab supported by brackets, so the dishes and food can be passed in and out. The pantry opens out of the kitchen on the north side. The kitchen is an L and opens on the other side of the end entry. Kate said, "I want to have my kitchen as convenient as possible, for I want every step to count. You see it is quite small, but that saves steps. On this side I have a number of cupboard, or rather a large one divided. This one is for tins and baking dishes, small but handy; hooks for all things hangable, and shelves for those that don't hang. This cupboard is for wash-day and ironing things; this drawer is for ironing sheet, bosom board, holders, and my white mittens for hanging clothes in cold weather, knit with a finger like the soldiers used to wear. On this shelf above I keep starch, blueing, &c., just room enough this side to hang my clothes-pin bag, the other for my skirtboard. This box beside the stove is for my kettles; you see it is lined with zinc, so there is no danger of fire from hot kettles. When I shut the cover down it makes a good seat. I never could bear a kettle closet under the sink. I think they smell musty. You see mine is open underneath. I had it made of soapstone. I think it keeps clean easier than iron. I have my water handy. This pump is the hard water, and this faucet soft water from the pond. My cooking table is built against the wall between these two windows, so I can have all the light. It is enclosed at the back and ends, has drawers and doors in front. This right hand closet is where I keep my flour barrel, this door open to let the barrel in, this lid opens over the barrel to take the flour out. Here I keep my sieve, scoop, &c. The middle closet is for things I use to cook with. Above the door of this closet is a place made to slip in my bread board when not in use; it has a piece on the end of it with a knob to pull it out by, and slips into place like a drawer. Here are drawers for dish-cloths, holders, and a drawer for cooking knives and spoons."

The floor is hard pine, oiled; woodwork grained; walls painted light buff and varnished. Paper soon spoils with steam, and this is soon cleaned with a damp cloth. There is a small shed opening out of the kitchen where the washing is done. On wash days Kate has a piece of rubber hose she screws on to the kitchen faucet, which carries the water to the tub or boiler without lifting or slopping. If I could stop I could tell you of the pretty chambers and their furnishing, but must defer it until another time.

Lynn, Mass.

M. J. W.

Papering and painting are best done in cold weather, especially the latter, for the wood absorbs the oil of paint in warm weather, while in cold weather the oil hardens on the outside, making a coat which will protect the wood instead of soaking into it.

An oaken color can be given to new pine floors and tables by washing them in a solution of copperas dissolved in strong lye, a pound of the former to a gallon of the latter. When dry, this should be oiled, and it will look well for a year or two; then renew the oiling.

[This article received second prize for Household Topics.]

### MY BREAKFAST SHAWL, AND WHAT BECAME OF IT.

I thought it was handsome when it was new, but that was a good dozen of years ago. It was none of your machine-woven concerns, but crocheted, of the brightest of scarlet zephyr, with a black and white border, scarlet fringe, and pretty mixed tassels. I came across it one rainy day away down in the bottom of an old trunk, and, as usual, began to consider as to what good use it could be made to serve. I have it, said I, it shall be unravelled and made into a jacket to wear under my cloak in severe cold weather. Full of my new idea I commenced at once, but before I had proceeded far in my work of destruction I began dubiously to shake my head, and by the time I had finished winding my last ball a very emphatic no escaped my lips. It was not strong enough to bear the wear and tear of a tight-fitting jacket, so it was consigned to the old trunk once more.

Not many weeks after this occurrence, by some unfortunate accident, one of my kitchen curtains was completely ruined. My bedroom boasts of but one window, and its curtain matched those in the kitchen. It was the work of only a few moments to take it down and put it into the place of the ruined one; but now the query arose, what shall I get for my bedroom? This room, so far as furnished at all, was furnished well. A chamber set of chestnut, with black walnut trimmings, and a pretty ingrain carpet of scarlet, white and green. The walls were just as the masons left them, simply lathed and plastered. The paint was white. If I bought a new curtain I must have a pretty one—the old one was not half good enough—but it was hard times, money very scarce, and I wanted a great many things. Thus I pondered, Well, that night I closed the blinds and slept in a curtainless bedroom, but ere the clock had tolled the midnight hour my plans were all arranged.

The morning found me up bright and early, and searching my FLORAL CABINETS for directions for kalsomining. It is fortunate those papers are made of the best of material, for if otherwise I am sure there would not be a piece left of mine. I wonder if every reader peruses them as faithfully as I do! But I am digressing. I found my directions, purchased the material, borrowed a brush, and with my husband's help had that room all kalsomined clear and white before night. I was stiff and sore for a week afterward, but that did not matter.

Now for the curtain. I had a set of three sheets that I never used except in the hottest weather. They were made of very fine and light cotton, and had been washed times enough to be very soft. I took one of them, ripped it through the middle, picked out the stitches, tore a strip lengthwise off each breadth to make a nice hem or facing, tore off ruffles from dimity I had in the house, hemmed and gathered them full enough to flute, set them within the facings, and stitched them on the machine, washed, boiled, starched, ironed and fluted them, and my curtains were finished.

I brought my balls of scarlet wool from out the depths of the old trunk, and crocheted them into a hermitage lambrequin. They were plenty strong enough for that. I cut a stiff paper pattern of lambrequin, and crocheted the wool in the exact shape of pattern, hid the fringe into the edge, and fastened the tassels in their proper places. I lined it with two or three thicknesses of white, starched very stiff, tacking the outside to lining wherever it was necessary. The effect of the white showing through the scarlet was

very pretty. I fastened the curtain to the top of window, the lambrequin I tacked to the cornice, which was made in this wise: I obtained a half-inch pine board long enough to reach to the outside of the framework of window, a small piece was tacked on each end to make the cornice set out the required distance, the top was sawed in fanciful shape, measuring six inches in the widest part, the lower edge was round but straight—that is, the edge of the board was rounded off and a groove cut a little above, to give the appearance of a moulding. I covered the cornice as far down as the groove with smooth brown wrapping paper stained black walnut; the moulding I covered with gold paper. I stained more paper, cut and folded leaves, and tacked them the whole length of upper edge of cornice and down each end, and finished with a good coat of varnish. It was as handsome as carved black walnut. All that remained now to make my window complete was something with which to loop my curtains back. These I made of strips of pasteboard covered with pieces of scarlet cloth, and again with Nottingham lace. My bed was already covered with a white counterpane, and my pillows with shams, tuiked and ruffled, with embroidered initial in centre. The little table for lamp I covered with a handsome spread of lace lined with scarlet. My bureau I did the same. A little scarlet wool yet remained, which I speedily converted into a scarlet and white pin-cushion, hair-receiver and hair-pin box. I covered my washstand with white, and put back of it a white splash-cloth bordered with scarlet; hung brackets and pictures on the wall, spread mats on the floor, and my room was finished.

I suppose you think I was proud of it. I am not ashamed to own that I was both proud and satisfied. I had a very attractive room—a room in which everything so blended as to form one harmonious whole, while my purse remained about as full as when I began, which certainly was an important item.

Before closing I would like to describe one of my floor mats. It is wholly of my own invention, one of the wonders of the neighborhood, and has received the name of "Centennial Mat." It is three feet long by two wide, corners rounded. It is made on dark glossy green cloth, and lined with bed ticking. I made flowers, buds, leaves and vines of pieces of straw braid in all colors, both variegated and plain—of course they were perfectly flat. I arranged them as a collection or bed of flowers in centre of mat. Wherever it needed any delicate filling in, finer than I could give in straw, I chain-stitched vines and tendrils on the cloth, tracing the design with a pencil. The material used for the chain-stitch was very fine white and brown mending cotton; a needleful of each threaded into one needle, thus making a variegated stitch. The centre figure measured two feet in length by a little less than one and one-half feet in width. The border of mat consisted of a long coarse piece, half an inch wide, of variegated red and white, variegated green and white, and plain white straw braid, braided very loosely together, and sewed on flat, nearly an inch from the edge of mat. These were stitched firmly on each edge of each braid, making six rows of stitches in the border. Every flower, leaf, bud and vine, was stitched around the edges and back and forth every way through its centre, leaving no possible place for careless feet to damage. The edge of mat was bound with green skirt-braid to match the cloth. It is handsome placed in almost any situation, but its own peculiar sphere is in a summer parlor, furnished in green and white, like the one described in THE FLORAL CABINET of May, 1875. SEAWEED.

## Household Elegancies.

## LAMBREQUINS, BASKETS, ETC.

The illustrations on this page represent several beautiful household ornaments. The Lambrequin is constructed by simply using a board of proper shape, and fastening thereon with glue acorns, leaves, nuts, shells, etc., which can be found in our forests; or it can be constructed of leather, in imitation of the natural. The little hanging corner Book-shelf is exceedingly simple to construct, its size being about fifteen inches in diameter. The Flower-Basket is made of bamboo reeds, and prettily trimmed with cords and tassels. It is about twelve by eighteen inches in diameter, and sufficiently large to hold one large-sized flower-pot and plant. It makes a very simple, pretty and acceptable flower-pot stand for a parlor centre table, or in the window.

## HINTS AND HELPS.

THE CABINET, as it comes to us from month to month, is always a welcome visitor, and so great is the variety and excellence of its contents, that it sometimes seems as if every possible thing of beauty or object of household art, within its province, had been already described in its pages. But each new number, rich in suggestion and helpful hints, reassures its

CORNER BOOK-SHELF.

readers and speaks of a wealth of good things yet to come; and so, doubtless, it will be while busy brains are left to plan and deft fingers to execute the designs of their beauty-loving owners.

Even as I write, I see about me some pretty things which I have never yet seen mentioned, and will try to describe some of them in return for the direction and help received from others.

## WALL POCKET.

A dainty little wall pocket may be made from cigar-

LAMBREQUIN.

lighters. Take twenty-four slips, using the uncolored kind, and interweave them basket-fashion to form a square; make another square like the first and fasten each of three corners of the second square to the middle of a side of the first, respectively. This will cause the second square to round outward somewhat, forming a pocket, of which the first or flat square is the back. One or two trials will show you exactly how to arrange them. Now pass two additional slips through openings in each of the upper corners of the back piece, and interweave the other ends of these four slips to form a pointed top like the tops of the photograph frames made of the cigar-lighters. Make a tiny bouquet of feather-grass and sew it upon the upper corner of the pocket, concealing the ends of the dried grass-stems, which should come down to the middle under a little oval picture or a scarlet rosette tacked on with a few stitches. Put little bows of scarlet satin ribbon on each corner of the back piece and one at the top where the strips cross, by which the wall pocket is suspended.

## A COURT-PLASTER CASE

Is an acceptable Christmas gift to almost any one, and even little fingers can readily make them. Two pieces of perforated eard, each two and one-half by three and one-half inches in size, are to be bound with narrow scarlet, blue or green ribbon. In the centre of one, work an initial, on the other the words, "I heal all wounds, save those of love." Cut four pieces of court-plaster of different color three-quarters of an inch smaller each way than the outer pieces and place them between two pieces of Bristol board of the same size. Sew the covers together, leaving them open at one end. Make two holes through the remaining piece, near one end, and pass through these a piece of ribbon, tying the ends in a bow. Insert between the covers the bow at the top, and hang up by a strap of ribbon.

## A PAPER-HOLDER

Well adapted for holding pamphlets and magazines, may be readily constructed out of stiff pasteboard, bleached muslin and a roll of scarlet dress-braid. Cut out from the eard-board, two pieces, one for the back twelve inches wide, twenty inches high in the middle, and sloping in deep curves to the sides, where it is but thirteen and one-half inches in height; the bottom is also cut in four scallops, and an inch and a half above; then draw a line across where the bottom of the pocket is to come; the pocket is twelve inches square. Lay these pieces on the muslin, and mark around them with a pencil, but do not cut away the margin until the ornamentation is applied.

Arrange on the front piece a bouquet of ferns, mountain fringe—Adlumina—and yarrow leaves; surround this with a light wreath of partridge-vine and wild clivers, and place in each corner a small, pretty leaf. For the back, place a bouquet of tiny leaves in the upper point; a geranium leaf in each of the lower points, and a small rose leaf in each of the two still below; in the middle, arrange an initial of the smallest fern fronds. When all is arranged and securely fastened, spatter with a brush dipped in India ink and rubbed over a sieve. Afterward, with a brush, delicately vein each leaf. A delicate line of fern fronds is arranged across the bottom of the back piece before spattering. Apply the muslin to the cardboard and bind each piece with scarlet braid. Stitch the front to the back firmly, on the line previously drawn, and lace the pocket to the back piece with braid or scarlet cord.

## PRETTY BASKETS

Can be made of cigar-lighters, interweaving them

FLOWER BASKET.

basket-fashion, fastening them at each point of intersection by a cross stitch of bright worsted, and cutting out bottom ends and sides to make any shaped basket desired.

## Fireside Reading.

Several years ago, while lecturing before a class of ladies, upon chemistry, we had occasion to purify some quicksilver by forcing it through chamois leather. The scrap remained upon the table after the lecture. and an old lady, thinking it would be very nice to wrap her gold spectacles in, accordingly appropriated it to this purpose. The next morning she came to us in great alarm, stating that the gold had mysteriously disappeared, and nothing was left in the parcel but the glasses. Sure enough, the metal remaining in the pores of the leather had amalgamated with the gold, and entirely destroyed the spectacles. It was a mystery which we could never explain to her satisfaction.  
—*Fireside Science.*

Pat had just seated himself in a Quaker meeting when a young Quaker lately married arose to announce his new relationship. "Brethren," said he, "I have married." Pat's spontaneous mother wit suddenly burst forth involuntarily: "The devil you hev!" The young and blushing bridegroom, imagining that the spirit had suddenly moved some more influential brother, sat down in confusion. In a few moments he rose and essayed again: "Brethren! I have married a daughter of the Lord!" "The devil ye hev!" ejaculated the intensely interested Irishman, "it'll be a long time before you see yer father-in-law!" The shuffling feet and confusion of faces which followed admonished "Patsy" that he had better be "thravelin'," and he was "after gettin' himself out o' that!"

On the North London railway a short time since, a passenger remarked in the hearing of one of the company's servants, how easy it was to "do" the company, and said he often traveled from Broad street to Dalston Junction without a ticket. "Any man can do it. I did it yesterday." When he alighted he was followed by an official, who asked him how it was done. For a consideration he agreed to tell him. This being given, "Now," said the inquirer, "how did you go from Broad street to Dalston Junction yesterday, without a ticket?" "Oh," was the reply, "I walked."

Thackeray, when speaking about fame, would frequently tell the following anecdote: When at dinner in St. Louis, one day, he heard one waiter say to another, "Do you know who that is?" "No," was the reply. "That is the celebrated Mr. Thackeray." "What's he done?" "Blessed if I know."

She was languishing upon a sofa, watching him affectionately as he skipped briskly about the room

and God disposes." "Yes," said a maiden present, "a man proposed to me once; I said no, and have never seen him since, so I thought somebody had disposed of him."

Elizabeth Cady Stanton mentions the fact that certain woman suffragists once picked up an orphan boy, bought him nice clothes, educated him for the ministry, and, when they went to hear his first sermon, were struck with consternation to hear the text: "Let the women keep silent in the church."

A man in Lexington, Ky., bought a turkey said to weigh ten pounds, but on arriving at home he found that it weighed but eight. Going back, he inquired how it happened. The dealer examined the turkey carefully, and then, with a sudden light, exclaimed, "Ah! I see you've lost the gizzard."

Madame X has charming features, charming arms, charming hands—but she has monstrous feet. Just recovering from a long illness, she said recently to one of her friends, "I am still very feeble, but I begin to be able to put one foot before the other." "And that is not saying a little," murmured the excellent friend.

District superintendent in Nova Scotia asked a backwoods teacher at the close of a visit: "What is your postoffice address?" The teacher looked blankly and said, "Sir?" The question was repeated, and after a moment's hesitation the reply was, "Oh, I'm a Roman Catholic." "I did not ask you anything about your religion; I want to know what—is—your—post office—address?" "Oh," said the teacher, a light breaking over his countenance, "oh, sure, I'm an Irishman, sir."

### A Pathetic Appeal.

"Mamma, shall you let me go to the Wilkinsons's ball, if they give one, this winter?" "No, darling!" (A

pause.) "You've been to a great many balls, haven't you, mamma?" "Yes, darling—and I've seen the folly of them all." (Another pause.) "Mightn't I just see the folly of one, mamma?" (A very long pause.)

Young lady—"Well, now, and what did the Israelites do after they crossed the Red Sea?" Sharp girl (eagerly)—Please, they put on their dry things."

"SLY BOOTS."

putting things in order. Finally she said in a low, sweet tone of voice: "Georgie, darling, I don't believe you will ever be a great man." "Why so, love?" he asked, wheeling a chair round on one of its legs, and gracefully stroking it with the duster. "Because great men always have such lazy, good-for-nothing wives."

One evening in company, during conversation, a gentleman quoted the expression, that "Man proposes

## Housekeeping.

## HOW TO ORNAMENT DINNER TABLES.

Housekeeping is simply home making, and the housekeeper who makes the pleasantest home is the best one. The first thing is to provide for the necessities of life, then for the comforts, then ornaments and elegancies. What hungry man or woman would fully appreciate a tastefully arranged bouquet, on a dining table, if the meat itself is ill-cooked and insufficient. First, however humble the meal and unpretentious, the table-cloth should be clean, and put on straight, and the napkins arranged orderly, all the dishes in their proper places, not looking as if they were thrown on, bright spotless silver, and well cooked food, and plenty of it. It is not necessary to have the viands of many varieties, if not desired, or very rich, or of complicated preparation, but good and wholesome, then decorate the table as well as your time, means, and taste will allow. Perhaps a bouquet or two, or some easily produced ornament is as much as one would be justifiable in using for common, but on state occasions for large parties, the floral decorations have become a large item in the programme. Large, almost fabulous prices are paid for the decorations for a single party, yet very fine effects can be produced with very little expense, if taste and ingenuity are used in the arrangement. We will suppose that a large party is to be given, and that the host has a large house, and spacious dining room. The cloth is laid and we will propose a way to produce the required floral decorations. If we have a tall, slender, gold or silver epergne, for the center of the table, we will fill it with drooping sprays of Smilax vine, a few Rose buds, and whatever fine white flowers we find available. If we can obtain it, a large white Lily for the centre. A little way on each side of this we will erect an aquatic bouquet. For this we need two bell glasses of equal size, and as large as we can procure. We will take a nice variety of flowers, and using considerable green, make some not very compact bouquets, which will almost fill the bell glass, when they are inverted over them. Tie a stone of considerable size inside of the stems. Have a dish, a soup plate, or a larger dish, into which the bell glass can be turned, and the edge of the plate come a little beyond and above the edge of the glass. Place the bouquet in this plate, and around the stems of the bouquet arrange moss and shells, to completely hide the plate. Have a tub of water large enough to completely immerse the bell glass. Set the plate, with the bouquet, in the tub and take the glass and put in the water with one side first, so the water will fill it clear to the top; keep turning it down in the water, and over the bouquet, setting it firmly on the plate. Lift the whole carefully from the tub, by the plate, leaving the water around the edge of the plate. Arrange fern fronds and shells to completely hide the edge of the plate. Smaller bouquets in small glasses may be placed around these large ones if desired, of course the process of preparing is materially the same. They should be prepared the day before they are to be shown, as they assume a frosty appearance about that time, that is very charming. Smaller epergnes, or vases with bouquets may be placed at each end of the table. Floral ornaments should be high at the center of the table, and diminish toward each end.

Very pretty ornaments, besides furnishing edibles, are formed by piling oranges in glass dishes, with tall

standards, the oranges first being prepared in the following manner. With a sharp knife first divide the peeling, half way down from one end, into twelve equal parts, then begin at the end and raise the peeling from the oranges as far as it has been cut. Leave every other section only raising it a little from the end. Turn this peeling back, and it gives it somewhat the appearance of a yellow lily, or some singular flower. Fill two other glass dishes with iced fruit, piled on green leaves. This is very beautiful, indeed, and is exceedingly charming when seen by gaslight.

A large napkin is now spread at the head and foot of the table. This is expected to be of the very finest linen, and the monogram beautifully embroidered. When people have arrived at the dignity (?) of adopting a coat of arms, these also are emblazoned upon them.

Sometimes the monogram and crest is woven into the linen, which, of course, must be of the finest and whitest.

The napkins, on grand occasions, should be folded in some elaborate design. Perhaps the camelia shaped is as pretty as any. Fold into the centre the four corners of the napkin, repeat this for the second time, and again for the third time. You now turn it over. The corners must this time be folded underneath the napkin to the centre, and the upper centre points drawn back, and the corners of the napkin slightly raised, when it will have the appearance of a camelia.

The letters and designs upon table linen should be large and handsome. The linen must be spotless and well arranged, or the ornamentation of flowers and shining silver will be useless, as far as producing a good effect is concerned. The napkins must be arranged in uniform places, and the knife and fork placed on the right side, with edge of the knife turned outward, and the tines of the forks downward. Each article designed for individual use should correspond with the like ones in position to give an air of order to the table, which is one of its greatest charms.

The fashions in china ware are as changeable and arbitrary as in all things else. Just now the rage is for real china, well decorated. "The Centennial" has been the favorite for the past year. It has a century blossom on each piece, and is really very handsome.

All sorts of dishes break out now-a-days in fantastic and singular shapes, so that we almost have to stop and ask what they are for. The shape of some articles have changed very much in the last few years.

For very elaborate occasions a net-work canopy of green moss, and evergreens, and bright colored berries may be erected over the centre of the table. Of course it must be arranged before setting the table. Then the viands themselves must be ornamental to make it all harmonious, cooked in an artistic manner, and brought in on suitable dishes.

One word about dinners should always be remembered. Do not attempt more than you can carry out well; have everything to correspond. Nothing makes articles, which are only passably nice, look so mean as to be surrounded with elegant and costly things. And surely you must not spoil the effect of an elegantly and expensively arranged table by one or two articles of shabby appearance. It takes talent, and thought, and good execution to make a grand dinner a success; and if one lacks the means or ability they should avoid attempting it. A small cozy dinner party is really much more pleasant, and lifts such a burden from the hostess. Everything should be just as perfect in its way, even if no guests are ex-

pected; but such elaborate decorations as a large party demand can be dispensed with. It is very unpleasant for a dining-room to have a cramped appearance after the table is laid. It should be large, and pleasant, and airy, suitably ornamented according to your means and the manner in which the rest of the house is furnished.

In placing the dishes of cooked food upon the table, never set them at the edge of the table, but reserve the spaces between the plates clear for the convenience of cups of tea, dishes of sauce, etc. To see dishes so placed always suggests the possibility of their being brushed with the sleeve of any one who should reach over them. If the table is crowded, leave some of the dishes off sooner than put them on in this way. Always arrange the food in as handsome a manner as possible upon the dishes. Give it a nice pleasing appearance instead of a mussy hurried-up appearance. Then arrange the dishes upon the table in the order in which they belong. Our first endeavor must be to satisfy the appetite, our next to suit the taste, and the next to please the eye. A general satisfaction with our surroundings gives a better relish to our dinner, promotes digestion and increases our health.

## HOUSEHOLD HINTS.

Croup can generally be greatly alleviated, if not cured very speedily, if the following remedy is applied promptly: Take a knife, and grate and shave off in small particles about a teaspoonful of alum; then mix it with twice its quantity of sugar to make it palatable, and administer it as quickly as possible. Almost instantaneous relief will follow.

A small piece of paper or linen, moistened with the spirits of turpentine, and put into a bureau or wardrobe for a single day, two or three times, is said to be a sufficient preservation against moths.

Lemon-juice and glycerine will remove tan and freckles.

Lemon-juice and glycerine will cleanse and soften the hands.

Lunar caustic, carefully applied, so as not to touch the skin, will destroy warts.

To obviate offensive perspiration, wash with soap and diluted spirits of ammonia.

The juice of ripe tomatoes will remove the stain of walnuts from the hands without injury to the skin.

If you are buying carpets for durability, choose small figures.

Benzine and common clay will clean marble.

If your flat-irons are rough, rub them with fine salt, and it will make them smooth.

Castor-oil is an excellent thing to soften leather.

To clean a browned porcelain kettle, boil peeled potatoes in it. The porcelain will be rendered nearly as white as when new.

To ascertain whether a bed be damp or not, after the bed is warmed, put a glass globe in between the sheets, and if the bed be damp, a few drops of wet will appear on the inside of the glass.

A strong solution of carbolic acid and water, poured into holes, kill all the ants it touches, and the survivors immediately take themselves off.

Linen garments, which have become yellow from time, may be whitened by being boiled in a lather made of milk and pure white soap, a pound of the latter to a gallon of the former. After the boiling process the linen should be twice rinsed, a little blue being added to the last water used.

The Twenty-first Edition of our celebrated Seed Catalogue and Amateur's Guide to the Flower and Kitchen Garden, containing upwards of 200 pages, including several hundred finely executed engravings of favorite flowers and vegetables, and a beautifully colored chromo, with a Supplement for 1877, will be ready Jan. 1st, and mailed to all applicants upon receipt of 35 cts. An edition elegantly bound in cloth, \$1.00.

**BLISS'S GARDENERS' ALMANAC**, for 1876, and Abridged Catalogue of Garden and Flower Seeds, contains upwards of 100 pages, and embraces a monthly Calendar of Operations and a price-list of all the leading GARDEN, FIELD and FLOWER SEEDS, with brief directions for their culture. A copy will be mailed to all applicants inclosing ten cents. Address

**B. K. BLISS & SONS,**  
34 Barclay Street,

**AGENTS MALE AND FEMALE WANTED**  
Everywhere, to handle the Patent Crown Self-Closing Inkstand. Sells itself at sight wherever ink is used. Profits immense. Sample 75 cents. Address A. H. SINGER, 438 Walnut St., Philadelphia, Pa.

**50** ELEGANT CHROMO CARDS, in Card Case (new designs, Flowers and Leaves), suitable for Visiting Cards, Rewards of Merit, Book Marks, &c., sent postpaid for 25 cts., and 3c. stamp, printed, 10 cts. a line extra. JEWETT CARD CO., NEW HAVEN, CT.

### TIDY FASTENER,

FOR FASTENING TIDIES UPON SOFAS, CHAIRS, LOUNGES, &c.

The Fastener is a velvet button with a spiral screw, and secures the tidy in its place by a few turns of the fingers, holding it fast. It never pulls out and never tears the furniture. They are made in green, scarlet, cherry, maroon, brown, and blue. Price (sample set 4), postpaid, 25 cents. Specify color wanted. Address,

**ALBERT COGSWELL,**  
46 Beekman St., New York.

### BEAUTIFUL BOOKS FOR LADIES!

EVERY LADY IS CHARMED.

EVERY HOME NEEDS THEM.

#### HOUSEHOLD ELEGANCIES.

A splendid new book on Household Art, devoted to a multitude of topics, interesting to ladies everywhere. Among the most popular subjects are, Transparencies on Glass, Leaf Work, Autumn Leaves, Wax Work, Painting, Leather Work, Fret Work, Picture Frames, Brackets, Wall Pockets, Work Boxes and Baskets, Skeleton Leaves, Shell Work, Crosses, Spatter Work, Mosses, Cone Work, etc. Hundreds of exquisite illustrations decorate the pages, which are full to overflowing with hints and devices to every lady, how to ornament her home cheaply, tastefully, and delightfully with fancy articles of her own construction. By far the most popular and elegant gift book of the year. 300 pages. Price, \$1.50.

#### WINDOW GARDENING.

An elegant book, with 250 Fine Engravings and 300 pages, containing a Descriptive List of all Plants suitable for Window Culture, Directions for their Treatment, and Practical Information about Plants and Flowers for the Parlor, Conservatory, Wardian Case, Fernery, or Window Garden. Tells all about Bulbs for House Culture, Geraniums, Hanging Baskets, Insects, Plant Decoration of Apartments. The illustrations are unusually beautiful, and many of them perfect gems of exquisite beauty. Price, \$1.50.

#### EVERY WOMAN HER OWN FLOWER GARDENER.

A delightful little Treatise on Out-Door Gardening for Ladies—practical, timely, charmingly written. Contains valuable information about Pansies, Roses, Geraniums, Climbing Plants, Annuals, Perennials, Fuchsias, Ribbon Beds, etc. Send for it. Printed in excellent taste. Price, 50 cents, postpaid. Bound in cloth, \$1.00.

For sale at all Book Stores, or sent by mail, postpaid, on receipt of price.

Address, **HENRY T. WILLIAMS, Publisher,**  
46 Beekman Street, New York.

### Ornamental Designs for Fret-Sawing.

PART IV. PRICE, FIFTY CENTS.

This is a new volume of Fret-Saw Patterns, by far the most tasteful and artistic in execution of any collection yet offered. Designed by a practical fret-saw artist, who has taken extreme pains and care to have perfect finish and pleasing choice of subjects, they will challenge the admiration of all lovers of fret-saw work. The book contains patterns, which, at usual sheet prices, would be worth \$2.40. All are new, never yet published, designed expressly for this series, and constitute a splendid FRET-SAWYERS' ANNUAL for this season. These patterns are all full size, ready for direct transfer to the wood and immediate use by the sawyer. Every fret-sawyer should have this book, as it contains the latest and best new patterns, and so cheap no one could afford to do without it.

**HENRY T. WILLIAMS, 46 Beekman St., N. Y.**

A beautiful Quarterly Journal, finely illustrated, and containing an elegant colored Flower Plate with the first number. Price only 25c for the year. The first No. for 1877 just issued in German and English.

Vick's Flower & Vegetable Garden, in paper, 50c.; with elegant cloth covers, \$1.00.

Vick's Catalogue—300 Illustrations, only 2c. Address, **JAMES VICK, Rochester, N. Y.**

Contains over 1,200 varieties Vegetable and Flower Seeds, COLORED PLATES. Elegant wood-cuts of vegetables and flowers. Handsomest Guide Published! Send for it. **DETROIT SEED CO., Detroit, Mich.**

**Dr. Warner's Health Corset,**  
With Skirt Supporter and Self-Adjusting Pads.

Secures HEALTH and COMFORT of Body, with grace and beauty of Form. Three Garments in one. Approved by all physicians. **AGENTS WANTED.**

Samples by mail, in Coutil, \$2; pattern, \$1.75. To Agents at 25 cents less. Order size two inches smaller than waist measure over the dress.

## CHRYSANTHEMUMS IN SICK ROOMS.

Chrysanthemums may be introduced into sick rooms, and by their beautiful colors, please many an invalid. If they are not handled much they give out little or no

good in a room for three weeks or a month. One of the best and most successful growers of Chrysanthemums was in the habit of cutting the flowers days or even weeks before the show or exhibition, and feeding

answer to occasional inquiries, we name the following sweet scented flowers, to which some of our readers may add others: Sweet Violet, Hyacinth, Heliotrope, Pinks, sweet scented Candytuft, Woodbine, Sweet

A SWISS LAKE SCENE.

odor, especially if put into vases in the usual way.

This beautiful winter flower can be enjoyed most if arranged in show stand.

Few or no leaves need then be used. The flowers thus prettily arranged and nicely contrasted as regard colors, look well in this way, and will keep fresh and

them with guano water and other stimulants in their show tubes to increase their size.

**Flowers for Odor.**—The *Country Gentleman* says: "Many cultivators of ornamental plants desire especially to raise those which produce fragrant odors, particularly for bouquets, stands and flower vases. In

Briar, Cabbage Rose, Tea Roses, White Lily, Sweet Alyssum, Mignonette, Sweet Pea, Carnations, Sweet William, and several sweet-scented perpetual roses. Here are enough to fill a room or garden with perfumes rivalling the 'odors from the spicy shores of Araby the blest,' if well managed and cultivated."

## Floral Contributions.

### MY FERN WINDOW.

It is a large bay-window, and in addition to being on the western side of the house, is shaded by a clump of firs which stand about fifteen feet from the central part of it. In days gone by the shutters were kept closed nearly all the time, as the firs shut out everything, except a little light, and we had plenty of that from a sunny south window and an unshaded west one. One day, while having a search in the garret for some odds and ends which were, or were supposed to be, within that garret's sacred precincts, I came across a large old-fashioned mirror, and while gravely contemplating my fair-haired self, an idea, or rather several ideas, came into my head. Forgetting what I had been in search of, I started down-stairs, and after a little delay, found my brother Ernest. We sat down and took counsel together. The result was, that we brought that ancient mirror down from the garret, and, with prudent care, escorted it to Ernest's workshop; there the old tarnished frame was removed and a new one of plain pine prepared for it. This frame was about six inches wide, and after being oiled and thoroughly dried, was decorated with branches from the neighboring woods, as twisted, knotty, and mossy as we could find. These were fastened on with small brads, and projected in every direction, though not in any case more than four inches from the foundation of pine. Then the mirror, securely fastened in its new frame, was placed in the centre of the bay-window, close to the glass, the shutters outside (to the west) remaining closed, as there was sufficient light from the northern and southern angles for our purpose. When placed in position, the mirror and frame exactly filled the central part of the window, except seven inches at the bottom. The next thing was to fill this space. A box, also of pine, three feet five inches long, eight inches wide, and eight deep, was made, and ornamented with small cedar branches with the bark on, split in two and tacked on perpendicularly all around it. This box was filled with leaf mould, mixed with a little sand, and placed on a shelf under the mirror. In each end was planted a German Ivy, in the centre a beautiful *Osmunda Regalis*, a *Polypodium* on each side, and the rest of the box filled in with tiny Ferns, Partridge Vines, and the most beautiful mosses we could find. Two similar boxes were placed under the side-lights of the window, and in the ends next the mirror another German Ivy was planted (we meant to have that mirror framed, you see), and the remainder filled with as many dainty and delicate Ferns and mosses as they would hold. This we considered a good beginning, and the next part was this: My brother made what I shall call a platform, about six inches high, something like a low table, which was set on castors, and would just fit into the window. Then he made a box, about six inches deep, the same size and shape as the platform; this box was lined with zinc, and had two large holes bored in the bottom for drainage. This was placed on the platform, put into position, and a rustic fern stand, thirty inches in length and about eighteen in width, placed in the centre of it. In this fernery, the top of which, I ought to mention, was even with the top of the rustic boxes, was a miniature arch made of beautiful mossy stones, and a tiny pond; albeit, the pond was only an old earthen dish with small pebbles in the bottom and moss shading the edges. The effect was beautiful

among the rich Ferns with which we filled the stand. In the centre of the window, just over the fernery, was suspended a large rustic hanging basket filled with German Ivy. On either side this central basket was a simple and easily constructed hanging basket, which may not be new to some, but it was to me. With a trowel, Ernest carefully removed a flourishing *Polypodium* from its native woods, together with a good-sized ball of the surrounding mould. This was wrapped in a sheet of beautiful green moss, the kind that looks as if composed of hundreds of exquisite little Ferns; then fine wire was twisted around, just enough to hold it in shape, and the whole hung up by a piece of the same wire. When these were finished, there only remained the lower part of our fern window. This was finished by covering the bottom of the zinc pan, or box, with a thin layer of bits of broken crockery, stone, and charcoal, then filling it with leaf mould and sand. Under the boxes, all around the window, we planted a little forest of the Maiden Hair Fern. I must say we were rather doubtful of the success of this last experiment, for it seemed almost too shady for any thing to grow. The bottom of the boxes was only seventeen inches from the earth in the zinc pan, but it was the very place for those Ferns. Then the remaining surface of the mould was covered with green moss, and a large pot of English Ivy placed on each side of the window, next the room, and it was finished. No, not quite finished, for something was needed for the Ivy to cling to. Rustic supports were nailed a little way apart, on each side of the window, and continued across the top of the side lights to enable the Ivy to join its companions around the mirror frame.

I wish you could see that window now. The Ivies have rambed all about, the most beautiful being the German ones in the central hanging basket; they have twined up the cords they were intended to, thrown out long branches which have encircled the little moss baskets on each side, covered the vines which suspend them, reached out and embraced those around the mirror frame, and followed their own sweet will wherever it has led them. The effect is splendid, for the old mirror reproduces all the lovely forms. I must say a word about one peculiarity of the aforesaid mirror. It does not favor the "human face divine." When you look at yourself in one way, you see yourself as nature intended you to be seen; but looking at it in another way, it is to be hoped others do not see you as you see yourself then; to be plain, there is a decided flaw in it, but in the case of Ferns and Ivy leaves, any such little failing is overlooked. It is very easy to take care of my window. I water the little moss baskets by immersing each one in a deep bowl of warm water, and by standing on a chair, can give all the Ferns, Mosses, and most of the Ivy leaves, a good sprinkling. All the surplus water runs off through the holes in the zinc pan, which, I forgot to say, were also bored through the platform on which it stands, into a pan set underneath. Another advantage is, that I can step on the moss "and leave no sign," or very little, when there are any decayed fronds to be removed. Sometime I shall like to tell you about my south window, which is in the same room, and presents quite a contrast to the cool green of "My Fern Window."

MAMIE.

### CITY GARDENS.

Having enjoyed reading the experience of so many correspondents in regard to the cultivation of flowers, I feel that it is only fair that I should add

mine in regard to the successful cultivation of a city garden.

You are aware that most of the city yards are small, and so shaded by high fences and brick walls that many persons become discouraged in their efforts to cultivate flowers, and are satisfied if their yards only look clean. Again, the soil of those yards is generally poor, and the opportunities of procuring manures so few that they do not try to get them.

Now, those persons who live in the country, and can drive to the woods to get soil and leaves, or to the barn yard to find all the fertilizers they wish, cannot fully sympathize with their city cousins who enjoy none of these privileges or advantages—yet, considering all these obstacles in the way, they can be overcome by energy and perseverance. And, as I live in a city and have to contend with those difficulties, I propose to tell others like situated how they may overcome them.

In the first place my beds all needed filling up, so I waited until the city authorities began to clean the streets, then I appropriated a sufficient quantity of this dirt to do it, having first cleaned it from all rubbish—this dirt I mixed with the original soil, but finding it too sticky, and inclined to bake, I procured a barrel or two of clean white sand that can be procured of builders, or those who cart it around the street for sale, this I mixed with the soil, leaving a fair proportion on the top so as to aid the smallest seed in germinating. After the plants began to grow, I procured a tight barrel, stood it in a corner out of the way, and each wash day had it filled with the strongest suds. With this water I gave the beds a good drenching every evening as long as it lasted, provided it had not rained previously. This water is one of the strongest and cheapest fertilizers one can procure. At the foot of the yard I had space for a bed four feet by twelve feet, which was quite low and not fit for bulbs, unless raised some six or eight inches, which required more dirt than I could procure from the street in time for fall planting, so I saved all my coal ashes until I had a sufficient quantity for my purpose, then dug out this space about twelve inches deep, threw in the ashes and replaced the soil in which I planted the bulbs. I found this plan was a good one, the ashes acting as a drainage. Previous to my planting in the fall I procured some ground bone (ten pounds) from a dealer, and mixed that with the soil. Having procured a quantity of leaves from the street, and a barrel or two of fine stable manure from a cartman, I first spread the leaves over the bed, then threw on the manure, which formed a warm covering for the bulbs. If the leaves are placed on the beds first, they will not only protect the bed from freezing—but, I think, turn the rain, while the manure will prevent the leaves from being blown away, and assist in rotting them. In the spring when I uncover the beds, I work as much of these two articles in the soil as I can, the remainder I either burn on one of the beds, or dig up one of the beds quite deep, throwing it in to lay and rot. Now, one can readily see at a glance that this was all done with less cost of money than personal exertion, and almost any one with ordinary health can do as I did.

My plan for arranging beds is different from any I have seen. The space between each post is used as a bed, and the short walks are convenient for getting at the post, at the same time enable you to reach all parts of the beds without stepping on them.

Hoboken, N. J.

C. W. I.

## Gossip with Correspondents.

**Night-blooming Cereus.**—In the November No. of your paper, I saw an account of the blossoming of a Night-blooming Cereus in Utica, N. Y. as being something rare. Allow me to say that here in Northern Maine they are quite common. I have two that bloomed every year since they were four years old. Last summer they had thirteen flowers—eleven in one week. No other flower that I have ever seen bears any comparison with this in beauty or fragrance.

A LOVER OF FLOWERS.

**Blooming Callas.**—I have been very successful in the cultivation of plants, because my whole heart was in the work. For blooming Callas, I use the soil from the henery; and on cold mornings I pour hot water in the saucers; I have had a bloom from every bulb. As my Fuchsias never grew very large, I put in fresh soil and then used some fine manure from the henery, and before spring it covered the window, with every shoot in full bloom. My Begonia has never failed to bloom.

Mrs. E. B.

**Easter Lilies.**—Besides Callas which are grown in immense quantities for Easter decorations in the vicinity of Boston, Liliun Candidum is also forced to bloom for Easter, and, being a true lily, is perhaps better entitled to the name, "Easter Lily."

M. P. G.

**Ferns.**—I should like to say to the person who wishes to know what Ferns can be grown in the house, that I have had for three winters, in a furnace-heated parlor, very handsome plants of Aspidium molle and Adiantum euneatum; and I have a friend who has Pteris tremula, looking as well as it could in a greenhouse. I also know that Pteris hastata does well in the house; so does the Japanese Climbing Fern and Lygodium scandens. All require to be kept comfortably warm, not too wet, and seldom sprinkled—just often enough to keep them clean. I have found that wetting the foliage often causes it to turn black.

M. P. G.

**Winter Decorations.**—Many people who do not burn coal cannot keep the parlor warm all the time, and, of course, can have no flowers therein. I will give a few hints in the way of brightening up the winter parlor. Take a round, rough board, and make a table of it, by nailing on firmly three legs of as twisted and gnarled roots or limbs as you can find; do not varnish, but have them as rough and mossy as possible; take dry moss—which you can find in the woods and on the trunks of trees, and with glue, stick it all over the bottom of the board; put a large, round, shallow tin on top of the board (which is now a table), and fasten with a round-headed tack; fill with green mosses of all kinds; then stick dry moss all over the space between the tin and the edge of the table. Wet the moss as it needs it; no amount of freezing and thawing will injure this. A vase containing wax autumn leaves adds a bit of color to it, placed in the centre of the moss. Wax branches of autumn leaves, and hang them gracefully, and naturally, over the pictures and curtains; also pressed ferns, and mountain cranberry. The herb commonly called Life-everlasting, is beautiful for winter decorations. The flowers can be dyed any color, and with evergreen, make lovely wreaths, bouquets, etc. A hanging basket containing a deep plate may be filled with moss, and a bouquet of these flowers placed in the centre. A pasteboard, or wooden bracket may be covered with dry moss, in the same manner as the table, and hold a basket of worsted flowers, made with double zephyr like hair flowers. Weave over a lead pencil, cut the worsted, and comb with a fine comb. Copy from nature in making the flowers up, and wind the stems with green split zephyr, or floss. Add little fancy articles, tidies, etc., from the pages of the CABINET, and the room will be cheerful, even in the gloomiest weather.

ANABEL C. ANDREWS.

**Geraniums, Veronica.**—1. What are Zonale Geraniums? 2. Will Veronicas live out through the winter, or would it be best to bring them in the house? 3. How old do Geraniums have to be from the seed before they blossom? I have some planted last spring; do you think they ought to bloom this winter?

State Centre, Iowa.

Mrs. O. J. W.

**Answer.**—1. The typical Zonale Geraniums have a zone of darker color on each leaf; the flowers run through various shades from white to pink, and deep scarlet. 2. The hardy herbaceous varieties will, but not the shrubby sorts. 3. Generally the second year.

**Geraniums.**—In the February number, Lady Cullum speaks of the ever-blooming variety of Geraniums. Will she please give the name; also, will correspondents always give the State they live in, so I may know what kind of a climate the plants are raised in? We lovers of flowers in this far western country, meet with many discouragements in finding flowers that will stand our cold winters. I should like to hear from some of our friends in the north-western part of this state, on the best kind of roses for out door culture.

Magnolia, Iowa.

S. L. B.

**Answer.**—We cordially agree with our correspondent's very sensible remarks.

**Madeira Vine.**—I have a Madeira Vine. One sprout from the bulb has grown quite thrifty, but an offset of the same bulb in the same pot, has sent out one or two small leaves, and there it has remained, just about so for six months; looks fresh and vigorous, as though it must send out some branches. It has the south sun part of the day, and occupies a warm place in my window garden; which, by the way, is a source of great pleasure to me. 1. Would it injure the Madeira Vine to transplant or repot? 2. My Geraniums, of which I have a large number, look a healthy green; but the stem to the leaves grow so long. Could it be caused by too much furnace heat at night? 3. And would pricking back the new shoots be of any use?

Joliet, Ill.

Mrs. N. E. FULLER.

**Answer.**—1. No. 2. Keep the plants in a more cool and light place. 3. Yes.

**Oxalis.**—1. What shall I do with a white Oxalis that has bloomed all winter, and now shows signs of dying. Should it be taken from the pot and dried. What kind of soil does it require? 2. Are old roses that have bloomed several winters as good as those newly started? 3. When is the best time to renew the soil for Caeti?

MADELIENE.

**Answer.**—1. Stand it out of doors in the pot until fall. Repot in any good soil. The Oxalis is not particular. 2. Yes, if healthy and growing freely. 3. In the spring.

**Geraniums and Fuchsias.**—1. My Geraniums grow very fine and large, but they do not bloom freely. I usually place them in fresh, rich soil, early in the spring; does this interfere with the blooming? 2. What is the name of a species of the Royal Family, which has large pink flowers? 3. What kind of Geranium has yellow leaves bordered with green? 4. Do Fuchsias require much sun? 5. How can I get my plants to bloom in winter?

FLOWER LOVER.

**Answer.**—1. Try repotting your Geraniums in September, and use less rich soil. 2. Will any of our readers inform our correspondent. 3. Cloth of Gold, and several others. 4. Not in summer. 5. Few plants flower in both winter and summer. It is necessary to grow some specially for winter.

**Cyclamen.**—1. I wish to ask how the Cyclamens are propagated. I saw in the January number of the CABINET that the bulbs must not be divided? 2. How can a Caladium Esculentum, that has the center decayed and has side stems, be managed?

MRS. D. LEONARD.

**Answer.**—1. From seed. 2. Remove offsets and plant separate, or plant the clump entire.

**Ivy and Clianthus.**—1. I enclose a leaf of Ivy, also a leaf and flower of a plant which we have always called Wax plant. The Ivy is a twining plant, with runners from fifteen to twenty feet in length. The leaves drop off every fall, leaving a long space leafless. Please give the reason why, and whether our kind blossoms or not. The Wax plant grows about two feet high, the same form as the leaves that I send. The bulbs live over winter in the earth. Please give correct names of each? 2. This spring we sent for some Clianthus and Lantana seed. They have been in the ground for five weeks. Neither kind are out yet. I fear it is soil, treatment or watching too closely. Please tell us which, and how to treat them, so that they will germinate?

Craries Mills.

ELLA M. WOOD.

**Answer.**—1. A single leaf is probably the Seucio scandens. The leaves probably drop from the soil being too poor and dry. The flowers are not ornamental. 2. Polygonatum Angustifolium. The seeds probably failed from the dry weather at the time of sowing.

**Prairie Sod for Flowers.**—Will some of your intelligent contributors who have ever had the tough prairie sod of the West to contend with, please tell me what I can do to enhance its richness so that my plants will flourish vigorously. I had much trouble last spring with both my vegetable and flower gardens?

Mt. Ayr, Iowa.

HELEN A. RAINS.

**Answer.**—You will probably have less trouble after the

first year; the soil might be burned. We wish the same tough sod was in our locality, which is sandy.

**Grape Myrtle.**—1. How should a Grape Myrtle be treated during winter (should it be kept growing or put in cellar) in order to have it blossom abundantly in the summer; also the kind of soil the Myrtle requires? 2. Would Tritoma be best kept during winter packed in dry sand or kept dry by laying them in a dry place free from frosts and cold? 3. Also, will it do to start them early in the spring by sprouting same as Dahlias?

OTIS T. CASEY.

**Answer.**—1. In cellar; any good soil. 2. In sand, a moderate frost will not injure the plant. 3. Yes.

**A Dream.**—I have been reading my FLORAL CABINET for November, and had fallen back in my arm chair, rested my feet upon the stool in front of the fire, and lost myself to all around. I saw with my mind's eye, a room facing the north and west; it was carpeted in brown, with a vine stem of darker brown running over it, here and there enlivened with bits of light green leaves, and a few purple berries. It was furnished with a set of plain brown wood, and fine white shades with brown lambrequins. On the dressing case, for 'tis a bedroom, are mats of some white canvas, worked with Pansies and light green leaves. Upon the wall, hang pictures of friends, framed with black walnut; also, a motto done in water color, and in the window, a hanging basket made of beads, and filled with Tradescantia. Under it on a light window stand, is a case of New England Ferns, and the gray moss that grows on rocks; and under the gas fixture was a match scraper, made of white card-board, and on the front a gray tabby cat, with "scratch my back" under it. It is useless to say, of course, that it was lined with sand paper. Something disturbed me; I stirred, and the clock was striking ten; the fire was dead, and I awoke.

ADLINE.

**California Flowers.**—I have often thought I would write the ladies of our interesting paper a short letter, and tell them of some of the pretty places and pretty things that the sun shines on in far off California, and here I wish to tell you some thing that every State cannot boast of, and that is the different climates one can be in. In traveling a few miles, (by a few miles I do not mean fifty); you can be in the valley where the pomegranate tree, lemons and orange, and tobacco, cotton and sweet potatoe flourish in a fine luxuriant growth, and up a short distance in the mountains, the nights are so cool that a pair of blankets and a good quilt are acceptable; and on the summit of these same mountains, snow keeps its whiteness and glitters in the sunshine the year round. The locality is to be found in the county of Tulare, near the town of Visalia. In San Francisco I have seen Fuchsias twelve feet in height, and with a stem between two and three inches in diameter, and with hundreds of blossoms thereon, Hydrangeas as large over as a bushel basket, and what we call Australian Pea covering the fence. Geraniums four and five feet tall, and Callas a mass of leaf and bloom growing out in the open air the year round, without any protection whatever. Here, where I live during the months of May and June, the wild flowers are so pretty and tempting I want to gather them all and preserve them in their beauty forever; I cannot name them as I do not know their botanical name, and we are in the habit of speaking of them by names of our own. I name one as it is so pretty, and that what is called the Vegetable Fire Cracker, or Brodiaea Coccinea, natural order Liliaceae, it is found in gravelly and rocky soils, on mountain tops and in shady cool places, and if kept in cool fresh water it will not wither for several weeks after being detached from the plant. Even to-day, December 11th, there is in bloom in my garden, Seabious, two varieties Marigold, Mignonette, Dianthus, Fish and Zonale Geraniums, Alyssum and Sweet Peas, and also velvety Pansy. I think sometimes the people of the Eastern States enjoy themselves better, and perhaps the society is more settled and possess a greater degree of refinement, but our people are warm hearted, impulsive and generous, and that is quite a recommend, but they are so uneasy, never staying but a few years in one place. There is a great deal of our State unsettled, and mountainous, and the favorite hiding place for deer, and occasionally a bear. Our hills are again getting a faint tinge of green, which is quite welcome to us, as we are not blessed with enough rain in the summer to keep the grass growing, and we get pretty brown and dry, but the soil is rich enough to grow almost anything for those who have the means of irrigation. I hope other writers will not forget to communicate anything of interest in their letters from time to time, as they have done me a great deal of good, and taught me how to make several articles for use and ornament. The questions and answers, and in fact all of the CABINET, is of great benefit to those who wish to know how to grow and cultivate plants.

Mendocino Connty, California.

AN AMATEUR.

## Flower Culture.

### FLOWERS IN THE HOUSE.

#### PLANTS FOR HOUSE CULTURE.

If you have only an ordinary window in which to keep plants, you can grow about half-a-dozen very satisfactorily, provided they are not large-growing kinds, like Oleanders or Abutilons. Such plants require a bay-window, or conservatory. If you have a bay-window, three times this number can be grown without crowding, and an Oleander, or some other large plant, can be added. Plants should never be crowded. It not only spoils the looks of them to huddle them together, but they do not do well. One reason why so many lose plants which they are trying to grow in windows is, they try to keep too many. Some of them must be crowded away from the sun, and these get sickly, turn yellow, and finally die. One healthy, vigorous plant is worth a thousand poor ones. Better try a few, and aim to have them fine specimens, than to have a dozen spindling, unsatisfactory ones.

Of those best suited to house culture, I have selected as the six best the Calla, Rose Geranium, Zonale Geranium (of this class there is so large a variety that all tastes can be suited as to color, habit of growth, and profusion of bloom), Heliotrope, Fuchsia, and Ivy. If you have a bay-window, or another ordinary window, any of the following will prove very satisfactory: Begonia, Lantana, Eupatorium, Plumbago, Capensis, any of the scented Geraniums, Coleus, Cactus, and, if you are willing to give them all the care they require, Roses, Salvia and Verbenas. For hanging plants, I would recommend Vinca Harrisonii, a beautifully variegated plant, Moneywort, Lysimachia, and Saxifrage. If you want some small-growing plants for brackets, use Oxalis, Chinese Primrose, and the pink-flowered Mesembryanthemum.

#### SOIL FOR POT PLANTS.

I have found the following to be the best soil for plants in pots: One-half fine, fibrous soil from under sods in an old pasture, one-fourth well-rotted barn-yard manure, or leaf-mold, and for the remaining fourth I add clean, sharp sand, and common garden mold, varying the proportion of sand to suit the liking of the plant I intend it for. For Geraniums, I have nearly one-quarter of the soil sand. For Fuchsias, I have also a liberal allowance, and use fibrous earth in place of the garden mold. For Roses, I use more garden mold, and less of the pasture soil. For all the others, the mixture I have spoken of does very well.

#### POTTING.

Don't use too large pots for flowering plants. For scented Geraniums, which are grown for their foliage, use larger pots to encourage a ranker growth. Fuch-

sias need larger pots, in proportion to their amount of stalks and foliage, than most other kinds. Geraniums, the flowering kinds, Heliotropes, Lantanas, and Begonias, will do well in six-inch pots, and they can be changed to eight-inch ones if they seem pot-bound, as they get age. A thrifty Calla should have an eight or ten-inch pot; Fuchsias an inch smaller, while Eupatoriums, Plumbago, Roses, and Coleus will not need larger than seven-inch ones. In potting plants, always put in bits of broken crockery or brick in the bottom of the pot, then fill with soil, rapping the pot well to settle the earth together firmly. After putting in your

again, before giving more. With good drainage, you will never have sour, moldy soil. The Fuchsia needs to be kept quite moist, and will take a liberal allowance of water every day through the growing and blooming season. The Begonia requires more than most other plants, while the Calla likes to be kept very wet. Always have your water for this plant as warm as you can bear your hand in it. Always take the chill from the water you give any of your plants. Cold water checks their growth.

#### REST OF PLANTS.

All plants require rest. They cannot be expected to grow and bloom all the time. When they throw out no more buds, and seem to be inclined to rest, let them. Reduce their usual supply of water, giving them only enough to keep them from wilting. When they are ready to go to work again, and you can tell when that time comes by watching them carefully, increase their supply of water gradually. It is well, at such times, after the plant has been in the same soil for six months or more, to give a little manure-water. These fertilizing liquids are easily made, and stimulate the plants to healthy growth, if too much is not given. For a large pail full of water, use half a pound of guano. After it has dissolved, give from one to two tablespoonsful, twice a week, to each plant, for a month. I know of no better stimulant.

#### PLANT ENEMIES.

If your plants get covered with green lice, fumigate them with tobacco-smoke. Put coarse stems, smoking-tobacco or cigar-ends, on coals in a small dish, and hold it under the plants, over which a newspaper should be thrown to confine the smoke among them until the lice are stupefied; then shake the plants thoroughly, and sweep away all the insects which fall from them. After that, sprinkle them thoroughly, taking care to wet the leaves below as well as above. If the red-spider comes, you must sprinkle your plants daily, being very particular to see that the underside of the leaves are wet, for there is where the spider hides most. If you keep your plants well-sprinkled, they will not be apt to become infested with spiders, and they require sprinkling daily, when grown in a living room, in order to keep healthy. The greatest drawback to growing flowers successfully in houses, is the dry air they usually get there. If worms get

into the soil, dissolve a piece of lime as large as a tea-cup in a pailful of water. Use one-third as much of this solution as you do of clear water, when watering your plants, and I think you will rid them of these pests.

I have tried to give good, practical hints, and I have drawn them from my own experience. I hope they will help others to be as successful in flower-culture as I have been.

EBEN E. REXFORD.

Shioeton, Wis.

THE IPOMOEA LEPTOPHYLLA.

plant and seeing that the earth is well-shaken down about the roots, give it a thorough watering, and keep it from the sun for a few days.

#### WATERING PLANTS.

My rule is, never to water plants, as a general thing, until the surface of the ground seems dry; then give them a thorough watering, enough to run through the soil and out at the bottom of the pot. If it drains off readily, you need not be afraid of bad results from too much watering, if you wait until the surface is dry

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

By AUGUSTA LARNED.

### CHAPTER V.

"Here's a young maid with travel much oppress'd,  
And faints for succor."

In a moment when the south wind blows, or the rays of June fall more directly upon it, the green calyx of the rose expands, and it becomes a glowing and splendid flower. The transition from green and crude girlhood to ripe womanhood was equally sudden in Winnifred. For a long time she had been loitering on the threshold, full of contradictions, cruel and tender, hard and affectionate, capricious, self-willed, reluctant, and yielding—by turns impetuous and calculating. But the shock of her father's death had altered everything within her, and unconsciously she became self-poised with the power to guide her affairs with a firm hand.

The will-power that had made the old judge a terror to those about him, even when crippled and chained to his chair, came uppermost in her nature, and reduced all the discordant elements to obedience. Physically she gained new expressions. Her picturesque, vivid face took on an added beauty of outline and coloring. Her eyes, of that peculiar changeable gray that ranges in hue from warm hazel to blue, assumed new brilliancy and lustre. Her form, wondrously lithe and willowy, had rounded out into fuller proportions, and lost the meagerness of girlhood. Fate had decreed that Winnifred's first great sorrow should be her introduction into real life. She had grieved passionately for a few hours over the old man's death, but being free from all conventional standards of mourning, she sprang up like a healthy branch that has been beat out of its natural direction.

After that last fatal interview with his girl, the old man never spoke again. He lay upon his bed with the purple flush overspreading his face, and the dreadful stertorous breathing resounding through the house. His hands moved, and vainly clutched the air for relief. It was a dreadful sight, that death-bed, but Winnifred hung over him in an agony of grief and remorse, praying for one last look of forgiveness, which she believed was granted, in a moment of returning consciousness, just before death set its awful seal upon the grey and shrivelled mask of his features.

Edgar Swayne came to Winnie's assistance in those first, distracting, confused hours when Mrs. Braithwaite was only a large, limp bundle of helplessness, and old Nanna went about the house wringing her hands. But Winnie soon rallied from the stupor of her grief. Virginie's sympathy was like a cordial to her sore heart. She roused herself to see that the interment took place in accordance with the old man's wishes. Godless he had lived and died, and without exhortation, or prayer, or psalm, he was laid away in earth.

A moralist might have drawn some pregnant lessons from the barrenness of that intellectual power, unvivified by love, from a life withered and dried up by avarice and suspicion, and selfish lusts, but Winnie, as she stood sole mourner by that grave, felt only passionate sorrow for a father who had been fond of her alone of all the creatures on earth, who had trusted her and believed in her while distrusting all others, and whom she had mortally wounded in his last hours. There arose within her the determination to act on every one of his wishes, though she did not confess it to herself, even the implied wish that she should be hard to her mother.

Superabundant health and vitality asserted themselves, and in a few days a restless activity took possession of Winnifred. She was a little queen, and must set at once about regulating her kingdom.

Virginie had timidly suggested that Bradley be telegraphed for before the day of the funeral. Winnie was then in the first languor of her sadness.

"O, yes," said she, with half querulous indifference, "perhaps it will be best; he must come soon at any rate."

"But will it not be proper to inform him immediately?" Virginie had ventured; "you surely will wish to consult your cousin about many things."

"I never think of what is proper," said Winnie, with a sigh, putting her head back on Virginie's shoulder. "I don't mind about propriety, and I don't suppose Bradley has much of a head for affairs, and there is nothing to consult him about, for Mr. Swayne has made all the arrangements; but if you think he ought to come at once, you can ask Mr. Swayne to telegraph him from Deanport, on the river, where he is going to-night."

It was with a terrible inward protest, almost an execration, that Edgar dispatched the telegram to Bradley Halcourt, whom he disliked with the irrational instinct of a rival. Love is a blind and unreasonable passion, and there were conflicts going on in the soul of the young clergyman-at-large it is impossible to describe. The attractions of his sacred calling which he had once relished with ardor, were opening to him anew, but they grew pallid and bloodless beside this first, great, overmastering, irrational love. He saw in Bradley the man who was to come gaily sailing in on the tide of fortune, and make shipwreck of his life. He could have wished him hump-backed, bent awry, to revolt the eyes of Winnifred, for the hot blood coursing to Edgar's heart had effaced some of those lessons of charity that he once believed were a part of his being.

But days passed, and Bradley did not appear. Edgar dared breathe again. As hope and life revived in her, and the apathy of grief was shaken off, a new and delightful intimacy sprang up between him and Winnifred. She took him into her confidence, and unfolded her pet scheme for a school for the poor miner's children, and a Sunday service in the village, which would restore him to his true vocation. She made him, by subtle means, feel that he was necessary to her, and an organic part of her life-scheme. Her old teasing, mocking air had passed away, and in her presence Edgar breathed the perfume of Paradise.

Winnifred had plunged into affairs. She was now a woman of business, with a clearness of head and soundness of judgment that astonished the Deanport lawyer, her nominal guardian and adviser. When the will was opened it was found that the old judge had left her practically untrammelled, and had shown the utmost confidence in his girl's ability and prudence.

Half the day she was spurring about on Thunderbolt with tireless energy, keenly enjoying the excitement of rapid motion, and the novelty of her new life. Sometimes Edgar rode with her as she dashed off on a visit to the farms, or over the hills to inspect the mines, or went riding into the town, to order a grand, new barouche, or to look at carriage horses. A spirit of change was everywhere at work about the old hall. Men were busy trimming the shrubberies, opening new vistas down to the lake, and rolling and raking the gravel paths. The rubbish was being cleaned out of the greenhouse to make it ready for rare exotics. Carpenters, and decorators, and upholsterers had been engaged, and already piles of brick and mortar blocked the main entrance. Winnie was determined that the great days of the old minister's time should return. She would make her ancestral hall the grand mansion of the countryside.

On the morning of the day of Bradley's arrival, she led Virginie about through the old rooms, some of which had scarcely been opened and aired for years, and were close and musty, with dingy and tattered furnishings that still bore the signs of former luxury.

"This was my Lady Betty's room," said she, pushing open a door and raising a cloud of dust in a large, dark chamber, where the spiders had wrought undisturbed for years, and had festooned everything with cobwebs. "I have told you of Lady Betty, a distant relation of grand-papa's, and a great lady in England in her time. I will open the shutters, so that you can see her picture over the mantelpiece, in the high stays and stomacher, with patches and powder. It was painted by Sir Joshua Reynolds, and

some say I am like her, but I shall never die of love as she did. There was a perfidious man in England who broke her heart, and she came here and slowly wasted away; and after she died, the servants had a superstition that they heard her sighing in this room all night long; but of course that was mere nonsense. You shall have this chamber, Virginie, if you like. It has a pretty view of Glenmere and the hills. I will furnish it with delicious blue chintz and white muslin, and I will take down Lady Betty and hang the room all round with meek maidens playing on heavenly dulcimers."

"No, no," said Virginie, with a little shudder, as she looked about at the moldering things and great state bed; "I could not sleep where I knew that poor lady had suffered; I should always hear her sigh. Leave me to my own little nest with the narrow bed and the one window, for I am not used to grandeur, and it would not agree with me."

"Well, you shall have your own way, Mousie; but come to my room. I have taken papa's old study for my business office. It has the desks and all other conveniences. I shall have it refitted with fresh paper hangings, walnut and gold, and some fine oak chairs, and a Turkey rug in the middle of the polished floor."

Virginie had never passed that door without a certain dread. Next to it was Mrs. Braithwaite's closed chamber, which she had not left but once or twice since her husband's death; and though not positively ill, she kept her bed from melancholy inertness; there she would lie and count her beads by the hour. Winnie, in the full tide of her glowing and exultant life, had almost forgotten this flaccid and feeble existence; but there was one heart that pitied her, that wondered and saddened over the enigma of her strange, colorless, joyless being.

Virginie glanced timidly at the shabby old arm-chair where the judge had been chained so many years. "That is where papa used to sit," said Winnie, following her glance with a sigh, "O, that I could call him back, and see him frowning, and smiling, and scolding his wayward girl all in the same breath."

Virginie could not echo the wish. It made her shiver to think of calling back that dreadful old man, the very tones of whose shrill voice had made her heart stand still. In a moment Winnie began speaking again. "See here," said she, taking up a ledger from the table, "this is my bank-book, and I can draw checks for a large amount. How would you like, Mousie, to have me give you a little bit of paper worth a hundred and fifty dollars to buy a fine gown?"

"No," said Virginie, with emphasis; "I have not earned it; I do not want fine gowns, I only want your love and confidence."

"How silly it is of you to make set speeches, and ask for what you already have in such abundance! But I will give you a mark of my confidence such as I have never given to any one else. Do you see that great safe in the corner yonder? It is where poor papa kept his papers, his bonds, mortgages, and money. It opens by a bit of magic, for if you do not know to what numbers to direct the hand here on the dial-plate, you could no more open it than you could, as mamma believes, get into heaven when St. Peter refuses to unlock the gate. I have learned this witchcraft with great difficulty, and find myself repeating the numbers even in my sleep. I am going to confide them to you, for my memory is provokingly treacherous, and at some critical moment I might forget. You shall help me to keep the secret. I should like to share everything with you."

"Not this," said Virginie, with gentle resistance. "You must not intrust this secret to any one, not even to your lover. A great deal of mischief is done by carelessness. It would be like giving edged tools to a child."

"You are not a child; you are a little female Solomon, and you must help me to keep the secret," she repeated, with affectionate willfulness. "Now say the numbers over slowly after me—24, 36, 48, and see," she continued, bending down, and twirling the index point, "this is the way it opens."

Virginie glanced behind her. "Hush!" she whispered, "the passage-door is open, and I heard that new maid brushing the hall only a moment ago."

"No matter," returned Winnie, carelessly, "I can change the combination at any time, and then I shall only have the trouble of teaching you a new set of numbers."

The door did open at that instant, revealing the monkey face and bushy head of Steenie, who was beaming all over with delight, in the possession of a black velvet jacket and a pair of red stockings which his young mistress had bestowed upon him, for Steenie had been promoted from the position of bootblack and knife-cleaner to that of page.

"Mass'r Edgar's waitin' wid de hosses—has been a waitin' dis half hour," and Steenie rolled up the white of his eyes, and practiced his new bow, bending his supple body with the quick, graceful motion of a cat.

"O, yes," said Winnie, "I had forgotten all about my engagement to ride to the mine with Mr. Swayne. Now I must run and put on my new habit. Will you come and help me with the buttons, Virginie? To-day we will play that you are my maid; I will have a real one from town before long."

"O, let me always be your maid," said Virginie; "it is all I am fit for, and I should delight to dress you."

"No, that is not your mission, Mousie; I have other views for you," tapping Virginie's golden head, as she bent down to fasten a pretty kid boot. "You must make me as fascinating as possible, for I am going to meet that young engineer, and talk over the plan of sinking a new shaft and developing the mine. O, isn't it grand," she cried with a little outburst of triumph, "to be able to influence large things, and get out of the petty contemptible existence of a commonplace woman. Then, you know, there is the school to look after. I expect you to be very much interested in the school, Mousie. You and Mr. Swayne will work together beautifully. There, hand me my hat. This morning is too dolorous. It would crush me if I did not light it up; so you see I have stuck in a red feather. How comically horrified you look at the idea of my wearing red with my crape," she said, laughing at Virginie's puzzled face; "but doesn't that splendid Prince Hal, in Shakespeare, tell his lady love that they will see new fashions? There, hand me my whip and gloves. Good-bye, Mousie," kissing her, and the bright, audacious creature flashed down the stairs.

Old Nanna stood on the gravel path, in front of the hall, with her broad, black face puckered into a comical look of distress. Nanna's mourning was as nondescript as that of her young mistress, for the suit of sables, laid in many folds about her portly person, was crowned by a turban of flaming colors.

"O, little miss," she began in a half-sobbing tone, as soon as Winnie appeared in the sunshine, "'pears like ole Nanna might jess as well be dead and buried. Honey, dat new cook from de Port, she's mighty grau' and stiff, and ole Nanna's in de way, and ole Nanna's jess no 'count. An' dat new maid is shinin' de silber-plate dat old mass'r kep in bank; an' nobody but Nanna eber had de haudlin' ob dat, honey; and dey'll waste, an' dey'll spill, an' she can't even peep now to save de victuals. Poor miss'ible, wore out old creeter; she might better be under gravel."

Impulsively, Winnie threw her arms around the old woman's neck, while Edgar stood looking on in silence. "They shan't shove you one side," she said. "Do you suppose I am going to let anybody abuse my dear, old mammy? I will have the lodge repaired, down at the gate, that is all covered with white and red roses in June, and you shall live there, looking like a picture, in your bright, little room. Steenie can sleep there nights, and you shall have one of Finster's children to open the gate, and Virginie and I will come and visit you, Nanna, and take tea."

The sunshine in old Nanna's face was again eclipsed. "O, honey," she sobbed, clinging to Winnie's knees, "don't send old Nanna from you; she dotes on you, honey, as de birds dote on de mornin'. 'Pears like she toted Miss Susan, and you too, when you was little. She'll go pinin' away, an' breakin' her ole heart a frettin' after you, ef she's cooped up in a cage by herself. Let me stay, honey, an' wipe de floors wid de hars of my old head, for my beautiful, proud birdie to walk on."

Winnie lifted up the old woman very tenderly. "I thought you would be delighted with the lodge plan, because it would make you independent, and you could have every thing your own way; but if you are unhappy at the idea of leaving me, you shall stay here at the hall, as long as you live, and have nothing to do but wait upon mamma; I will let you keep the keys, and then the other servants will have to look up to you."

"Bress your heart alive, honey," cried the old creature in a transport of delight, kissing Winnie's feet, as she mounted into the saddle, and in a moment she was cantering down the avenue by Edgar's side, like a fairy princess riding through an enchanted landscape.

Virginie stood in the place where her friend had left her, with a heart ill at ease; for she had carried a secret burden many days. Would not all be changed? she had

asked herself with much perturbation of spirit, when Bradley Halcourt appeared as the affianced husband of Winnie? Could she remain in that house as the pet and favorite of his proud, young wife? She was haunted by the thought of Winnie's cold, altered looks, when her love for the stranger had turned to distrust and hate. Though impulsive and affectionate, she knew that Winnie could be hard, for was she not habitually hard to her mother? Something she had not dared to own to herself rose up to face her, and, with a stifled moan, she put her hands to her eyes, to shut out the golden sunshine, and then suddenly resolved that she would write to the good pastor, Viardot, in Geneva, and ask him to find some asylum for her in her native land; there, engaged in humble toil—it mattered not what—she would try and forget this strange, sad episode in her lonely life.

As she shut herself into her little chamber, she saw lying on the dressing-table a folded letter, and, as her eye fell upon it, an evil foreboding intruded upon her already disturbed mind. The note was not very clean, and it was addressed to her in a hand with which she was unfamiliar. After a moment's hesitation, she took it up, and opened it, and her eyes traced these words:

"MISS VIRGINIE DUVAL: If you wish to hear tidings of your uncle, Walter Freeborn, you will visit the pine grove, at the north end of the lake, this afternoon between the hours of three and four. You are requested to keep this communication secret, and to come alone, or else it will be impossible for the writer to confer with you."

There was no signature, and Virginie, as she read it, experienced a strange tremor, and sinking of the heart, instead of the joy that might have seemed natural at this first token in evidence that her uncle still lived. Since the great blow which his failure to meet her in New York had occasioned, she had thought of the possibility of finding him with inexplicable dread. The mystery thrown around this strange note only added to her disquietude, and she sat for a long time upon her little bed, holding it in her hand, and trying to steady herself with the hope that uncle Walter might be about to appear just at the proper moment to help her solve her life problem.

At three o'clock Winnie had not returned, and Virginie tied on her hat, resolved to walk to the pine grove. Her face was pale, and the large blue eyes, with a pathetic wistfulness in them, looked as if they had wept. Now, as she left the door, she called to the great hound, Hector, to follow, for, it had occurred to her that in a conference with a stranger, it would be well to have this faithful creature's protection. The autumnal quiet was absolute, for a golden haze brooded over the distant hills, and the waters of the little lake lay smooth as a polished steel mirror, reflecting the sky tints and brilliant foliage in its clear depths.

The path Virginie took in her rapid walk skirted the lake, and passed not far from the fisherman's (Finster) cottage, where a boat was drawn up on the little beach filled with a brood of bareheaded children. Virginie, as she climbed the bank to get into the grove, was hidden by trees, but she had a clear view of the cottage door, and, to her astonishment, she saw the large, slow, heavy form of Mrs. Braithwaite, clad in black, with the slight lameness in the left foot, entering that humble portal. She could hardly credit the evidence of her senses, for it was the first time, to her knowledge, that Mrs. Braithwaite had strayed so far from the Hall for many months.

The pine grove was dense and dark, like a temple devoted to the infernal gods. The tall tree-stems admitted furtive gleams of light that stole along, and were quenched in the deep, green gloom. The mat of pine needles rustled stealthily under Virginie's feet, and the twilight made by the boughs had hardly closed around, when Hector bounded from her side, and, in a moment, a tall, slender man advanced out of the trees, patting the dog's head. He was decently clad, and had a noiseless, cat-like tread. From his snipple form, and the character of his dark, watchful face, it was impossible to tell his age. The shining black hair clung close to his temples, and his eyes had a trick of roving about, taking in everything without looking at anything.

"You seem to know my dog," said Virginie, in a low voice, as he came towards her, and raised his hat?

"O, yes, miss: I always make it a point to get acquainted with the large dogs in the neighborhood where I am stopping."

"Did you send me this note?" Virginie asked directly, drawing the scrap of paper out of her pocket.

The man glanced behind him, and drew a step nearer. "Perhaps I did, and perhaps I didn't; at any rate I came here to meet Miss Virginie Duval; and I can assure you," he added, the peculiar smile curling about his thin lips, "that your uncle, Walter Freeborn, is an affectionate uncle, and that he feels the deepest interest in his lovely niece."

Virginie shrank back from any nearer approach, for this man's gallantry was insupportable. "He has a singular mode of showing his interest," said she, in cold, faint tones. "He left me at the moment of my greatest need to the charity of strangers, a prey to the most cruel anxiety as to his fate."

"Now don't be hard on your uncle," the man returned, as if he were coaxing a child. "He would have met you if he could. The fact is, he was detained against his will. Your poor uncle has been very unfortunate."

Virginie could scarcely keep from trembling, visibly. There was a terrible, cold, heavy load upon her heart, but she managed to say, with a touch of resentment, "If my uncle was ill why did he not send me a message? Why did he not write?"

"He was not ill," returned the man slowly, and almost in a whisper, and fixing his strange eyes upon her, with a power she could not resist. "He was detained, I tell you, against his will."

"Where was he detained?"

"Do you wish to know?"

"Yes, tell me all," she faltered.

"He was confined in prison; he could not write to you because he had changed his name, and was not then known as Walter Freeborn; but he has since made his escape. The mistaken zeal of Bradley Halcourt, in trying to find him, in advertising him all over the country, has raised the very devil, and obliged your uncle to keep in hiding much longer than otherwise would have been necessary."

Virginie felt as if she had received a staggering blow. She tottered back and put her hands to her head with a loud moan: "My uncle a convict—a felon?"

"Why do you use such unpleasant words? Your poor uncle was the victim of circumstances; any decent jury would have acquitted him on the ground of emotional insanity. You, at least are bound to be charitable."

"I will not judge him," murmured the poor girl, with blanched cheeks, "until I know of what crime he is accused."

"No, I wouldn't judge him," he returned with a leer. "And it is about time, my pretty little niece, that we dropped this disguise. You must already have suspected who I am. Your affectionate heart must have recognized your fond uncle."

Virginie sprang back with a cry, and her gaze was arrested by the large, shambling form of Father Dooley, who was moving through the trees, at a little distance, and had stopped at the sound of her voice. The three gazed at each other a moment in silence, and then her companion raised his hat, nonchalantly, and the priest passed on.

"The old priest has gone to confess Madame Braithwaite," said the man in a careless tone; "he will have to hold his tongue. You see I am deep in the secrets of the old Hall."

Virginie had already begun to move swiftly out of the shadow of the trees. "I shall make no secret of your arrival," said she, with pale defiance, and the scared look of a hunted animal in her blue eyes; "I shall speak to my friend, Miss Braithwaite, immediately, and I shall send word to Bradley Halcourt."

"O, no you won't." The velvety, treacherous voice was not raised. "It won't be an easy thing to let your fine friends know that your uncle is an escaped convict, is hiding up in a miner's hut, on the mountain. You see I can make it appear that you have had knowledge of me from the first. I can prove to this Bradley, as clear as daylight, that you have wormed yourself into his confidence, and have had secret meetings with me. But I am a loving, kind uncle, and I shan't do it, but you will take good care not to go back on me."

This man filled her with loathing and horror, and the poor girl turned now with a kind of desperate courage, and her voice sounded harsh and strange in her own ears. "What do you want of me?"

"What should I want but a little help and regard from my own niece? You are a deuced attractive girl, and you can make your attractions pay. Already you are in clover, living with a great heiress, who fairly adores you. You can get what you please, and you can wind her about your finger; and you owe it all to me who sent for you to come over, and put you in the way of making your fortune."

"I have never taken money from Miss Braithwaite. I earn nothing. I am simply a dependent in her house. She has given me only a few presents of clothing."

"But you must take money," said he, in his soft, exasperating tones, "and you must come instantly when I send for you. The time may arrive when it will be necessary for you to introduce me to your friends."

Virginie had but one thought, to free herself from that hated presence. She shook off the hand he had laid on her arm, and fled, panting and breathless, down the wood-path, almost into the arms of Bradley Halcourt.

(To be continued.)

### TRUST.

I cannot see with my small human sight,  
Why God should lead this way or that for me;  
I only know He saith, "Child follow me,"  
But I can trust.

I know not why my path should be at times  
So straightly hedged, so strangely barred before;  
I only know God could keep wide the door,  
But I can trust.

offers to the public The **FINEST TOILET SOAP** in the World. *Use the purest vegetable Glycerine in its manufacture.*  
**For Use in the Country it has No Equal.**  
 Worth ten times cost to every man, woman and family in Christendom. Sample box containing 3 cakes of 16 ozs. each, sent free to any address on receipt of 75 cents.  
 Address **B. T. Rabbit, New York City**  
 For Sale by all Druggists.

NEW YORK, FEBRUARY, 1877.

**"A BIT O' CHRISTMAS GREEN."**

When preparing Christmas decorations, if evergreens are abundant, make plenty of garland trimming. If not, confine your efforts to mottoes, crosses and wreaths, and light trimming for pictures. In making garlands, use strong twine or cord in preference to wire, as the latter is liable to twist. Fasten one end of the cord to some stationary object, and having a supply of evergreens cut into small branches, bind them on the cord one bunch after another with fine twine, one firm twist being sufficient to hold them in place. Cedar, Juniper and Hemlock are generally used for this work, but Spruce, Fir and Laurel will not come amiss, and even Pine can be made effective in skillful hands. To give color, work in occasional clusters of bright berries, American Holly, Winter berries, Burning Bush, Bitter Sweet, or whatever you can find. Generally, the neighboring woods and swamps will furnish something of the kind; if they do not, make imitation berries by stringing three or four soaked peas on fine wire and dipping them in a varnish of red sealing-wax dissolved in spirits of wine. Or tufts of cotton can be fastened to wire and dipped into melted sealing-wax, and molded into berries with the fingers. Everlastings may be used, but are not as appropriate as berries. Above all, those unsightly colored tissue paper flowers sometimes used, should be avoided, though if nothing better can be had to relieve the somber evergreens, little tufts of pure white tissue paper cut fine as for baskets and crimped are admissible. Be careful to make these garlands light and airy, and twine them around columns and railings, attach them along the cornices, and if the ceilings are not too low festoon them from the cornices, looping them up in the centre of the ceiling. Lighter garlands of the same kind should be made for trimming the tops of the doors and windows and the gas fixtures.

Mottoes made of evergreen letters are one of the essentials. Cut the letters of the requisite size and shape from strong straw board and sew or tie on small

branches of evergreen with stout dark thread. The handsomest letters are of rustic text and are covered with Ivy, Laurel or Holly leaves, and a few bright berries mingled in. The beauty of all the decorations mentioned so far can be greatly enhanced by frosting. Brush lightly with liquid gum and sprinkle with glass dust on powdered mica, which may be obtained at a trifling expense. Fragments of glass might be pulverized at home for the purpose, if especial care was taken to protect the eyes. For variety, crest some of the frosting with starch to imitate hoar frost.

Crosses, wreaths, anchors and letters made of moss and everlastings divide the honors with those of frosted evergreens. Procure that moss which grows in large thin sheets on old logs, wash it through two or three waters and dry. With a pair of sharp scissors cut it according to the required designs and fasten it to a pasteboard foundation by winding with dark thread. Cut the stems of the everlasting quite short, about half an inch, dip them in paste or glue and insert in the moss; when dry they will remain secure.

Another charming variety of letters, crosses, etc., is made of gray moss crystalized. Select stiff gray moss of coarse open texture, dampen and sew on a pasteboard foundation. Next prepare a solution of alum, one pound to a quart of hard water, heat gradually in a brass kettle until boiling hot, then allow to cool, when it is ready for use. A little extra care must be taken with the crystalizing. The moss must be perfectly dry; hold the article over the kettle, and with a cap or large spoon repeatedly pour the water over the moss, moistening the pasteboard as little as possible. This process produces more frost-like crystals than the ordinary one of immersion.

But the loveliest, daintiest mottoes of all are of pressed ferns, and are quite easily made. Sketch the motto on Bristol-board with a lead pencil, in any text you like. Choose your smallest, greenest ferns for the capitals, and take the divisions of the fronds for the smaller words. Brush the back of the ferns with gum-arabic, lay carefully in place, and you have a "thing of beauty," which will be a joy as long as it endures.

**A NEW AND BEAUTIFUL FLOWER.**

Several summers when travelling in the Rocky Mountains, we have seen a species of Ipomœa, so large and rich in color, growing low and branching over the ground, that it attracted our attention. It was so beautiful and luxuriant that we have often wished it was cultivated in our Eastern flower gardens, like the Aquilegia Cœrulea, also a native of the Rocky Mountains, it would be sure of popular favor.

We are glad to learn that, through Mr. Bliss, the seedsman, and his friends, seed collectors, seeds of it have been gathered, and it is thus introduced to flower lovers for the first time. Its botanical name is Ipomœa leptophylla, and is thus more particularly described: One of its most striking characteristics is its enormous perennial root. A few years ago a root was sent to the East which was shaped like an enormous rutabaga, and would nearly fill a flour barrel. While the root is decidedly perennial, the stems are annual, two or three feet or more high, and branching from the very base, throwing out great numbers of branches, and forming a bushy mass about as broad as it is high. The leaves are two to four inches long, very narrow, and like the rest of the plant, perfectly smooth. The flowers, either solitary or two or three together on a stalk, are two to two and a half inches long, funnel-form, but less open at

the throat than the common Ipomœas, and of a pleasing rose-purple color. The flowers are produced in the greatest profusion, a large plant having the appearance of an immense bouquet. The plant is found on the Platte and Canadian rivers, and also on the table lands of Colorado; as in the last named locality the mercury falls in winter to 20° and 30° below zero, there is no doubt about the hardiness of the plant in any part of the United States, and we deem it worthy to be tried in every flower garden.

See Illustration, page 20.

**AWARD OF PRIZES FOR COOKING RECEIPTS.**

The cooking receipts forwarded to us for competition were submitted for careful examination to other parties than the Editor, so that there might be no awards to his friends or interested acquaintances, and the verdict seems to be unanimous, as follows:

First prize, \$5, to Mrs. W. A. Ramsauer, Lincoln, N. C.  
Second prize, \$10, to Olive E. Chapman, Penn., Mich.  
Third prize, \$5, to each of following: C. S. J. and Hortense Share.

The following are mentioned as exceedingly valuable, and they will all be published this year:

Mrs. W. C. Holmes, Leicester Junction, Vt.  
Ella S. Phelps, Racine, Wis.  
Mrs. H. C. Early, Lynchburg, Va.  
Mrs. A. C. Ackerman, 123 Reid avenue, Brooklyn, L. I.  
Mrs. Caroline E. Cocks, Fordham P. O., N. Y. City.  
Mrs. J. H. Smyth, San Francisco, Cal.  
Mrs. J. J. Randall, Winona, Minn.  
J. Robertson Archer, Pt. Gibson, Miss.

The following comments are added by the Committee:

COMMENTS UPON MANUSCRIPTS SENT TO COMPETE FOR PRIZES.

In reply to the offer of prizes for the twenty-five best receipts for cooking of all kinds, manuscripts have been received at this office from the Atlantic to the Pacific Slope. Not a State in the Union but has sent contributions to our list, making in all nine thousand six hundred and sixty-six receipts!

Of course, in so large a number, there have been many manuscripts that are almost identical; and the receipts for Chicken Salad, Pressed Chicken, Chicken Cheese, Escalloped Oysters, Parker House Rolls, &c., Tomato Soup, Oyster Soup, Chow-chow, Pickles of Cucumbers and Tomatoes, Chocolate Cakes and Puddings, Cream Cakes, Snow Pudding and Queen of the Puddings, Jelly Cakes, and Cold and Hot Slaw, have been repeated in hundreds of manuscripts with but little variations in the receipts. Of course, in such cases, those first received and best arranged were selected.

But where all were so good it has not been an easy task to choose those which were most suitable for the prizes, and we can only say with the Irish Bridget—"I have done me endeavor, ma'am, an' troth I'm sorry if it din'na suit ye."

In some manuscripts the directions were not attended to, and several kinds of cakes or pies were given, instead of only two. In a few, the pages were written on both sides of the paper, thus making them of no use, as printers cannot use manuscripts thus written.

In other cases the location was not given correctly, either the town or State being omitted.

Taken as a whole, however, the receipts were most excellent; and while they show that the delicacies of the table are not confined to any State, they also declare that our Southern and Western sisters excel the Eastern, in some branches of cookery.

An ancient poet of the Elizabethan age wrote:

"The surest road to peoples' hearts, I find,  
Lies through the mouth, or I mistake mankind."

And the maxim holds as true in this 19th century.

Good cooks also make good tempers, for we must allow that the temper of mankind depends greatly upon the state of the digestive organs; and if greasy, leathery, unattractive food is substituted for that which is wholesome and toothsome, we cannot grow either in Christian graces or beauty, without a terrible struggle of both mind and body.

The prizes were awarded because they were each excellent as collections, were well arranged, and principally because they contained the most and best of new recipes.

**A WORD ABOUT ADVERTISEMENTS.**

We never mean to take any advertisements from any parties but, from the best knowledge and inquiries we can make, seem reliable and will do just as is promised. So far as we know, no swindle or patent medicine has found its way into our columns, and never, knowingly, do we permit anything but is of respectable character.

An advertisement of the Ohio & Kentucky & Texas Land Company was sent us by a reliable agent, who assured us that the matter was all right, and that every word said by the advertiser could be depended upon. We had dealt with this agent for years, and found him and his opinions reliable in the highest degree. We therefore inserted it. Some who patronize it, call us to task, for our responsibility in the matter. We can only say that we took usual care, and asked every one who knew the parties, and they told us that it was a good enterprise. It may or may not be a swindle. No one seems to have positive information, and we have no means of judging. We can only say from complaints received, do not trust that company any more.

**A Costly Number.**—This number is a costly one. Upon the opposite page is a perfect copy by electrotypes of a splendid steel plate engraving which cost over \$500; upon the fourteenth page is the \$25 collection of new recipes. Add to this the new music, and the other prize floral and household articles which we publish, and the reader has for the small sum of 11 or 12 cents a value of over \$541.

**New Floral Premium.**—The beautiful flower, Ipomœa leptophylla, which we illustrate this month, we have made arrangements to give as premium free to any one who being now a subscriber will send us before May 1st one more yearly subscriber, or two six months' subscribers. It is new, never yet introduced. Its flowers are very large and brilliant. It is worth having. Remember, only one new subscription is necessary to secure it free.

**Astonishing Premiums of Flower and Garden Seeds.**—The splendid offer of flower seeds, which we make upon our first page of cover, are open only to the 1st of June, and must in all cases be accompanied with the certificates which are printed on the paper. No order can be filled without the certificate. These offers are made both to encourage our readers to get flower seeds and work for the interest of the FLORAL CABINET in extending its good name and fame, and circulation.

MEMORIES OF HAPPY CHILDHOOD.  
[FROM STEEL-PLATE ENGRAVING.]

R. GRAVES, A.R.A., SCULPT.

## Ladies' Boudoir.

## OUR MINISTER'S SERMON.

The minister said last night, says he,  
 "Don't be afraid of givin';  
 If your life ain't worth nothin' to other folks,  
 Why, what's the use of livin'?"  
 And that's what I say to my wife, says I,  
 There's Brown the mis'able sinner,  
 He'd sooner a beggar would starve than give  
 A cent towards buyin' a dinner.

I tell you our minister's prime, he is,  
 But I couldn't quite determine,  
 When I heard him a givin' it right and left,  
 Just who was hit by his sermon.  
 Of course there couldn't be no mistake  
 When he talked of long winded prayin'.  
 For Peters and Johnson they sot and sewed  
 At every word he was sayin'.

And the minister he went on to say:  
 "There's various kinds of cheatin',  
 And religion's as good for every day  
 As it is to bring to meetin'.  
 I don't think much of the man that gives  
 The loud Amens at my preachin',  
 And spends his time the followin' week  
 In cheatin' and overreachin'."

I guess that dose was bitter enough  
 For a man like Jones to swaller;  
 But I noticed he didn't open his mouth,  
 Not once, after that, to holler;  
 Hurrah, says I, for the minister—  
 Of course I said it quiet—  
 Give us some more of this open talk;  
 It's very refreshin' diet.

The minister hit 'em every time;  
 And when he spoke of fashion,  
 And riggin's out in bows and things,  
 As woman's rulin' passion,  
 And coming to church to see the styles,  
 I couldn't help a winkin'.  
 And a-nudgin' my wife, and says I, "That's you;"  
 And I guess it sot her thinkin'.

Says I to myself, that sermon is pat,  
 But man is a queer creation,  
 And I'm much afraid that most of the folks  
 Won't make the application.  
 Now, if he had said a word about  
 My personal mode of sinnin',  
 I'd have gone to work to right myself  
 And not set there a-grinnin'.

Just then the minister, says he,  
 "And now I've come to the fellers  
 Who've lost this shower by usin' their friends  
 As a sort o' moral umbrellas.  
 Go home," says he, "and find your faults,  
 Instead of huntin' your brothers';  
 Go home," says he, "and wear the coats  
 You tried to fit for others."

My wife she nudged and Brown he winked,  
 And there were lots o' smilin',  
 And lots o' lookin' at our pew—  
 It sot my blood a bilin'.  
 Says I to myself, our minister  
 Is gettin' a little bitter;  
 I'll tell him, when the meetin's out, that I  
 Ain't at all that kind of a critter!

HINTS TO COUNTRY GIRLS ABOUT  
THEIR BED-ROOMS.

In offering the following homely suggestions, the writer makes no pretension to advancing any very novel ideas, but hopes they may prove useful to some of the *petites soeurs des pauvres*, who may, like herself, be thrown into the country, twenty miles from town, with little to aid in their love for the beautiful, except their native ingenuity, and the necessity that we are told is the mother of invention.

In the first place, the bedstead should be low—I sawed mine off to within a foot of the floor—and the bed evenly and squarely made, and flat on top. Those who live in the country know what high, inaccessible mountains of feathers, heaped up in the centre, generally greet you on entering a country bed-room, hence the suggestion. Large, square pillows look much better than the small ones generally seen; and with these one can dispense with a bolster. As pillow-cases, even when only once used, will look rumpled, pillow-shams add much to the appearance of the bed. They should be large and square—thirty-two by thirty-

four inches is a good size—with ruffle three inches wide after being hemmed. A braided pattern all around is pretty, or, instead, there may be a row of tucks. The centres may have braided or embroidered initials or monograms, six or seven inches long. The braiding pattern can be worked with coarse, black silk, the lines being followed either on the sewing machine or in chain stitch embroidery. The material may be linen, cambric, or plain white cotton; white Swiss muslin is very pretty, lined with bright colored cambric.

Wooden washstands will be much improved by tacking a piece of oil-cloth, which so closely imitates white marble, neatly over the top, taking care to have the edges covered, and the tacks hidden underneath. Mats should be beneath each article on the stand, and these can be easily and prettily made of round pieces of white pique, with crocheted edge of white cotton or red wool. Every washstand should have behind it a small wall-tidy; those of white net are pretty—round-meshed, mosquito net will do—darned with white embroidery cotton in any pretty pattern, and lined with bright cambric, and edged either with a quilling of pinked cambric, or with cheap white lace. White ones are pretty, made of white pique, scalloped around with coarse embroidery cotton, and a braiding pattern stitched with black silk, like the shams; but white tidies do not suit white walls. A very cheap one is made by taking solid, colored calico—one before me is gray—turn over on the right side a hem an inch and a half wide, and stitch with black; then spatter in each corner a cluster of ferns, and in the centre either a monogram or initial, or else a large group of quaintly-shaped leaves, ferns and graceful views. A bow of bright ribbon at the corners is an improvement. Tidies may be made in the same way for the tops of wooden bureaus that have been defaced, and for the backs of chairs.

For cords to hang pictures, homespun yarn can be twisted into looking very respectable, but it must have a strand of twine mixed in.

Amongst the various suggestions about cone work, I have seen no description of the six-pointed, star-shaped frames for small photographs; these are nine inches from point to point, and have a hexagonal opening in the centre for the picture. A small piece of glass must cover the opening, and this and the picture are fastened in by having a piece of stiff paste-board, star-shaped, sewed around the edges. Pretty match receivers to hang on the wall can be made of the same materials; mine is about ten inches long and six wide where the little inch and a half box for matches is sewed on; it narrows to the top, and, above the box, is cut out to imitate carved wood.

If at a loss for vases for your mantel, and you have any of the bluish gray jars in which West India preserves are put up, cut off the straw handles, and, if you can, have a round, funnel-shaped mouth made of tin; paint the whole with asphaltum varnish. These look well without the tin. On my mantel are two of the little white wood cages, not a foot square, in which canaries are sent on their travels; these are lined with dried ferny, green moss and grasses, and berries fill the top. They make unique bouquet-holders; they also make beautiful hanging baskets; in one of my windows hangs one filled with green tradescantia; in the other is one filled with tradescantia, zebrina and Kenilworth ivy, and it must be seen to be appreciated. Another novel hanging basket can be made of a large gnarled and knotty squash, with top sawed off and cleaned out; one which I used as a pot for a fine scarlet geranium was the admiration of all beholders,

and the plant bloomed profusely. The long, gourd-shaped squashes, with part of the large end sawed off, and suspended by cords, make pretty corner cornucopias for grasses and autumn leaves; sometimes their color needs no change, but if it does, they can be stained and varnished. Here let me say that I stain every thing with asphaltum varnish; as Mrs. Toodles would say, "it is a handy thing to have in the house." With it I've varnished old gilt cornices—leaving portions gilt—until they looked almost new; it will hide ugly scratches on furniture, and will stain any thing you wish a dark color. Ten cents will get enough to last a long time, as it must be diluted with turpentine.

Having seen in an old CABINET that a turtle shell makes a pretty card receiver, I tried to see if one could not be fashioned into a jewel stand, but it was too flat; then one of the farm servants brought a terrapiu, which answers nicely since the shell is several inches deep, and is a pretty brown, spotted with yellow. The terrapiu must be boiled nearly an hour, until the meat can be pulled out perfectly clean, then a narrow ribbon can be run under the vertebrae, tied in a little bow at each end, and pasted fast. For mine, a friend contributed a little stand of carved walnut, about three inches high, with four little feet to rest on the bureau, and four to support the shell.

Sheepskins cut in rectangular shape make pretty and comfortable rugs, either left white or dyed with aniline, and they can be combed out when washed. One of my rugs is the skin of a red fox, tanned head and all; where fox-hunting is as prevalent as in this part of the world, these are easily procured, and the tanning will cost only a few cents. They must be lined with cloth, cut the shape of the skin, but larger; some that I saw lately at the Centennial, from Norway, were lined with black, and had narrow, pinked strips of red, white and blue flannel or cloth stitched around the edge.

To make a rustic picture, buy a little five cent wicker basket about three inches long, cut in half, handle and all, and sew to a piece of Bristol board; fill the basket with mosses, lichens and tiny pressed ferns, then frame in a deep frame. On the wall I preserve a souvenir from the valley of Chamouni in this shape. I have seen the basket filled with different colored birds' feathers, and the effect is pretty. Above each of my pictures I place small bouquets of grasses, pressed autumn leaves, ferns, berries and everlasting; the sprays of the wild bamboo vine, with its brilliantly blotched leaves and black berries, are specially beautiful. Press the leaves with an iron, leaving the stem to twist its own way. My pressed autumn leaves are dipped in common, yellow, melted wax, then powdered carmine is rubbed on with the finger, and they are as brilliant as before being pressed.

Perhaps it may not be generally known that common glue, dissolved in vinegar, will answer the same purpose as the troublesome contrivance that has to have two vessels; one to contain water; all one has to do is to set it near the fire—not too near—when you wish to use.

If you have ink stains on your furniture, oxalic acid, dissolved in tepid water and left to stand on the one place a short time, will take it entirely out of oiled wood; I have not tried varnished wood. Kerosene, applied with what my mother used to call "elbow grease," will take out white spots from furniture, but only with long and patient rubbing; otherwise it gives a greasy, smeared appearance to the wood.

A VIRGINIA GIRL.

## Household Art.

## AN AFTERNOON CHAT.

"What lovely lambrequins!" exclaimed Mrs. Grey to Mrs. Nelson, one afternoon, when she had dropped in there for a friendly call. "Really I think you are extravagant, to buy new lambrequins when your windows were already so nicely furnished with curtains."

Mrs. Nelson smiled. There was a secret about those lambrequins that she had not intended to disclose to any one; but to be called extravagant, she could not stand that, so she said:

"Oh, those lambrequins were very cheap, in fact, I made them out of some old lace curtains that I never expected to use again. You see I had got tired of my long lace curtains that I had used winter and summer for three years, and longed for a change of some kind; then, you know, we use this room for both parlor and sitting-room; and, in the winter, when my two wide-awake boys were in the house all the time, my poor curtains had a hard time of it, trying to look respectable all winter; the children must see out, and as the curtains were rather voluminous, it was impossible to keep them out of their way. I was going to get some cambrie and line some old lace curtains that I have, and make lambrequins that I could use without any curtains underneath them; but husband thought that the times were too hard to admit of our spending even that much for curtains, when we had curtains for our windows, so I had to set my wits to work to accomplish what I wished without calling on this economical husband of mine. I had almost given it up when I was up in the garret and came across these old forgotten curtains—they were much nicer when new than the ones I had intended to use—and as they were close work I thought I could make them do without lining, so I took them down and began with them. I took a needle and some coarse cotton and drew together all the slits that I thought would show; next I washed them, and bleached them by boiling in borax water and drying in the sun; when they were dry, I starched them in hot, thick starch, and after spreading a sheet on the floor in the spare bedroom I pinned them on it, one on top of the other, putting the pins about five inches apart and stretching the curtains pretty well. When they were dry I plaited one side of each in three large box plaits and run a strong string in from the middle of each plait to the other edge, and gathered it up as much as I wanted it, making the string in the middle the shortest. You see I have curved boards at the top of my windows that make curtains stand out from the window in the middle. I tacked the curtains to these boards, and then got out my stock of pressed autumn leaves and ferns, and arranged a bouquet for each plait and a spray for down the middle of each. They looked so pretty, when I had got them done, that I felt paid for all the time and trouble I had expended on them; and when my husband came home, and I saw he was pleased, I was proud. Now, you see, I have no long-looped curtains to bother with; nothing but these plain, white blinds—which, by the way, are made of ten-cent muslin, with a thin stick lashed in each end to fasten them up with and roll them on—and the lambrequins that will stay clean and fresh all winter, because they are out of the children's reach, and I will have my curtains fresh and nice for the summer, when my boys can be out of doors part of the time."

Mrs. Grey looked pleased and thoughtful. After a time she said, "I don't see how you can find time to

fix so many things of that kind, with your little children to attend to. My children are old enough to go to school, and I can scarcely find time to do anything but sew for them, if I want to have them look like other children. And then it seems that I get no thanks for it; they are never willing to spend an evening at home, but always have some place to go to, and I have not the heart to refuse them after they have been housed up all day. Then my husband always seems to have more business to attend to in the evening than at any other time; I never see him before ten o'clock."

Mrs. Nelson knew all this, for she had seen Mrs. Grey's little girls dressed up to every ruffle and tuck of the fashion, even to go to school, and had also seen the bare, cheerless rooms which they called home, and was glad of a chance to give her neighbor an insight into the way she run the machinery of her household.

"Don't you think, Mrs. Grey," she said, "that you could afford to hire some of your sewing, if you have so much to do, and devote the time thus gained to beautifying your home, adding games and amusements for the children, and every thing you can think of that might attract your husband to his home?"

"Oh, yes; I suppose I could afford it, but it costs so much to put out sewing, and I want to save all I can."

"Well, take a sewing girl in the house, then, for a few weeks each season, that will be cheaper, perhaps, and if you use your time to advantage, I am sure you will not feel that you are any poorer at the end of the year, and as to having your husband spend all his evenings away from home, why I would not stand it. Now Charlie used to think he could do the same thing, but I soon put a stop to it by showing him that home was the most pleasant and enjoyable place he could find. I always keep a pair of nice slippers for him, and a warm dressing-gown, and have them where they are warm and handy; then I manage to have plenty of late papers and magazines on the table, and keep my guitar strung up, if I have to sacrifice something once in a while to do it. After supper, if he gets his gown and slippers on, and gets to reading once, I am sure of him for that evening at least. Then I get him interested, and ask his help in everything I do, till now he takes as much interest in adorning our home as I do, and he is such a help—a man can do many things very easily that a woman is very awkward about. We make all our own brackets, sawing things out of soft wood, and staining them to imitate any wood we wish. I will be happy to render you any assistance in that line you would want. He made the molds for all the leaves and for the petals of all the flowers I have on my wax cross. You know that kind of work is expensive if you have to buy all the molds. Mr. Grey admired the cross very much when he was in here the other evening, and I will tell you how to make the molds, and help you arrange it all, if you want to make something of that kind to begin with, it would please him I know. To make the molds you must gather the natural leaves of the kind you want to make in wax, and with a brush, cover the under side of them with lard; then mix in a bowl one-half pound of plaster of Paris with enough water to make a stiff batter; dip out quickly, as it soon hardens, and cover each leaf on the under side with a thick coat of the plaster; smooth over with a case knife, then in half an hour turn over the molds, and carefully remove the leaves with a pen-knife; let them stand till they are quite hard and they are ready for use."

"Thank you; I think I will try that, and if George likes it, I may come to you again for help. I would like to do such things if I thought I could, and he would help me. I thought he did not care for such things."

"Well, he does, very much; why, when he came in here about that book the other night, he staid nearly all the evening just because, he said, it was so cosy and comfortable here; and he admired everything of the kind I have in the room, even to those small steel engravings framed in autumn leaves. And he wished me to tell you how I fixed a bottom in that cane rocking-chair and made it so easy. You see the cane that was in when we got it was not very good, and it gave out in a few years. I thought I could not spare the chair, for it is the one Charlie always sits in. There was no one in town could fix it for me, so I had to do it myself. It took some time to study it out, but after a time I had it all planned how I thought we could fix it, and after I had the materials ready, I asked him to help me. We first removed all the cane from the seat of the chair and then took a long piece of whip cord, tied a knot in one end, and drew the string through one of the holes in which the cane had been fastened; then we drew it across to the opposite side of the chair through two holes, then back again, and so on clear across the chair. Then we knew we had a foundation of rope that would never give way. Over this we tacked two pieces of coffee sacking, having the upper one a little larger than the other, and leaving it loose in front. Between these we stuffed ten cents worth of curled hair and then fastened the top down in front. This cushion I covered with scarlet flannel, over which I put a cover of rosettes of old black alpaca, lined with the scarlet flannel; these sewed together show the red flannel in between very nicely, and it matches the tidy that I made of scraps of fine, white muslin, and lined with red flannel, sewed together in the shape of a diamond, and trimmed around the edge with a crochet and fringe of No. 8 cotton. Now the chair looks better, and is much more comfortable than when we first got it."

Mrs. Gray went home, resolved to do what she could to make their home attractive to her loved ones; and we know she will succeed well, for she took Mrs. Nelson's advice, and subscribed for THE LADIES' FLORAL CABINET, to begin with.

MRS. BARNETTE.

## LITTLE THINGS.

For a very pretty bracket, procure a triangular piece of board, slightly rounded in front, for the shelf, and some pieces of old table-cloth, with a pretty pattern; work the pattern in suitable worsteds, fit and tack on the shelf. Cut another piece of the cloth long enough to go around, and three or four inches in depth, and work as before; scallop or point the lower edge; bind with ribbon, and finish each point with bow of ribbon or tassel of worsted. Toilet mats are made of old napkins, worked, and bound or fringed at the edges. Perforated tin is pretty, used instead of perforated paper, and is useful in making presents for tin weddings. A match-safe is made like a cornucopia, worked with a pretty pattern; bind with ribbon; attach ribbons to suspend it, and finish with a bow at the end. One of perforated paper is made in the same manner, but with a small tin spice-box inclosed. They are very pretty to suspend from chandeliers. A wall match-safe is made of the tin; the back piece to be worked with a pretty vine, the safes with flowers; bind with ribbon, and make a loop by which to hang it.

## Household Elegancies.

## AUTUMN LEAF WORK.

In the Autumn kind Nature gently weaves,  
For the dear old year, a crown,  
Of the beautiful ripened leaves,  
Bright red, and yellow, and brown.

Of late years it has become a favorite amusement to gather quantities of the most beautiful autumn leaves, and after carefully pressing them (and varnishing, if you like a glossy surface) to arrange them into wreaths, crosses, bouquets, mottoes, and various devices, which often produce effects as beautiful as a picture from the brush of a skillful painter.

When tastefully arranged in a bouquet, on buff or white card-board, they make beautiful pictures; and when with the leaves a few delicate green and frost-touched ferns are mixed, they are fair and graceful enough to deck the most gorgeous parlor.

When leaves are thoroughly dried they can be attached to a piece of coarse flexible wire, by the help of fine brown cotton-covered wire; and, by intermingling the varied and contrasting colors of the different maples, the oak, beech, &c., with a few green fern fronds, handsome garlands can thus be formed with which to encircle picture frames and mirrors, or to hang in windows. Then, too, some of the prettiest lambrequins one could wish may be made of autumn leaves fastened in graceful figures on to lace, each curtain adorned with but one kind of leaves, with fronds of fern—breathing sweet remembrances of the cool, green, old woods—interspersed among them.

Mottoes, for framing, make beautiful gifts from friend to friend, and are very easily made. As you take your autumn walks, eagerly search for the gayest leaves and ferns with which to fill your vases, and decorate your windows or pictures. Please not forget to take your eyes from the trees now and then, and look carefully on the ground at your feet, or on the small bushes and tiny running vines, for there you will find material for your mottoes. Gather the smallest leaves you can see; the dark, maroon wild rose, bright red huckleberry, the delicate notched miller grape-vine, white and fuzzy as a miller's coat; the clover, toad-sorrel, cinquefoil, and, in fact, any very small ones which your eyes may be so fortunate as to rest upon. Press these carefully. Draw, with a pencil, the outline of your letters on card-board, then carefully stick on the leaves (with common flour paste), and you will have mottoes which, when framed under glass, are far prettier than many of the chromos now so common and so much admired. The word "Welcome!" made in this manner is very pretty to hang in a hall, or in a room facing it.

Bookmarks with motto on one side, and initials on the other, make pretty birthday gifts.

A very tasteful ornament for a bracket consists of a cross made of wood, covered with a coating of mucilage, and marble dust sprinkled carefully over it. Fasten the base of it on to a very thin block of wood or thick card-board, which block cover with green moss. Form a wreath of small leaves, by means of fine wire, and twine up the cross. If marble dust cannot be obtained, coarse sand may be used, or the cross may be covered with gray mosses.

Lovers of the beautiful will find much pleasure in using some of their bright leaves for decorating articles in "Japanese Work," (or "Anglo-Japanese

Work," as it is too often called.) The materials required are some fine black paint, a piece of nice sand-paper, bottle of shellac varnish, a little isinglass, and ferns and leaves. Any article may be ornamented by this "elegant and easy domestic art;" an old work-box, writing-desk, tea-caddy, fire-screen, flower-pots, small tables, wall-pockets, bracelets, &c. Select perfect leaves, carefully pressed and dry; rub the surface of whatever you wish to ornament smooth with sand-paper, cover the surface with black paint; leave this to dry thoroughly; smooth with the sand-paper,

MOTTO IN AUTUMN LEAVES.

if rough at all; add two other coats of paint, then gum your leaves on, after the paint has thoroughly dried. Dissolve a little of the isinglass in hot water, and, with a brush, apply a coat of it while warm. When this is dry, give the work three coats of copal

TOILET TABLE.

varnish, allowing ample time for each coat to dry. To make the work look "very Chinese," or Japanese, the leaves are put on in every possible way (with no regular design), but it is much more tasteful and pleasing if the leaves and ferns are arranged in bouquets, clusters, wreaths, or garlands. Exquisite brackets and wall-pockets may be fashioned from

cigar-boxes, and ornamented with bouquets or garlands of leaves. Letter-cases and card-racks are also very elegant done in the same way. Beautiful boxes may be made by taking nice smooth strawberry or oval fig boxes, painting them, arranging a bouquet or wreath on the cover, and a garland around the box. An old table which has been thrown aside for its defacement, can be made into "a thing of beauty," of which the most fastidious may be proud. If it is a round or oval table, fashion a wreath of leaves and ferns; but if square, make a wreath or bouquet in the centre, and pretty figures in the corners. Flower pots look very nicely with a small garland around them, or a single leaf or small cluster on the sides. In fact, many are the beautiful articles of use and adornment which can be made by the aid of this pleasing art. The paint can be obtained already mixed at a paint shop, and either copal or shellac varnish may be used.

Another very elegant use to make of autumn leaves is, to form them into transparencies for hanging in the window. Place your brightest leaves with some delicate grasses and ferns, between two panes of glass; bind the edges first with some old, but strong, cambric; then bind over this with ribbon, leaving a loop at the top with which to hang it up by, or sew a ring on securely through the cambric and ribbon before the paste gets quite dried.

Very handsome crosses, wreaths and anchors are often made for hanging in windows, by sewing leaves on paper or stiff net lace.

An arch made of twigs or stiff wires, on to which leaves, ferns and a few pine cones are secured, and fastened over the mantel, with a small wreath, or basket covered with moss and filled with grasses, suspended from the centre, well repays for the labor of making it.

One more method of using leaves I will give you, and must then say good-bye to this subject, though the half of the beautiful ornaments they suggest are yet unmentioned. Procure a piece of tin, seven by nine, or eight by ten inches square, get an oval aperture cut out of the centre. Next cover the tin with two coats of "black Japan," then arrange little corner pieces of bright leaves, allowing a delicate branch of them to go down the sides and across the ends. Now varnish with two coats, and you have an odd but tasteful frame for some light picture, which I am sure you will like.

MARY I. HERRON.

## A BEAUTIFUL TOILET TABLE.

This beautiful toilet table may be adapted to the size of the room and can be draped to suit the furniture.

An ordinary dry goods packing box will answer for the lower part; to this is screwed two upright strips of wood, four inches wide, six feet long, and one inch thick, placed one-fourth distant from each side of the back; small strips of lath are nailed from each end of the back, diagonally, across to these strips, and two end pieces and a back of the inch plank nailed on the box; then a hoop is securely screwed to the top of the two uprights, projecting over towards the front; pieces of wood are nailed on the under four corners and castors inserted in them. This forms the frame-work, which is covered with scarlet or other colored velvet, as also the plain mirror hung between the upright standards. Two short posts, one foot in length, are nailed to the front corners and also velvet covered.

The entire box is next covered with suitable crimson glazed muslin, over which is stretched, in gathered folds, dotted lace or Swiss muslin, edged with lace and a full puff of the thin material. Drapery of the same, with a lined and full-gathered lambrequin, cut with long points finish the latter at the top. Around the table is gracefully looped a long strip of Swiss muslin, held by ribbon bands, the same ornamenting the top. The inside of the box forms a handy receptacle.

The ottoman to match may be made of a section of a barrel lathed over and surmounted by an embroidered cushion, draped with Swiss and lining like the table and similarly puffed around the edge.

The table and stool are exceedingly elegant, and in a small room will be found to be not only attractive but very convenient.

## Hireside Reading.

**No Chance to Ponder.**—The other afternoon the crew of the Cleveland boat, which was to sail that evening, discovered an old chap stowed away among the freight to secure a free trip across the lake. The hose was on and the "pony" working, and the mate sent about fifty gallons of water into the nest of the stowaway. He came out on the gallop, wet to the hide, and charging up to the mate, he shouted: "Who threw that water on me?" "I did," was the reply. "What for?" "To help you ashore." "That's the way," said the old man as he took off his wet coat and held the tails between his knees while he sought to wring the water out of the sleeves and body. "I can't get off by myself anywhere, and begin to ponder on the faded and gone, but a barrel of salt falls on my ear, or some pirate hits me in the back with half of Lake St. Clair."

**Too Polite by Half.**—Pereire, a banker, got a little tired of returning bows of an uncomfortably polite man in his establishment, and finally gave the polite man this conundrum at point-blank range:

"Sir, what would become of the hours if the minute hand stopped to bow to the second hand every time they met?"

**Better than Nothing.**—A good old Methodist lady, very particular and pious, once kept a boarding-house in Boston. Stanch to her principles, she would take no one to board who did not hold to the eternal punishment of a large portion of the race. But the people were more intent on carnal comforts than spiritual health, so that in time her house became empty, much to her grief and alarm. After some time a bluff old sea captain knocked at the door, and the old lady answered the call. "Servant, ma'am. Can you give me board for two or three days? Got my ship here, and shall be off soon as I load." "Wa-al, I don't know," said the old lady. "Oh, house full, eh?" "No, but ——" "But what, ma'am?" "I don't take any unclean or carnal people in my house. What do you believe?" "About what?"

"Why, do you believe that any one will be condemned?" "Oh, thunder! yes." "Do you?" said the good woman, brightening up. "Well, how many souls do you think will be in fire eternally?" "Don't know, ma'am, really—never calculated that." "Can't you guess?" "Can't say—perhaps fifty thousand."

"Wa'al, hom!" mused the good woman: "I guess I'll take you; fifty thousand is better than nothing."

It was a pungent answer given by a Free Kirk member who had deserted his colors and returned to the old faith. The minister bluntly accosted him, "Ay man, John, an' ye've left us; what might be your reason for that? Did ye think it was na a guid road we was gawn?" "Ou, I dawrsay it was a guid eneuch road and a braw road; but, O minister, the tolls were unco high."

A good story is told of a parrot who had always lived on board of a ship, but who escaped at some seaport, and took refuge in a church. Soon afterwards the congregation assembled, and the clergyman began preaching, saying that there was no virtue in them; that every one of them would be lost unless they speedily repented. Just as he uttered the sentence, up spoke the parrot from his hiding-place—"All hands below!" To say that "all hands" were startled would be but a mild way of putting it. The peculiar voice, from its unknown source, had much more effect upon them than the parson's voice ever had. He waited a moment, and then, a shade or two paler, he repeated the warning. "All hands below!" again rang out from somewhere. The preacher started from his pulpit, and looked anxiously around, inquiring if anybody had spoken. "All hands below!" was

A BASKET OF ROSES.

the only reply, at which the panic-stricken congregation got up, and a moment after they all bolted for the doors, the preacher trying to be first, and during the time the mischievous bird kept up his yelling "All hands below!" There was one old woman who was lame, and could not get out so fast as the rest, and in a very short time she was left entirely alone. Just as she was about to hobble out, the parrot flew down, and, alighting on her shoulder, yelled in her ear, "All hands below!" No, no, Mister Devil," shrieked the old woman, "you can't mean me. I don't belong here. I go to the other church across the way."

A milk-pitcher thrown by his wife at a Nelson-street man, missed the aim and ruined a handsome frame which inclosed the words, "God bless our home."

A New Englander, riding in a railroad car, seemed particularly anxious to astonish the other passengers with tough stories of Yankeedom. At last he mentioned that one of his neighbors owned an immense dairy, and made a million pounds of butter and a million pounds of cheese yearly. This story produced some sensation; and the Yankee, perceiving that his veracity was in danger of being questioned, appealed to a friend as follows: "True, isn't it, Mr. P.? I speak of Deacon Brown—you know Dea. Brown?" "Y-e-e-s," replied the friend, "that is, yes, I know Deacon Brown; I don't know as I ever heard precisely how many pounds of butter and cheese he makes a year, but I know that he has twelve saw-mills that go by buttermilk."

"Well, uncle, how is the cause of religion getting on in your neighborhood?" "Mighty poor—mighty poor." "No new converts, eh?" "Not a single one—not de sign of one." "What seems to be the matter?" asked the citizen, after a lengthy pause. "De matter is dat some one bez stolen four big watermelons out o' my cart dis afternoon, an' I feel in my bones dat religion is gwine down hill all froo dis locality!"

The motto for the week on a little girl's Sunday-school card was, "Get thee behind me, Satan." There were gooseberries in the garden, but she was forbidden to pluck them. Pluck them she did. "Why didn't you," asked her mother, "when you were tempted to touch them, say, 'Get thee behind me, Satan?'" "I did," she said earnestly, "and he got behind me, and pushed me into the bush."

"Who was the wisest man?" asked a Sunday-school teacher. "Solomon." "Yes; who was the wisest woman?" "Mrs. Isaac." "How so?" "'Cause she euchred her blind husband and got a deed for the old place to her younger son without paying for it." "Correct; who was the meekest man?" "Moses." "Very well; who was the meekest woman?" "Mrs. Lot." "How can you tell?" "'Cause she stood out all night in a thunder shower of fire and brimstone without any umbrel', and never said a word about the ruination of her best hat." "Well, yes; that's so," said the teacher.

A country gentleman was in the habit of entertaining his friends almost weekly, and discovered that regularly some small article of plate was missing, a easter-pot, a salt-spoon, a napkin-ring, or something of the kind. He suspected his servants, and to make sure, one night when the guests had assembled, he said: "I tell you what! Let's do without servants to-night and wait on ourselves!" The odd suggestion was greeted with applause and peals of laughter. The servants were turned out; the meal was seasoned with sparkling sallies at the expense of the clumsiness of this or that guest, and when they had all gone the host took stock, and discovered that two-thirds of the spoons had gone too.

A farmer's daughter lately put off her wedding-day because eggs were up to 40 cents a dozen, and it would take two dozen for the wedding-cakes.

PRIZE COLLECTION OF HOUSEHOLD  
AND COOKING RECEIPTS.

BY MRS. M. A. RAMSAUER.

To this collection was awarded first prize, \$25, for best collection of  
Cooking Receipts submitted.

## BREAKFAST DISHES.

*Italian Cakes.*—Take one quart of flour, a measure of Horsford's powder, or two teaspoonfuls of cream of tartar, and one of soda, mix them thoroughly through the flour, then work in two ounces of butter, and use water enough to make it into a moderately stiff dough, roll it out about a quarter of an inch thick, cut it out with a biscuit cutter, and fry it in butter until it is a light brown. If you want it purely Italian, fry it in nice salad oil.

*Seasoned Crackers.*—Take half pound of butter, beat it until soft, then beat in the yolks of two eggs, one pint of warm water and yeast, or rising enough to make it rise well; stir in flour enough to make a batter, and pepper to flavor it well; beat the whites of the eggs to a stiff froth, and stir them in. Put in a warm place and let it stand until very light, then knead it into a dough like light bread and let it rise again; when light, make it into crackers, about an inch thick, let them rise again, then bake them of a light brown. Next put them all into a pan and set them again in the oven, and keep them there until they are dry and crisp all through. When wanted for breakfast, pour some boiling water or milk over them, as you prefer, and they will be soft in a few minutes. Use them as a dressing, to be eaten either with meat or gravy; they are also very nice to use instead of bread, to make stuffing for fowls.

*French Hash.*—After dinner, take what meat you have left and cut all the flesh from the bones that you can; pour what gravy you may have over it and set it away. Break the bones and put them on the fire to stew, with sufficient water to cover them, and a little onion; stew them all the afternoon, then strain off the liquor and pour it over your meat; in the morning put it on the fire in a clean saucepan, and let it stew a little; season it well with kitchen salt and thicken it slightly with a little flour. When you dish it up, put some slices of toasted bread in your dish, and pour it on hot. Garnish, if you please, with parsley and hard-boiled eggs cut in half.

*Pancakes.*—Take two teaspoonfuls of flour, and pour over it just enough boiling water to scald it; mix with it a pint of sweet milk, the yolks of two eggs, and then beat in a pint of flour and the whites of the eggs beaten to a stiff froth; bake on a griddle as other pancakes. This same batter is good baked as waffles.

*Grand Breakfast Hash.*—Make pancake batter by the given receipt, and bake them as large as a good sized dinner plate; as soon as you bake one, spread it over with a layer of French hash, then lay on the next, and continue piling them up, with layers of hash between each, until you have a stack five or six inches high, or more; then set it in your oven long enough to heat it well through. When you serve this dish, cut it down through the whole pile. This is a delightful breakfast dish for cold weather.

*Sausage Rolls.*—In the evening, make up about a quart of flour into a dough, exactly as you would for light rolls; set them in a warm place to insure them being light. In the morning, make them into rolls, putting in the middle of each one a piece of sausage meat, about the size of a black walnut; bake as other rolls. Any other meat chopped may be used as a substitute for the sausage.

*Crescent Rolls.*—Take about two pounds of well raised light bread dough. Rub fine on your pastry board, a large teaspoonful of white sugar, and a piece of soda about the size of a large pea, and some flour. Lay your dough on this and stick on it a piece of butter about the size of an egg. Knead it very well and set it to rise again. When well risen, knead it again and roll it out about an inch thick; cut it out with a round biscuit cutter, spread a very little melted butter or lard over the surface, and then lap them over, so that they form a half circle or crescent; let them rise a little while before baking.

## DINNER DISHES.

*Kibobbed Mutton or Veal, a Turkish Dish.*—Procure a fine loin of mutton or veal. If mutton, take all the leaf fat out carefully, then separate into chops at every joint, season it with kitchen salt and grate a little nutmeg over each piece; dip them into beaten yolks of eggs and sprinkle them with bread crumbs; then take a long skewer (a wooden one will do), and stick it through each piece so as to bring it to its original shape, as nearly as possible, and bind thread around it to keep it close and compact; then put it in your oven to bake or roast; baste it with butter until it gives out gravy; then keep it well basted with its own gravy, occasionally strewing bread

crumbs over it. When nearly done, pour the gravy into a saucepan, and put the meat back into the oven. Add to your gravy some catsup or Worcester sauce, and if you have any cold or made gravy, add that also; boil this up together. Take up your meat, pour the gravy over it; if it is veal, squeeze some lemon juice over the inside of the loin. Serve as hot as possible.

*Genuine East India Chicken Curry.*—Cut your fowl up in pieces, as for fricassee, fry it of a light brown; then take some gravy, if you have it; if not, substitute a teaspoonful of sweet cream, and as much water, a little onion, and curry powder enough to season it highly, then stew your chicken in this, and when sufficiently done, thicken it with some butter rolled in flour, and a little more cream; put to this enough lemon juice to give it the flavor, and boil it up once. Dish it and garnish it with slices of lemon.

*To Stuff a Leg of Veal or a Fleshy Piece of Beef.*—Grate or break into crumbs a pound loaf of light bread; take a piece of butter the size of a black walnut; two beaten eggs, and work it up with your bread crumbs; season with kitchen salt, and flavor slightly with nutmeg; if it is rather stiff, add a little wine or French brandy to make it sufficiently soft; take a long knife and make an incision around the bone; put your stuffing into it, and sew it up at the top to keep the stuffing in; rub a little butter and kitchen salt over it, and put it on to roast; as soon as any gravy is drawn, keep basting it well; when nearly done, spread over it some butter, and sprinkle bread crumbs over it; put it on again, and roast until well done; garnish with celery or parsley.

*French Fricassee of Beans.*—Take Lima beans (or navy beans will do); boil them until tender enough to eat; put them to drain; then brown some butter in a frying-pan; put in your beans, and fry them till they begin to brown; then put in some finely-chopped onion and parsley, and fry them a few minutes more; now put in a teaspoonful of flour, some boiling water, and season well with kitchen salt, or salt and pepper; let them stew a few minutes, and then add the yolk of an egg, beat up with a spoonful of water, the same of vinegar, and mushroom catsup, if you have it; if not thick enough, add a little flour and a little cream. This is a good way to dress snap beans.

*Stacked Squashes.*—Cut your squashes in slices about a quarter of an inch thick; fry them till brown in butter or lard; while these are frying, prepare a mixture, as follows: beat up two eggs, a teaspoonful of rich, sweet milk, and flour enough to make a thin batter; then stir in bread crumbs enough to make it thick, and season it with pepper and salt; now lay down one slice of squash on a baking-plate, and spread over it a layer of batter; but sprinkle some kitchen salt on the slices of squash as you put them on; continue this until you have a good stack with batter on the top; then bake it until the batter is done. If your oven is hot, it will not take more than fifteen minutes.

*Scalloped Salsify.*—Boil the quantity of salsify you want until very tender; then peel it and cut into pieces about an inch long; if you have a quart of the vegetable, take an equal quantity of bread crumbs or small slices; season with kitchen salt, and cut a piece of butter about the size of an egg into it; now put a layer of salsify in a deep baking-dish; season with pepper and salt; put a sprinkling of the prepared bread over it; continue this till your dish is full, with bread on the top; pour sweet milk, or milk and water, in your dish until it is full, and bake it till nicely brown.

*Spanish Onion Sauce.*—Roast six large onions until nearly done; peel them, and add to them some gravy from any meat you may be cooking; thicken with a little dust of flour; season with kitchen salt, very little cayenne pepper and a glass of wine—port is best; add to this the juice of half a lemon or a teaspoonful of vinegar; stew them till well done, and mash them up with a little butter. A very excellent sauce for game, or ducks and geese.

## DESSERT DISHES.

*Swedish Blanc Mange.*—Take one ounce of gelatine, pour over it one pint of cold water; let it stand in a pretty warm place for several hours, stirring it occasionally; then pour into it one pint of boiling water, and one-half pound of white sugar; flavor it with bitter almonds, extract of almonds, or peach kernels, as is most convenient. As soon as the gelatine is entirely dissolved, set it away to cool; this had best be done in the afternoon, so as to give it all night to get firm; the next morning put your jelly into a large pan or bowl, and, with a fork, beat it until it is perfectly broken up and light; then take a good pint, or rather more than that, of very rich, thick cream—the richer the better; make it quite sweet, and, with a whisk or egg-beater, beat it until it is very light and frothy; then mix the two together and beat until thoroughly mixed.

*A Grand Trifle.*—As the appearance of a trifle is to be considered, it needs a large glass dish; in the bottom of your dish put a layer of Naples biscuits or sponge cakes, another of ratafias, and then another of macaroons, strewing between each layer some blanched and pounded almonds, a little citron, a little candied orange peel, and a pineapple cut up small; pour half a pint of wine (or

enough to soak the cake)—it should be a nice, light-colored wine—over them; in the mean time have a custard prepared as follows:—Boil a quart of milk and cream mixed in equal quantities; beat up the yolks of six eggs, three ounces of sugar, one tablespoonful of flour or corn starch; when the milk boils, pour it over the eggs, stirring it rapidly; if it does not thicken sufficiently, put it over the fire a few minutes, stirring it all the time, till it comes to a boil; then put it away to cool; flavor it with extract of lemon or orange, and, if you like, a little French brandy; now pour the custard over the cakes, and over that put some apricot or raspberry jam and some nice currant or apple jelly; next take a pint or more of cream, the white of one egg, a glass of white wine, a few drops of extract of lemon, and sugar to taste; churn it with a cream-churn (or you can beat it with a spoon or egg-beater), and as the foam rises, take off and pile it as high as you can on the top of your trifle; it is a good way to take the froth off and leave it in a sieve, so as to let it drip, and then turn it over on your dish, keeping some cream to churn up and lay on, in order to make it a nice shape; you can ornament, if you please, with very tiny sugar plums or comfits, or colored sugars, but it is very beautiful without it.

*Orange Cream.*—Take a pint of orange juice (four oranges are best), put to it the well-beaten yolks of six eggs and the whites of four; beat these well together, and add to it one pound of fine sugar; set it over a slow fire, and put the peel of half an orange in it; keep stirring it all the while one way, and when it is nearly boiling, take out the peel and pour the cream into glasses to cool. This is delightful when frozen.

*Swedish Lent Pudding.*—Make some light rolls, but place them so far apart in your pan that they will not stick together in baking. Let them get old and dry enough to cut well, then cut off the top crust and take out the crumb, leaving the crust whole. Mix a part of the crumb with some beaten almonds, sugar and butter, to suit your taste; then boil new milk to cover them, pour it over, and when well soaked they are ready for use.

## TEA DISHES.

*Delicate North Carolina Biscuits.*—Take one quart of flour, four eggs (beat the whites and yolks separately), a small tablespoonful of butter, a large one of yeast; make all into a rather soft dough with sweet milk, set them in the morning so that they will have time to rise well. Make them out into biscuits, and let them rise a little while before baking.

*Cocoanut Snaps.*—Take the whites of four eggs, beaten to a stiff froth, with three heaping tablespoonfuls of fine sugar and three of flour. Stir in desiccated cocoanut until it is stiff; drop on buttered tins, in any shape you like, and bake. If you prefer using fresh cocoanut, you must put four spoonfuls of sugar with it.

*Ratafia Cake.*—Bake a sponge cake—it is best if several days old—cut off the top crust and take out the inside, as for charlotte russe. Now mix the crumb with some blanched and pounded almonds, and enough bitter almonds—extract of almonds or pounded peach kernels—to flavor it agreeably; add some coarse grained sugar and enough yolk of egg to make it into a soft paste; put this into the crust of your cake and bake a little while. In the mean time, make the whites of your eggs into a nice icing; as soon as your cake has cooled a little pile the icing on it and put it in the oven until it is the least bit browned. This is a delightful cake, and although a sponge cake is to be preferred, any other cake you may have on hand will do, or you can in this way make use of a cake which has been a failure in making.

*Cream Tarts.*—Take a quart of flour, half pound of butter and two well beaten eggs, add cold water enough to make into a paste, and set it away to cool, then cut it into round shapes with a cutter or a tumbler; cut the middle out of half of them with a wine glass, lay one of these rings on a whole one and moisten the paste between the two with a little cold water to make it adhere. Bake them about a quarter of an hour. Beat together one pint of cream, four eggs and four tablespoonfuls of fine sugar, fill the tarts with this, grate a little nutmeg over each, and bake again about ten minutes.

## USEFUL RECEIPTS.

*Kitchen Salt.*—An article that will be found useful for all persons, and a perfect treasure when you have an inexperienced cook, or one who does not season well. Take two teacups of fine salt, the same of sugar, and half a cup of black pepper—if you like a good deal of pepper you may take a whole cup. Mix thoroughly. Use for seasoning soups, hashes, etc.

*Curry Powder.* (This is the genuine East India receipt.)—Take of fennel seed, cummin seed and coriander seed each four ounces, with two ounces of caraway seed, dry them before the fire, then grind and sift them, add to this two ounces of ground turmeric and the same of ground black pepper, one ounce of ground ginger, and half an ounce of Cayenne pepper. Mix well and keep dry and well stopped.

## TREES

We offer for Spring of 1877, the largest and most complete stock in the U. S. of **Fruit Trees**, Standard and Dwarf, **Ornamental Trees & Shrubs**, deciduous and evergreen. **Roses** a specialty—all the finest sorts. **Green and Hot-House Plants**, including best Novelties. Descriptive and Illustrated priced Catalogues sent prepaid to customers, **free**, to others, on receipt of stamps, as follows:

No. 1. Fruits, with colored plate, 15c.; plain, 10c.  
No. 2. Ornamental Trees, colored plate, 25c.; plain, 15c.  
No. 3. Greenhouse, **Free**. No. 4. Wholesale, **Free**. No. 5. List of New Roses, **Free**.  
Small parcels forwarded by mail when desired. Address,

ELLWANGER & BARRY, Rochester, N. Y.

## Bulbs for Summer Blooming

BY MAIL. Gloxinia, 20c.; Achimenes, 15c.; Calla Lily, 15c.; Gladiolus, 10c.; Double Tuberose, 10c., three for 25c.; twelve for 75c. MILLER & HAYES,

MOUNT AIRY NURSERIES, Philadelphia, Pa.

\$66 a week in your own town. Terms and \$5 outfit free. H. HALLETT & Co., Portland, Maine.

## DOBBINS STARCH POLISH

For polishing Shirt Bosoms, Collars, Lace Curtains, etc., putting on the same gloss and hard pearl finish as when bought at the store. It enables the most incompetent ironer to compete with any laundry. It makes the clothes clear and white. It makes the clothes iron smooth, and prevents the iron from sticking. It makes old linen look like new. It saves a woman many hours of hard work each week. A polished shirt bosom, cuff, or collar, keeps clean much longer than linen not polished, for this reason: The enamel fills up the pores, lays down the nap, puts on a hard, pearl gloss, which prevents the dust or dirt from working into the cloth; therefore, by the use of the enamel, clothes can be worn much longer without washing. Price, 25 cents, postage paid. Address,

Henry T. Williams, 46 Beekman St., N. Y.

**Excelsior** Latest Improvement. Double Treadle, including one doz. Saws, thirty imitable Fret Sawing Patterns and Prepared Wood, to the value of \$4. A new device for tightening Saw, Power Drilling attachment, Wrench, Oil cup, and Screw driver. Speed, 800 strokes per minute. Saws 11-2 inch thick. Price, complete, cased and delivered on board cars or at Express office, 12 Dollars.

**SMALL STEAM ENGINES**, with copper Boiler, to drive Light Lathes, Scroll Saws, &c. 100 Scroll Work Desires Free on receipt of stamp. Saw only, without Attachments, \$9. GEORGE PARR, BUFFALO, N. Y.

## 25 FLOWERING PLANTS FOR \$1.25 BY MAIL, POSTPAID.

Your choice from over 150 varieties, some of which see below. Abutilons, Aelhimines, Bouvardias, Begonias, Callas, Cobaeas, Cupheas, Colens, Cactas, Daisies, 3 varieties Dentzias, Fuchsias, Ferns, Geraniums (either Ivy, Silver, or Zonale-leaved sorts), Gladiolus, Hoyas, Heliotropes, Ivies, Jasmines, Lantanas, Myrtles, Pansies, Pomegranates, Pilea, Smilax, Stevias, Solanums, Tuberoses, Tulips, Violets, Zephranthes. 10 of the above for 50 cents. Catalogue free. Hillside Greenhouses, New Brighton, Beaver Co., Pa. THOMAS ELVERSON, Proprietor.

## FRENCH LAUNDRY STARCH POLISH.

The receipt for making and full directions for using will be sent to any address on receipt of 50 cents. It produces the beautiful gloss finish which is seen on all first-class Laundry work; does not injure the material in the least, and is highly prized by all who have tried it. Address P. O. Box 518. C. A. LANDAU, Buffalo, N. Y.

## ONLY THE BEST.

All who have a Garden should send for my Illustrated Catalogue, descriptive of the latest Novelties and choicest Varieties of Vegetable, Field, and Flower Seeds. Free to all on receipt of postage-stamp.

WM. H. CARSON, SEEDSMAN,

125 Chambers St., N. Y., (Late of Peter Henderson & Co.)

VOL. VI.

NEW YORK, MARCH, 1877.

No. 63.

PRICE 12 CENTS.

## CITY GARDENS.

There are several advantages in forming small flower beds. You can extend them out from the fence or building, so as to give the sun a better opportunity to reach them, and you can grow the different varieties separate in small quantities without mixing them with others. And you can regulate the early and late blooming ones without damage to each other. For instance, the Verbena and Pinks can, with care, be kept in bloom quite late in the season with the aid of a sack, or even a piece of muslin stretched over them to cover them during the early part. Then again, some plants will thrive best with profuse watering, while others will not under this treatment.

I find that the Verbena, Asters, Phlox Drummond, and Pinks are easily cultivated in masses, and look as well as others, and would advise beginners to try them. The Gladiolus is one of the most beautiful summer flowers; the bulbs can be bought cheap by the quantity, are easily cultivated, and I think give the richest returns for the money invested. Planted

FLOWER BOX AND TREE TRELLIS.

A WINDOW FERNERY AND AQUARIUM.

four inches deep and one foot apart, then scatter a paper of mixed Phlox Drummond among them and you will have as beautiful a show of flowers as you can wish. Plant the small ones first, then every two weeks until all are planted. Be careful to plant your latest in the warmest spot you can, and where you will not want to plant your bulbs. In the fall, say October 1st, I begin to plant my bulbs, and in succession up to December 1st, as my plants cease to bloom. The early plantings give you the early and strongest bloom, as the roots get a good start before the frost touches them. Dig up your beds to the depth of at least one foot, then lay out your beds as you wish to plant them. I find it a good plan to keep a book expressly for the garden. I mark the places, then write the names and location with figures. This will enable you to refer to any spot you wish and ascertain the location of each, in case you wish to plant between them at any time.

In regard to the varieties to plant I will give a single example: In the corner of a bed I plant a Narcissus; between them a Jonquil, then I fill in the border with Crocus, planted two inches apart, or a group of a yellow, blue and white every three inches, setting the bulbs two inches deep. These multiply rapidly, so that in two or three years your borders will be full. Then for the centre I plant a tall growing Lily, such as a Tiger, Candidum or Auratum, then add a few low growing ones, such as the Longiflorum; then fill in every eight inches with Tulips or Hyacinths. The brown Imperial is a good old hardy bulb, so are many others which you will find advertised in the many catalogues. In the spring I scatter a few seed of hardy Annuals among my beds, or set out such plants as I wish to grow, so that by the time the bulbs are done blooming, the others begin to grow finely.

C. W. I.

FLOWER STAND FOR PARLOR WINDOW.

## Floral Contributions.

## FLORAL DECORATIONS IN OUR BAY WINDOW.

The sitting-room coal stove is within eight feet of our bay window, and is the only heat, except that of sunshine, which the plants receive. The window has a southern exposure. Its floor is covered with oil cloth. This, I think, is preferable to either carpeting or matting, as water will not readily penetrate it, and can be easily removed if any happens to drip upon it. The carpet, under any ordinary window which contains plants, should be covered with oil cloth for the same reason. There is only one shelf, extending along the east and south sides of the window, about eight inches above the floor. I prefer to have most of the plants which are not in my window garden box, on brackets and in hanging baskets. These are so much more graceful and ornamental, tastefully disposed, than the stiff-looking rows of shelves, with their precise rows of flower pots.

Two hanging baskets are suspended from fancy hooks above the double window which forms the south part of the bay window. One is filled with German Ivy, which twines around the wires and the hook, and drops over the basket in a bushy mass. This is kept bushy by frequently pinching off the new shoots. The other is filled with a most luxuriant growth of the variegated *Tradescantia*. A basket of *Maurandya* is suspended from another hook on the east side of the bay window. On the west side, just above the window garden, are three hanging baskets. One is an imitation log of wood, filled with pink *Oxalis*. On each side of this is suspended a cocoanut shell, draped with the long grey Spanish moss, each filled with delicate blue *Lobelia*. Birdie's cage is suspended from the centre of the ceiling.

A little to the north-east and the north-west, and at equal distances from his cage, are suspended round black-walnut hanging baskets in fret work, each containing a fancy red flower pot. One of these flower pots contains a Cigar plant (*Cuphea Platycentra*), the other a winter-blooming *Fuchsia*. Some of my brackets are of hardware from the manufactory of florist's goods. Others are homemade ones of blackwalnut, made with the bracket saw. Two four-pot florist's brackets are on the south side. One contains the green *Tradescantia*, a *Cyclamen*, a white *Chrysanthemum*, and a pink *Begonia*. The other, green *Tradescantia*, a Chinese Primrose, a white *Begonia*, and a pink *Chrysanthemum*. Two single florist's brackets, between the double windows, hold pots of *Coleus* and *Rex Begonias*.

On the little space of wall in the south-east and south-west cut corners are side brackets of black-walnut (four in number). One holds a pot of Ivy Geranium; another, above, a pot of Dew Plant. On the other side, the lower bracket holds a pot of a kind of vine which is much used in rockeries. I do not know its botanical name, but we call it "Creeping Charlie." Above this is a pot of Box. On the east side a pair of two-pot florist's brackets hold four lovely little rose bushes. The arched opening between the window and sitting-room does not comprise the full length of the window, so there is still room left for two little shelves not larger than ordinary brackets. On one is a brown painted box, filled with the Bridal Wreath, which falls gracefully over the north end of the window garden. On the opposite side, the other shelf contains a broken sugar-bowl set in a red flower pot. It is almost con-

cealed with a wreath of Kenilworth Ivy. Two small brackets, supporting pots of Madeira Vine, are fastened to the sides of the opening into the sitting-room. The vine is trained about the arch above, back and forth. You can well imagine, if you are familiar with the vine, what a beautiful tracery of green it makes. On the long single shelf before mentioned, are all my taller plants. There are a scarlet *Salvia*, a General Grant Geranium, an *Abutilon*, a *Calla*, a *Heliotrope*, an English Ivy, a Rose Geranium, and other large pots of Sweet Alyssums, Garden Pinks, Ten Weeks' Stock, and a good-sized box of *Verbenas*.

My window garden is a box furnished with table legs and castors. It is stained with raw umber, and varnished with coach varnish. This is much more durable than copal, and does not turn white in blotches where water works into it. The box is two feet by three, and just fits nicely into the west part of the window. The tallest plants it contains (about two feet in height), are a Dusty Miller and a bronze red *Coleus*. Surrounding these are seven varieties of Geraniums, including nutmeg, rose, silver-leaf and zonales, a Tuberose, a Carnation, a Feverfew, a Lily of the Valley, an *Achyranthus*, two small *Coleus* plants, a Lemon Verbena, and four blotched and striped *Petunia* plants. *Tradescantia*, green and variegated, vines of *Tropæolum* and *Portulaca* droop over the edges. White Caudy-tuft, Sweet Alyssum, *Gilia* (tricolor), and green Mosses, are planted at convenient places along the edges, and as an undergrowth among the larger plants. At the corners of the box are vines of pink and blue Morning Glories, Madeira Vines, and one *Smilax*. These twine around cords along the west division of the window. Everything in the box presents a most thrifty appearance. Much as I enjoy the culture of plants in pots, much more do I enjoy the results which come from the care of my window garden box. In the first place, a goodly number of plants occupy so much less space than the same number in pots. Then they are so easily showered. All that is necessary is to take from one to two quart dippers of lukewarm water, every evening, and sprinkle the plants as you would clothes. This can be done in a few minutes without moving the box from its cozy nook; whereas flower pots must be carried from and to their usual resting place to undergo a thorough sprinkling. One cannot often spare the time to shower them every day, so much time being required in the removal. I sometimes take small plants, one at a time, and hold it in one hand over the window garden, while sprinkling it with the other. My roses get their bath in this way every day. I find that frequent sprinkling is the best preventive for insects. Where any do dare to intrude, they get Scotch snuff to the right of them, Scotch snuff to the left of them, and Scotch snuff all around them, till the air to them is thick with Scotch snuff, and they probably end their existence by sneezing their little heads off. This I allow to remain a day or two before sprinkling again. The drainage for pots and box consists of pieces of charcoal. The soil is a mixture of leaf-mold and black muck, from the woods, finely pulverized. To this is added a small quantity of sand.

Slips that I wish to root, rarely fail to do their duty. Just insert an oat in the end of the cutting, and plant in rich soil. The oat soon roots, and its vitality is transmitted to the cutting.

Last winter, my General Grant Geranium refused to bloom, though it was "ole enuff, big enuff, and oughter known better than to went"—and refuse to bloom. It was about eighteen inches in height, and grew finely in a six-inch pot. But no wonder it re-

fused! It did well out of doors during the summer. When I took it up in September, I resolved that it should bloom for me this winter, and accordingly placed it in a four-inch pot. It was a fine bushy shrub, which I had previously intended for the central ornament for my window garden, but it threatened to occupy so much space as to exclude other plants which must have a place therein; hence that idea was abandoned. After crowding its roots in the small pot, and trimming several large branches, I found that it was still top-heavy, and couldn't stand alone. Not to be baffled in regard to confining its roots in a small space, I planted this four-inch pot containing the plant into a six-inch one, and since then it has stood erect, and several buds have appeared, which promise well for this winter's bloom. This appears to me in the light of a success, after last winter's failure.

*Smilax* once resisted my efforts to make it grow. I wanted it to grow in a four-inch pot, but it wouldn't, in spite of sun, water and fine threads. After giving it a two month's rest in the cellar, and planting it during summer in the open ground under the Morning Glories, it never began to show signs of growth until it was placed in the window garden; and now it begins to act like a *Smilax*, by twining nicely around threads, and sending out new shoots, as all well-regulated *Smilaxes* should do. It wanted more room for its feet, in addition to sun, water and thread. *Coleus* and *Achyranthus* always made a point of dropping their leaves after being taken from the open ground and placed in pots, until the advent of the window garden, when they were planted in it direct from the garden border, and continued to grow without dropping their leaves; but on the contrary sending forth new shoots and leaves.

Dusty Miller (*Centaurea Candidissima*), never occasioned me any trouble, as I always kept it in a large pot, but it has improved in appearance since its residence in the window garden.

Were you ever distracted by the dust occasioned by sweeping, which would settle upon your floral treasures, unless you took extra pains to remove or cover them during said operation? In order to obviate this difficulty with my plants, I purchased a "Welcome Carpet Sweeper," and have been more than satisfied with the result, both in the saving of physical strength, and with the great decrease of dust upon my plants. I think that much of insect life is engendered in the dust which often rests upon plants. When the nights are extremely cold, I pin newspapers over the windows around my plants, as a means of protection from the frost.

One word now in regard to the three ornamental flower pots in our bay window. In the September (1876) number of *Harpers' Magazine*, are silhouettes of Dr. Goodall and Dr. Keats, and in one of Gould's catalogues is another of a boy clinging to the mane of a horse flying at a mad rate through the air. These I selected to make grotesque a pair of red painted flower pots. After holding the leaves containing them up to the window glass long enough to trace their outline on white paper, I cut the designs from the white paper, for a pattern, to use for cutting the same out of black silk. The black silk figures and a border of black silk points, for the top of the pots, were fastened on with varnish, and the whole finished with a coat of coach varnish. Another red flower pot was ornamented with a horizontal oval of black silk, surrounded by an oval border of gilt paper scalloped with the pinking iron. On the silk oval were fastened a bouquet of flowers, and pictures of two musicians, and the whole pot varnished.

## Gossip with Correspondents.

**Our Flower Beds.**—It is quite possible to make the small court yard in front of a city house attractive and pleasing by a judicious grouping of our floral favorites and a little care in keeping them in good health. To have our flower borders look well we must exercise some little taste in the grouping or massing of our plants. A few well arranged and carefully tended specimens will prove much more satisfactory than a large collection of ill-assorted and carelessly arranged ones. How many are there who, about the middle of April or May, will visit the nearest nursery or greenhouse, spend a great amount of money, with no thought as to the beds they have to fill, no idea as to the effect that will be produced, or rather the lack of it, by the indiscriminate mixing up in beds of twenty or thirty different kinds of flowers; Cactus and Lobelia, Caladiums and Sedums, Dahlias and Mignonette side by side, each one lovely in its own place with others of its species, or in well harmonized groups, but lost in its motley surroundings. We cannot all have our lawns and our pleasure grounds, our conservatories and greenhouses, in which to luxuriate both winter and summer, but thousands of us can have one or two flower beds, thank Heaven, whether in city or country; and let us try to arrange them so that they may be "things of beauty" to gladden our eyes until winter again claims our gardens for his own.

First upon the list of bedding plants I should name Coleus. Nothing, perhaps, looks richer than a bed planted in ribbon lines of well contrasted shades and edged with Dusty Miller. Next, a large bed of scarlet Geraniums edged with Sweet Alyssum becomes, by about the end of July, a bit of dazzling brightness. Deep rose pink double and single Geraniums, bordered with first a line of bronze and then of the silver-leaved variety, always look well. Calceolarias of different colors, with an edge of blue Lobelia, will do well if you have a bed on the south side of the house, so that they do not have too much sun; there, too, will flourish best your Fuchsias, Pansies and Forget-me-nots. Verbenas for bedding purposes are unsurpassed. Salvias look best in a large bed on a lawn. For foliage plants on a large scale, where there is plenty of room, Caena Indica, Caladiums, Amaranthus and Japanese Maize are all showy and beautiful if planted in masses. Now for our more humble but scarcely less beautiful annuals. First, Petunias; they will flower oftentimes till November, will load the air with their sweet, delicate fragrance, and will draw all the humming-birds and butterflies in the neighborhood to themselves. Buy a few plants for the centre of your bed and then sow seed all round, but not too near the edge, as they spread very much; this will well when three inches high, and you will have a succession of bloom all summer. Sow your China Asters in a little cold frame, if you have it, or a wooden box with a pane of glass over it, in April, and transplant as soon as large enough, which will be about the end of May, into the open ground; do the same with your Dwarf Nasturtiums for early blooming. Sow the Dianthus seed in the bed you wish it to remain in, but thin out well. Be sure you have a bed of Drummond Phlox, and also Mignonette. Sow both, as the Dianthus, in their own places; these all dislike transplanting and will do best if their roots are not disturbed. Fill in odd corners of your garden with Sweet Peas; they will climb up a piece of common brush or run up strings. Don't sow them until the weather is quite mild and the ground warm. Zinnias are a showy plant and make a fine bed; sow either in cold frame or ground when you think cold nights are over. Heliotropes, for making up our summer bouquets—they will grow almost in any situation, but are scarcely bright enough for beds; they both grow much to wood, and consequently will bear cutting well. ALA.

**Glimpses into a Country Parsonage.**—I would state at once that I am a minister's wife, and not only a minister's wife, but a Methodist minister's wife, at that. Perhaps you don't think this has anything to do with house furnishing. I guess if you had to undo all you had done every one year, or two or three, as the "powers that be" might decree, you'd think it made a great deal of difference. It was just the brightest, most beautiful day of last May that I grew from Miss to Mrs. Miriam, and, with Thaddeus the Wise (Teddy, for short), journeyed toward the new parsonage home. After the proprieties had been disposed of, the kindly welcome over and the strangers gone, together we made the tour of the rooms. First the library, or, as Teddy said, "our library sitting room." It was a dear little cosy place, with two west and one sunny south window, and connected with a bedroom of the same size by sliding doors, and here was another south window. "What a splendid place for my winter plants!" I exclaimed at once. My first question in regard to the parsonage had been, "Is there a south window for plants?" and my very practical mother said it seemed to make no difference whether there was a kitchen or not, so long as

I had a place for flowers. The dining room was large, nicely papered with a light, cheerful paper, and opening out of that by folding doors was a dear little room with a north window and an eastern door. This soon became, however, the north study, as the warm summer afternoons drove us from the sunnier room. But the parlor! Words almost fail me. The homeliest of homely yellow wall paper with an ugly brown spot in it; the darkest of dark carpets on the floor; a great high black mantel; a black sheet-iron fire-board, cracked and broken, and an open stove-pipe hole to let the swallows out, and black bricks for the fire place; windows high and old-fashioned, with great, barn-like shutters; half a dozen very common chairs and a stray sofa. After taking an inventory I finally gasped, "Oh, Teddy, let's get out. This room must be sacredly set apart for funerals." It was a relief to breathe the air of our cozy kitchen, with its lots of little handy closets. Four bedrooms composed the upstairs; but wait till I come to the furnishing thereof before I tell you of them.

I have taken long for introduction, but I think the getting acquainted and getting to work will take but a short time. THE BIRD'S NEST.

**To Bleach Wax.**—First sheet it; keep it in the sunshine. To half a pound of good white wax add one-quarter ounce balsam of fir. You can guess at the quantity; less will do; if you get in too much it will be sticky. Pour boiling water into the cup and let the wax melt gradually, then put in the balsam; have a dish of hot soap suds; dip your mould in that, then into the wax quickly, then in cold water, and slip it off.

**Wax Grapes.**—To make wax grapes, take annealed wire that is stiff enough to support it—I don't remember the number—wind a little cotton on one end, double it over to prevent its pulling off; then for what is called Black Hamburg, color common rosin with lamp-black and melt gradually, then dip the cotton end in the rosin, then in cold water and press it tight with the fingers; when it is cold continue to dip it in the rosin, then in the water to cool, until it is as large as wanted, being careful to turn it when just out of the rosin to get the required shape and size; lastly, dip in hot wax previously colored with blue and red paint, and hold grape in cup so it will drain. Each kind has its color of paint. E. C. BIDLAK.

**Home Made Rugs.**—For those who make drawn-in rugs of rags, I will give two patterns that are very pretty, where the colors are not suitable for flowers, or very elaborate figures. Take an oblong piece of burlap, and fasten it to the frame and draw a line all round the outside as near the edge as you desire to work; then draw a straight line from the middle of each side to the middle of each end, forming a diamond in the centre, and quarter diamonds at each corner. Outline the outside of rug and centre piece with three times round; suitable colors would be one scarlet between two of black, or some shade of yellow between dark blue or maroon; after that draw in different colors in stripes round each piece according to taste, having the centre and corners correspond exactly, or the corners all alike. When the centre is filled up except a small diamond, have that some bright, pretty color, and if shaded, all the better; the corner pieces should correspond also. If attention is paid to contrasting colors, the result is very fine, even if some are rather dull. I have never seen one of this style, except my own, another which I have seen and used is called "hit or miss." The border is generally shaded or drawn in in stripes all round the rug, and the centre is filled in with odds and ends of every color drawn in straight across one after another without much regard to the arrangement, though it is best to have the brightest colors, like scarlet, pretty evenly distributed. Any pieces will do, that when drawn in will make a stripe two inches long, but do not have a stripe of one color more than six inches long in one place. This will work in many beautiful bright bits that are good for nothing else. If sheared it will look more like velvet, but is pretty enough without.

**A Kansas Home.**—My home does not consist of frescoed walls nor stately palaces, it is nothing more than a neat little cottage. I do all I can to make it pleasant and happy. My little daughter gathers wild flowers and ferns for me during the summer. I press them, and after they are dry, I dip them in white wax or varnish them, they will retain their color, and I lay them on black velvet in the shape of a cross, or a wreath, and will then have a beautiful picture. I also make medleys from pictures I preserve. I have a bouquet I made from grass, I got some Venetian red, mazarine blue and some Paris green, at the drug store, and painted them; I then joined them by placing them on a long stick, and it will make a beautiful corner piece; I made Zephyr flowers and placed through it. When Harry came in he was surprised, for I had not let him know I was making it, and he pronounced it perfectly beautiful. I have just completed a tidy made with the Afghan stitch in strips, and narrow it off in points at

the ends, then take red zephyr and work a little vine through it, and a border around it. Now my dear readers these will help ornament your home, and are got up at little expense. NORETA.

**Ferns.**—I frequently see directions for bleaching ferns, but in the fall of the year, here in New Hampshire, we have no difficulty in finding them pretty enough without that trouble. Besides the white, there are straw color, pea-green, and many beautiful shades of brown. Soon after gathering, iron them with a not too hot iron, which has been waxed with common yellow beeswax. If intended to frame or wanted to be perfectly flat, iron until dry. Frame with black velvet or cloth for a background, either with or without a mat. For bouquets for vases or similar decorations, I think they are nicer not to be ironed perfectly dry; they will then be curled and drooping a little, much more graceful and natural, autumn leaves can be treated in the same way and remain on the branches if desired.

**Fancy Work.**—Take a piece of perforated paper five inches square, and work "Scratch my Back," and a border around the edge, of leaves, then tack a piece of sand paper on the back, a quilling of ribbon around the edge, and loop to hang it up. To make vines, take green or red-glazed muslin, and cut the shape of "Ivy," and dip in wax, and lay the wire on the back, and dip a piece of the muslin in the wax, and then lay on the wire, and hold over a lamp-chimney and then press together, and your leaf is done, be careful not to get too much wax on the leaf.

CLEMENCE ST. ONAO.

**Washing Dishes.**—I would like to say a few words to my friendly housekeeper in FLORAL CABINET. I think the best plan is to wash up the dishes nicely after each meal, I always dislike to have dishes left from one meal to another. Her method of washing dishes suits me very well, but never leave your dishes standing from one meal to another. There is another thing I shall speak of; some housekeepers think on washday, they must have everything in an uproar, and themselves attired in a slovenly and unbecoming manner, now I contend this is unnecessary. I always do my morning work on washdays, just the same as other days, make some preparation for dinner so as not to be in a rush at dinner time, wash and comb myself and children, dress them clean just as I would if there was no washing to be done; one does not get at washing so early by doing this, but I find I like it better than to have things upside down while washing. In cooking, always try to have everything palatable. I have been housekeeping only three years, but by taking an interest in my cooking and the CABINET for my counsellor, I find I improve all the time, my husband often tells me so. I always try to have my floor swept clean before arranging my table, then with a nice white table-cloth on my table, I prepare my meal. I think a white table-cloth far nicer than the fashionable colored ones of this day. L. J. C.

**Ancient Gardens.**—"The first notice of a garden in the historical records of Rome, is that of Tarquinius Superbus, five hundred and thirty-four years before the birth of Christ. Livy and Dionysius allude to one which adjoined the royal palace, which was embellished with a profusion of flowers, in which the rose and poppy predominated. Among the paintings found at Herculaneum, are a few tracings of gardens; they are, we are told, small square inclosures formed by trellis work and espaliers, and regularly ornamented with vases, fountains and caryatides, elegantly symmetrical." \* \* \* \* \*

"The gardens of Athens were remarkable for their classic elegance. Adorned with temples, altar, statues and monuments, where some of their departed heroes reposed, it would appear that these gardens had some resemblance to our modern cemeteries. The points to which particular attention was paid, were shade, coolness, fragrance, and repose." \* \* \* \* \*

"Flowers were not merely a luxury to the Grecians, but they were considered absolutely necessary. Flowers, that lovely part of the creation, that serve the very pledges of a father's love, have indeed been associated with the most striking events of life; they are woven into garlands for the happy and prosperous, they are strewn upon the grave of the beloved, the offerings alike of joy and sorrow." \* \*

"Flowers have been made the vehicles for sentiment all over the world. The Persians communicate with the fair sex, by means of bouquets. The poet has made the fond girl depend on the decision of a flower to ascertain whether her affection was returned." \* \* \* \* \*

"The taste for introducing statues and urns in gardens, was revived by Cardinal d'Este. Anxious to design a garden and residence for himself, he took the ground where the Emperor Adrian's villa had stood; there he happened to find a number of antiquities, which he distributed through his gardens, and thus the plan he had accidentally adopted, became the fashion throughout Europe." \* \* \* \* \* —Extracts from an "Essay on Horticulture" found in an old Magazine of 1854.

## Window Gardening.

### MY GERMAN IVY.

Last winter a friend gave me a cutting of German Ivy that was kept in the cellar with my other plants until spring. When removed to the air and sunshine of the outer world, it had two or three little frail branches with a few scattering leaves not larger than a twenty-five cent piece, and was a forlorn hope for the magnificent specimen of which I have read, being trained around a room or festooning a window. I removed the soil, and filled the pot with rich, black mold, taken from a lot that had been used as a wood-pile and a cow-pen for several years, and gave it, the Ivy, a little frame about three feet high, so that if it felt disposed to climb, it might have the opportunity of doing so. In a few days it accepted the invitation, and sent out four vigorous young branches that soon climbed to the top of the frame, and as it seemed too ambitious, I moved the pot up to the side-light on the front veranda, tacking up small cords to support it. Its growth was really astonishing; in a few weeks it had reached to the top of the door. We arched it over the transom and across the door, but when it reached the parallel cords, it would not twine around them of its own free will, but had a habit of growing downward, as if its ambitious spirit wearied of its lofty flight and yearned to touch mother earth again, and my little boy (nearly six feet high), had to mount a table, with a chair on it, to train it in the way it should go, and he often complained of its growing so fast; every two or three days he would have to mount the table and chair to train the delicate branches and prevent them from being cut off when the door was closed. By the opposite side-light I placed another pot containing several Cypress vines. When the Ivy reached the Cypress pot in its downward flight, it measured, each of the four branches, twenty-eight feet, but I dare say, before frost, it was forty or fifty feet long, for after it reached the top of the door in its second flight, we allowed it to follow its own truant will, and it leaped from cord to cord over the transom, mingling its luxuriant leaves, which were larger in circumference than a pint cup, with the delicate fringed foliage of the Cypress, all studded with the crimson stars, and made

of my front door a perfect arbor, which was the admiration of all who beheld it. So simple, so inexpensive, yet so beautiful. No Corinthian column, no Arabian arabesque ever equaled its graceful festoons. When frost came, sometime in October, with many sighs and regrets we cut the Ivy off at the top of the little frame and carried the pot in the house, leaving the vines hanging over the door, thinking they might remain green and fresh for a few days, but to my

When the cold days came, not having a greenhouse or pit, or even a cellar to put them in (they were kept in a neighbor's cellar last year, and I did not like to trouble her with them again), we could not see them all die without making an effort to save at least a few of them, and my same little boy, who is fond of flowers as I am, made a frame of laths, three sides of which we covered with paper, leaving the front and top open, intending, when freezing weather came, to cover them also with paper. Under this frame we put our favorite flowers, the Ivy being among them. It still continues growing, and has twined all over the frame, making a miniature bower of it, and is as handsome an ornament for our sitting-room in the winter as it was for the veranda in summer. L.

BOUQUET OF ORNAMENTAL GRASSES.

astonishment they scarcely seemed to miss their roots, and although the door is due north, and they had very little protection from the cold winds, in December they put forth abundant clusters of yellow flowers. The severe weather we have had recently has withered the leaves somewhat, but at this present writing (Jan. 10), the flowers are as fresh as ever. I counted one cluster just now that contained fifty-four delicate fringe flowers, looking more like a bunch of little yellow tassels than anything else. But that is not all of my Ivy.

cones. Soon after, the little spears of grass will begin to emerge from among the laminæ, forming a beautiful hanging ornament.

Take about twenty wheat ears, with two or three inches of the straw; tie them together, hang them up in a warm place, keep them sprinkled with water, and when they commence to sprout, put them in a celery glass with water; the top will soon become a perfect pyramid of verdure, and will retain its beauty for several weeks.

### Vines For Window Gardening.—The following kinds of plants, says the *Country Gentleman*, can be

easily cultivated and grown in a room not heated more than just to keep out frost: For vines to grow in pots and twine along the inside casing of the window, take the Russian and Giant Ivies; for the borders of pots or boxes, take the different varieties of Sedums—the catalogues will tell you of the colors. Again, as a climber, or trained *en masse* in the center, take *Ampelopsis Veitchii*, which is a miniature foliaged variety of our well-known, hardy Virginia Creeper. *Akebia quinata* is another rapid-growing vine, of neat foliage and large clusters of chocolate, purple-colored flowers, deliciously fragrant. *Anemone japonica nigra* and *alba*, are plants beautiful for pots in winter, being nearly hardy and producing abundance of flowers. And that a pretty ornament for the sitting-room may be formed by taking large pine burs and sprinkling grass-seed of any kind in them, and then place them in a pot of water. When the bur has soaked a few days, it will close up to the form of solid

[Written specially for the LADIES' FLORAL CABINET.]

**Winnifred's Will.**

BY AUGUSTA LARNED.

## CHAPTER VI.

"A mad world, my masters."

Bradley Halcourt removed the large meerschaum he was smoking with the air of deliberation that belonged to him, and bent his hazel eyes, gleaming with covert amusement, on old Nanna, who stood before him, arms akimbo, and with a puzzled, mysterious expression on her broad black face.

"A ghost, Nanna!" said he, smiling, and showing his beautiful teeth. "Now that is delightful; I always thought the old Hall ought to have a ghost to make it complete. And you say you have actually seen one?"

"'Pears like it was a spook shore enuf, honey; and I seed it plain as day," returned old Nanna, in an awe-struck whisper.

"Perhaps Steenie has been playing a trick on you," Bradley suggested.

"Dat dar chile is up to de debble's shindies," said Nanna, shaking her head, "but he couldn't, nohow some-dever, make hisself six foot tall, wid a face as white as a pocket handkerchief.

"And it wasn't the old judge?" said he, trying another tack.

"What fore, honey, should de ole mass'r come snootin' back from t'oder world 'cept dar was priests gettin' into de house, or he smelt de dishes dat new fangle cook makes in de kitchen? Ef de ole mass'r was to come, shore's you live, he'd cough and knock on de flore wid his stick."

"Well, Nanna, I'll watch to-night for your ghost, and I'll take my uncle's old musket and see if I can't bring him down."

"Shoot, honey! (in a solemn whisper) dem spooks don't mine bullets; dey go right frew without makin' nary hole; an' if you git de spookses ill will, 'pears like dey might trick us all."

"Never fear," said Bradley, laughing gaily, "if I can lodge a bullet in the ghost, he will not trouble you again. But tell me, Nanna, has any one seen it except yourself?"

"Miss Jinny," said the old woman, in the same awsome whisper. "Lass night, jess afore I locked de house, dat furrin gal, as little miss dotes on like de apple ob her eye, she bust in all white, and tremble and shaky like a ole hen afeard for its chicks; an' 'pears like she wouldn't 'fess what was de matter, and when I chafe and chafe her cold han's she jess bust out acryin'. I'se shore she seed de spook, honey."

"Very well," said Bradley, who had become grave and watchful while Nanna was speaking, "if Miss Duval has seen the ghost I can find out all about it, for here she comes with my cousin."

Old Nanna went off through the trees, and Winnie and her friend, with Hector bounding on before them, came down the oak avenue. The day was cool and windy, with scuds of dark and silvery clouds moving rapidly across the sky, and opening at moments to emit floods of brilliant light. Gusts from the clear, cold west swept along, fitfully laden with "the flying gold of the woodland."

Winnie was in the full radiance and glow of health. She had written her business letters, and attended to the upholsterers who were refurbishing the drawing-room. She had given orders to restock the greenhouse with rare plants, and had been to the stable to inspect her new carriage horses, and had directed the men who were cleaning the grounds. All the knowledge she needed for practical affairs seemed to lie at the tips of her fingers.

The day was cool, and she was dressed in a long cloak edged with fur, and a large black hat with a floating plume. Virginia, who was wrapped in a gray shawl, looked pale and fragile beside her brilliant friend. Bradley had remarked with pain, almost with resentment, that ever since his arrival at the Hall, Virginia had avoided him, appearing to dread a chance encounter, and to keep well

out of the way when there was the least likelihood of their being left alone together. The sense of trust in him, and dependence upon him, which she had once expressed in such a sweet, almost childlike, fashion, had now vanished, and he would have felt that he had a right to be more than hurt, if, as he furtively watched her, the conviction that she was suffering from some secret cause had not forced itself upon his mind. But if she was in trouble, to whom ought she so naturally to turn for help as to himself? He was vexed with her want of frankness when he had tried to prove her friend, and yet he would have been the last to claim anything on that ground. He did not want gratitude. What did he want? Pah! he was not in love. As he went about the woods and fields visiting the old familiar spots, he resolved to accept his fate, reserving the privilege of railing at the world afterwards. But his mind was mainly busy with wondering why Virginia avoided him, and what was the meaning of her agitation on the day of his arrival. He would not distrust her. She was as ingenuous and simple-hearted as a child; but some dark secret had come to cloud her young life, and kill her faith in him.

With Winnifred, things had gone more smoothly. There was always plenty of spi y conversation and sparring between the cousins while Virginia sat by tongue-tied; or, if appealed to, answered with a mere monosyllable, as if determined to reduce herself to the position of a formal companion to the young heiress.

Mr. Swayne was absent much of the time, attending to the affairs of the school at the mine, and of his new position as minister-at-large. He came to the Hall at night to sleep, and was occasionally present at meals. It was impossible for him to wholly conceal the almost worshipful deference with which he met Winnifred's slightest look or word. Toward Bradley, his manner was cold, stiff, and formally polite. Bradley, who unconsciously studied the different members of this group with close attention, had remarked Mr. Swayne's treatment of Virginia. He seemed to completely ignore her. Had not his own preoccupation prevented him from penetrating Edgar Swayne's secret, he would have discovered that where Winnifred was no other woman counted for anything in the young parson's eyes. Half falling into the opposite mistake, it had flashed upon him once or twice that the young man's apparent indifference to Virginia might be assumed to cover feelings of quite another nature.

Now, as the two girls came down the avenue together, Bradley determined to make Virginia look him fairly in the face. "Miss Duval?" said he, advancing to meet them. Virginia gave a little start as she heard her name called, and then the blue eyes were raised with a half shy, half timid look of inquiry, and a faint flush overspread her face. "Old Nanna has just been out to confide to me the startling fact that you have seen a ghost. Now, as I have the greatest desire to learn the secrets of the other world, I beg that you will tell me all about your adventure. The old nurse claims to have seen the apparition herself in the form of a tall man, with a very pale face."

Virginia's cheek blanched, and an involuntary shudder ran through her.

"Don't you see how nervous you have made her by the bare suggestion?" said Winnie. "Nanna has her head stuffed full of superstitious notions about spooks. She has all the credulousness of the negro race, and has been seeing spirits ever since I can remember."

"I am not at all sure Miss Duval has not seen something uncanny," returned Bradley, pitilessly determined to make Virginia speak and look at him again. "Her lips are quite pale, and they say that is always a sign."

"I have never seen such things," said Virginia in a low, pained voice, with a deeply serious air. "I have often prayed if such things are possible, that my loved ones would speak to me, or give some sign, but they are silent to my cries and my tears. Last night I was restless, I could not sleep, so I stole down into the grounds, and when Nanna let me in I was perhaps shaking from cold."

"If you could not sleep, why did you not come to my room?" said Winnie, reproachfully. "What was I made

strong for, if not to comfort you, Mousie. She has been ill of late, (turning to Bradley) and it all comes from nursing that Finster boy, Jake, who is down with the measles, and sitting in a stuffy little room where the air is perfectly choking, to tell the freckled-faced, red-headed lad stories and give him cooling drinks; and now, though she is far from well, she is obstinately bent on going again."

"Yes, dear mademoiselle, do let me go. The poor mother has so much to do for her little ones she cannot sit by the lad's bedside. He will be wishing for me." She drew her hand away from Winnie's with a little, gentle violence, and giving her a fond look of farewell, glided down toward the lake.

"What a dear, adorable creature she is," said Winnie, standing still in the road, and looking after her with the deep glow of a smile in her eyes. "I have never been so much attached to any one before, and I am very grateful to you, Bradley, for sending Virginia to me."

"She does not seem a very lively companion," said Bradley, dryly, as he knocked the ashes out of his pipe. "I thought her quite a different sort of person when I knew her on the ship."

"I didn't want a lively companion," returned Winnie with some heat; "I wanted some one to—to love." And the next moment she was ashamed and vexed with herself for having gushed over, and made a confession to Bradley that sounded sentimental and ridiculous in her own ears. She expected a sarcastic reply, but he only glanced at her from under his eyelids and said, "Oh, indeed!"

This seemed to Winnie a very unpromising prelude to the confidential talk with her cousin, as she had planned to have that very day; but her will was predominant, and though she felt a husky, half-choking sensation in her throat, she put it down, and said in her coldest and most assured tones: "Bradley, would you mind walking a little way with me? I have not yet told you anything about poor father."

"If the crisis has come, curse my fate," thought Bradley to himself. He would have been glad to whistle, but he only turned toward her with cold politeness, and said, "I am entirely at your service, Winnifred."

"Well, let us move on," said she with alacrity, feeling that the task she had set herself was a very hard and disagreeable one. It would be easier to get through it creditably if she could walk herself into a glow of exercise; then, perhaps, she might take the leap before her in a handsome and spirited manner.

Bradley removed his meerschaum, and stole a furtive glance at her face. He had not studied his cousin as she deserved since he had come back to Halcourt, and found her a full grown, beautiful woman. He acknowledged secretly that she was handsomer than he had at first thought, and carried herself regally. An intense magnetic life seemed to tingle down to her finger tips. How had such a vivid creature sprung from the union of that bundle of legal lore and malignity—the old judge—with his half moribund aunt? It occurred to Bradley that there were men in the world who would worship the ground on which this superb girl trod, and though she might be a wayward creature, capricious, and undisciplined and crude, she was certainly magnificent. There must be a great power of loving in her. Such richness of coloring is never given to the unimpassioned. These thoughts passed through his mind in the flash of an eye, and then Winnie had begun speaking in rather a higher key than usual, which betokened some suppressed inward excitement. She was walking on the moss-grown border of the road where her dress made a slight rustling among the fallen leaves.

"I have not yet had an opportunity to speak to you, Bradley, about poor father's wishes and feelings concerning you, which he expressed to me very strongly just before he died."

"Indeed," said Bradley, in a cold tone of surprise, "I was not aware that the Judge had any wishes or feelings connected with me except a feeling of disapproval—disgust, perhaps, for the way I have, thus far, lounged through life."

Winnie was nettled by the tone of this reply, which gave her no help or reassurance, but she found relief in a little outburst of unreasonable resentment. "My father was a peculiar man. Of course I know there was never any love between him and some members of the family. You may have done him great injustice, and I will not hear one word against him, for he was always good to me, and I am bound

to take his part, and to strive in every way to fulfil his wishes."

"Don't think, Winnifred, I should have the bad taste to speak against your father in your presence," said Bradley, with a slightly cynical smile curling his lips. "I am sure it is very commendable in you to feel as you do."

This speech sounded patronizing and hypocritical in Winnifred's ears, but it only goaded her on to the aim she had in view. "I think you ought to know," said she, trying to make her voice very strong and assured, and looking straight before her, "that my father had some regrets, some feelings of remorse, for the wrong done my uncle Harold by Grandfather Halcourt's will."

"Well, that is all past and gone, Winnifred. There is no use in raking it up now," returned Bradley with alacrity; "I do not hold the money at a pin's fee. As you were the gainer I think you ought to know this."

"But my uncle Harold did not feel so."

"No, his last years were embittered by what he considered an outrage, almost an act of robbery. But we younger ones are not responsible for the irrevocable things that happened to our elders. We do not think or feel as they did. Their grudges are not ours, and we can well afford to let the old hatreds and heartburnings die out, and to live our own lives in our own way."

"Perhaps it is our duty to try and atone for some of the sins and errors of the past," said Winnie, in a loud voice, for her daring and courage had strangely deserted her. Her eyes were dropped on the ground, but in a moment she rallied. "Your mother, Bradley, must certainly be ambitious for you, if you are not for yourself. I have not seen her since I was a child, but then she seemed to me an intensely proud, high-spirited woman. Perhaps her wishes would coincide with my father's."

A cloud swept over Bradley's face, and there was a strong infusion of bitterness in his tone as he said slowly, "My mother has not changed in any of her aims or purposes. She is far more worldly than I once supposed, though we have always lived together in the closest intimacy. But what were your father's wishes, Winnifred?"

Winnie tried to recover from the almost overwhelming sense of humiliation that fell upon her now. She longed to call up a laugh, a saucy repartee, anything to break the evil spell, and give her back the old feeling of predominance and self-command, by which she could do an audacious, almost shocking thing, in a high-spirited manner. But the power refused to come, and she said in a low, half-pleading voice, "I should think you might guess, Bradley, without forcing me to speak out; he wished to have the family name and estates united. It was his dying wish, his very last request to me, and I gave him a promise"—here she stopped, for it seemed difficult for her to articulate.

A distinct shock ran through Bradley, as if Winnifred had violated the sanctity of her sex, by taking the initiative in a delicate matter, where man has always claimed the right to lead. He unconsciously stopped quite still, and pressed his heel hard into the sod, forgetting, for two or three moments, that he had not spoken; but her voice, more deprecating than before, recalled him to himself.

"My only aim is to keep the promise I gave my father, to—try and right the old wrong. Of course, I do not know how you feel. It may be very unwelcome to you. Perhaps you will not understand or respect my motives, or remember how I have been brought up." The words came with great effort, and a hot, intense blush spread over her face.

Winnifred's confusion brought a reaction in Bradley, and awoke his pity, which was intensified by conscious self-scorn for the part he had agreed to play. He was pale to the very lips as he turned toward her. "Winnifred," said he, "I cannot misunderstand you; but it is right that we should not deceive each other; that all should be open and honest between us. You have been forced into a painful position by your father's dying request, which now seems sacredly binding upon your conscience. But, though you are a very clever girl, you are young in mind; you do not know yourself; you have not seen the great world; and are yet incapable of appreciating the immense advantages your great wealth offers. I should be base to make capital out of our singular relation. I am older than you are; it is my duty to protect you, and to convince you that this promise is not binding upon you. If you put shackles upon yourself before you have attained to self-knowledge, nature, passion, life, will revenge the wrong. But what will you think of me, Winnifred, when I confess with shame that I came here to marry you, if I could; that I promised my mother, whose influence on my life has always been overmastering, to marry you, if I could. I have told you that I do not care for the money; but I do not expect you to believe me. My conduct must seem to you disgustingly mercenary. Our fortune has nearly all been lost in bad speculations. We are now poor; and my mother has assured me that she would die in shame and misery if her luxuries were curtailed, if her pride and ambition are mortified; in short,

if I do not marry you. I have told you this in the boldest way; I have not tried to screen my mother; for I wish you to know us as we are, that you may despise my weakness, and reject me with scorn."

"I do not wish to reject you," said Winnie, in a loud voice, "I am bound by my promise to my father."

"And I am bound by my promise to my mother," said Bradley, "if you will take me after the confession I have made. It seems, Winnifred, we are good, obedient little children, with no wish but to obey our parents. You know, in novels, people who are destined for each other, by the will of their elders, who have outlived the generous instincts of human nature, and forgotten the passions and emotions of their youth, generally rebel and make a deuce of a time. But we have found out a more excellent way, and are bound to please papa and mamma by perfect submission. Look here, Winnifred," with a strange softening in his voice, "nothing shall be done in haste or unadvisedly, and if you wish to break this bond, even when we are standing at the altar, with hands joined, you shall do it freely. I will protect you against myself and all other fortune hunters. You do not know yourself; you are a splendid creature, a magnificent young woman. I did not do you justice years ago. A boy seldom does justice to the possibilities of a romping girl of thirteen, who teases him. But you have turned into something quite wonderful, and you ought to be loved with passionate ardor, and complete consecration. You ought to love, you will love, with all the strength of your rich, fervid, proud nature; and then the bonds that policy or cold scheming have imposed, will snap like withes in the hand of a giant. But I see how it is," he continued, taking on a light, ironical tone. "A great heiress is like a queen; she sacrifices her inclination for reasons of state, and offers herself in marriage; and the prince-consort is commonly something of a tame cat."

A burning, blending blush had overspread Winnie's face and neck; she was tugging in every fibre with a sense of shame—this proud, mettlesome creature, who never had bent her head to any yoke. Bradley's compliments, his tone of talking down to her level, seemed to heap hot coals upon her, so that the force of the last terrible sarcasm was almost lost. She found relief in an angry outburst.

"Don't waste any of your sentiment on me, Bradley. I consider such speeches absolutely insulting."

They had approached now that part of the winding wood walk that skirted the head of Glenmere, near where the mountain road opened its long avenue. It was carpeted with bright leaves, and the wind was making music among the lofty boughs. Just at this point Bradley had met Winnie, on the day of his arrival. As the memory came over him with a warm rush, he half paused in the path.

"Of course, I did not mean to insult you, Winnifred, though the joke was questionable; but there are always conjugal tiffs after marriage, and I suppose this is a little prelude. I shall write to my mother and tell her the arrangement is made—conditionally. Have I your consent?"

It was horrible to Winnie to say yes after what had occurred. Bradley had been offensive all through this strange interview, and had made things as hard as possible, but she did speak the word in the coldest tone she could command. The silence that ensued as they walked along the road, rustling the leaves under their feet, was so oppressive she was fain to break it.

"I want to speak to you about Virginia and the search after her uncle, which I think had better be abandoned. If he should appear to claim her I would not give her up. She is necessary to me, and I have my own plans as to her future."

"And what may they be?" inquired Bradley, with clear, sharp emphasis.

Something in his voice restored Winnie to herself, and gave her the old delightful feeling of assured power.

"O, I shall always keep her near me and care for her like a sister, for her affection is one of the luxuries of my life. She is a little missionary and saint, and perhaps—who knows—sometime she may marry Mr. Swayne."

"Marry Swayne!" ejaculated Bradley, with surprise and scorn, as he stopped, rooted to the path. "You must be very crude, Winnifred, to imagine that you can dispose of the lives and fortunes of human beings by a caprice. You must have an exaggerated idea of what mere money can do in the world."

Bradley had been betrayed into emotion, a weakness of which Winnie took immediate advantage.

"O," said she, haughtily, "you can sneer at me and call me crude. I do not mind that, or your thinking that I am vulgarly proud of my money and what I can do. There is nothing at all unreasonable in the idea that Virginia and Mr. Swayne may some day marry. They have the same tastes and interests, they are both of them given to good works, and love to sacrifice themselves, and of course they cannot help being thrown much together."

"Oh!" said Bradley, turning round, and digging the point of his stick savagely into the soft earth, with a look of intense disgust on his face. In a moment he had turned

back, and was speaking almost humbly. "What reason have you to suppose that Miss Duval is—is—partial to this pseudo parson?"

"O, I know that she admires him, for she has told me so. Why, here is Mr. Swayne coming down from the mine."

Edgar was in fact mounted on horseback and proceeding at a good round pace over the forest road. He raised his hat with stiff civility as Bradley glared at him, and then wheeled his horse so that he might address himself exclusively to Winnie.

"I am glad to find you here, Miss Braithwaite. The engineer of the new works has met with some obstruction. He will be obliged to alter the direction of the galleries, which will involve additional expense. He wants to see you."

Winnie was glad to have a practical problem to grapple with after the unpleasantness of the morning. She answered with alacrity:

"I will go at once, and I shall like the long walk in this invigorating air."

"You will excuse me from accompanying you," said Bradley, "I have letters to write, and there is just time to catch the afternoon mail."

Winnie looked at him with a sarcastic smile.

"You are not interested in the dull details of mining?"

"No," said he coldly; "I am well satisfied you should manage all that. You have a splendid head for business, my cousin."

He turned abruptly into the wooded path, and walked rapidly forward, for his brain seemed on fire. During the forepart of this trying interview a burning, smarting sense of injury, inflicted upon him by his mother, had filled his consciousness, but this was completely lost in the suggestion Winnie had thrown out concerning her friend. Why was the thought that Virginia had formed an attachment to this young man so odious, so unendurable to him, at a moment, too, when he had irrevocably fixed his own fate? His heart was torn at the bare possibility, and yet she had been in familiar, daily intercourse with Edgar Swayne for months. It was natural and reasonable to suppose they might marry, as Winnie had said, but he was angry with his cousin, for the unwelcome suggestion. The young men had instinctively disliked each other from the first moment of meeting. Bradley eagerly lived over every look and tone, every expression of Virginia's face since his appearance at the Hall. The memory of her coldness, her shyness, her marked avoidance, almost dislike, of him, only added to the torment of his soul.

He made a long detour through the woods and fields, and it was hours before he reached the Hall, where workmen were busy laying soft gray Axminster carpets on the drawing-room and library, and hanging rich crimson portieres over the old oak doors.

"Looks mighty like a weddin', don't it honey?" said old Nanna, beaming on him in a rich, expansive glow of satisfaction. He pushed past her and got to his own room, where he wrote the following note:

"DEAR MOTHER: My Cousin Winnifred has proposed to me, and the matter you have so much at heart is partially arranged. It has been conducted strictly in a commercial spirit. My cousin is a fine woman, with splendid business capacity. She hates hypocrisy as much as I do, and is free from all sentimental nonsense. I hope you are satisfied with your obedient son, BRADLEY HALCOURT."

At midnight Bradley was pacing up and down the oak avenue. The red spark had died at the end of his cigar, but he was keeping his promise to old Nanna to watch for her ghostly visitant. By the gleam of the setting moon, that silvered the tips of the fir trees, and made the whole scene sweet and solemn, he could see Virginia's window, in an angle of the old Hall. Suddenly there woke a low, cautious rustling among some bushes at the right. Bradley hid himself behind the trunk of a large tree, and watched and waited. The rustling continued, and something larger than a dog was softly creeping forth. Instantly he sprang upon it, clutched it, and found his hand buried in a head of curly wool.

"Who are you, prowling about this place at night?"

"O, Lo'd! O, Lo'd! I've kitched. I've no thief. O, Mass'r Bradley, am dat you? Don't whale me. It's Steenie. 'Pears like I've dat scart I shall jess keel up."

"What are you doing at this hour?" shaking the boy soundly, "are you trying to frighten the young ladies, or to fool your old grandmother, and fill her head with ghosts and hobgoblins? I'll take that nonsense out of you, for I have a strong arm."

"O, mass'r, Bradley dont, dont, I knows noffin at all of de spook, I've innercent as a lam' unbo'n. I did cheat Gandy, for I runned away to tend a shout at Goose Creek, for Ise powerful pious, and it took so long for de sistern and de brederin to tell dar spierience it didn't let out till late, and I was gwine to steal in and sleep in de barn. Don't let on to hittle Miss. I'll nebbber, nebbber do so no mo."

(To be continued.)

### DECORATE YOUR HOMES.

The above is a fac-simile of a sheet of Perforated Card Board, 8 1-2 x 21 1-2 inches, on which is an elegant design for embroidery. This is only one of a series of the most artistic and tasteful designs for mottoes which we have ever seen. The whole list numbers about sixty, among which are such as "Consider the Lilies," "After Clouds, Sunshine," and "Should Auld Acquaintance be Forgot." The prices of these vary from 30 cts. to 60 cts., and they can be had by mail only by sending to COLMAN SMITH, NEW HAVEN, CONN., who will send a list on receipt of a stamp. The designs are all patented, as well as the method of indicating each stitch, and by light and heavy lines show the shading necessary for a good effect. Purchasers should not be deceived by cheap imitations.

**Aster, Zinnia, Pink, Phlox, Pansy.**  
Packets of each of these very choicest seeds mailed to new customers for trial for only 10c. and stamp. Catalogue free. Send for it. Prices moderate, packets large, quality unexcelled. A trial will prove. Address E. WYMAN, JR. Florist, ROCKFORD, ILL.

**FOUNTAIN PUMP.**  
GARDEN ENGINE and FIRE EXTINGUISHER. For Washing Windows, Carriages, etc. Protects Buildings from Fire, and Trees, Vines, etc., from Insects. Throws water 50 feet. Easily carried. No Dwellings, Country Home, or Factory should be without the Fountain Pump. Send for Large Illustrated Circular. J. A. WHITMAN, Sole Proprietor and Manufacturer, Providence, R. I.

### White Water Lilies.

(*NYMPHIA ODORATA*.)  
I will send roots bearing these beautiful and fragrant flowers to any address postpaid, with instructions to grow them, for 25c. each, or \$2.50 per dozen. They can be grown in ponds or tubs. Address B. K. LANGWORTHY, Rockville, Wash. Co., R. I.

### PLEASANT EMPLOYMENT

For young or middle aged ladies or gentlemen in every City and Town. No fortune to be made selling humbugs, but sure pay and pleasant honorable work. If you or some friend really want work, send postal card for particulars. Great inducements to experienced canvassers. Address at once, WELLS, RICHARDSON & CO., Burlington, Vermont.

### A Greenhouse at Your Door.

For \$1.00 I will send free by mail,

- 8 distinct kinds of Monthly Roses,
- Or 8 " " " Flowering Begonias,
- " 12 " " " Basket Plants,
- " 8 " " " White Leaved Plants,
- " 12 " " " Carnation Plants,
- " 12 " " " Pink Plants,
- " 6 " " " Fancy Caladium Bulbs,

Catalogues free. Send for one at once. All kinds of Flower Seeds at 5 cts. per paper. Bulbs and Plants at extremely low prices. JOHN LEWIS CHILDS, QUEENS, N. Y.

## COLGATE & CO.'S VIOLET TOILET WATER.

My annual Catalogue of Vegetable and Flower Seed for 1877 will be ready by January, and sent free to all who apply. Customers of last season need not write for it. I offer one of the largest collections of vegetable seed ever sent out by any seed house in America, a large portion of which were grown on my six seed farms. Printed directions for cultivation on every package. All seed sold from my establishment warranted to be both fresh and true to name; so far, that should it prove otherwise I will refund the order gratis. As the original introducer of the Hubbard and Marblehead Squashes, the Marblehead Cabbages, and a score of other new vegetables, I invite the patronage of all who are anxious to have their seed fresh, true, and of the very best strain. New Vegetables a specialty.

JAMES J. H. GREGORY, Marblehead, Mass.

### ROSES

By mail, postpaid (on own roots), 25 cents apiece, \$2.00 per dozen. Large plants (budded or on own roots) by express at purchasers expense, 50 cents apiece, \$4.00 per dozen. The most select collection in America. Send for Catalogue.

ELLWANGER & BARRY, Rochester, N. Y.

### \$200.00 IN PREMIUMS

For the largest amount of fruit grown in 1878 from plants set the coming season of the famous COL. CHENEY STRAWBERRY, the hardest, most productive, largest, handsomest and most delicious Berry grown. LADIES can easily compete for these premiums as a part of them require the care of but from 1 to 12 plants. Plants sent by mail or express to any part of U. S. Price, 25c. per doz.; \$1.00 per 100, postpaid; \$5.00 per 1,000; \$35.00 per 10,000. (Original stock from A. M. Purdy.) ROCKLAND FRUIT FARM ANNUAL, with engraving and full particulars free. J. E. REMSBURG, ATCHISON, KANSAS.

### A \$2.00 Chromo GIVEN AWAY.

The greatest inducement ever offered to lovers of flowers.

For further particulars and prices, see our Illustrated Catalogue of 150 pages, which will be sent on receipt of two 3 cent stamps. The well-known reputation of our Seeds for the past twenty years is a sufficient guarantee of their quality. Address WASHBURN & CO., 100 Tremont St., Boston, Mass.

### ROSES

Fine ever-blooming and other Roses sent by mail post-paid everywhere, and their safe arrival guaranteed. 6 for \$1; 14 for \$2; 30 for \$4. Purchaser's choice of nearly 600 varieties of Roses and other plants, carefully labeled. Fine Premium Rose with each package when 10 cents are added. Catalogue free. Address JOS. T. PHILLIPS & SON, West Grove, Chester Co., Pa.

### THE FREET WORK DRILL.

Indispensable with Fret Saws. It will make beautiful ornamental work with or without a saw; will drill 75 holes per minute without danger of splitting, as an awl will, every one praises it. Sent by mail on receipt of \$1. COLMAN SMITH, New Haven, Conn.

### MISFIT CARPETS.

ENGLISH BRUSSELS, THREE-PLY, AND INGRAIN, very cheap, at the old place.

112 Fulton Street, New York. Send for a price-list. J. A. BENDALL.

\$12 a day at home. Agents wanted. Outfit and terms free. TRUE & CO., Augusta, Maine.

**ONLY THE BEST.**  
CARSON'S COMPLETE COLLECTION OF CHOICE VEGETABLE SEEDS, \$5.  
12 Varieties of SELECT FLOWER SEEDS, 50 cts.  
25 Varieties for \$1.00.  
Send Postage Stamp for my illustrated Catalogue, and Guide to the Vegetable and Flower Garden.  
WM. H. CARSON,  
125 CHAMBERS ST., N. Y.  
(Late of Peter Henderson & Co.)

### BRIGHTON GRAPE VINES

This new variety has proved a very strong grower, and perfectly hardy. Fruit ripens just before the Delaware; is double the size, and fully equal in quality for table use. It is as great an acquisition to our list of Grapes as the Concord was to varieties previously grown. I offer strong plants, propagated from the original vine owned by me, postpaid, by mail, or on the trade in quantities. Send for a Circular. H. E. HOOKER, Hooker Nurseries, Rochester, N. Y.

### POND LILIES AT HOME.

READER, if you want, this coming summer, a tub of aquatic flowers like the above engraving beautiful and fragrant as the rose, easy to grow, send \$2 to my address and I will forward you free of charge, one-half doz. strong blooming roots of *Nymphaea Odorata* White Water Lilies, and two roots of *Pontederia Cordata* with instructions for growing them in ponds, tubs or aquariums. Single roots 35 cents each. Will send roots as soon as weather will permit. Please mention this paper. J. E. S. GRANDALL, ROCKVILLE, Washington Co., R. I. P. O. money orders may be sent to Westerly, R. I.

### THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING ROSES

Strong Pot Plants, suitable for immediate flowering, sent safely by mail, postpaid. 5 splendid varieties, your choice, all labeled, for \$1; 12 for \$2; 19 for \$3; 26 for \$4; 35 for \$5. For 10 cents each additional, one Magnificent Premium Rose to every dollar's worth ordered. Send for our NEW GUIDE TO ROSE CULTURE, and choose from over 300 finest sorts. We make Roses a Great Specialty, and are the largest Rose-growers in America. Refer to 100,000 customers in the United States and Canada. THE DINGEE & CONARD CO., ROSE GROWERS, West Grove, Chester Co., Pa.

**A NEW DEPARTURE, TRAVELING** men wanted. STAPLE GOODS, NO PEDDLING. Salary \$75 a month. Hotel and traveling expenses paid. S. A. GRANT & CO., manufacturers of ENVELOPES and PAPER, 2, 4, 6, and 8 Home St., CINCINNATI, OHIO.

NEW YORK, MARCH, 1877.

### VERBENAS AS WINDOW PLANTS IN WINTER.

Have the soil, half garden loam, one-fourth each of old barn yard manure and sand; good drainage of charcoal and broken bits of old plaster. In August take strong shoots, three to four inches long, without flower buds, if you can; if not, pinch them out. Be sure to take them with leaves at the lower end of your cuttings; just at the leaves the roots start. Clip off the lower leaves, and plant about an inch or more, in six-inch pots; four cuttings around the edge, and one in the center, each a different kind. Set them in a shady place for a week, where they will get the dew; they root rapidly, if not drowned; but give water as needed, to keep the foliage from wilting; give an hour's morning sun for a week; when growing well, more sun; and so on until all day; as they grow, pinch back; they soon become bushy plants. Leave out as long as possible; when brought in, place in a south window; they love a plenary fullness of sunshine and air. Do not water too much. Watch and pick off the green aphids, if they appear; sometimes I have this to do once. Once or twice a week dip the plants in a bucket of tepid water, or hold sideways and sprinkle thoroughly with the hand. When they form buds, water once a week with weak manure water. One winter I had a fine lot; they commenced budding in February, bloomed all through March and April. March is colder and rougher here than midwinter. They were just glorious—trusses large, colors as brilliant as if grown out of doors. No plant makes a finer show in the window-garden in early spring, and they repay us for all care. The last of May I set them out in a bed of rich soil; they grew right on, were covered with flowers long before the seedlings were in bud, and were the last to succumb to the frost. In warm countries the Verbena is perennial. I have twenty-four kinds in the house now; they will soon bloom.

L. K. SHARE.

### ILLUSTRATIONS OF THE MONTH.

The illustrations on the first page, represent favorite ways of decorating windows with flowers in Germany and England, which we can successfully imitate and adopt here in America.

The Fern Window and Aquarium, is large, and projects outward. The arch frame is also on the outside. The rockery constructed within, is made of natural rock and earth, built and cemented together, and the bottom of the aquarium is covered with loose sand and pebbles. The crevices of the rocks are full of earth, in which grows such ferns as Adiantum, Onychium, Pteris, Selaginella and Pteris, in any of the varieties. Such a window fernery, however, is permissible in this country, either in mild weather, or in the milder climates.

The illustrations of flower stands, represent pretty boxes, in which bloom and are displayed the striking foliage of Dracenas, Marantas, Agaves, Pteris, &c., while in the trellis hang the drooping tendrils of the Coebea, or the German Ivy.

Upon pages 36 is an artistic arrangement of the common varieties of ornamental grasses, all of which are described in every seedsmans catalogue.

Upon pages 40, 41 and 45, are family scenes, with incidents of pleasure and taste. The absorbed reader of the book—the bright good morning of the gleeful boy awaiting the return of his father—and the fair artist, both whose work and face are pretty, remind us of home joys, and make home occupation doubly attractive.

THE CHARMED READER.

### PUBLISHER'S ANNOUNCEMENTS.

**Renew, Renew.**—Many thousand subscriptions expire with this number. Renew! Renew!!

**Only One Dollar.**—All the rest of this year's numbers April to December, will be sent for only one dollar, this including also the steel plate engraving, "The Glee Maiden," worth alone \$1.00.

**Get up Clubs.**—To any one who will get up clubs for us this Spring, will be given their commission towards your own paper free.

To every dollar subscription, we will allow 15 cents, or to every subscription at \$1.30, we will allow 20 cents, to be applied towards your own paper free, or any book we offer in our list. These commissions are not cash, but trade towards your own paper or book.

A club of 7 will get you your paper one year; a club of three will pay for nearly six months, but every name you get besides your own, counts in your favor and reduces the cost of your own paper.

**Respecting Certain Advertisements.**—In response to further inquiries of our readers, we will state that the advertisement of the Texas Land Company, was sent us by an agent, Edwin Alden, of Cincinnati. We have always found him and his word reliable. Before inserting it in our journal, we took the trouble to specially ask him if this Company was responsible, and he informed us they were *all right*. As this Company has not proved other than swindlers—both Mr. Alden and ourselves have been deceived, although, we took due caution before hand. Our readers must understand that we did the best we could.

Mr. C. A. Reeser, of Erie, Pa., also last year met with many misfortunes. Hard times took away his business, his landlord shut down and sold him out by Sheriff, stopped his business, and effectually broke up his correspondence. Mr. Reeser had always previously been reliable. We do not know the cause of his misfortune. We do not consider it a deliberate swindle—if so, then as he owes us \$168, we also have been swindled worse than any of our readers. Mr. Reeser has always tried to keep a good name and reputation, but he was unfortunate.

We exercise scrupulous care over our pages that nothing *known to be wrong*, shall be inserted. We can not personally know each party, but do take pains to inquire and try to become satisfied that every advertiser has hitherto always done as he agrees, and is considered able to keep his promises.

**Six Months' Subscriptions.**—By reference to publishers new terms, subscribers are allowed privilege of six months' subscriptions at 65 cents (without Premium), to begin with any number. This will accommodate those who may not be able to pay but for six months at a time. It is better, however, to pay for a full year at one time, and thus save trouble of double remittance and correspondence.

**To Housekeepers.**—Ladies will take note that the Prize Collections of Recipes, which the CABINET publish this year, will be of *immense value to them* virtually a first-class *Cook Book* of themselves, worth \$1.50. We do not see how any lady can do without them.

**A Sweet Home Paper.**—THE FLORAL CABINET is eminently a practical paper of *Home Work*. It avoids fashions and exciting stories, and considers things of common sense and practical use; but specially teaches ladies *how to beautify their homes*—this is our special mission. We choose flowers as a leading feature, but it is not an exclusive subject. Music, Art, Elegancies, Housekeeping—all we give, have *ideas* which have cost time, dollars, and experience to procure. There are plenty of papers at cheaper price, but none which give more true worth for the money.

**Household Books.**—Premiums for Clubs.—A club of only eight entitles club agent to one of these splendid household books:

"Window Gardening,"	- - - -	Retail price, \$1.50
"Household Elegancies,"	- - - -	" " 1.50
"Ladies' Fancy Work,"	- - - -	" " 1.50

If agent's club is less than eight, 20 cents is allowed towards any book for each name in his club, and he can remit balance in cash. A little effort on the part of each subscriber will enable him to get his book or paper at a reduced price.

### MAGNIFICENT NEW FLORAL PREMIUMS.

**"The Floral Cabinet" Collection of New Seedling Gladiolus.**—This is a new collection, never before offered, grown exclusively for us, which consists of twelve flowering bulbs of Gladiolus, one of the finest quality and most exquisite variety of colors. The quality of this collection is unequalled, and in every respect, we can safely guarantee them extra choice. The same quality of named varieties of Gladiolus, obtained of reliable seedsmen, would cost \$12. The colors range from the most fiery scarlet to the purest white.

**OFFER No. 1.**—This collection, worth \$12, will be given free to any person who will raise a club of 15 subscribers to the FLORAL CABINET at \$1.30, and also an extra copy of paper 1 year, free to agent.

**OFFER No. 2.**—To any one who will get up a club of 20 subscribers at \$1.30 we will give sufficient bulbs that the members of the club may have each 1 bulb worth \$1, and the club agent the entire set of 12, also with extra copy of paper free 1 year.

**OFFER No. 3.**—One subscription at \$3, will give subscriber the CABINET 1 year and collection free, all worth \$15.

This collection is not for sale by any seed house, and cannot be obtained at any other place, and all are new seedling varieties just originated.

**The Floral Cabinet Collection of Balsams.**—This comprises the best strains of Camellia-flowered Balsams ever offered. The Balsam is a great favorite with the ladies. This collection is the very *cream of the extra choicest sorts ever raised*. Its value may be judged when the seedsmen have offered 10 cents a seed for all that can be spared. We know there is nothing in Europe or America to equal them. The collection consists of 6 packets, pure white, deep rich purple, brilliant scarlet, crimson spotted, velvet violet spotted, and carnation striped. The flowers are so large and perfect as to be almost equal to roses. The set is worth \$1.50 at least, and can be obtained only on the following terms:

No. 1.—A club of 10 subscribers to FLORAL CABINET, at \$1.30, will entitle club agent to 1 set of above packets, \$1.50, and 1 extra copy of CABINET and engraving free.

No. 2.—A subscription of \$2 to CABINET will entitle subscriber to the paper and collection in addition.

No. 3.—A club of 4 subscribers at \$1.30 will entitle agent to the collection free, as a premium.

No. 4.—A club of 20 subscribers, at \$1.30 each, will entitle club agent to enough packets to present each member of the club with the collection, worth \$1.50, also the CABINET and engraving 1 year, all together worth \$3.50, and the club agent to extra set of paper, engraving, and collection free.

The supply is limited, and those who desire them will do well to get clubs in as soon as possible.

The collections of Balsams and Gladiolus are named specially after the FLORAL CABINET, and we are very cautious never to send out anything but just as represented. The good name and fame, and honor of the CABINET is the best endorsement of these new floral collections, which are of extraordinary value.

"GOOD MORNING."

## The Household.

## WOOD-VIOLETS.

'Tis but a tiny wood-violet,  
Gathered by childish hands,  
Just in the edge of the forest,  
Where the gnarled old oak tree stands.

Yet it stirreth thought's deepest fountain,  
And turneth my memory back,  
To the years that have flown forever,  
Swift-winged adown time's track.

'Neath the old oak's wide-spreading branches,  
I've lingered in days ago,  
Lingered when day was declining,  
To catch the last glimpse of the sun.

See with what beauty and splendor  
He lit up the western skies,  
Tints no earth painter can rival,  
Are these glorious sunset dyes,

'Mid the hush and the quiet of eve'n,  
And breath of wood-violet sweet,  
For silent self-communings  
This seemeth a place most meet.

Here, lessons of life, and God's wisdom,  
Are 'round upon every hand,  
Plainly writ on the face of all nature,  
Who soeth may understand.

The glorious sun, in beams refulgent,  
Sinks him in the western way,  
To let earth-life, as eve approacheth,  
Its most beautiful hues display.

Well we know by laws of nature,  
Day succeedeth unto day,  
That ere long the sun will greet us  
With his cheering morning ray.

When we've trod the mystic valley,  
May not our proud spirit rise,  
To a morn of life eternal,  
To a home in purer skies.

Dainty violets round us blooming,  
Fill the air with sweet perfume,  
From the seeming death of winter,  
They have risen to beautiful bloom.

So may we, through death's cold winter  
Rise, 'tis the same God controls  
Wild-wood violets in their beauty,  
And bids these "hodies bloom to souls."

HINDA.

## PICTURES AS FURNITURE.

"I don't know much about pictures, but they do furnish a room beautifully," said a lady one day as we were talking of house furnishing, and many parlors filled with handsome furniture, and with their walls utterly bare and desolate, or else covered with unsuitable, unsightly pictures, illustrate, by most melancholy contrast, the truth of her words.

In furnishing our houses, we usually try to adapt our carpets and furniture to the rooms for which they are intended, but our pictures, bought as they happen to please our fancy, or that of our friends, and too often because they are considered cheap, are usually hung without a thought being given to their fitness for their place, unless we make their size an exception to this rule. They seem frequently to be bought as Mr. Potiphar purchased the books for his library, "by the foot," or because they will fill certain spaces, without any regard to their subjects, or to the general harmony of the room for which they are intended.

Pictures are considered by many as an extravagant luxury, but when the pleasure they give to every one that enters the house is considered, and we compare notes in regard to their price, and that of some other luxuries, specially of tobacco, which gratifies one person alone, and is often very annoying to others, rendering the atmosphere of a room impure and disagreeable, it must be conceded that a taste for pictures is comparatively unselfish and inexpensive. If "my lord" would save his tobacco money, and "my lady" that which she spends for candy in a year, there is no doubt that they might buy, with their savings, two

pictures, that would not only be a pleasing reminder of their self-denial, but be "a joy forever" to them and to their guests. In a family of children the refining and elevating influence of pictures can hardly be over-rated, and they will teach lessons of faith and love, hope, trust, and heroism that will be felt for a lifetime. A house without pictures is almost as cheerless as a house without windows, and many rooms furnished at comparatively little cost, which have beautiful pictures upon their walls, are prettier, and give more pleasure and comfort than rooms filled with costly and expensive furniture without pictures, or else with pictures unfitly chosen.

A lady living in a plainly furnished house, but with some of Brockman's photographs of Raphael's and Holbein's pictures upon its walls, who taught a class in a mission Sunday-school, and was in the habit of inviting her scholars to her house, had occasion to explain in one of her Sunday-school lessons the word palace. She mentioned the handsomest buildings in the city in which she lived, and said that palaces were usually much more beautifully furnished; to which one of the girls, who always had an opinion of her own, responded with an air of the greatest incredulity, "A house nicer than your'n, Miss Mary?" as if such a thing were not to be credited for a moment. If the lady's house had been stripped of its copies of the old masters, we doubt whether her scholars would ever have been impressed by its grandeur.

As it is very easy to furnish a house on paper, a few suggestions in regard to pictures suitable for different rooms may be useful to some reader. In parlors, landscapes and beautiful faces appear to best advantage, oil paintings if we can afford them, if not, photographs or engravings, only let the subjects be pleasant, and let there be uniformity in regard to the style of the picture. Oil paintings and photographs, or engravings, rarely appear to advantage near each other, and as a general rule, ought not to be hung in the same room, never on the same wall or aside of each other. Most persons hang their pictures so high that their visitors can only see them after tiresome and fatiguing effort, and near-sighted persons lose most of the pleasure that pictures afford by reason of their being frequently entirely out of their range of vision. Pictures, as a general rule, should be hung upon a level with the eye, and in that way can hardly fail to give satisfaction. Good oil paintings are an expensive luxury, but good photographs and engravings are within the reach of all, and chromos flood the country. Some of these are not to be despised. Some of Prang's are very pretty, and some chromos of water colors, especially English ones after Birket Foster's pictures, can hardly be distinguished from the pictures after which they are made.

One word for the illuminated texts and mottoes; they certainly show the religious character of a house, and many a guest, careless in regard to sacred things, may, by their silent teachings, be led to a better and purer life.

In a library, historical pictures seem to be most suitable. Pictures that record heroic deeds, or portraits of men and women who have lived noble lives, will teach us as valuable lessons as the books upon our shelves; and they have this advantage over the books, that almost all who see them, even the little ones, can read and comprehend. In our dining-rooms let us have pictures of fruit and flowers, of animals (and I shall add, of game), but our restaurants seem to have the monopoly of pictures of game, and most of us are unwilling to deprive them of their rights in that direction. It is pleasant to enjoy game upon our

tables with our friends; but most repulsive to many, to see pictures of lifeless birds upon our walls. We have even heard of a dining-room that contained a picture of Herodias, with John the Baptist's head in a charger, but the story is almost too marvelous for belief. In sitting-rooms let there be placed portraits of friends and interior views, glimpses into cottages, and happy homes; scenes taken from pleasant books, as "Priscilla," by Margaret Gillies, from the "Courtship of Miles Standish," or Huntingdon's "Mercy's Dream," or "Christiana and her children," from the "Pilgrim's Progress," or Faed's "O Nannie wilt thou gang wi' me." In the nursery, gather all that is bright and beautiful for the little ones; dogs and kittens, and pretty faces of children, pleasant Bible characters, any picture that will point a moral or adorn a tale; any thing that will make the room bright, cheerful and attractive. Little home pictures like "His only pair," by Thomas Faed, are always pleasing to the little ones. In our bed-rooms let us have pictures of the Saviour, of His mother, and of the saints, no crucifixions or martyrdoms, but pictures which will inspire faith and hope; saintly pictures with a holy repose upon their faces, that has been the fruit of life-long struggle, and unto which we also, striving feebly to follow in their footsteps, may in the end attain.

Verily such pictures, when the toils of the day are over,

— "have power to quiet  
The restless pulse of care,  
And come like the benediction  
That follows after prayer."

Reading, Pa.

M. C. E.

## WORSTED FLOWERS.

Select the finest wire (which can be purchased at any drug store); take a large sewing needle, wrap the wire around it very tight and close; cut the wire any length you desire; for a common-sized leaf cut the wire two fingers' length; I wrap the wire around the needle; I then slip it off carefully; stretch the wire out a little, then putting the two ends together and twisting them; and then you can bend them in any way you wish; wrap the zephyr from right to left, until you get to the top of the leaf; draw the yarn back under the leaf, and over the top, and back under again. To make buds, I take a hair pin; wrap the zephyr around it; then I cut the wire about one and a half fingers in length, and bend it over the zephyr, and twist it very tight; slip the zephyr off the pin; take the scissors and clip the zephyr the shape you want your buds. Make a group of white buds, they are as pretty as they can be. For another way to make leaves, take about three knitting needles, more or less, if desired; cut your wire five fingers in length; bend it in the middle over needles; then throw the zephyr over the needles; bend the wire from right to left, and so on until you get your wire all used up. I have made some very pretty flowers in this way; they are very much admired by those who have seen them. I cannot tell you how pretty they are. I have fourteen colors of zephyr. When you get your flowers all made, take a wire the size of a coarse knitting needle; wrap it with green zephyr (stems should all be wrapped with green). You then arrange the flowers, and bend your wire the shape you want it, and place your flowers upon it. They are very pretty when framed, and cost but little; my frame is 24x26 inches. If the work is done according to directions, you will have some very pretty flowers. I have quite a variety of flowers, leaves and buds. Hair flowers can be made in the same way.

## Household Art.

### USEFUL ELEGANCIES.

More, perhaps, has been written on the subject of home, how to render it attractive, &c., than almost any other. It would seem that the theme has been well nigh exhausted, so many ways and means have been described by which we can adorn our homes. But ingenious minds are constantly presenting us with some novelty, which keeps up a lively interest in the work, encouraging the practical mind to combine the useful with the elegant. We read of a home rendered so beautiful by artistic female hands, that Titani, herself might preside over it; also of the lowly cot, overrun with graceful vines, bearing a rustic grace as charming as Nature herself in her own untrained wilds. Yet I cannot forbear describing some of the beauties of one, belonging to some friends of my husband and myself. It was a modest one, yet so beautiful in exterior and interior, that it was universally alluded to as "a perfect little Eden," "a real home nest," by the friends and acquaintances of the family. I will tell you of some of the lovely things I saw inside, leaving the outside to some visitor to transcribe for the floral department of our CABINET.

The house, which was an unpretending one, with six rooms, was painted a soft French grey, the door and window facings of a darker shade. It was the delight of Mrs. A—— and her grown up daughter to provide it with many ornamental and useful articles, their own handiwork. The word "Welcome," in large evergreen letters, met the eye upon being ushered into the hall. The cosy air of each room, the cordial greeting of the mother, the sparkling face of the daughter, at once convinced the visitor that this was a haven of hospitality.

Over the windows in the parlor were cornices, which I first thought must be antique carving, but found to be made of putty. The cornices were first sawed out in rough wood and covered with putty, prepared as follows: take several pounds of putty, mix in linseed oil until soft, and easily moulded with the hands; if you wish the work to be the color of walnut, mix in lamp-black and Venetian red until the desired color; after it is thoroughly mixed cover the cornice smoothly all over, using a flat tinsil, a case knife will do; make a bead work all around the edges; then comes the moulding of buds, leaves and flowers, grapes, vines tendrils, acorns, or anything the fancy may suggest, and herein lies a field for the display of talent, inasmuch as there is a good deal of art in the moulding. First take a large lump of putty, and roll out on a smooth board, until sufficiently thin to form the foliage (a bottle will do for the purpose); gather some leaves from the plant you wish to copy; or, if you cannot procure the natural leaf, cut one out of paper, dip the pattern in water, and lay upon the putty, cut out with a knife, and trace the veins distinctly; arrange on the cornice, putting a small oblong piece of putty under each leaf, curving and turning it any way the taste may dictate; make stems and tendrils by rolling the putty in the hands; roses, tulips and acorns can be made from nature. Let the work get perfectly hard and dry, then varnish; frames, hanging baskets, what-nots and brackets can be made in putty almost any color. There was a frame in the wall enclosing hair flowers, made of putty, painted pure white, and while the varnish was wet, sprinkled with diamond dust. But the beautiful object that attracted my attention was a basket of rosin fruit, on a small stand in a cor-

ner, covered with a shade made of five pieces of glass, four of them 12x14, the top one 12x12. These were joined together by being set in rough wood, and made fast with putty; the wood work was covered with putty, colored ebony with lampblack, and formed into half-blown buds and leaves; this was placed upon a pedestal composed of three graduated steps, covered in the same way, around the shade. The basket was placed on a bed of moss, over which were strewn a few shells; on one side was a tiny lakelet, made of a piece of looking-glass, edged with moss. The fruit was arranged in pyramidal form, the luscious grapes, plums, &c., presenting a most tempting appearance; the very bloom of the grape was ably counterfeited. This is how the fruit is made: Procure from a tinner a nursery lamp, and half a dozen tin cups, in which to melt the rosin (get the finest white virgin rosin); you must have half a pint of alcohol for your lamp, a gill of white demar varnish; about ten cents' worth of each of the following kinds of paint: drop-lake, ear-mine No. 40, chrome green, Prussian blue, and lamp-black; five cents' worth of wine; have your wire ready cut in five inch lengths; wind a bit of cotton around one end, and fasten; dip in the melted rosin; take out and turn the wire in your hand until a good shape is obtained; drop into a goblet of water to cool; grind the paint in demar varnish, and put in a small quantity at a time; follow nature in size and color; bloom with lily-white and a small portion of the dry paint suitable to the fruit you are making; rub on with a bit of cotton.

In a deep rustic frame was a picture in moss work; it was made by drawing the outline of a landscape on bristol-board, and filled in with moss, gummed on, to represent trees and grass; an old mill was made of bits of bark and tiny boards, overgrown with lichens; the water and sky were made by the pencil, slightly tinted. In another deep frame, was a wreath of wax flowers, lovely enough to deck the brow of Spring; while in still another deep frame, on a background of purple velvet, was a waxen cross, with simply a vine of ivy leaves, climbing from the base, twining around it and over the arms; this was thickly strewn with diamond dust. I thought I never saw anything so purely white and chaste. On the mantel, under a glass globe or shade, was a lyre, made of wax, with a wreath of tiny roses, buds and lilies of the valley, fuschias, in fact, almost every flower was copied in miniature; all pure white, the strings were also of wax: this was admired by all, far and near. Silver dust and gold dust are also very pretty on wax work. Brackets of leather work, and brackets and photograph frames made with a fret saw and a jackknife, on every side, made by my fair young friend, evinced her taste and energy. I could fill much more than my allotted space, describing the beautiful things in this room. I would like to tell you of the beautiful tidies on chairs and sofas, the lovely sea-foam mat under the parlor lamp, the exquisite transparencies in the windows, the sofa cushions, footstools, and hassocks, all elegant, devoid of that homemade look which is so discouraging to beginners. The bedrooms of this house were furnished simply, but so pretty and attractive, so faultlessly neat and without being stiff, was every piece and fold arranged, that it was impossible to take no note of details. The room I occupied during my visit was furnished in oak, with oak and blue carpet on the floor, pure white curtains hung at the windows, with cornices of the long Texas moss, and lambrequins of canton-flannel torn in narrow strips, and each edge ravelled out until only four threads remain in the center. The manner of arranging, I have once seen in these columns, so will not

give it place here. On the beaurean lay a set of toilet mats in spatter work (this work has also been described in the CABINET), on Swiss muslin, lined with rose-colored silk, edged with imitation valenciennes lace; a toilet cushion was made of rose-colored velvet in applique; that is, the leaves and flowers were all cut out of stiff paper, and covered in velvet or silk; the flowers are made and arranged in groups and fastened on, the stems are wire wound with green silk; this cushion was oblong, about 12x14 inches; it had a fringe of wax beads falling in heavy tassels at the corners. On the bed, over the snowy counterpane, were pillow and sheet shams, made of fine Lonsdale cambric. The pillow shams had a plain center, scarcely half a yard square, surrounded by two rows of puffing and two rows of tufts, four in a group, edged with a ruffle; sheet sham edged the same way.

KITTIE.

### OUR SEWING BEES.

We had passed an unusually pleasant summer with picnics under the shady old apple trees, with which grandpa's lot was well supplied.

But summer was over, and so were the picnics, for a season at least. We were all sorry.

"I'll tell you, girls," suggested one—we would still be "girls" to each other until we were seventy, I suppose—"you know how we enjoyed the day that we met together and made short clothes for Carrie's twins, and how much we accomplished too; now instead of working away alone at our winter sewing, suppose we cut out a quantity of work, and meet at each other's houses in turn. We could get it done just as well, and more sociably."

"Yes," said another, "and the gentlemen, that is, the fathers, husbands and big brothers, could come at eight o'clock, and from that time until ten we would have games."

The gentlemen approved of the plan, and waited with impatience for the time of our first meeting.

We talked the matter over, and the result of our deliberation was, we would meet every two weeks, on Friday, that being the day we could best spare, as early in the afternoon as possible, and we were to accomplish as much as we could to do it well, working until eight in the evening. The afternoon dress we should wear if at home, was good enough for the "Bee." A plain supper, just what was convenient, and no cake; we would have that with apples after the gentlemen came. There were ten of us, and five places to meet; and we usually kept three sewing machines busy.

Celia was our best tucker; Sallie splendid at button-holes; Emma, Carrie and Tillie, good, either at button-holes or machine sewing. Ettie could fit dresses and sew cotton goods without basting, thereby saving us much time, whilst Mary and Jennie, Aunt Margaret and Aunt Sue, made themselves generally useful.

We were some of us very fond of fancy work, and anything new or pretty, in that line, that we heard of, or saw, we treasured up for the Bee.

New recipes for puddings, that were specially appetizing, or economical, or both; labor-saving ideas of housework, all were freely discussed; and Mary sometimes read us a choice article from one of our latest periodicals.

We found it possible to pass the evenings pleasantly without the aid of cards, dancing, or theatricals. It was the winter that spelling-matches were so fashionable, and one evening we had a spelling-school; sometimes we played "Twenty-questions," "Verbatim" and "Rhyming-answers."

## Household Elegancies.

### DRESSING-TABLE.

Many families have plain wash-stands such as are shown in our illustration, which may be made into charming dressing-tables, in the following manner: Take a piece of plank four inches wide and eight feet long, which screw firmly against the back of the stand; on this nail a circular piece of board, one foot six inches in diameter, around which fasten an umbrella frame, covered with muslin and neatly lined, which will form a scalloped edge, which must be stiffened with wire.

On this is arranged the canopy, made of figured swiss, over pink or blue muslin; plait a circular piece over the top and around the edge, sew a strap twelve inches in width around each edge of it, which are fluted and puffed ruffles; below this depends a curtain one and a half yards long, also ruffled on the edges and drawn up into festoons. Beneath this, around the edge of the frame, is fastened the long curtains, draped back and arranged on the arms or towel rack of the stand, which must first be covered neatly with colored muslin and puffs of swiss.

The table is covered first with a colored cover, and curtains of the lined swiss, finished to correspond with the hangings. This curtain must open in front in order to allow access to the drawer and shelf beneath, which is thus utilized as a receptacle for shoes, &c.; a dressing glass, cushion and toilet set ornament the stand, and bows of ribbon finish the different points where the curtains are fastened. The lambrequin and window curtains are easily understood at a glance.

### A BEAUTIFUL ART—PHOTOGRAPHIC PRINTING.

Among many of the new and fascinating arts which yearly appear to help make home more enjoyable, is the new art of photographic printing, thus described by a California lady, who has succeeded splendidly with the really valuable Christmas gifts; I am now going to describe a process called photographic printing, by which charming pictures may be taken of our lovely wild field plants, for albums, screens, or any other purpose which may suit the fancy of the collector. The beginner had better commence his experiments with leaves alone, afterwards simple plants like nemophilas or gillias can be taken entire. The first step is to lay in a stock of materials.

We must have good, well dried specimens of all the leaves—maple, abutilon, pear, cherry; every kind is desirable; but those in which the veins are well relieved make the best pictures, and ferns are the most beautiful in form. Lay the leaves into an old book, and dry with medium pressure.

Now for the chemicals. We must have a lot of sensitized paper, and had better, for economy, make it ourselves. As soon as this pretty accomplishment becomes fashionable, as it surely will, we shall be able to buy these papers, as we do materials for wax flowers and the like, but at present we cannot. Select a dozen sheets of the best wove letter paper, eschewing cream laid or any which shows the manufacturer's wire marks when held to the light. We shall want a dozen spring clothes, pins or pegs, and a few quarts of rain water. If you have only spring or hard water, this must be distilled before using.

Now put in a medicine bottle, holding at least half a pint, half an ounce (four drachms) of prussiate of potash, in four tablespoonfuls of the rain water. When it is dissolved, so that uoue is visible in the bottle,

letting it become equally wetted. Then hang it by one of the corners from the edge of a shelf and let it dry. This part of the business must be done in a dark room, by the light of a candle. Candle light does not affect the paper. Daylight would ruin it for this purpose. Now have two sheets of clear glass. Lay on one of them three or four sheets of white blotting paper; upon this the dried and sensitized prussiate of potash paper with the prepared surface uppermost, and upon this place the fern frond or other desired leaf with the back down. (All this, remember, in the dark room.) Then lay on the second sheet of glass, and put the clothes-pin clamps on the edges to hold it in place.

Some clear sunshiny day, take your prepared object into the light, and leave it exposed for a half hour or more to the direct rays of the sun. If you watch the paper while nature is printing it, you will observe the part not covered by the leaf changing to a bright blue, deepening with the tint of exposure until it is nearly black. When you take it out of the glasses, you have a yellow leaf on a blue ground. Wash the paper several times in the clear rain water, and every trace of the potash will disappear from the yellow ground.

Freshly sensitized papers are the best, but you can preserve them in absolute darkness if you wish.

These nature-printed photographs may be colored true to nature, in autumn tints, or the vernal hues of spring. There are other methods; one, in which the ordinary albumenized paper of photographers is used, after dipping it into a solution of nitrate of silver, sixty grains to the ounce of distilled water. Float and dry as in the previous case. When the picture is painted, and the glasses removed, wash it in rain water, to remove the nitrate of silver; then wash again in a solution of hyposulphite of soda; strength, two ounces to half a pint of water. You will need to keep the pictures, made with nitrate of silver, immersed in the hyposulphite solution for fifteen minutes, in order that they may be permanent.

A great many impressions can be made in the same day by economizing time and space on the papers. They may be ruled off into sizes fit for album cards, and the leaves selected so as to leave neat margins, before the paper is sensitized, by numbering the squares and specimens, the spaces will be quickly filled, and four or more impressions taken at once. The washing and drying process is thus economized also. It is pleasant to have both the upper and lower sides of some leaves taken. Very thick leaves, like the California laurel, should be rejected. Alfileria is a beautiful leaf for this purpose; so are many of the acacias. The nitrate of silver process is the most perfect, but it is fatal to clothes and delicate hands, and should only be attempted by a careful and dexterous operator. JEANNE C. CARR.

Handkerchief, cigar and tobacco boxes? wall pockets, dinner mats, napkin rings, may be all made of tin, worked with a pretty pattern, bound with ribbon, and finished with bows, &c. Tobacco boxes and wall pockets should be lined with cambric. A wall pocket I have is composed of four pieces, front, back, and two long triangular pieces for the sides. The front is worked in a bunch of blue forget-me-nots and daisies; the pieces are lined with blue cambric, bound with ribbon as near the same shade as possible and then joined together; is suspended by ribbons, fastened at the corners back and front, and joined at the top with a little bow of ribbon.

WINDOW DECORATED WITH WORKED BALANCE AND MUSLIN CURTAINS.

DRESSING-TABLE.

pour half of the solution in a dinner plate, and float on its surface a piece of paper of the size intended,

## Fireside Reading.

### A HOME IN THE HEART.

O! ask not a home in the mansions of pride,  
Where marble shines out in the pillars and walls!  
Though the roof be of gold, it is brilliantly cold,  
And joy may not be found in its torch-lighted halls.

But seek for a bosom all honest and true,  
Where love, once awakened, will never depart;  
Turn, turn to that breast, like the dove to its nest,  
And you'll find there's no home like a home in the heart.

O, link, but one spirit that's warmly sincere,  
That will brighten your pleasure, and solace your care;  
Find a soul you may trust, as the kind and the great,  
And be sure the wild world holds no treasure so rare!

Then the frowns of misfortune may shadow our lot,  
The cheek-searing tear-drops of sorrow may start,  
But a star never dim sheds a halo for him;  
Who can turn for repose to a home in the heart.

ELIZA COOK.

**What Happened at an Auction.**—An auction sale of old furniture and goods of a hotel, occurred not long since at Colchester, Coun. Part were sold first day, and adjournment made to election day. Those who bought at the first sale found the things so full of bed-bugs, that the second sale looked very hard. The auctioneer came into the Town Hall and invited the people to go over to the auction. He stood on the bench and gave out his invitation, after he got through, a large, tall Dutchman who stood by him, spoke up loud enough for all to hear: "Shentlemen you go over dare, and buys some tings, you gets so many bed-bugs, dey carry your tings home for you. I buys a shtraw tick dare, and gets more bugs than I gets shtraw, you can never more get me to buy some ting there." The roar that followed was tremendous, and not a bid could be got for anything in the house.

**Miss Kate Field** narrates in *The Graphic* these stories of "The Country Parson:" Two trustworthy men assured me that they have seen the Rev. Dr. Boyd deliver a sermon in white kid-gloves. More than one related to me the following story: Traveling one day in a railway carriage, "The Country Parson" had for his neighbor a plainly dressed but extremely intelligent man, in whose conversation he became much interested. On finding that the stranger intended getting out at the town in which he resided, he expressed his desire to invite the clever unknown to dinner, but added that it would be impossible, as Mrs. Boyd always required gentlemen to dress for dinner. Having made this graceful speech, the parson exchanged cards with the Duke of Argyle! The parson stammered; the parson apologized; the parson was snobbish enough to eat his own words, and beg of the Duke to waive ceremony. It is unnecessary to say that the Duke of Argyle did not waive ceremony, and that the story has flown from one end of Scotland to the other.

"Well, what can I do for you?" said Damon, of the Milwaukee Poor Department to a Ninth ward female all rags and tatters. "I'd like a cord o' wood, a bag o' flour, and if ye don't mind, Mister, a daily paper for six months, jest to see how this Beecher trial is a comin' out, ye see."

A Party of belated gentlemen, about a certain hour, began to think of home and their wives' displeasure, and urge a departure. "Never mind," said one of the guests, "fifteen minutes will make no difference; my wife is as mad now as she can be."

There is still a live law in Massachusetts which fines a young man \$5 if he walks out with his girl after sundown. Those old law-makers didn't know beans about the best time to talk love and eat ice-cream and buy peanuts.

"What are you about?" inquired a lunatic of a cook, who was industriously picking the feathers from a fowl.—"Dressing a chicken," answered the cook.—"I should call that undressing," replied the crazy fellow. The cook looked reflective.

A good deacon making an official visit to a dying neighbor, who was very churlish and universally an unpopular man, put the usual question: Are you willing to go, my friend? "Oh, yes," said the sick man "I am." "Well," said the simple-minded deacon, "I am glad you are, for all the neighbors are willing."

**Gushing Expressions.**—The absurd use of certain words by young ladies is well set forth by the following: Did anybody ever hear a gushing young lady tell what she thought about anything extraordinary? Well, that's nothing to what they write. We have analyzed a short story written by one of them, and find that "splendid" occurs sixty-four times; "beautiful," seventy-seven; "nice," six hundred and eleven; "delightful," sixty-one; and "lovely," sixty-three.

A Minister was soliciting aid to foreign missions, and applied to a gentleman, who refused him, with the reply, "I don't believe in foreign missions. I want what I give to benefit my neighbors." "Well," replied he, "whom do you regard as your neighbors?" "Why, those around me." "Do you mean those whose land joins yours?" inquired the minister. "Yes." "Well," said the minister, how much land do you own?" "About five hundred acres." "How far down do you own?" "Why, I never thought of it before, but I suppose I own half-way through." "Exactly," said the clergyman; "I suppose you do, and I want this money for the New Zealanders—the men whose land joins yours on the bottom."

It was a rich old widow who wondered that the handsome young man had fallen in love with her. "Yes, it is wonderful," said Mr. Sprucup; "but I do love you to distraction; why, I even love the ground you walk on." "I thought so," observed the widow; "but I am not in want of a landlord at present."

An old colored preacher in Atlanta, Georgia, was lecturing a youth of his fold about the sin of dancing, when the latter protested that the Bible plainly said: "There is a time to dance." "Yes, dar am a time to dance," said the dark divine, "and it's when a boy gits a whippiu' for gwine to a ball."

A Voter on a train when asked by the conductor for his ticket, said: "I have (hie) made a d-r-e-f-u-l mistake; voted my (hie) railroad ticket 'stead of the (hie) Democratic ticket."

My dear, said a husband to his better half, after a quarrel, "you will never be permitted to go to heaven." "Why not?" "Because you will be wanted as a torment down below."

Labor is sweet, for Thou hast toiled,  
And care is sweet, for Thou hast cared;  
Ah, never let our works be soiled,  
With strife, or by deceit ensnared  
Through life's long day, and death's dark night,  
O, gentle Jesus, be our Light.

THE FAIR ARTIST.

There is a kind of grim humor in the address of a devout deacon to his newly-settled pastor as he gave him the usual welcome: "The Lord keep you humble and we will keep you poor."

A Frenchman learning the English language complained of the irregularity of the verb "to go," the present tense of which some wag had written out for him as follows: "I go; thou startest; he departs; we make tracks; you cut sticks; they absquatulate or skeddadle."

"Who is that a statue of?" asked a lady of her husband, pointing to an Apollo.—"The Apollo Belvidere." "Law! how affectionate you are, my love! And now, darling, who was Apollo Belvy?" An explanation on pronunciation followed.

PRIZE COOKING AND HOUSEHOLD  
RECEIPTS.

BY OLIVIA E. CHAPMAN.

To this article was awarded second prize, \$15.

**Birds' Nest and Eggs.**—Take one dozen lemons or oranges, and with a sharp knife shred off the yellow rind, let the strips be long and slender; make a rich syrup with pure white sugar, flavored with the juice of lemons or oranges. Into this, while boiling, drop the shreds and boil until clear, then remove and cool upon broad dishes. When the syrup has drained off, form the shreds into a nest, in the center of a handsome dish. Take a dozen or more eggs, and cutting off the tip of the small end, extract all the white and yolk; make blanc-mange—yellow and white—yellow with yolks of eggs, and white in the usual way with cornstarch or gelatine, flavoring with vanilla, almond, and other flavoring if desired, separating the mixture and flavoring several different portions; one part should be colored pink and crimson with a decoction of cochineal dissolved in alcohol. While in a half liquid state fill the shells to the top, and allow them to cool. When solid, remove the shells carefully, and beautiful eggs of various shades of color will be formed, with which fill the nest. Dress the dish upon the outside with a green wreath, or set in the midst of branches and sprays of green, intermixed with flowers.

**Cream Cake—The Shells.**—Beat five eggs, yellow and white separately, add to the yolks one cup full of sugar, then the whites whisked until they stand alone; rub half a teaspoonful of soda into one teacupful of flour, beat this into the eggs and sugar, and add one full teaspoonful of cream of tartar, beat well, and divide into cakes by dropping a large tablespoonful upon a baking tin, not allowing the drops to touch each other, nor be placed near enough to run together when heated. Gem pans are best to bake them in, the flat circles instead of deep ones. Let the oven be quick, and when the cakes are a light brown remove them, and allow to cool a little, then split them open on one side and drop the cream in the hollow opening.

**For the Cream.**—Boil one pint of new milk, beat the yolks of two eggs, and add a teaspoonful of sugar and enough of cornstarch to thicken, (nearly three tablespoonfuls) stirred smooth in a little cold milk; add to the milk also the whites of the eggs, a teaspoonful extracts of lemon, and one of vanilla, beat well, and as soon as thick remove from the fire, allow to cool before placing in the puffs, pinching the parts together after filling. Paint over with the white of an egg and dress plentifully with powdered sugar.

**Canvass-Back Duck to Roast.**—The duck should be young and fat; pick it well, draw and singe carefully; but do not wash it. Dress it, leaving its head on to distinguish it from common game, and place it on the spit before a brisk fire for at least fifteen minutes, or according as your family or friend like them more or less done, which you must inquire; serve it hot, in its own gravy. The head of the Canvass Back is purple, and the breast silver color. Other ducks can be served in the same manner, only wild game should not be cooked quite as long, as that peculiar delicate wild flavor so highly prized by epicures would be destroyed. For sauce, currant jelly.

**Broiled Partridge.**—(French method.) After having prepared the bird with great nicety, divided and flattened it, season it with salt and pepper, or Cayenne, dip it into clarified butter, and then into fine bread crumbs, and take care to have it evenly covered; if wanted very nice, dip the second time into the butter and crumbs, place over a very clear fire and broil gently from twenty to thirty minutes; serve with mushroom sauce.

**Bread Jelly for the Sick.**—Cut the crumbs of a penny roll into thin slices, and toast them equally of a pale brown; boil them gently in a quart of water until it will jelly, which may be known by putting a little in a spoon to cool; strain it upon a bit of lemon peel, and sweeten with a little sugar; cleanliness is very essential in sickness, a dirty cup, or a bit of coal on toast, or in broth, may turn an invalid's stomach.

**Rock Rice.**—Boil a teacupful of the best rice till quite soft, in new milk, sweeten with powdered white sugar, and pile it upon a dish; lay all over it lumps of jelly, or preserved fruit of any kind. Beat the whites of three eggs to a stiff froth, add a little sugar, flavor with what you please. Add to this when beaten very stiff, about a tablespoonful of rich cream: drop it over the rice, giving it the appearance of a rock of snow.

**To Prepare Fruit for Dessert.**—Beat well the white of an egg with a little water; dip the fruit in and roll it immediately in fine crushed sugar; place it upon a dish, and leave it five or six hours, then serve. A more slightly or exquisite dessert than a plate of currants thus dressed cannot be had.

**Cookies.**—Two cups of sugar, one cup of butter, one cup of sweet milk, two eggs, four cups of flour, four heaping teaspoonfuls of baking powder. The flour should be measured in a little larger cup than the sugar, mix well, and bake in a quick oven, then spread with the white of an egg well beaten, and sprinkle with sugar; or a quicker way would be to sprinkle well with sugar just before baking.

**To Bake Fish.**—Take two good sized fish, clean and wipe them well in a cloth, but do not wash them; keep the breasts as whole as possible; strew salt over them, and leave upon a board several hours; then wipe the salt from them, cut off the heads and fins, cut the skin through down the back, and take it off neatly, being careful to keep the fish whole. Beat yolks of three eggs, dip the fish in the egg, have ready some bread crumbs mixed with pepper, salt, and chopped parsley, roll the fish in the crumbs, and stuff the heads and breasts with oysters chopped, but not too fine, and bread crumbs mixed with egg. Butter a dish, lay the fish upon it, stick pieces of butter upon each, and bake them. For sauce, take a pint of veal gravy, the same of cream, mix two tablespoonfuls of flour in a little of the cream, cold, and boil until smooth; add a blade of mace, a little nutmeg and salt; some prefer an onion. Lay the heads of the fish at each end of the dish and garnish with lemon.

**A Novel Way of Making Jelly Cake.**—Take the whites of six eggs, one cup of white sugar, same of flour, one tablespoonful of butter, two tablespoonfuls of sweet milk, two teaspoonfuls cream of tartar and one of soda. Bake in a large oblong dripping pan, so the cake will be very thin; meanwhile stir another batch, making just the same, with the exception of using the yolk instead of the whites; when both are done, spread while warm with jelly, or preserves of any kind; put together, bring the largest side of the cake toward you, and roll immediately; or cut in four or eight parts, put together alternately, putting jelly between each layer, and frost lightly over the top. Another method is to make three pans, making the third layer of one-third red sand sugar, proceeding the same as for the other layers; in putting together let the first layer be the yellow, made of the yolks, then the red, and lastly the whites. Nicely frost the top, and you have a beautiful as well as a delicious party cake. They are very pretty made into rolls.

**For Iced Apples.**—Pare and core ten large apples (more or less) of a large tart kind. Bake them until nearly done; put them away to get entirely cold; then prepare some icing as for apple meringue, and first pouring off all the juice, lay the icing thickly on the tops and sides as much as you can. Return them to the oven to just harden and set. Serve with cream.

**Wild Plum Jelly.**—Beautiful jelly can be made from the wild plums so plentiful in some parts of the west; nice marmalade can be made from the same fruit. Pour boiling water over your plums, turning it off immediately—this is for the purpose of extracting the bitter taste in the skins. Steam the plums in a stone jar or covered pan over boiling water until they crack so that the juice runs out. Put them in a colander and allow to drain, but do not press them; boil this juice twenty minutes, meanwhile heating the sugar on plates in the oven (pound for pint) so hot that you cannot bear your hand in it. Put the hot sugar into the boiling juice and boil all together a few minutes. Jelly can be made from any fruit or vegetable from which can be obtained the peculiar principle called *pectine*. Boiling the sugar with the fruit longer than is necessary for its perfect mixture spoils the flavor. Never put water on fruit and allow it to simmer, will have to be boiled out again. Everything should be very clean and bright.

**Crab-apple Marmalade.**—Sift the steamed apples through a colander; do not pare them, only cut out the blossom ends; a pint of pulp to half a pound of sugar. Boil until you have a clear thick paste.

**To Cook Beans.**—Beans should never be put in cold water to soak, because all the nutritious part of the bean is extracted by the process. They should be washed in warm water, then in cold; be tied loosely in a cloth; be put into boiling water, with a spoonful of dripping and a little salt in it and be kept boiling for four hours. They are excellent if served with gravy and not with melted butter. They serve as garnish for roast mutton or beef, or are excellent served whole as a puree. To make the latter, when the beans are done throw them instantly into cold water, when the skins will slip off; rub the beans through a colander and mix a lump of butter with them. A little milk or cream is good mixed in.

**Hominy Cakes.**—A pint of small hominy, a pint of white Indian meal sifted, a saltspoonful of salt, three large tablespoonfuls of strong yeast, a quart of milk. Having washed the hominy and left it soaking over night, boil it soft, drain, and while hot mix it with meal, adding the salt and butter, then mix gradually with the milk and set away to cool;

beat the eggs very light and add them gradually to the mixture. The whole should make a thick batter. Bake on a griddle.

**Transparent Pudding.**—Beat the yolks of eight eggs and the whites of two, and mix with them half a pound of warmed butter and the same of loaf sugar, pounded; butter cups or moulds, lay at the bottom orange marmalade or preserved apricots, pour the pudding upon the sweetmeats and bake from fifteen to twenty minutes. This is very rich, and should not be eaten by those having weak stomachs.

**Arrow-root Pudding.**—Dissolve four teacupfuls of arrow-root in a quart of fresh milk, boil with a few bitter almonds pounded up, or peach leaves to give it a flavor, if you wish; stir it well while it is boiling, or until it becomes a smooth batter; when quite cool add six eggs well beaten, to the batter, then mix with it a quarter of a pound of powdered sugar (if brown is used it spoils the color); grate some lemon peel into the mixture and add a little of the juice. The pudding should be baked an hour and sent to the table cold. Quince, raspberry or strawberry preserves may be served with it, and, to add to the appearance, ornament the top with slices of preserves.

**Mixed Pickle.**—To each gallon of vinegar allow a quarter of a pound of bruised ginger, quarter of a pound of mustard, quarter of a pound of salt, two ounces of mustard seed, one and a half ounces of turmeric, one ounce of ground black pepper, one-quarter ounce of Cayenne; cauliflowers, onions, celery, sliced cucumbers, gherkin, French beans, nasturtions, capicum. Have a large jar with a tightly fitting lid, in which put as much vinegar as is required, reserving a little to mix the various powders to a smooth paste. Put into a basin the mustard, turmeric, pepper and Cayenne; mix them with vinegar and stir until no lumps remain; add all the ingredients to the vinegar and mix well. Keep this liquor in a warm place and stir thoroughly every morning with a wooden spoon for near a month, when it will be ready for the vegetables to be added. As these come into season have them gathered on a dry day, and, after merely wiping them with a cloth to free them from moisture, put them into the pickle. The cauliflowers should be divided into small bunches. Put all the vegetables into the pickle raw, and at the end of the season, when the vegetables are all procured, store away in jars and tie over with a bladder. As none of the ingredients are boiled, this pickle will not be fit for eating for several months. I will repeat that the contents must be stirred each morning.

**Pickle Chow-Chow.**—Quarter of a peck green tomatoes, the same of white onions and pickling beans, one dozen green cucumbers, one dozen green peppers, one large head of cabbage; season with mustard, celery seed, salt to suit the taste. Cover the mixture with the best cider vinegar. Boil two hours slowly, continually stirring, and add two tablespoonfuls of sweet oil while hot.

**Beef Steak Pie.**—Choose steak that has been long hung; cut into moderately-sized pieces and trim off all the skin or sinews; season them with salt and pepper; put a crust underneath, or in the bottom, then layers of crust, beef and oysters alternately; stew the liquor and beards of oysters with a bit of lemon peel, mace, and a tablespoonful of walnut catsup. When the pie is baked, boil with the above three spoonfuls of cream and one of butter rubbed in flour. For a small pie, a dozen oysters, generally more is better. The pie should be baked near two hours.

**Crust for Tarts.**—Beat the white of an egg to a strong froth, thin it with as much water as will make three-fourths of a pound of fine flour into a very stiff paste; roll it very thin, then lay the third part of half a pound of butter upon it in little bits, dredge it with some flour left out at first and roll up tight; roll it out again and put the same proportion of butter, and so proceed until all be worked in; bake in the form desired and use cranberries for filling.

**Ginger Bread to Keep.**—Rub half a pound of butter into one pound of flour, then rub in half a pound of sugar, two tablespoonfuls of ginger and one of rose water; work it well, roll out, and bake in flat pans in a moderate oven. It will take about half an hour.

**Pumpkin Pie.**—Take out the seeds and pare the pumpkin or squash, but in taking out the seeds do not scrape the inside of the pumpkin; the part nearest the seed is the sweetest; then stew the pumpkin and strain it through a sieve or colander; to a quart of milk for a family pie, three eggs are enough; stir in the stewed pumpkin with your milk and beaten up eggs till it is as thick as you can stir round rapidly and easily. If the pie is wanted richer make it thinner and add sweet cream or another egg or two, but even one egg to one quart of milk makes "very decent pies." Add a little salt, two tablespoonfuls of cinnamon and one of powdered ginger; the peel of a lemon grated gives a pleasant flavor. The more eggs the better pie. Some put an egg to a gill of milk. Bake three-fourths of an hour in deep plates or shallow dishes, without an upper crust, in a hot oven.

# THE LADIES' FLORAL CABINET

BY HENRY T. WILLIAMS.

VOL. VI.

NEW YORK, APRIL, 1877.

No. 64.

PRICE 12 CENTS.

## MY FRIEND'S GREENHOUSE.

What to describe first, where all is so wonderfully beautiful and full of interest, is the query; but as my eye always searches out for the choicest flower-gems, I will introduce you at once to the heart of the house, where, half hidden by Callas, Brugmantias, Laurestinus, and other rare things, stands a huge Century Plant. The east wall of the greenhouse is covered with the rarest Begonias that it has ever been my good fortune to see. These Begonias are all planted in old tin fruit cans, white-washed, holes made for drainage, and a perforation in the side for hanging up. It is wonderful how Begonias and Cacti thrive in cans. It must be that the rust in the cans acts as a tonic on the plant. The Begonias fall in abundant drapery over the wall, entirely hiding it from view. Near this tangled mass of Begonias is a beautiful specimen of variegated ivy-leaf Geranium, crimson and gray—it is very lovely. A large Hoya Carnosa trained across the house, and at short distances soft sprays of Smilax caught lovingly at it and fell gracefully from above. Primulas look at us with their bright faces; Jessamines, Mahernias, Ferns, Azaleas, Bouvardias, Coranella, Japonicas, an innumerable variety of Cacti, Sedums, and a large army of choice plants charm our eye. I must not omit to describe the graceful hanging-baskets, home-made, which add greatly to the effect of the scene. These are made by knocking the end out of a fruit can, cutting the sides with sharp shears, or knife, into narrow strips; form these into basket shape, place a wire around the edge and another for a handle; line with moss, and everything planted in them grows as if by magic. If my flower sisters were to try them, they would never throw away an old can while they live! In the beginning of this article I referred to Brugmantias. I am surprised that they are not more extensively cultivated. There is nothing more lovely or ornamental for a lawn. I saw one last summer about seven feet high, on which were two hundred flowers opened at one time. It was beautiful beyond conception. The plant requires but little care, not more than you would bestow on an Oleander; and with its wealth of pure white fragrant flowers hanging

so gracefully among its dark green foliage, no more attractive plant could be placed in your garden. In the north corner of the green-house is a fine specimen of Rhyneosperrum, growing in great luxuriance, vying with a large Cape Jessamino for beauty of flower and foliage. The Rhyneosperrum is a semi-tropical plant, of easy cultivation, and pays a large dividend to its owner in star-like blossoms. I would advise all

A FIREPLACE DECORATED WITH FLOWERS.

flower lovers to invest in one. The sweet Bard of Avon assures us it—

"Is wasteful and ridiculous excess  
To gild refined gold, to paint the lily,  
To throw a perfume o'er the violet."

And so I have felt it to be in this attempted description of my friend's lovely flowers. I would describe to your readers a Cactus which elicits much admiration, and which, I am sure, would lead many to imitate. A Cereus grafted with innumerable branches of Crab Cactus. The process is easy and the effect per-

fect. Make incisions in the Cereus with a sharp pen-knife and insert the branches of Crab Cactus, holding them firmly for a few minutes. They will soon grow and need no special care. It is to be regretted that ladies do not learn to graft; they could become quite skilled in it, and would be richly repaid, especially among their roses. They appear to look upon grafting as a thing that belongs exclusively to skilled gardeners, and by no means attainable by ordinary workers, whereas, the truth is that women are very successful in this branch of gardening when they attempt it. A nice judgment and gentle manipulations are all that are necessary to accomplish this now mysterious art. But I am admonished by the length of this article to leave my friend's treasure-house of flowers brimming with refreshment, and blessing this grim, persistent winter weather, feeling grateful that it has been my privilege to appropriate so much of its perfect loveliness.

In these days of gold and iron how refreshing it is to come across a charming paper like THE LADIES' FLORAL CABINET, around which is ever floating an atmosphere of Apple-blossoms, Roses and all the fragrant favorites of the flower-garden. I never think of the CABINET but visions of the beautiful float o'er my brain, and I have derived so much information and pleasure from its perusal that I feel under an obligation for the value of the benefit, and would like to requite the obligation.

LIBONIA FLORIBUNDA.

How Like a Garden our school appears these pleasant summer mornings! Each of the twenty-six pupils has a small flower bed which she cultivates, and at the ringing of the bell they appear, with fresh and rosy faces and heads adorned by garlands or clusters of gay blossoms. The love for flowers and children is a redeeming feature in the Turkish character. The swarthiest and coarsest soldier wears a nosegay in his button-hole and cultivates the ground about the guard-house, or fills its windows with pots of flowers in full bloom, and his hard, stern face relaxes into a smile of tenderness as he lifts a little child into a carriage or a boat.—From "Romance of Missions," by Miss West.

## Floral Contributions.

### GET A GARDEN.

There is one thing that I have long been wishing to tell the readers of the CABINET, and that is the way that many ladies can make themselves happy, and at the same time save doctor's bills. I can talk on this subject all the better, because I have tried it myself. My recipe is summed up in these few words—Get a garden. I very often see ladies, white, weak, and wan, nothing particular the matter, and yet never well; to these I say, only try my plan, and see for yourselves how superior it is to all the apothecaries under the sun. I myself was one of these much to be pitied ladies until, by the advice and aid of a kind friend, a little square of twenty-five feet, near our house, was dug up, laid out, and became a garden. During the whole of one summer, for about an hour every morning before breakfast, I worked diligently in my garden, and I was amply rewarded for my pains. The flowers thrived, and with them my strength. By the next summer I increased my boundaries to fifty feet square, and in a very few years I felt myself equal to even more than that, so now the garden measures one hundred by fifty feet in flowers, besides a small vegetable garden. Of course it is not so easy to make a garden as to write about it, but with a little help from the stronger sex in the beginning, the difficulties were soon overcome, and then came the pleasures. My garden was in the midst of the pine woods, where neither plow nor hoe had ever broken the earth before, so there was much to do in the way of digging up roots, pulverizing the soil and laying out beds. When one gets through this much, there is no further use for men then, unless, indeed, to amuse us or to admire. To begin in systematic style, we must first enrich our garden. For this, nothing in the world is so good as the earth from some old rubbish hole. In every country lot, probably, there is such a hole, where the sweepings of the yard and the scraps from the kitchen are all thrown to be out of sight. All gardeners possessing such a hole are rich, and those who do not, will, if they take our advice, set to work at once to make one. As soon as the decayed contents are evenly laid over the flower-beds, we begin to fill up our hole again with the same material, so keeping up a constant supply of fresh food for another season. Flowers do not require strong manures; it makes them grow too much to bush, fresh mold and decayed vegetable matter being the food they delight in: Roses especially luxuriate on this sort of diet. Another excellent fertilizer is the greasy, soapy water that the plates and dishes are washed in. Annuals in particular improve on this, and a bed of Petunias will beam out their thanks for such a treat in countless blossoms and the brightest leaves. In fact, I do not know any plant that will not grow and thrive for a bucket of greasy water occasionally. Guano and bone-dust are both fine, but one does not always have them at hand; and to country people, they are sometimes impossibilities. For Violets, I think nothing better as an enricher than thoroughly decayed wood-dust. After the garden is once set going, it is but little trouble to keep it up. Seeds of annuals and perennials are so cheap in these days, and reproduce themselves so rapidly and easily, and even Roses cost so few cents, that one wonders why so few people have gardens, surely it must be because they do not know the pleasures to be derived therefrom. For several years our

church has been dressed on every Sunday from my garden, so that the pleasure has been shared by many. I often think of the refining power that flowers yield. They make a sympathy where nothing else can.

There is another mode of cultivating flowers which is very delightful, although, perhaps, not so healthful as out-door exercise in the garden. I mean house-plants, and these are open to everybody who possesses at least one window, be that window north, south, east, or west, for there are many plants that will flourish in a shady northern window as well as in warm southern one. The way I grow my plants, which are Geraniums, Pelargoniums, Begonias, Callas, Libonias, Azalias, Fuchsias, and Lobelias, is very simple. I have neither hot-house nor green-house, and as I believe more than half the lovers of flowers are in the same condition as myself, they will be the better able to appreciate my plan. I will begin by telling of my proceedings in the fall, as that season always seems to be the beginning of the plant year. As soon as October's winds begin to chill the weather, I commence to cut down the plants, not merely trimming them, but cutting them down until only two or three inches are above the ground. They are then set aside to rest, for rest they must have as well as ourselves. Soon they begin to put out new, fresh leaves, and some would even bloom, but it is not good to encourage them in this, for if we want a fine spring and summer show, we must now keep them from exhausting themselves. If a winter bloom is desired, we must have a set of cuttings from the summer before. From this time, until January or February, they require but little care. A moderately warm room, say not below forty-one degrees at night, a plenty of bright sunlight in the day, an airing by raising the glasses when it is pleasant, and just enough water to keep the earth from drying hard, is all that they ask of us. But in February comes the great work on which the bloom of the whole year depends. We now get a barrowful of earth from the same valuable rubbish hole that we feed the garden with, or if there is no rubbish hole, any good garden soil with a little leaf mold will answer the purpose. Each plant is then taken carefully up, the dead earth shaken off gently, and the roots dipped into a tub of water until they are clean. Then set the plant nicely into the new earth, spreading out the tender little roots and gradually filling up the jar and pressing down the earth firmly. We then give each plant two or three spoonfuls of chicken manure, laid on the top of the earth, a good watering, and then set the jar where it is to remain. Occasionally the jars must be turned round to the light, otherwise the plant will grow to an ugly one-sided shape. I particularly recommend chicken manure as the best fertilizer that I know; some like to use it in liquid form, but I find my way the best and least troublesome. Just lay it on top, and every time the plant is watered, a little of the strength is carried down to the roots, and the bloom will be constant and magnificent. Your plants will soon begin to show you their gratitude for this refreshment, and in a very few weeks they will be covered with buds and bright blossoms, which I will warrant to continue until the "melancholy days" come round again, when once more they must be divested of their tops and put to rest. Surely this is not very hard work, my friends, and think how much we are repaid for it. I must not forget to say that Geraniums do best always in small jars, and the younger the plant the finer the bloom. Keep new cuttings, therefore, going all the time, and I promise you there will never be any lack of flowers. Remember to keep the jars bright and clean on the outside. In my opinion,

this is far more important as a drainage than the broken crocks inside. There is another class of plants I am surprised not to see mentioned more frequently; I refer to those charming bulbs, Achimenes; they are the easiest things in the world to cultivate, and humble little beauties, they ask no better habitation than an old tomato can. Indeed, they seem to delight in old tins. The truth is, they must have moisture, and the cans retain the dampness longer than small jars. In the spring I set out my Achimenes in a compost of one-third sand, one-third leaf mold, and one-third well-rotted manure; then put the cans in some half shady spot of the piazza, and leave alone until they begin to come up. In a short time after the plants commence growing, they will begin to put out their lovely flowers, and continue to do so until late in the fall. As soon as they cease blooming, discontinue watering, and when the tops are quite dry, lift the roots and store in thoroughly dried sand until another spring. If my lady friends will only follow these easy rules, there is no reason why they cannot have an abundance of beautiful flowers and much real enjoyment, not to speak of the greatest of all blessings, good health. You will learn to love your flowers more and more as you continue to cultivate them, and in time find in them a gentle, silent companionship that is welcome, even at that time when the expression of human sympathy is unavailing. Very often some plant will take a history to itself that will enhance its value many fold. For instance, this Rose Geranium. It is but a poor little plant, and yet we prize it above rubies. Simply for this: two little hands that we loved, once tended it, and we laid some of its fragrant leaves and delicate blossoms on the gentle, young breast when it had "fallen asleep."

C. P. W.

### BEDDING OUT WINDOW PLANTS.

Last spring I was like "the old woman who lived in a shoe;" had more plants than the flower stands would hold; so I prepared early an oval bed on the east side of the house, ten feet from it; this bed was ten feet wide and eighteen feet long. Removed the largest sods, spaded under the lightest; after this it rained, froze and thawed—making the ground very mellow. Then I wheeled on rich, well-rotted manure, two barrows of fine chip dirt, one of manure from the hen house, one of sand, spaded all in and raked smoothly. This was the third of June. In the morning I had given the plants selected a good watering, so they turned out of the pots easily. It was a dry time; into each hole I poured two quarts of water, letting it sink before planting. As I finished each plant I drew the dry earth around it. Was from three o'clock until nearly dark setting thirty plants. When done, showered with a watering pot. Next day made paper caps for all, taking them off at night. For four weeks we had no rain; I watered twice a week, drawing the dirt away, then covering with dry earth; kept them in their paper caps for ten days; after that, they had the sun every day until two o'clock, P. M. They never wilted, and how they grew!

Three times a week I stirred the soil with a push hoe. As it grew cooler, with plenty of rain, the whole was a mass of verdure and bloom! We had no killing frost until the night of September 26. The day before I had taken up the plants I wished to keep over, I trimmed and planted them in boxes of earth, putting them in a dark frost-proof cellar. In August, I took cuttings of all; they are now fine plants in the window garden.

L. K. SHARE.

## Gossip with Correspondents.

**Plants in the Sun.**—It is a mistake to suppose that plants will not flourish except when exposed to the direct rays of the sun, as I have a conservatory on the north side of my house, with a glass roof, in which I have had many varieties of plants in bloom all winter. My Geraniums and Camellias have done splendidly; my Daphne blossomed profusely, and my Fuchsia and Bouvardia are blooming away finely; besides, I have a Hydrangea and Oxalis in bud. I have also a conservatory heated by pipes from the same hot water apparatus that warms the one on the north, on the south side of my house, but which has not the light overhead, in which though I have plants in bloom, they have not done nearly as well as in the one on the north side. I have a large yellow Jasmine vine planted outdoors on the south side, the lower part of which is protected by an oilcloth covering; it had a flower in bloom near the top, while many of the buds are ready to burst forth.

Brooklyn, N. Y.

W. L. COCHRAN.

**Cactus.**—I have long looked for and anxiously expected some of our flower lovers to write a treatise on the Cactus. It is a family of plants that I have a great partiality for. I have many times thought if some scientific man, such as the author of the *Rose Manual*, could be induced to write such a treatise on the Cactus, it would be hailed with great pleasure by many flower-loving friends. I should be willing to pay any price for such a treatise as I know he could write, his descriptions are so plain and easy to understand; and as I see from a catalogue I received from him last spring that he has retired from business, I have thought he might be induced to write a treatise on the Cactus, its classifications and descriptions, with embellishments and cultivation.

I have quite a collection of plants; some of them I bought of R. Buist more than ten years ago, such as Azaleas, Camellias, Dracænas, Clerodendron, and many other plants too numerous to mention. Among the rest I have about thirty species of Cactus; many of them I do not know to what family they belong. I have some of the Cereus family, one Night Blooming Cereus Grandiflorus, Cereus Heptagonus, and others that I do not know the names. I have several of the Epiphyllums; one is night blooming, the others are scarlet, white, and pink. I have three of the Crab or Lobster family, some of the Mammillarias, and many others that I do not know what family they belong, except Melocactus, three species.

Some of the species that I have I collected some four years ago while in Texas; I found them on the prairie in the suburbs of San Antonio; they grew here to great perfection. I there saw the Century plant twenty feet high growing in the cemetery, and it was just opening its bloom buds and had a majestic appearance, grand, but not beautiful. Does the Aloe belong to the Cactus family? I cannot find that it does. Now, my dear floral friends, will you join me in asking Mr. Buist to write us another book, and let its chief topic be on the Cactus, and if he wishes other newly introduced plants, such as the Palms, Ferns, and Lycopodium, such a work I think would be well appreciated both by florists and amateurs.

Petersburg, Ill.

M. L. FISHER.

**Pot Plants.**—A friend asks advice about pot plants, and you are very welcome to my experience. In the first place, I think more depends upon the earth than anything else. I begin in this way: As early in

May we have warm days, but cool nights, I put my plants out during the day and shelter them at night; in this way they become gradually accustomed to the air. Next, I slip all that I can to start anew, cutting as near the roots as possible, as they have more vitality; and, as regards soil for slips, take salt boxes, and bore a few holes in the bottom for drainage, then put in first an inch or two of charcoal, next sand, and last a layer of earth. Place the box in the shade for a week, then give it moderate sun, and not too much water.

My large plants I cut down considerably, and if they bud I snip them. You will see by this that I do not always put my Geraniums in the garden to continue their bloom, for I like to retain some old plants to winter in my windows. The same with Fuchsias and Heliotropes. As early as July I prepare my soil, and repot and renew the earth of many of my plants; that is, I take out of such plants as Heliotropes and Fuchsias from one to two inches of old soil to replace with new. In that way the tender roots are not disturbed. If possible I get the mold of decayed trees, as that is excellent; if I cannot get this, I go into the woods and scrape away from the trunks of trees the soil that clings around them. This I sit through a fine sieve, adding loam from the garden; and lastly, I take it to kill all insects that may be in it. You may say that this is a great deal of work; but what can we have without care and trouble? I am fully repaid for my work, as my plants are a perpetual joy. Now that my earth is prepared, I repot every day, and very early in September I move all my plants under cover. I think the earlier they are settled for the winter, and commence growing, all the sooner you will have blooming plants.

I like to cut back Petunias at the same time with Geraniums and Heliotropes. The last two require a great deal of water and sun. I wish I could show you mine; but do not feel discouraged, yours will look just as well, with care. Water your plants with warm water every morning before the sun is shining warmly upon them. Hanging plants require more water than others. I use liquid manure twice a week, and to make the leaves green and the blossoms bright I use pounded charcoal. I also use this in potting plants instead of pot shreds. Keep plants and pots clean, as it is a great preventative of insects.

Perhaps you have the great desire of my heart—a bay-window? But next best to that are my two southwestern exposures, eight feet broad, with shelves and brackets. I accommodate fifty plants. With me this has been a splendid winter for blossoms; one of my red Geraniums has eight large clusters, another four, and so on. Petunias, Heliotropes, Abutilons, Mignonette, yellow and pink Oxalis, and even my Dutchman's Pipe has blossoms. Have patience and do not be discouraged; with sun and care your plants will look as well, if not better, than mine.

H. C. H.

**Flower Pots.**—I would like to say a few words to the readers of the CABINET about flower pots. We are often told in horticultural books and papers that plants will not thrive so well in glazed pots as in the common unglazed ones. I think this is a mistake. I have kept house plants for nearly twenty years, using both kinds of pots, and my experience is that plants will grow and blossom in glazed pots as well as in those that look moldy or discolored, even if washed every day. Within a short time I have learned to improve common pots, so that they will not grow moldy. First scrub them, inside and out, until perfectly clean; then dry them perfectly. If any are

new enough so that they are not discolored, give them one or two coats of shellac inside and out. It is much cheaper to buy the shellac dry and dissolve in alcohol; apply with a brush. Some pots that are discolored I give a coat of black-walnut stain, made by mixing burnt umber with spirits of turpentine; when this is dry, apply a coat of shellac inside and out, putting the stain only on the outside. Sometimes I have painted pots with green paint, but they need a coat of shellac inside and out first to prevent the moisture of the soil from taking the paint off.

AUNT FANNY.

**Lantana Seed.**—I see complaint is made in the last number about Lantana seed not growing. Please state that the seed must have boiling water poured over them, and soak a while before planting.

C. L. F.

## LILIES.

The Lily has for all time the first rank in Flora's diadem. No other flower has been so long admired and universally cultivated. It has rightly been christened the "Queen of Flowers," and no other, except the regal Rose, has ever attempted the usurpation of its title. Within the last half century many new members of this family have been introduced to the floral world. Many of these new subjects have at once taken leading ranks among cultivators. With the introduction of these new varieties there became a small mania for the possession of some or all of them; as a natural result, many who bought bulbs at high prices met with failure, their bulbs living perhaps a year and then dying. This at once had the effect of killing the mania. The cause of these failures were that people, thinking they needed the same culture as the old sorts then known, owing to belonging to the same family, gave them similar treatment, and the consequence was—failure. Cultivators who desire to have success with new Lilies, should find out how they grew in their native places, and treat them accordingly. If they grew in warm, dry places, they should be grown in a dry, warm place; if they grew in a moist, shaded place, they should have a similar place in your gardens.

## CULTURE.

A few general remarks on the cultivation of Lilies may be useful to some of the CABINET readers.

All Lilies should be planted from six to ten inches deep, and twelve inches would be better for the Auratum and the California Lilies; the roots that support the flowers and stem grow above the bulb; the roots below the bulb only nourish the bulb; therefore, if the bulb is planted shallow, there is not sufficient soil to allow the roots supporting the flowers to do their duty; and not only this, but the hot sun burns them up. The soil should be cultivated well and deep, and moderately rich, but not freshly manured—fresh manure will kill Lily bulbs—if the soil is very rich, put a little sand or poorer soil around the bulb. The bulbs should be planted in the fall or early spring, not later than April if you wish flowers. After planting it will not be necessary to move them; in fact it will be better not to for three or four years. In moving them be very careful in lifting them not to break or bruise the roots at the base of the bulb; if these are injured, it may cause the bulb not to bloom for the next season, or perhaps to decay. The best time for moving is in September, or just as soon as the stem is ripe after flowering. In some future number I will tell the CABINET readers how to treat the new California Lilies, now becoming so popular.

WM. C. L. DREW.

## Flower Gardening.

## FLOWER FANCIES.

"That's a fine garden," said one gentleman to another, as they drove past our place one morning while I was staking my Gladioli. "Ye-es," said the other, a Mr. Bullion, who bows in adoration to the almighty dollar, and whose taste is limited to tobacco and "beef critters," "but I think that patch 'd better be planted to potatoes, and she a hoein' in of 'em." And he chuckled at his sagacity, and I powdered the ways of men, and took an inventory of my plant family to find Mr. Bullion's affinity, for I often please myself by studying the habits and dispositions of plants and tracing a similarity to corresponding classes of the human family. For instance: Look at that bed of Tulips. How gorgeous! what a self-satisfied air they have, and how defiantly they flaunt their gaudy colors, as if to challenge admiration. Are you not reminded of the gaudily-attired female who ransacks dry goods establishments, jewelry stores, and millinery shops, in quest of personal adornments? Your mind follows her out of one place, in at another, you catch momentary glimpses of steady-going business men, or sober matrons with a gleam of reproof or indignation in their eyes; and one horny-handed old farmer turns to look, and mutters to himself, "That's the way the money goes." It is pitiful, too. You look in her vapid, iuane face, and you see behind those expressionless eyes great mental cobwebs that gather dust and hang in unsightly festoons in the poorly furnished attic. You glance at the flounces, ruffles, ribbons and laces, brooches, bracelets, ear-rings, and chains, at the barbaric display generally, and with that glance you have fathomed the character and rendered the verdict, "More money than brains." Poor human Tulip!

But here is a contrast—they are what we used to call Honeysuckles, or Columbines; now they are named Aquilegias. How prim they are, with straight, stiff flower-stems surmounted by white, purple, or pink heads, with faces turned downward; admiring humility, they clothe themselves in it and carry our thoughts away back to the time of our great-grandmothers, who spent so many days and weeks at the loom weaving linen for their own households, and filling chests, presses, and drawers with the work of their hands, to be handed down to posterity and valued as precious heirlooms. And here is a highly respectable representative of the floral kingdom; it comes of a very aristocratic family, and is called *Lilium Auratum*; when it was first introduced it commanded high prices, five dollars a bulb being readily paid for it. The florists all declared that no garden should be without it, and so all of us lady amateurs were unhappy until we possessed one. But they had come from a far off country, and were not acclimated; some of them sent up a sickly little stalk, and were petted and nursed to death; others sent up no stalk at all, but rotted in the earth, heart-sick and disgusted, making no effort to live, and taking no thought of the care and expense that had been lavished upon them; perhaps one in a hundred had survived the perilous voyage and transplanting process, and made glad the hearts of their owners by blossoming and sending out a rare perfume, once inhaled, never forgotten. We have all seen their human compeers. Some of them are university graduates, who look down from the sublime heights of a Greek lexicon and point their fingers in disgust at a Roman capital. They are our lawyers, and doctors, and theologians, in an embryotic condition. They

are our white-handed clerks and perfumed exquisites, who spring up in the social hot-bed of caste and distinction. It is the *Lilium Auratum* that our girls think of when they declare they won't marry a farmer. Many a young lady has made a wreck of her life by indulging in these expensive fancies; too often the investment has proved the counterpart of these same

WATER LILY GARDEN.

*Auratum*s. Dry rot, a failure to send up even one green leaf, a sickly little effort to fight the battle of life, and they are overcome in the unequal struggle. Better by far, be content with the prosy Sweet Williams, and stout-hearted Hollyhocks, than to sigh after the unreliable *Anraturms*. And here are the Balsams, so improved by cultivation that a novice would never dream they were the lineal descendants of the old-fashioned Lady's Slipper, but here they are reminding you of your fat, good-natured aunt sitting on the kitchen door-step shelling peas for dinner.

RUSTIC FLLOWER DECORATION.

Here are the Violets, too—Johnny-jump-ups, we used to call them; little dandies, with hair parted in the middle, twirling a cane and reciting verses to Angelina Evalina, sentimental youths—they claim priority of acquaintance and kinship with the royal Pansy. Yes, here they are, a great bed of them. "O-o-o-o-h." To be sure, that's just what everybody says—in fact

that is about the only expression one is capable of making at first sight of them. The next is, "How do you grow them so large?" or, "Why don't you take them to the fair?" My dear friend, my ambition is satisfied in that respect, for I took the first premium at the State fair last year; and now I'll tell you how I manage Pansies: I get first-class seed, and sow about the last of April in pans or shallow boxes in the house, transplanting when they have four or six leaves, into a bed composed of two-thirds leaf mold and one-third good garden soil. You see my bed is located where they get the shade of that young apple tree at midday, but far enough out to escape the drippings of rain or dew that fall from it; and my leaf mold is never composed of oak or beech leaves. Pansies and tauuin don't assimilate, no how. These are for fall blooming. For spring flowers, I grow seed in August, and cover the young plants with leaves for winter protection. Dahlias? yes, born to command. Give them a deep, rich soil, a plenty of liquid manure, and you shall see regality of form and demcaur. And see my Verbenas. I never fail of a fine show of these; and this is my secret: I sow the seed early in April in a shallow box, and do not allow the earth to become dry until the young plants appear. Almost every seed will germinate, and once they are up they are hardy enough, and bear transplanting with the fortitude of veterans. The Pansies make a fine display, but they are the Aldermen, the Tweeds of society; and the Marigolds, coarse-grained creatures of the plebeian origin, no amount of cultivation will ever refine them. They have daily intercourse with the elegant Lilies, the delicate Daisies, and the beautiful Roses, but none of their graces ever stick to the Marigolds. One is reminded of the old sayings, "You can't make a whistle of a pig's tail," "Can't silver scour a pewter spoon," etc., and you compare them to Mrs. Jones, who has gradually risen from the position of servant to be the mistress of a fine house of her own, fine furniture, fine dress, fine equipage, but who, although she has very good associates, hasn't the tact or capability of filling the position with honor to herself or family.

MRS. GEORGE KATOR.

## MY LILY GARDEN.

I wish to tell the readers of the FLORAL CABINET that I had splendid success in cultivating Water Lily, *Nymphia Odorata*, last summer. The roots were sent me by express from Massachusetts, the 9th of June. I had sawed into a large barrel a rustic band of braided twigs, with the bark on around the top, and a handle of the same material. In the centre of the handle I placed an urn-shaped wire basket lined with moss and filled with earth, and some very lovely plants. The tub sat on a stone foundation two feet high; surrounding that, a mound of earth covered with scarlet and white Verbenas and Pansies. I filled in good rich soil to the depth of six inches; set out the roots and filled in the water gradually with a sprinkler, or watering-pot. I trained vines of *Star Ipomoea* over the rustic handle. The 9th of August the first blossoms opened, it was a beautiful little picture; people came for miles around to see it.

MRS. WM. H. MABEE.

## RUSTIC FLOWER-STAND.

A few summers since we obtained from the forest the top of a chestnut tree; shortened the main stem until four and a half feet in length, leaving five or six of the top branches projecting above and outward from three to four and a half feet. This was firmly inserted in the ground, fronting the house. Upon the main stem was placed a damaged wooden bowl of eighteen inches diameter, and to each of the branches was attached, by screws, a pint tin basin, painted green. After filling with rich soil, Strawberry Geraniums, and various running plants, with fine, delicate foliage, were placed in each, and soon presented a beautiful and novel appearance.

## Winnifred's Will.

BY AUGUSTA LARNED.

### CHAPTER VII.

"O Love, what is it in this world of ours  
Which makes it fatal to be loved?"

The Fortescues had come up to Cloverbrook for the autumn, and there were greetings between their cottage and the Hall in these latter days of October. The two young ladies were plain, and wore eye-glasses, but they had the reputation of being very clever. They had read Mill and Herbert Spencer, and could converse about evolution. They came and played wonderful fantasias and sonatas on Winnifred's new grand piano, while their brother Charley sauntered languidly about the drawing-room, making eyes at the young heiress, to convey to her the fact that he considered her "a deuced fine girl." Mrs. Fortescue, a fussy little matron in gray puffs, and with a set smile on her false teeth, overflowed with compliments and caresses toward her dear, darling Winnifred.

Mrs. Halcourt had dispatched an exquisite little perfumed note to her friend, announcing the fact that matters were satisfactorily arranged between Bradley and his cousin, and congratulations quite in order. Bradley had not behaved very well in company since the arrival of the Fortescues, and the whole family voted that his indifference to Winnifred was simply brutal, and anything that could rescue the dear girl and her money from such a marriage, might be looked upon in the light of providential interference.

To Winnifred, in those days, the Fortescues seemed a welcome resource. She was fitfully feverish and restless in all her moods, hurrying things on to a certain point, and then losing interest in them from mere whim and caprice. Her unnatural gaiety was succeeded by petulance and irritability, which every one felt except Virginia, towards whom she was uniformly tender and considerate. In her hoydenish days she had snubbed Charley Fortescue unmercifully, but now she showered her favors upon him, until the foolish youth's curly blonde head was almost turned.

One morning nearly all the inmates of the old Hall were assembled in the fine old dining-room, which the young heiress had refitted in a very good style. Though an untutored girl, without artistic cultivation, she had a feeling for harmonious adornment. The old fireplace was a delight to Bradley. It was a great roomy cavern, large enough to sit in, and finished with picture-tiles which his diplomatic ancestor had brought from abroad; the walls of the room had been tinted a cool gray, and Winnifred had hung about upon them some of the oldest and mellowest of the family pictures. There were heavy crimson curtains at the windows, and the great mahogany side-board was weighed down by a burden of antique silver. Now a cheery wood fire crackled and snapped between the hand-irons, and Hector lay stretched out at full length on the tiger-skin rug.

Winnie enjoyed presiding at her own board, and ordering Steenie and the new maid, and she did the honors with a touch of pretty imperiousness that was not unbecoming. Bradley occupied the head of the table, and Edgar Swayne sat opposite Virginia, who was pale and listless, making the merest show of appetite over her tea and toast.

"What were you telling me just now, Mr. Swayne," Winnie inquired from behind the tray, "about those masked burglars at Deanport?"

Virginia felt a quiver run through her, and as she looked up she caught Bradley's eye, and a wave of conscious color dyed her cheek. Edgar answered with the stiff punctilious politeness he always assumed in Bradley's presence, "It was a bad case, Miss Braithwaite, and may involve serious consequences. The Deanport people are thoroughly aroused, and there are detectives out in several directions. This Mrs. Stanley, whose house was entered, is a nervous invalid. Her husband was absent on business, and she was alone in the house with the servants. The burglars obliged her to rise, gagged her, and bound her to a chair, while they rifled the drawers and boxes. Of course they escaped with their booty, and now the poor woman is lying very low indeed."

Virginia felt a creeping, cold sensation, mount from her feet to her vitals, why, she could not tell; and she seemed to hear Winnie's voice far off through a roaring of waters, as she said, "O, how dreadful! Have they any idea where the robbers are hiding?"

"There is a shrewd suspicion that a gang has been organized in this neighborhood, and every effort will be made to unearth them."

"You make me quite nervous," exclaimed Winnie, "talking about an organized gang," though in fact she half enjoyed the spice of danger. "I shall have new chain bolts put upon the doors, and the window fastenings must

be looked to. For outside protection we can depend on old Hector, and within doors I suppose two brave gallants will suffice."

"Don't trust too much to my prowess," said Bradley, who had not spoken before. "I sleep like the dead. I would advise you to get a small dog that can rouse the house by vociferous barking."

"It would be well to have a burglar alarm put in your bed-room," suggested Edgar.

"Yes, and to sleep with a brace of pistols under my pillow," said Winnie, laughing gaily. "Your suggestions are very kind, and prove your courage. But perhaps you will try and prevent the masked gentry from visiting us by exerting yourselves to detect them."

"I thought I had got on the trail of one of them yesterday," said Edgar, as he helped himself to another muffin. "There has been a suspicious character lurking about the mine for some weeks. He has been seen lying in bed in the day-time in Smoky Duff's cabin, so I was told by little Ben Harding, a very sharp boy, who lives next door to Duff's. Duff's wife is a virago. I could get nothing out of her, and she abused me like a pickpocket, when I went to her door. But Ben tells me he believes the man was playing possum, lying in bed, and pretending to be sick, for he has caught him once or twice prowling about at night. He describes him as a tall man, with a dark, watchful face, and black hair, very noiseless and stealthy in his motions."

"I am convinced he is one of the gang," said Winnie with animation. "His hiding in a miner's hut, shows he was on an evil errand. If you can catch him, Mr. Swayne, it will be a feather in your cap."

Virginia's face had grown miserably pallid, even to the lips, and her eyes had a hunted, despairing look they sometimes wore now. Bradley had watched her cautiously, though listening with keen interest to what Edgar was saying. He trembled lest she would faint, or break out into hysterical weeping. She did neither, but sat rigidly in her place. The girl had a power of self-control for which he had not given her credit, and happily, just at that moment, there came a diversion. Much to the surprise of every one present, Mrs. Braithwaite entered the room. Her black dress was huddled carelessly upon her, and her gray locks tucked away under a soiled morning cap. But there was an unusual look of determination and energy in her heavy face.

"Why, mamma," exclaimed Winnie, in a tone tinged with annoyance, as Mrs. Braithwaite stood defiantly still, and gazed about as if seeking to discover her place at the table, "this is an unexpected favor. You have not breakfasted with us before for ages."

"I have not been asked to take my rightful place at this table," said Mrs. Braithwaite, her voice breaking into a quaver of resentment. "I have been ignored and slighted in this house, where I was born, for many a long year. Your father did it before you, and now you are carrying out his policy."

Winnie colored high with anger, in spite of her determination to put down a scene with a strong hand. "I am sure you are at home here, mamma. It is not my place to point out what it is proper for you to do. I have always supposed that you consulted your own ease and comfort in staying in bed until late, and I have instructed Nanna to attend to your every want. If you have any complaints to make of me, this is certainly not the time to make them."

Both Bradley and Edgar had risen and offered the lady a chair. She took her place beside Bradley, and replied, with snuffing, but increased acrimony, "I shall choose my own time for making complaints. The strangers here are not of my inviting, but Bradley Halcourt is my own nephew, and it is right he should know all I have endured. I am willing he should judge between us."

Bradley looked at his aunt, to whose almost squalid figure an exalted sense of injury could not add one touch of dignity, with unmixed dismay. The appeal she had made to him against her own child, the woman he was in a manner pledged to marry, opened up vistas that it required a stone heart to contemplate. Edgar and Virginia had left the room, and at that moment Steenie entered with a card on a salver.

"Mr. Fortescue has called," said Winnie, as she took it up with an immense sense of relief. "If you would like to see him, Bradley, perhaps mamma will defer setting forth my high crimes and misdemeanors until a more convenient season."

"He is no friend of mine," returned Bradley. "I have nothing to say to him."

"I know by your tone you do not approve of poor Charley."

"What matters it so long as he is a favorite of yours?"

Winnie gave an expressive little twist to her shoulders, and went sailing out of the breakfast-room with mixed emotions. There were disagreeable things in her triumphant young life that had to be put down, or crushed; but deeper than all lurked a feeling of resentment toward Bradley, who refused to be piqued with her—who received all her doings and sayings with cold imperturbability, or

sarcastic silence. But why should she wish to pique Bradley? If he had remonstrated with her it would have been to save an appearance of decorum and propriety before the world, and for this Winnie had nothing but scorn. In the hall she encountered Virginia, who had her hat on for the daily visit to the Finster cottage, where little Jake still lay ill. Winnie ran and clasped her arm about her friend's waist.

"What on earth put it into mamma's head to make such a scene," said she in a whisper. "She must be plotting something or other in which she wants Bradley's assistance. Do you know I am so oppressed by her presence that I cannot stay in the room where she is five minutes at a time. It was shameful for her to come down in that untidy dress; and I shall scold Nanna, and tell her not to let the thing happen again. She must lock the chamber door if necessary."

Virginia lifted her clasped hands with a pretty, imploring gesture. "Pardon, mademoiselle; would it not be better to try and win madam by kindness and gentleness, to try and make her life a little less triste. Forgive me, but she is your mother, and that is a holy name."

The sensitive mouth began to tremble, and Winnie took her playfully by the chin and kissed her.

"You have been reared so differently you cannot understand things, Virginia. You have never known anything about fighting and contending. But I cannot shut my eyes to facts—I cannot be hypocritical, and I do not see why one's life should be spoiled by disagreeable things one is not to blame for."

"But, dear mademoiselle, is there not such a thing as duty?" and the great blue eyes were lifted to her's.

"Yes, I suppose so; but I cannot stop to discuss it now, for I hear Charley Fortescue romping around in the drawing-room like an impatient bear. You know he was a kind of beau of mine once, and I used to treat him abominably."

"Why does he come back again now? Why do you waste time on him?"

"O, one must amuse one's self, as the French say," and she gave her friend another kiss and ran away to engage in lively nonsense with the young loungeur in the drawing-room.

Meantime Bradley was closeted with Mrs. Braithwaite. The poor woman had fallen into a very lachrymose condition, and the flesh of her heavy cheeks and chin trembled visibly.

"So you are going to marry Winnifred?" she asked.

"I believe so," he answered somberly, with his hands in his pockets and his legs stretched out under the table. "Things have been arranged between Winnifred and me partly to that effect."

"I suppose your mother has played her cards," said Mrs. Braithwaite, with a gleam of shrewdness coming into her dull face. "She always had an eye on the property."

Bradley did not answer, but he winced under the imputation. "Well," Mrs. Braithwaite went on, "I am glad you are going to marry her; things will be better for me than if a stranger was to come in here. They might look me in a lunatic asylum, who knows. But you are my nephew, and bound to take my part. You ought to have the money if you want it, for I am sure Harold was cheated by the old judge. Nobody knows the life I led those days when poor father lay dying. It's perfectly natural that you and your mother should want to get the property back again, and I suppose there is no other way but to marry Winnifred. She is just like her father—heartless and hard, though she does fawn over that foreign girl. Folks may think I have been so crushed and beaten down I have got no natural feelings, but wouldn't a stone feel to be deprived of every right and title? I brought all the money to the Braithwaites. This house was mine, but I have no more authority in it than a dog. My wishes are never consulted, my spiritual adviser can't darken the door, and I am put down and disgraced in the eyes of menials. But when you are married, Bradley, you can make things better for me. Promise me that you will try."

Bradley was deeply shamed by his aunt's rather coarse speech, so far as it bore upon his own motives. A sense of repugnance and loathing made him sick at heart. He seemed to see what a poor creature he was in other people's eyes; but it was useless to deny anything that might be imputed to him, so he sat some instants in silence with a black cloud on his face, and then said very slowly and coldly, "You are very much mistaken, aunt, if you suppose I shall ever have control of the Halcourt estates. Winnifred's fortune is settled on herself, and should we marry, I shall be only one of her appendages."

"I don't know anything how it was left," said the poor woman, shaking her head helplessly; "I haven't the faintest idea what I am entitled to. That Deaport lawyer came here and talked a rigmorole I couldn't understand, and then he made me sign some papers, and that is all I know. But I thought if you got the handling of the money perhaps you could persuade Winnifred to let Father Dooley come to the house without setting the dog on him. Now she has taken a whim to have schools, and a Sunday

preaching, and a parson of her own, and it is cruel to deny me my only consolation," and the poor woman broke down into a snuffling exhibition of her wrongs.

"I can do what you request in regard to Father Dooley," said her nephew, who really pitied her, "but I must tell you before-hand that it will be in vain, for I have no influence with Winnifred."

"Perhaps not," said his aunt, with a dolorous sigh; "she's that wilful that she'll break her neck to get her own way. But I think, Bradley, you ought to do what you can to have that French girl sent away. Her coming to this house was your doing, and I've a presentiment that she will bring trouble. Winnifred is ready to eat her up now, but one day she will hate her—mark me, she will hate her."

Bradley was shocked by his aunt's narrowness and suspicion. "Nonsense," he muttered between his teeth as he rose to his feet.

"There is another thing, Bradley," Mrs. Braithwaite continued in a half whisper, not minding his exclamation; "I do not feel at liberty to mention it to anybody but you; that girl has held secret meetings with a suspicious character—a strange man."

"O, I know all about that," returned the young man eagerly, catching at any straw that would save him from committing to a distinct course of action in reference to Virginia; "she told me herself. A stranger met her by accident in the pine grove and spoke to her, and she was very much frightened. It happened the day I came."

Mrs. Braithwaite shook her head, and settled down heavily into herself. "That ain't all, Bradley; you don't know the whole story."

"I'll tell you what," Bradley resumed after a moment of serious reflection, "if you will promise not to persecute Virginia, and will put by your cruel suspicions of the poor girl, I will do all I can to induce Winnifred to let Father Dooley visit you here at the hall."

Mrs. Braithwaite looked at him with a glimmer of surprise in her leaden eyes. "It seems strange that you should want to keep that girl here when I am sure she will only do harm by staying. But perhaps you know best, Bradley. I have always thought you were good ever since you were a little boy."

Bradley received this declaration with a black scowl on his face. "No, aunt, I am not good, but I want to be just, and I will stake my life and soul that Virginia Duval is a pure noble-minded girl." Then he turned abruptly on his heel and walked out of the room. Just as he had taken his hat with the design of escaping from the house, Winnie opened the drawing-room door and came hurriedly toward him in her white morning-gown. There was a defiant, playful light in her eyes, but the expression on Bradley's face was peculiarly discouraging.

"Mr. Fortescue has asked me to ride over to the fair at Cloverbrook, Bradley, and I thought perhaps your highness might be induced to join us. I can mount you tolerably well already, and as the fair is a horse and cattle show, you will have an opportunity to select a steed for yourself. The stables are not half filled, and you can indulge your taste in horses to almost any extent, and oblige me at the same time."

Bradley grew as cold and rigid as stone. "No, I thank you," said he hastily; "I do not care for horse exercise, and you will excuse me from accompanying you to Cloverbrook, as you already have an escort."

Bradley's tone was like sleet beating on her face. A vista strange and bleak and desolate seemed to open for a moment before the young girl's eyes. She felt hot tears burning against her lids, but she nerved herself instantly. "I suppose it is your absurd prejudice against Charley Fortescue. You disapprove my knowing him."

"I have no prejudice against Fortescue, Winnifred. He does not interest me; but if you like his society, there is no reason why you should not enjoy it. Be assured I shall never attempt to interfere with your friendships."

An unreasonable feeling of indignation came to sustain the girl, as often happened. "You want to exhibit your lofty pride and wise prudence to show me that you will take no favors from my hand. As I do not care to have mine go begging, I will not intrude them again."

"Yes, I will ask one favor of you, Winnifred," and his whole manner changed and softened. "It may make you angry, I presume it will, but I shall do it because it is right."

"What is it you will deign to ask of me, Bradley?" looking up at him with surprise.

"I will ask you to treat your mother with more consideration—to give her the place she is entitled to by age and circumstances."

A fiery, red tide suffused Winnifred's face. "It is just what I have expected," she cried, with bitter scorn; "you have espoused mamma's cause, and taken sides against me. Now I suppose you will ask to have that disgusting, dirty old priest let into the house, though mamma knows she can have the carriage to go to chapel whenever she chooses. You will not interfere with my friendships, but you will come and preach to me about my duties and obli-

gations, and I shall tell you plainly that I hate preaching and canting."

"It would seem that a daughter's heart would teach her all she ought to feel toward a mother," he said in a low voice, "without forcing upon any one such a disagreeable and thankless task."

"Yes, of course," returned Winnifred resentfully; "you think me hard and unnatural and monstrous, but I cannot help it. That old priest shall not darken this door. I gave papa my word for it, and I will keep it."

Bradley turned upon his heel and walked off without another word, and that same morning when Winnifred rode away to Cloverbrook Fair, she almost hated herself. A sense of personal loathing had come over her, mingled with burning indignation toward Bradley. She knew she was right, but the world had changed and grown perverse and hard and unlovely. The old buoyant, brilliant consciousness of life and power was clouded over; but a sharp cauter of several miles and a great deal of high-spirited, soulless banter poured out on Charley Fortescue would surely set her up again.

The October day was mild and still as it drew toward noon, with a golden haze netting up fields and farms and woods and waters in a symphony of exquisite color. Bradley wandered along the lake-side and started up a partridge now and then from the cover. By circling nearly the whole sheet, he came to the north end, and was soon clambering up the high bank in among the dark Druidical pine trees, where he wandered about for a time over the pale red needles, and at last emerged at a point where Finster's cottage was visible, and seated himself on a mossy log. The voices of the children playing around the door came softened to his ear, and he idly watched the ducks making circles in the water near where the fisherman's boat was drawn up on the sand.

Long time he watched and waited, for Bradley had great capacity of patience in him, until at last the cottage appeared to exercise an attractive power he could not resist, and slowly descending the bank, he came to a little unfenced cabbage patch. The place was only one room high on that side, where a window stood partly open. Bradley approached and peeped through the light screen of withering morning glories and scarlet runners that shaded it, and there he saw this picture: Virginia sat by a low cot with her hat off, and her golden hair making a dim glory in the shady room. She was reading to the sick child, a freckle-faced, sandy-headed lad of eight or nine. The boy's little brown fist was clasped in her hand, and the story was in French, which she turned into English as she went along. The child's eyes, large from illness, devoured her face, and now and then he broke into a weak, gurgling laugh, for the tale was a merry one.

Bradley watched this scene for some instants, and then gently shook the sash and spoke her name. Virginia raised her head. She could not see him through the screen of leaves, but she knew his voice, and it thrilled through her. She put down the book and went to the window.

"You look worn and pale, and the air of that little den is stifling. Do come out and let me row you round the lake in Finster's boat; I want to speak with you."

"Where is mademoiselle, your cousin?"

"She has gone to Cloverbrook Fair with Fortescue. Do come out," he pleaded in a whisper.

Virginia went slowly back to the cot, stooped down and spoke to the sick boy, and kissed his freckled face. Then she tied on her hat, and another moment was embarking in Finster's boat with Bradley Halcourt.

"I'm glad you're going to give her a mouthful of fresh air," said the slatternly, easy-going Mrs. Finster with her heavy baby hanging on her shoulder like a bag of beans. "She's stuck to little Jake as if he was her own; beats all how he dotes on her. If the child gets well, it will be her purty face as has cured him, and not the doctor stuff."

Bradley pushed off into the middle of the calm lake. He had seated Virginia in the stern so that she could not avoid meeting his glance when she raised her eyes. He knew not what he meant to do or say, for he seemed carried along by an irresistible tide. For some moments nothing was heard but the light splash of the oars, but at last Bradley spoke in rather a constrained tone of voice.

"Did you tell me, Miss Duval, that you wish the search for your uncle definitively abandoned?"

"Yes," said she, with a little shudder; "he is dead to me."

"I have been surprised," returned Bradley, assuming a cold air of grievance that seemed to fortify him, "to see that you evidently wish to avoid me."

"O, monsieur!" in a low, pleading tone of remonstrance.

"Yes," said Bradley, not daring to look at her for fear his coldness would melt, "there is some mystery enveloping you; something is troubling or perplexing your mind. I dared once to hope that I might win the right to a little more frankness—the right to help you if it lay in my power."

"Monsieur does not trust me," she said, with a low

half sob; "he has suspicions like madame. I do not wonder, for monsieur has been all kindness, all goodness. It is monstrous in me to seem ungrateful."

"I have no suspicions," he exclaimed, dropping the oar, now. "I do trust you, Virginia, with all my heart and soul, but will you give me the right to ask one question: Is it true there are thoughts of—of marriage between you and Mr. Swayne?"

She gave a little cry of surprise, and clasped her hands. "Marriage between me and Mr. Swayne! Monsieur must know, he must surely have seen, that the poor young man has a hopeless passion for mademoiselle. You are betrothed to her, and you have no cause for anxiety. She is a glorious being, monsieur. I know that her heart is noble and true, and I have reason to worship the ground where she walks."

Bradley sat with his face quite pale, a troubled gleam in his eyes, and his arms hanging at his side, for he had let the boat drift as it would. "If what you say is true," he returned, "things are more inextricably tangled up than I had supposed. But I cannot think of my cousin now. I am mad, perhaps, Virginia. I am out of my senses, but I must speak. It has made me desperate and reckless to see you suffer. I have not slept, and am not myself. But why should I keep up this miserable mockery and pretense, when I know now that I love you better than life?"

Virginia gave a low, despairing moan, and covered her face with her hands. "O, monsieur," she sobbed brokenly, "you do not respect me, and I have reverence for you as a superior being far, far above me; but you have forgotten your honor or my helpless and dependent state, else you could not speak thus, knowing what I owe to my generous, kind friend, who has so loved and trusted in me."

Bradley was bowed down to the depths of contrition by the sight of her grief. He went over to her and knelt before her, and took one of her cold, small hands in his. "O, forgive me," he cried. "Do not misjudge me so cruelly. I do reverence you like a saint in heaven. No wonder you are shocked, for my conduct has seemed weak and strange and inconsistent and unmanly. I was led to make a wicked promise to my mother before I knew the strength of my feeling toward you. But the tie that binds me to my cousin is only a business arrangement—a matter of expediency, of convenience and cursed family pride. I will break it, and follow the dictates of my own heart."

"You do not know the truth, monsieur," said she, raising her head with the tears streaming over her pale cheeks. "Your cousin loves you, though, perhaps, unconsciously."

"God forbid," said Bradley, with an incredulous smile. "That is a strange delusion of your's, Virginia; she loves only her own way and the power to rule."

Virginia shook her head mournfully, and gently withdrew her hand. "Monsieur is noble; he will put by this delirium and let me land here in the little cove, and I forget all that has passed in this mad hour. I am going away, for I have only done harm in this place. I am going back to the good pastor Viardot at Geneva. I put myself under your protection while I remain, monsieur. Do not let them think me a mere adventuress. Do not let your cousin believe herself deceived and wronged by me, and that I have returned evil for her good. O, monsieur, I beseech you save me from every breath of suspicion and reproach."

"Wherever you go," said Bradley doggedly, "I shall follow, unless you tell me distinctly that you do not love me. You will draw me to you by an irresistible attraction."

She put her hands again over her eyes and began to tremble. "O, have mercy, monsieur; be not pitiless!"

He had possessed himself of one of her hands again, and covered it with kisses. "You do love me, Virginia; I know it now. I will obey you like a dog, and never pain you again."

"You will be docile if I tell you we must part forever," she whispered.

"O, my God, Virginia," he groaned, "these are hard words. Do not give me over to despair. I will do nothing unworthy of you or of myself, nothing to pain or trouble you. But trust me, believe in me, my love. If we belong to each other, who shall part us? Virginia, I saw you stoop and kiss that boy in the cottage. I would give five years of my life for a touch of your lips."

Virginia's face was pale; she did not blush at his words. Her eyes had a depth of solemn meaning as she said, "It will be the first and last time." And just as the keel of the boat grated on the sand of the little cove, Bradley folded her in his arms.

(To be continued.)

## LOST.

Somewhere between sunrise and sunset,  
Two golden hours,  
Each set with sixty diamond minutes;  
No reward is offered  
As they are lost forever.

NEW YORK, APRIL, 1877.

## FLORAL DECORATIONS.

The illustration represented upon the first page is a floral arrangement which is often used at an occasion of a French party, for hiding a doorway or large fire-place. Tall panels filled with mirrors are placed in such situations. At the base is a marble slab; and within the fender are grouped varying collections of plants in bloom. The mode of arrangement is as follows: A double row is necessary, the taller plants standing at the back, as indicated by the uneven numbers, the lower ones being placed between each of the large flower-pots. Roses, Arum Lilies, beautiful tree Ferns, Marantas, and Azaleas, are used to form the background, the tallest and most erect being placed in the centre, and the most sweeping away at the end.

1 3 5 7 9 11  
2 4 6 8 10

For edging, nothing is so pretty as the *Isolepis gracilis*, a little hanging grass, which grows naturally and in extreme profusion. For grouping amidst the grass, low-growing ferns are chosen. Such flowers as Lilies of the Valley, blue Lobelias, double Violets, Forget-me-nots, white Anemone, and Campanulas, both white and blue. For training up the sides, use Passion flower vine, a honeysuckle, or the hop vine. The design on first page is only slight indication of possible achievements. In the back are tall Lilies, Penstemons; in front, Geraniums, Deutzias, Violets, etc. A suite of rooms was so well decorated with this plan of floral arrangements that it seemed double in size, and another suite, a perfect counterpart, appeared to extend on beyond. One of the immense pier-glasses, so much used abroad, was placed so as to occupy the end of the

drawing-room; at each side of this were tall thickets of shrubs and flowers, filling up the interstices between it and the walls. These thickets of shrubs came down in the segment of a circle at the base, so that the effect was perfect of another room, separated only by a mass of most lovely flowers.

Upon this page is a sketch of a Fender Basket. The front is constructed of wicker work. A zinc or tin tray is made so as to fit the basket. The ends rise slightly; the centre should be quite low. The fire-place is fitted with a mirror which reaches from the floor to the mantel. The fender basket, or tray, is filled with a mass of moss, arranged to form a soft swelling bank, rising very gradually. Either a heap of moss, or a mass of sand or cocoanut fibre, can be used to fill up the tin tray all around the flower pots, and the interstices between. The illustration shows Callas, Fuchsias, Begonias, as the principal plants; but to these might be easily added Palms, Acacias, Roses, and large ferns, if the fender basket is of sufficient width. All these form ideas upon which those fond of floral decorations can build and construct to ornament their fire-places, their mantels, mirrors, and doorways between rooms and niches and bay windows. If the zinc tray is properly made of sufficient depth, it can be filled with earth and sand, covered with moss, and the plants grow therein without pots.

Upon page 57 is an illustration of a beautiful combined aquarium and plant case. Suitable rock work is provided within, and cemented together. At the sides, corners and back are planted lovely plants and grasses which will grow in moist places. The plants most suitable for this purpose are the following: Vallisnerias, Anacharis, Charas, the pigmy-blossomed Water Lily, the hawthorn-scented Apouogeton distachyon, fresh green disk-shaped sheath-rooted Duck Weed, pontederia crassipes, the hollow petioles of which are smaller, and filled with air. The only earth necessary, is

A FENDER BASKET.

fibrous peat, and fresh living sphagnum, or moss. In the aquarium can be placed lizards, golden trout, frogs, and a multitude of other fish or water inhabitants. While flitting from branch to flower overhead may be butterflies and birds. The aquarium and plant case is very large, at least six to eight feet long and wide, and ten feet high.

## PUBLISHER'S ANNOUNCEMENTS.

**Fire, Snow, Post Office.**—Within the past three months a combination of fire in our office, a missing bag of papers delivered to the post office, and the extraordinary delays occasioned by snows, and mails (often days and weeks behind), have utterly prevented exact promptness in filling orders. We usually are able to fill every order within forty-eight hours, but must confess, in such a combination of circumstances, our readers must exercise charity. In January, letters from our subscribers were two weeks in reaching us—and even in case we filled the order the day received, still the blockaded condition of the railroads made another delay of two weeks in delivering papers to subscribers. Our office, also, within the past month, was burned with a serious fire, and created serious interference. Also a bag of mail matter to subscribers was sent to the post office, which must have been lost, for we cannot otherwise explain delay of some in receiving their January No. But all difficulties have been overcome, and everything now is again "on time."

**Steel Plate Engraving, "The Home of Washington."**—We have the past month become possessors of the plate and copyright of this splendid and expensive Steel Plate Engraving. The cost of it, together with the original oil painting, has been \$8,000. Wishing all the subscribers of the FLORAL CABINET to have a copy of it, as it is really a gem of art, we will present a copy to every one now a subscriber, who will enclose to us the certificate printed upon our first page cover, before July 1st, and also remit 50 cents. This sum hardly pays expense and labor of forwarding; as all our subscribers know that we never offer a poor article, and in almost every case the *real worth* is from two to ten times the sum we ask, we feel sure our announcement of the privilege of obtaining a copy of "The Home of Washington" will attract confidence and attention. We guarantee perfect copies, printed directly by hand from the plate, equal in all respects to the best \$25 engraving sold in this city. And if any one does not find it a "real treasure," we will refund the money. Any one who, at this time, is a subscriber to any of our papers, for any length of time, or has been in the past a purchaser of any of our books, etc., has the privilege of procuring a copy.

**Chromo, "Gems of the Flower Garden."**—All editions of this are exhausted, and we cannot supply it any more. Subscribers will therefore be supplied instead with "My Window Garden"; or, "The Easter Cross," a new and most beautiful cross of flowers.

**Renew, Renew.**—Many thousand subscriptions expire with this number. Renew! Renew!!

**Only One Dollar.**—All the rest of this year's numbers, April to December, will be sent for only one dollar, this including also the steel plate engraving, "The Glee Maiden," worth alone \$1.00.

**Get up Clubs.**—To any one who will get up clubs for us this Spring, will be given these commissions towards your own paper free.

To every dollar subscription, we will allow 15 cents, or to every subscription at \$1.80, we will allow 20 cents, to be applied towards your own paper free, or any book we offer in our list. These commissions are not cash, but trade towards your own paper or book.

A club of 7 will get you your paper one year; a club of three will pay for nearly six months, but every name you get besides your own, counts in your favor and reduces the cost of your own paper.

## MAGNIFICENT NEW FLORAL PREMIUMS.

**"The Floral Cabinet" Collection of New Seedling Gladiolus.**—This is a new collection, never before offered, grown exclusively for us, which consists of twelve flowering bulbs of Gladiolus, one of the finest quality and most exquisite variety of colors. The quality of this collection is unequalled, and in every respect, we can safely guarantee them extra choice. The same quality of named varieties of Gladiolus, obtained of reliable seedsmen, would cost \$12. The colors range from the most fiery scarlet to the purest white.

**OFFER No. 1.**—This collection, worth \$12, will be given free to any person who will raise a club of 15 subscribers to the FLORAL CABINET at \$1.80, and also an extra copy of paper 1 year, free to agent.

**OFFER No. 2.**—To any one who will get up a club of 20 subscribers at \$1.80 we will give sufficient bulbs that the members of the club may have each 1 bulb worth \$1, and the club agent the entire set of 12, also with extra copy of paper free 1 year.

**OFFER No. 3.**—One subscription at \$3, will give subscriber the CABINET 1 year and collection free, all worth \$15.

This collection is not for sale by any seed house, and cannot be obtained at any other place, and all are new seedling varieties just originated.

**The Floral Cabinet Collection of Balsams.**—This comprises the best strains of Camellia-flowered Balsams ever offered. The Balsam is a great favorite with the ladies. This collection is the very cream of the extra choicest sorts ever raised. Its value may be judged when the seedsmen have offered 10 cents a seed for all that can be spared. We know there is nothing in Europe or America to equal them. The collection consists of 6 packets, pure white, deep, rich purple, brilliant scarlet, crimson spotted, velvet violet spotted, and carnation striped. The flowers are so large and perfect as to be almost equal to roses. The set is worth \$1.50 at least, and can be obtained only on the following terms:

**No. 1.**—A club of 10 subscribers to FLORAL CABINET, at \$1.80, will entitle club agent to 1 set of above packets, \$1.50, and 1 extra copy of CABINET and engraving free.

**No. 2.**—A subscription of \$2 to CABINET will entitle subscriber to the paper and collection in addition.

**No. 3.**—A club of 4 subscribers at \$1.80 will entitle agent to the collection free, as a premium.

**No. 4.**—A club of 20 subscribers, at \$1.80 each, will entitle club agent to enough packets to present each member of the club with the collection, worth \$1.50, also the CABINET and engraving 1 year, all together worth \$3.80, and the club agent to extra set of paper, engraving, and collection free.

The supply is limited, and those who desire them will do well to get clubs in as soon as possible.

The collections of balsams and Gladiolus are named specially after the FLORAL CABINET, and we are very cautious never to send out anything but just as represented. The good name and fame, and honor of the CABINET is the best endorsement of these new floral collections, which are of extraordinary value.

### BIRD HOUSES.

Birds appreciate houses and other artificial shelter, and will usually accept any accommodations we may provide for them; but they have their preferences, and while perfectly indifferent to the fashion and beauty of their habitations, they naturally seek for retirement and secrecy. Consequently, a dilapidated stove-pipe hat, with a hole in the top and nailed against a retired wall, will be more readily occupied than the most wonderfully-carved and highly-colored pagoda perched prominently on a pole. The less conspicuous bird houses are, the better; all elaborate, gaudy affairs in imitation of temples and other buildings are to be condemned, both as unsuitable and as contrary to good taste.

The most artistic bird houses are of rustic construction. A strong, rain-proof box of rough boards serves as a foundation. The size and shape of the box is simply a matter of taste and convenience, but it must be provided with a roof. Shed and gable roofs are most easily made, but curved or gambrel, and hip or four-sided roofs are more fanciful. The floor of the house should project an inch or two beyond the walls, making a sort of step or perch. Two round or oval holes two inches in diameter must be made for doors, and the house is ready to be covered with strips of bark or of some straight splitting wood nailed on. The "rustic" appearance is further increased by nailing on crooked twigs or roots. A very beautiful house could be made by covering it with pieces of bark from which bits of grayish-green dry moss are growing, and adding tufts of the same kind of moss here and there. In fact, any kind of rustic work used for hanging baskets is suitable for bird houses. An ordinary paint-keg, stood on end with a hole in the side, and a gable roof, makes a very good house. It can be painted, or covered with bark and twigs.

To make a nice martin house, take two soap-boxes, and put two cross partitions in each, dividing each box into four rooms. Nail one of the boxes on a board of sufficient size to allow a two-inch projection all around.

Prepare the other box in the same manner, and nail its bottom to the top of the other box. Put a piece on each side of the house to fit it properly for the roof, and with two boards make a gable roof. Furnish each room with a two-inch door, and the house is complete, except the outdoor finish. Paint a deep brown or slate, or sand it over with clean, dark sand, or cover it in rustic style.

Old tin pans, nailed against the walls of out-build-

they be mounted on poles, fastened against walls, or suspended from limbs of trees. MRS. M. F. A.

### STATUARY TRANSPARENCY.

A beautiful and striking statuary transparency that I recently saw hanging in a parlor window is different from anything I have noticed described in the CABINET. The method of preparing it is quite simple, but calls for tolerable skill in drawing.

Wash a piece of ground glass clean with soap and water, rinse thoroughly and dry with a towel. Fix it firmly in some way convenient for drawing, and clearly trace the outlines of a group of statuary on the ground side. If expert at drawing you may design your own group, or copy from some good model, directly on the glass. If not sufficiently skilled for this, place a wood-cut, photograph, or drawing on the smooth side of the glass, with the face of the picture next to the glass. The picture will show through distinctly, and the outlines can be easily traced correctly. Shade carefully with soft drawing pencils, and touch the high lights with pure mastic varnish, and if there is anything of the artist in your nature, you will be able to produce the true statuary effect. When finished satisfactorily, fill in the ground-work of the glass with opaque black, either water colors or oil, or with any of the transparent oil colors. Prussian blue, crimson or scarlet lake, or purple (by mixing crimson lake with Prussian blue). Exercise the greatest care when applying the color around the edges of the picture that the sharp, clear outline may not be disturbed. When dry, take a piece of plain glass of the same size and place it over the painted side, and bind

AQUARIUM AND PLANT CASE.

ings and painted brown, are not disdained by the birds for housekeeping purposes. Large sized tin fruit-cans, placed on the side and securely held in place by wires or other means, are also acceptable. Care must be taken not to put tin houses where the sun's ray will strike them long, as the reflection will make it too hot for the birdlings. Attention must also be given to placing the bird houses out of the reach of cats, whether

the two together by gumming narrow strips of paper or ribbon over the edges. MRS. M. F. ADKINSON.

In washing windows, a narrow-bladed wooden knife, sharply pointed, will take out the dust that hardens in the corners of the sash. Dry whiting will polish the glass, which should first be washed with weak black tea mixed with a little alcohol.

## Ladies' Boudoir.

## MY COZY ROOM.

"O, May, what a cosy room," said my friend Stella Moore, as I led her to my own special sanctum, on the occasion of her first visit to me.

We had been room-mates at a celebrated seminary, and had left school just one year before this time. Our situations in life were very different. She was the only daughter of a wealthy city merchant, while I was the child of a country physician, and had numerous brothers and sisters. Although we were intimate friends, it was with some misgivings that I invited her to spend a few weeks of the summer with me, for my home, though pleasant, was plainly furnished. I wished much to have my own room pretty and cosy, and lay wondering many a night how to accomplish it. At last a plan came to me, and only confiding it to my mother, I set about it, and now, as it is all complete, perhaps some of the readers of the CABINET would like to have a description of it.

It contained two large windows; it was a few feet longer than it was wide, and there were two doors. My first move was to purchase a white straw matting for the floor; next I papered the walls with pretty gilt paper, touching the top with a blue and gold border. At my window I hung plain, full white muslin curtains, looping them back with blue ribbons, and hanging over them lambrequins of delicate blue chintz. Then came a bold move. I went to a furniture dealers and purchased an *unpainted* bedstead, dressing-case, commode, two chairs, and a rocking-chair; at a paint-shop I bought some very delicate blue paint, and by dint of much patience, painted and varnished my set myself. When perfectly dry, I relieved its very blue look by ornamenting it with lovely landscapes in decalcomanie. So far, very well; but I needed a table and two more chairs. In the attic I found an old stand with two drawers, just the thing for my purpose, but it was a woeful sight. I, however, with soap and water and sand-paper, washed and rubbed off much of the dirt and old paint. I then applied several coats of my blue paint, and with a cloth of blue flannel pinked around the edges, and braided with gold braid—behold a charming stand. On this I placed my writing-desk, my albums, and my few choice books. For my chairs, a barrel with the top sawed off, so as to form an easy back, and nicely cushioned and stuffed, made a comfortable seat, and when covered with chintz to match my lambrequins, was very pleasing to the eye. For the other, I got an unpainted camp-stool, painted it blue, and an old bit of tapestry carpeting, nailed on with brass nails, did admirably for a seat.

Thus my principal furniture was complete. Now for the ornaments. I took two pieces of wood about two inches thick and circular shape, put a broom-handle through the centre of each piece about two and a half feet apart; I covered it with chintz and tied a band of blue ribbon round the belt. Around its top were pockets of the chintz, with blue bows, and on it stood my basket of work. Over my commode I hung a curtain of white rubber cloth, pinked round the edges, and ornamented in the centre and each of the four corners, with sprays of flowers and grasses in decalcomanie. The commode was covered with a white cloth, and mats, crocheted in cotton yarn over lamp-wicking, were under the bowl and pitcher. Two small mats of the same were on the small shelves. Under the mantel stood a box covered with chintz; its

cover was put on with hinges, a broad knife-plaited ruffle finished the edge. This was a pleasant seat, being nicely stuffed, and also a convenient receptacle for soiled clothes. The mantle itself was a piece of plain board painted blue, and set on iron brackets. Around this hung a curtain of Java canvas, white, on which was worked a broad, handsome pattern with the shades of blue worsted; its edge was a shaded blue fringe. On the mantel stood two hollow wood frames (sawed by myself with a friend's bracket saw), holding photographs of two friends. These frames rested on two rose mats made of blue and white split zephyr. In the centre was a Parian vase filled with autumn leaves made in wax. Over this hung a picture of Evangeline in a gilt frame, which no one would guess was very much worn, for it was covered with straw-colored tarlatan prettily falled over it. My dressing-case held a toilet set of white honeycomb canvas, worked with blue worsted in Grecian pattern, and consisting of a large mat, two small ones, and a cushion. A handkerchief box, made of pieces of glass, cut to fit each other, and bound together with narrow blue ribbon, a hair-pin basket, long and narrow. A hair receiver of silver paper, embroidered with blue floss, and lined with blue silk, hung from one knob, and from the other a watch-case of blue velvet embroidered with a raised pattern of beads. My pretty trinkets, gifts of friends, were scattered around, with here and there a picture; most of them drawings or paintings of my own. Several brackets were fastened on the walls; one bore a cross of wax twined with ivy, another sea-shells and moss. Hassocks made of odds and ends of silk and worsted goods pieced together, offered easy resting places for the tired feet. The straw matting was relieved by mats made from old coffee-bags, and worked in various patterns suitable for canvas with bright colored Germantown wools.

ELLEN C. WRIGHT.

## MY GUEST CHAMBER.

A large chamber with three pleasant windows, two looking south and one west, curtained with plain white shades. On the floor a carpet decidedly the worse for wear, hardly a square yard guiltless of a darn, a cottage bedstead of dark stained wood, a bureau of ditto, surmounted by a small, dull looking-glass, a washstand of the same gloomy color, and three straight cane-seated chairs with one rocking-chair; a table of the hour-glass description, covered with white, and standing at the head of the bed, completed the list of furniture.

This was my guest chamber, which I had just entered. We were poor and could not afford to spend money save for those things which were absolutely needful.

A bad debt, as my husband had always considered it, of fifty dollars, had been paid to him the night before, and he had given me half of it, to do as I pleased.

As a result of my cogitations, I bought a dollar's worth of white paint, into which I stirred a very little lamp-black, making a light French gray. With this I painted all my furniture excepting the bedstead. I wished for a French bedstead, and by going to a manufactory obtained one, unpainted, for four dollars. The man of whom I bought it cautioned me to shellac all the knots in the first place, as otherwise they would make their appearance through the paint. I put on three coats of paint, and no one could have suspected what was underneath. After it was all dry my John took a small paint brush, and after putting more lamp-black into the paint, and making it very dark, he drew

lines, straight and curved, where they were necessary to give a finished look.

I had bought a dollar's worth of decalcomanie pictures, groups of flowers, of three sizes. The largest I put on the bedstead, one on the inside of the head-board, two on the foot-board, one inside and one outside, and a medium-sized one on the lower part of the foot-board. On each large bureau drawer I placed a medium-sized picture, and a small one on each small drawer, also one at the top and bottom of the looking-glass. For the wash-stand I used medium-sized, and on the top of each chair a small one. I then varnished all the furniture, and with immense pride regarded my work. It was an experiment, and I had felt so doubtful of success that I had chosen to do it first; now, however, with renewed courage, I set about considering what I could do for the rest of the room. The ceiling was clean and white, so was the paint, and the paper was likewise respectable, being delicate in tint, with an unobtrusive small figure, so I merely got a cheap blue border—I had decided on having a "blue room"—and that part of the work was over.

Twenty yards of white straw matting, at twenty-five cents a yard, made me a carpet. I had once heard of putting wall paper on the floor, giving it one or two coats of varnish after it was down, and was tempted to try that economical arrangement, but refrained, not having much faith in such a carpet.

When bright colors were worn for dresses, I possessed a blue, all-wool delaine of a light and exceedingly bright shade. I had not liked to wear it for years, so it had hung undisturbed in the attic. Now I thought that I saw an opportunity of utilizing it, as there was a good quantity of material in it; so I took it, bought ten yards of curtain lace, which is very wide, for thirty cents a yard, to put over it, and made my lambrequins. I lined them with old white cotton, putting between the lining and delaine thick brown paper, through which the sun could not shine and fade the blue. I made my pillow shams in the same way, finishing them around the edge with a narrow plaiting of tarlatan, as I also did the lambrequins and a splasher for my wash-stand. Next, I got John to make me a rough table, with a frame work at the back four feet high, and rounding over at the top. I covered this plainly with the blue delaine, and over it fulled the lace, excepting on the top of the table, where I drew it smoothly across. For two dollars I bought a good-sized looking-glass with a white pine frame, which my husband fastened on the back of the table. I pasted gilt paper nicely over the pine, and arranged the draperies to fall over in such a manner that it looked like a gilt frame—which it surely was! My supply of delaine was exhausted by this time, else I should have liked to make a barrel chair, upholstering it like the toilet table, but I drew consolation from the reflection that lace would hardly make a durable chair covering. I bought, for a dollar and a quarter, a pretty towel rack, a bracket for a dollar, and with another dollar, a pretty little Parian head to put on the bracket. I still had about five dollars left, with which I purchased two photographs and one chromo, unframed, black walnut molding enough for the frames of the photographs and gilt for the chromo. John made the frames himself, and very creditable frames they were too. And now, when I had added a few finishing touches, such as a toilet cushion and mats, hair-pin drum, cornucopia, etc., my work was done, and the room which had been a source of such dissatisfaction to me, had become the pride of my heart, for without a single costly article in it, the effect of the whole was very pleasing.

KATE HILLARD.

## Household Art.

## ONE SITTING-ROOM.

A few weeks since I visited an old schoolmate for the first time since her marriage. She had been in a home of her own some six months, and everything in it had been arranged by her own hands and as her taste dictated. Such a cosy, restful home feeling came over me as I entered the sitting-room. I involuntarily exclaimed, "How beautiful you have made your home!" As I realized how much of its beauty was due to her own labor, I wondered how she ever found the time in which to accomplish so much, and putting my wonderings into the form of a question one day, she replied: "By employing the odd minutes." That answer set me to thinking; and as I staid there day after day the fitness of things impressed me so very much, "the spirit moved" me to tell the CABINET readers about this home. As I can describe only one room now, I have decided that that shall be the living room, and promise at some future time to give you a sight of the rest of the house. I can only hint at its beauties; but I know that hints can be caught up and worked out so as to form many beautiful creations; and thus I may help some house-keeper to be a home-keeper too.

The woodwork of the room was black walnut, and was simply oiled; and just here I cannot refrain from saying that I wish house builders would use in the finishing of rooms those woods which need only to be oiled or stained instead of painted. No paint can give such soft, beautiful shades of colors. My friend had chosen for the walls a plain paper of a delicate shade of drab, and a wide, handsome bordering of gilt and dark, brilliant scarlet. The carpet was one of those lovely all-wools which are now made with vines and flowers scattered over it in no set pattern. The color of the ground was drab, of a shade matching the wall paper, which set off the green of the vines and the pink and scarlet of the buds and roses to perfection. A lounge covered with green terry filled the space between two windows. The chairs were of different patterns and all invited you to rest; while once in them you felt that their looks were a faithful index of their characters. Did you ever realize how very much chairs differ in degree of comfortability? Entering the door from the hall, the first thing to attract notice would be the bright, cheery wood-fire, which sparkled and sent out a warm welcome from an open grate. A broad black walnut shelf, directly above, held various ornaments; in the centre a pure white dove seemed the very embodiment of peace; on one side a tiny vase held small pressed Ferns and Sunae leaves; a large one held *Tradescantia Zebrina*, which drooped over the shelf and lay on it in beautiful gracefulness. On the side were two vases, each large, one filled with *Tradescantia Vulgaris*, the long shoots of which completely enveloped its receptacle and ran riot over and on the shelf; the other held pressed Ferns, autumn leaves and vines, the whole forming a handsome bouquet. Two large butterflies seemed to have just alighted on one of the Ferns a moment to rest themselves. The *Tradescantia* had been growing in moist sand some months and was very thrifty-looking. Suspended from the wall, midway of the space above the shelf, was Vick's chrono, "Winter, indoors and out." The frame was of pine and on the plain surface were glued grapevine tendrils, the whole stained with burnt umber and varnished. Up the cords and around the frame a lovely Madeira vine clustered, which was

growing in a large-mouthed bottle filled with rich earth and suspended from the back of the frame in such a manner as to be entirely concealed from view. One corner of the room held a bracket constructed of dark scarlet velvet cut in the shape of a very large maple leaf, and over it was worked a vine of small leaves done in white glass beads. On this was placed a handsome pot containing a root of English Ivy, the vine having gone two-thirds of the distance round the room, the branches shooting here and there down the cords of some pictures, up those of others, and twined around a few of their frames. It was held in position by very small tacks, and no one would suppose it grew in any way or place other than it pleased. One vine which was used much with ferns and leaves to decorate picture cords I had never seen, and my friend told me to "guess;" but I had to give it up. It was the common running blackberry vine, gathered just after the frost had turned the leaves so many brilliant hues, and pressed carefully and thoroughly with a quite warm flat iron. It was very lovely.

Another corner was filled by a bracket of various colored worsted worked into canvas in such pattern as to form a bouquet of beautiful colored flowers, buds and leaves. This held a wax cross which had leaves and flowers made of feathers falling over the base and twining up the body and over the arms. I think nothing can exceed the airy grace of feather flowers. A third corner was occupied by a black walnut bracket of three shelves, and the two lower and larger of these held the books which were in daily use, while on the small upper shelf was placed a bust of Dickens. Suspended directly over this bracket was an engraving of Longfellow. How fitting that these two, so eminent in fiction and song, should watch and guard over those volumes which did so very much to elevate and purify the taste of their owners!

The remaining corner was rendered beautiful by a bracket made of white bristol board cut in fanciful shape, on which seaweed had been secured in the form of a vine. This shelf supported a quite large branch of red coral, and around that were grouped many handsome sea shells. Above this hung a picture entitled "Noon on the Sea-shore." Whenever my eyes rested on these suggestions of "Old Ocean," how my heart bounded, and pleasant thought came scattering all cares and anxieties!

I liked this idea of filling up the corners of a room, for I found it helps largely towards cosiness. I will say nothing of the lamp-mats and tidies which were in every proper and available place, because everyone knows so well how to fashion beautiful ones, except that all were of dark scarlet color mingled with drab or white. The bay window I must not neglect to mention, for the taste displayed in the arrangement of the curtains, plants, &c., which were therein. The curtains at this window, as well as the other two in the room, were of lace; the cornices were embroidered bands of various colored wools on drab rep, so combined as to form a lovely vine of leaves and rosebuds. The holders were like the the cornices, and the lambrequins of green terry matching the cover of the lounge and some of the chairs in shade. In the centre of the bay window was a low stand supporting an aquarium, in the middle of which rose a stately calla lilly, the roots held firmly by sand and a little rich earth. A few sea-shells were grouped together so as to form two little grottoes, and among many small plants, other shells and pretty pebbles were scattered. Among and over all this prettiness darted and played three gold-fishes. On either side of this miniature lake was a small fernery with round base containing

blooming plants and creeping vines. Up the sides of the window were plant brackets of black walnut on which were plants of brilliant foliage.

Directly over the stand hung Birdie's cage, and from the same hook was suspended a basket made of hoopskirt wires and scarlet worsted. Growing in the centre of this was a Mrs. Pollock geranium, clustering around that were five Chinese primroses, all of different colored bloom, while at the edge was coliseum ivy growing so luxuriantly as to cover the supports of the basket and fall over the edge, twining in, out and over the canary's home, thus making for him a perfect bower.

But time and space both failing, I must bring my description to an end, feeling that the half has not been told. However, I cannot refrain from begging some tired and almost homesick housewife to employ a few of her spare moments now and then in beautifying the living-room at least with some of the many pretty things which are costless. I know too well that many people think the time spent in making and arranging these articles is wasted time; but doesn't such help to cultivate a taste for the beautiful wherever found, and thus help the soul to fit itself for the enjoyment of its life after it has gone from the life of earth? If we like not lovely surroundings here, how can we enjoy them there? Then, too, our husbands and children like a cosy, restful room much better than any other place, and I feel sure that they will gladly come to such a home, and that they will prefer no other place to it.

## FOOT MATS.

Cut woolen and flannel pieces of cloth into strips three inches long and half an inch wide. Get a pair of very coarse steel knitting needles and some jute twine—no other will answer—the same that is used in making gunny-sacks, and can always be obtained where they are made, if not at the shops. Set up fifteen stitches on the needles, and knit once across; knit the first stitch on the second row, and between the needles put a piece of the cloth at right angles with the stitch, and knit another stitch; then turn the end of the cloth that points toward you out between the needles, so that the ends will be even, and so on clear across, two stitches for every piece of cloth; then knit across again plain to get back to the side where you began. The ends of the cloth must always point from you as you knit them in.

I knit one for my phaeton one yard in length and five strips wide, sewed together with jute, over and over stitch. They are very warm for the feet and are very pretty, and it is a good way to use up discarded coats, vests and pants. The cloth must not be too thick; broadcloth, waterproof, ladies' cloth, &c., are the best for the purpose. Mine is really very pretty; the centre is orange and black mixed waterproof and a border of black, brightened up with tufts of scarlet flannel.

MRS. J. H. S.

**Preventing Wood from Cracking.**—A correspondent of the *English Mechanic*, writing of a good mode of seasoning wood, says: Having a great deal to do with the seasoning of the harder and better kinds of wood, I find that they are all liable to crack badly at the ends. I generally give them three or four coats of glue on the ends only, which I find is a sure preventive, till the wood is well dry, and then cut on the quarter.

Gray marble hearths can be rubbed with linseed oil, and no spots will show.

## Household Elegancies.

## PEN-WIPERS AND SCISSORS' SHEATH.

## FEATHER PEN-WIPER.

This elegant little article is composed of a pigeon's wing, blue, scarlet, and black cloth, and a bit of scarlet ribbon. Take a strip of black cloth fifteen inches long and two and a half inches wide; gather it round the top, and sew it up in the centre of the back neatly, so as to give it a bell shape; then take a strip of red

cloth two inches longer and a little wider than the black, and one of blue cloth the same length and half the width; scallop and pink them round the edges; gather and sew together the scarlet strip like the black, arrange over it and then add the blue, done in the same manner, next the wing, to which all should be sewed firmly; then a scarlet or black ribbon is tied around and arranged in a pretty bow in front, to hide the joinings of the cloth to the wing.

## BUTTERFLY PEN-WIPER.

This shape is easily made, and looks quite pretty. First cut out a piece of black velvet the shape of the butterfly's wings; buttonhole stitch all round the outside of the wings with bright gold-colored sewing silk, and do the chain-stitch lines with the same. For the straight bars on the wings, use red sewing silk, and sew on small gilt beads, according to the figure. For the body, cut out another piece of velvet the size you require; sew it up, over and over, and stuff with cotton wool; twist round the neck a piece of red silk, cross the same over the back and again round the end,

and fasten it off, putting two beads in the head for eyes. The inside leaves must be made of black cloth, two or three thicknesses, and the back of another piece of plain black velvet; then stitch together neatly through the wings each side of the body. Light drab velvet is also pretty for these pen-wipers.

## GAUNTLET PEN-WIPERS.

This pretty method of constructing pen-wipers must not be left from our list, as they are really worth the trouble of making them. Cut two pieces of black cloth the shape of a gauntlet glove; sew over and over around the edges to the wrist, which leave open down the sides; now back-stitch together the two pieces where the fingers would be separated in a real glove. Chain-stitch with bright-colored silk, three round the back of the hand; then take some wicking,

attach a small darning-needle threaded with common thread to the end, run the needle successively up through the hand and out at the tip of the fingers, drawing the thread tight until the wicking fills up to the end of the finger, leaving the lower ends to stuff out the hand as far as the wrist. A little cotton wool besides, will be needed to fill out the hand. Cut sev-

eral pieces of old black silk or thin cloth, and fasten firmly between the two outside pieces of the wrist, to wipe the pen on. Put a piece of ribbon around at the wrist the color of the chain stitching on the back, and finish with a small bow on the back of the wrist.

## OAK-LEAF PEN-WIPER.

The materials for this nice pen-wiper are green, brown or red cloth for the outside, black for the inside, and brown or green zephyr worsted. Cut two shapes like the pattern, of either color of cloth mentioned; buttonhole stitch around the edges with sewing silk of a shade darker than the cloth; embroider the acorns

with either brown or green zephyr by taking the stitches the long way, very closely together. Form the cups of brown zephyr by small French knots, and sew the stems neatly over and over with zephyr the color of the leaf; this is for the upper side; for the under side the leaf may be simply veined. Cut three or four leaves of black cloth a trifle smaller than the outside ones, and without the upper stem; point these,

and laying them between the outside ones, fasten together neatly at each side of the centre stem for a short distance from the top, and you have a nice little gift for some friend's writing-desk.

There are many other pretty ways of making these useful additions to a secretary or desk, one of which is made by cutting three pieces of broadcloth about two and a half inches square; fold these together, and sew them down the centre, so as to form a shape like the pattern below. The first three can be simply sewed together with black silk, and a little figure worked near the top with bright zephyr or silk; now cut three

more pieces about two inches square; work them down the centre, after folding like the first, with bright zephyr or silk, in herring-bone stitch; also work little figure near top like pattern. Either point or buttonhole stitch the upper edges. Fasten the three larger pieces together at the lower points, and at the sides, so as to form a fan shape; then fasten the other three in like manner; place over the larger ones and fasten at the lower, and near the upper points; finish off at the lower points by a fancy button on each side, or a little bow of ribbon. Another method is to cut circular pieces of card-board, cover with velvet or silk; cut three or four pieces of black cloth, point them finely; place them between the covers, and fasten a fancy button on either side; or cut circular pieces of black cloth, and fasten all over them small round pieces of bright-colored cloth about the size of a wafer, laid one over the other, like the scales of a fish. Place several pieces of cloth cut round, folded together in centre, then again, and fastened together at the points, between these outside pieces.

## EMBROIDERED SCISSORS' SHEATH.

The materials for this useful article for the work-box, are gray, blue or black kid, gold thread, or saddlers' silk of different colors, silk cord or chenille, card-board, white kid, grey sewing silk. Cut two pieces of card-board the shape of the pattern, covered outside with the embroidered kid and inside with white kid; sew together over and over stitch. Trim the edge with silk cord or chenille. Instead of kid, nice cloth, thick silk, or velvet can be used, and the embroidery—worked in satin stitch—may be done with gold thread, chenille, or saddlers' silk of various colors. I have made them without any embroidery, and trimmed the edge with chenille, forming it into three leaves in centre of each side at the top, and they are very neat, done in this manner.

MRS. MARY I. HERRON.

## Fireside Reading.

### A DELIGHTFUL LEGEND.

There is a beautiful legend connected with the site on which the Temple of Solomon was erected. It is said to have been occupied in common by two brothers, one of whom had a family, but the other had none. On the spot was a field of wheat. On the evening succeeding the harvest, the wheat having been gathered in shocks, the elder brother said to his wife:

"My younger brother is unable to bear the burden and heat of the day. I will arise, take off my shocks and place them with his, without his knowledge."

The younger brother, being actuated by the same benevolent motives, said within himself:

"My elder brother has a family, and I have none. I will contribute to their support. I will arise, take off my shocks and place them with his, without his knowledge."

Judge of their astonishment when, on the following morning, they found that their respective shocks were undiminished. This course of events transpired for several nights, when each resolved in his own mind to stand guard, and, if possible, solve the mystery. They did so, when, on the following night, they met each other half way between their respective shocks, with their arms full.

Upon ground hallowed by such associations as this was the Temple of King Solomon erected—so spacious, so magnificent, the wonder and admiration of the world. Alas! in these days, how many would sooner steal their brother's whole shocks than add to a single sheaf!

### SELF-SACRIFICING.

This is a true story. The circumstances occurred the other evening. He escorted her to and from church, and upon arriving at her home their discussion of the sermon and the extreme heat suggested an invitation, readily accepted by Charles, that they step into the house and partake of a cooling glass of lemonade. She led him to the dining-room, and there found naughty brother Ben about to squeeze the last lemon in the house for his own individual benefit! Calling him aside, she induced Ben, by means of sundry threats and promises, to dissect that lemon and make Charlie and herself a glass. A self-sacrificing thought struck her! "No, Ben," said she, "put the juice of the whole lemon into Charlie's glass, and bring me a glass of water. He won't notice it—there is no light in the parlor!"

Ben was making one good strong lemonade, as directed, when Charlie quietly slipped out and re-

marked: "I say, Ben! put the juice of the entire lemon in your sister's glass, and bring me some ice water—there is no light in the parlor, and she won't notice it!"

Ben's forte is in obeying orders.

With a merry twinkle in his eye he drank the lemonade, then carried them each a glass of water, which they drank with much apparent relish, asking each other, between the sips, "if it was sweet enough!" And naughty brother Ben, with the taste of that lemonade in his mouth, stood out in the hall and laughed till his sides ached, to hear them assure each other that it was "just right! so palatable and refreshing!"

The late Dr. ——— did not satisfy, by his preach-

parents live on Myrtle avenue, entered the house the other day and remarked to his mother: "Is dinner ready, and if not, why in t. (thunder) and l. (lightning) ain't it?" "What do you mean?" she slowly inquired. "I mean that you had better t. a. l. (tread around lively)" he answered. She didn't say any more, but when the father came home to dinner she quietly informed him that young Napoleon was picking up slang. "Is, eh? I'll see about that," and he called the boy and inquired: "Napoleon, where were you last evening?" "Oh, down at the c. g. for a little while." "What do you mean by c. g.?" demanded the father. "Why, corner grocery, of course. You see, I have g. t. h. (got the habit) of abbreviating my words!" "I see you have," mused the father, as he rose up. "You will p. a. m. (please accompany me) to the woodshed!" They had a little physical exercise out there, the father holding the balance of power, and the son doing all the high stepping and side dancing. When the show had adjourned, the father said: "Now, d. l. m. (don't let me) ever hear any more of your slang." "Not a. b. w. (another blessed word), sighed the boy, and he sat down on a lump of Briar Hill and wiped his tears away.

Pigeon English is all the rage with Boston girls, and, when an escort leaves one of them at her papa's front steps, he is startled to hear something like this: "Hoop-la—Melican man he heap much nice—fetches me home alle light, top-side up on slippely walk—buy gum dlops—comee you alle same 'gin sometime—you savey, ch, John?" And she disappears within the storm-doors, leaving the perplexed young man slowly muttering, "Well—I'll—be—heap—much—blowed—alle—same—if I know what that charming creature is driving at."

The Cincinnati Saturday Night relates the following: "A young woman recently answered an advertisement for a dining-room girl, and the lady of the house seemed pleased with her. But before engaging her there were some questions to ask. 'Suppose,' said the lady—'now only suppose, under-

stand—that you were carrying a piece of steak from the kitchen, and by accident should let it slip from the plate to the floor, what would you do in such a case?' The girl looked the lady square in the eye for a moment before asking, 'Is it a private family, or are there boarders?' 'Boarders,' answered the lady. 'Pick it up and put it back on the plate,' firmly replied the girl. She was engaged."

Sometime ago a pupil in a deaf and dumb asylum in New England read a portion of the Book of Job; when asked to write out his understanding of Job's sufferings, he wrote: "The Lord boiled Job seven days."

THE WEDDING.

ing, the Calvinistic portion of his flock. "Why, sir," said they, "we think you dinna tell us enough about renouncing our ain righteousness." "Renouncing your ain righteousness!" vociferated the astonished doctor; "I never saw any ye had to renounce."

Under the head of "D.D. (Domestic Difficulty)," the Detroit Press Press recounts the following: It is all right for the Hon. Bardwell Slote to lug his "Mighty Dollar" around the country and say g. f. for good fellow, c. d. for cash down, and s. m. for sour mash, but such little eccentricities don't wear well in the family circle. A forward youth of fourteen, whose

PRIZE COLLECTION OF HOUSEHOLD  
AND COOKING RECEIPTS.

BY HORTENSE SHARE.

To this collection was awarded a third prize.

**French Rolls.**—Of light bread dough take as much as will make one loaf. Work into this one egg, one heaped tablespoonful of lard, two of white sugar. Set in a warm place to rise. When light, work down, knead again. When very light and puffy, roll out. Cut with a biscuit cutter. When raised, bake twenty minutes in a quick oven.

**Indian Bread.**—Two-thirds pint of corn meal, one pint sweet milk, two tablespoons flour, one of sugar, two eggs, lump of butter size of an egg, one small teaspoon soda, two of tartar or one tablespoonful vinegar, pinch of salt—tartar mixed in the meal, soda in the milk. Beat sugar, butter and yolks of eggs together; add the milk. Beat whites and stir in last. Bake half or three-quarters of an hour in a quick oven. Makes a delicious cake if one cup of sugar is used. Good hot or cold.

**Noodle or "Nudla" Soup.**—Three hours before dinner, take three eggs, teaspoonful salt, mix with as much flour as will make a very stiff dough. Beat well with the rolling-pin—the more the better. Cut into four pieces, roll each as thinly as possible—keep on rolling till as thin as paper. Spread on a paper to dry—but do not leave till so dry as to break when rolled into long rolls to cut. With a sharp knife slice into rings no thicker than a broom-splint. Spread out to dry, shaking them out well. Fifteen minutes before dinner, shake them lightly into five quarts of the boiling liquor in which a fat chicken or piece of fat, fresh beef has been cooked, the broth having been well skimmed. Add salt and pepper to taste, cup of sweet milk or cream, pinch of parsley or saffron. Boil up two or three times and serve.

**"Smeltz de Nudla."**—The noodles made same as for soup. When cut and dry, boiled five minutes in clear (boiling) water with a little salt. Have ready in a skillet a teaspoonful of bread crumbs browned in butter size of an egg. Skim out the noodles into the bread crumbs. Pour over them a cupful of sweet milk or cream; let it heat. Send to table hot with bits of butter strewn over the top. This is a stand-by in the spring when winter vegetables are gone and we are tired of canned things. Noodles can be made in quantity, well dried, put in a jar, covered tight, keeping for months to be used as wanted. (Both these recipes have been in use in our family over a hundred years.)

**Cucumber Salad.**—Two hours before dinner, slice on a slaw-cutter four full-grown, but not yellow, cucumbers; salt, and leave stand in an earthen dish. Half an hour before dinner drain in a colander or squeeze out the juice with the hand. While they are draining, peel and slice two onions and fry in a spoonful of lard. Beat together the yolk of an egg, half a teacup sweet cream and two spoonfuls of water. Put the drained cucumber in a porcelain kettle with the onion, pour on the beaten mixture, dredge over a little flour, add half teacup sharp vinegar. Boil up five minutes. Serve hot.

**Potatoe Salad.**—Boil until soft two pints of pared and sliced potatoes, fry two onions in one spoonful of lard, skim out the potatoes into the onion, beat the yolk of one egg with a cup of sweet milk and half cup of vinegar; pour over the potatoes. A little flour to thicken. Boil two minutes, serve very hot.

**Spiced Hash.**—Take bits of cold beef, or any other kinds of roasted or boiled meats, and hash fine. Mix with potatoe mashed well, as much potatoe as meat. Add two beaten eggs. Season with salt, pepper, cloves, summer savory—any or all as you like. Shape into a loaf and bake brown. Good hot, or as a relish cold.

**Egg and Bacon Pie.**—Beat together six eggs, mix two and a quarter pints of milk. Put a rim of pie-crust at the side—one at the bottom—of a deep earthen dish. Cut some bacon or ham into small bits and lay over the bottom. A little pepper, no salt. Make no vent in the top crust or the egg will boil out.

**Egg Omelette.**—One pint rich, sweet milk, three table-spoons of flour, three eggs well beaten, half teaspoon salt, pinch of pepper, and some parsley or summer savory, if liked. Stir flour and milk smooth, add the eggs. Melt a large tablespoon of butter in a baking pan, pour in, and bake twenty minutes.

**Transparent Pies.**—Yolks of eight eggs, quarter pound butter, half pound sugar, beaten together. This will make

two pies. Make only bottom crust. Bake about as long as custards. They are nice baked in shells for tarts.

**Baked Flour Pudding.**—Mix smoothly one cup of flour with one cup of sour cream, then pour in one cup of sweet milk. Beat separately three eggs, and stir in one teaspoon salt and not quite one teaspoonful of soda. Bake in a quick oven. Don't think the batter too thin; it will come out right. For sauce to it, boil two cups of sweet milk and thicken with a tablespoon of flour. Add half cup white sugar, butter size of an egg.

**Boiled Flour Pudding.**—One quart flour, one quart milk, five eggs, one teaspoonful salt, one of tartar, half teaspoonful soda. Boil in a bag one and a quarter hours. For sauce, sweet milk and sugar and nutmeg, or six spoonfuls sugar and three of butter, worked until very light. Flavor with lemon or vanilla.

**Sweet Pickled Pears.**—Pare, halve, core and boil the pears till soft enough to run a straw through. To seven pounds of pears, three pounds sugar, one quart vinegar (cider). Use root ginger and stick cinnamon. Tie in bags, boil them in the syrup. Put the pears in jars, pour over the syrup, and lay the spice-bags in with the fruit. Boil syrup two mornings. Keep in sealed jars.

**Sweet Pickle—Nutmeg Melon.**—Take the melons when just ripe, pare, take out the seed, cut in any shape or size. Put them in a pan, cover with weak alum water; let stand twenty-four hours. Drain well, pour on vinegar to cover, pour it off and measure it. To each quart take two pounds of sugar, add two tablespoonfuls of mace; no other spice. Put on the syrup, boil fast, skimming well, then put in the fruit; boil five minutes. Pour into a large jar, leave stand twenty-four hours. Boil the syrup without the fruit eight mornings, then once together. If too much juice to cover, boil down. Keeps in unsealed jars.

**Peach Custard.**—Cover a pie dish with bottom crust. Into this place the halves of ripe freestone peaches that have been pared, until the bottom is covered. Fill each half with sugar. Make a custard of one pint sweet milk, three eggs and three tablespoonfuls sugar. Pour over and bake.

**Custard Tarts.**—Four eggs, quarter pound butter, quarter pound sugar beaten together. Line tart shells with puff-paste. Put a little jam of any kind on the bottom of each tart, pour the mixture on top, and bake.

**Centennial Pound Cake.**—(Been in use 100 years.)—Twelve eggs, leaving out three yolks. Beat separately. Three-quarters pound butter, one pound sugar. Sugar and butter worked together with the hand. Then add the yolks, next the flour, lastly the whites. Flavor with rose, lemon or vanilla.

**French Sponge Cake.**—Half or three-quarters pound of flour, one pound white sugar, one teaspoonful vinegar or small teaspoon cream tartar, one teaspoonful of salt, twelve eggs beaten separately. After the yolks and sugar are well beaten in a bucket, beat in the whites, stirring slowly while sifting in the flour.

**Spiced Plums.**—Four pounds brown sugar, seven pounds plums, one pint cider vinegar, one nutmeg grated, one tablespoonful each of cinnamon, cloves, allspice. Boil all slowly two hours.

**Plum Jelly.**—Boil the plums until soft in enough water to cover them. Pour into a jelly bag, and drain over night. Then strain through a flannel bag. Boil this juice twenty minutes, skimming well. Take off, measure it; to each pint of juice add one and a half pints of white sugar, and boil, one pint of juice at a time, seven minutes. Pour into cups. When cold, paste papers over, and brush all over with white of egg.

**Lemon Conserve.**—One pound powdered white sugar, quarter pound fresh butter, six eggs, leaving out the whites of two, adding the juice and grated rind of three fine lemons. Put all into a saucepan, stir the whole gently over a slow fire until it gets thick as honey. A delicious spread for bread, biscuit or rolls.

**French Croul.**—Cut fine a common-sized cabbage, add one tablespoonful ground mustard, one of black pepper, one of salt, one teacup of white sugar, two beaten eggs, one teacup sweet cream, and one of vinegar, all warmed before stirring. Excellent for dinner.

**Candied Orange Peel.**—Orange peel boiled in a thick syrup of white sugar until it granulates; packed in jars and syrup poured over. Keeps well, and is excellent for fruit cake or in puddings, or eaten with rice cups.

**"Slippitie."**—Take two quarts of pared, quartered and cored green sweet apples, or one quart of unpeeled dried sweet apples, and boil till tender. Thicken the juice with a tablespoon of flour smoothly mixed with cold water. Then set on the back of the stove where it will keep hot, but not boil. Tart, dried apples can be used, but they must be well sugared as soon as they begin to boil to keep them

whole. Have ready in a kettle three quarts of boiling water, into which stir wheat-flour until as thick as corn-meal mush. Boil three minutes. Brown a handful of fine bread-crumbs (in a skillet) in butter or lard size of an egg. With a tablespoon drop one spoonful at a time of the wheat mush in the browned crumbs, turning it over, and place on a hot platter until full, dipping the spoon each time in water so it will slip off easily. Dish the apples in a separate dish, send to table hot, eat together, and see if this old German dish is not good. (100 years old.)

**French Cream.**—Half box of gelatine, cold water to dissolve, one quart sweet milk, one cup white sugar, yolks of three or four eggs. Beat sugar and yolks together, then add gelatine. Have the milk boiling and cook as custard. Beat the whites to a froth. When the mixture is cool—about luke-warm—stir in the whites lightly, flavoring first with vanilla. Put in moulds. Makes a handsome, delicious dish for tea or dessert.

**A Delicate Custard.**—Take the yolks of two eggs, two spoonfuls of sugar, and one large cupful of milk. Beat the yolks and sugar well, add the milk and flavor with lemon or orange. Bake in a tin plate on paste in a moderately hot oven. Beat the whites to a stiff froth, and add two teaspoonfuls sugar. When the custard is done, cover with the white and set in the oven a few minutes to brown slightly.

**To make nice Syllabub.**—Take a quart cream, sweeten, and add the wine; put it in an old-fashioned churn and churn it until it thickens, and you will have syllabub that will not be all froth. If the cream is not new, or it is allowed to get too warm, it will make butter if made in summer.

**Fricassee Chicken with Green Corn.**—Cut the green corn from the cob, put it in the pot with water enough to cover it, let it stew until the corn is nearly done; then cut up the chicken, put it with the corn and let them stew together about half an hour; put in a few whole grains of pepper, with a teacupful of cream or milk; thicken with two tablespoonfuls of flour stirred in a lump of butter; add the salt last.

**To Stew Mushrooms.**—The large buttons are the best for this purpose, and the small flaps while the fur is still red. Rub the buttons with salt and a bit of flannel; cut out the fur, and take off the skin from the others; put them into a stew-pan with a little lemon juice, pepper, salt, and a small piece of fresh butter, and let the whole simmer slowly until done; then put a small bit of butter and flour with two spoonfuls of cream; just boil and serve with sippets of bread. We do not believe mushrooms nutritive, and anyone knows they are dangerously poison—the un-catable kind, we mean—and cooks should be perfectly acquainted with them before attempting to present to epicures.

**Scandinavian Sausage** (quite equal to the best Bologna).—Take twenty pounds of the best beef, carefully cut away all the fat and sinews, cut it up and run it three times through a sausage cutter, put it in a cool place. Now take ten pounds of fat side pork, remove all the lean and skin; with a sharp knife cut your pork into very small square bits, and as you cut it up throw it into a pail of cold water, then beat it so that the pieces are separate from each other. Take the beef and put with it one pound of salt, three ounces of black pepper and sixty ground cloves; knead it like dough for an hour, then drain the pork, put it with the beef and knead again for twenty-five minutes. Stuff very closely in cloth bags about three inches in diameter; rub the outside of the bags well with powdered saltpetre, lay them on a table or shelf, lay a board over them on which put a heavy weight; let them remain for three days, then smoke quickly.

**Heat is a perfect antidote to taint in milk in all its phases.** Passing milk through charcoal will remove taint from warm milk, and give it a most delicious flavor. Cold will silence the activity of the yeast, but will not kill it, and acidity will neutralize the oil for a time, but it will assert its sway upon the first favorable opportunity. In the treatment of milk, airing is a more efficient antidote.

**Meat boiled for table use** should be plunged at once into boiling water, as the heat contracts the outer surfaces, and coagulates the albumen, thus preventing the escape of the juices. Prepared for stock or broth it should be placed on the fire in cold water, as then unconfined juices are free to pass into the liquor surrounding it.

**Until the kitchen** becomes thoroughly and systematically organized, and is regarded as one of the most—if not the most—important of household departments, there can be no such thing as habitual health in the family. Bad cooking poisons more persons than all the nauseous drugs ever administered to poor humanity, and it affords the remote cause for the employment of two-thirds of all the divorce lawyers in existence.

# THE LADIES' **Domestic**

BY HENRY T. WILLIAMS.

VOL. VI.

NEW YORK, MAY, 1877.

No. 65.

PRICE 12 CENTS.

## DESIGN FOR RURAL COTTAGE.

We present this month a cottage, costing \$3,850, containing, we think, a good deal of accommodation for the money, there being four rooms on the first floor. The parlor, dining and sitting rooms are connected by sliding doors. There are three rooms and bath on second floor, and two good rooms in third story. The room over the kitchen is intended for servant's bedroom—reached by a private staircase from kitchen. All the rooms are of good size for this class of house. Each room is lighted from two sides, thus insuring coolness in warm weather.

The exterior, although plain, has, we think, a pleasing appearance, with its broad, comfortable verandas and carriage porch, and liberally projected roof at eaves and gables, casting deep, pleasant shadows.

The house is intended to be well built. To be sheathed and papered before clapboards are put on. The interior to be neatly and plainly finished. The bathroom has closet, tub and bowl. Butler's pantry has copper sink. Kitchen has sink, and pump to supply tank in third story from cistern.

The architects assure us that the above quotation of cost is not guesswork, but that they have a builder who stands ready to build the house for the sum of \$3,850, in the vicinity of Newark.

## LILY OF THE VALLEY, Etc.

The Lily of the Valley—emblem of happiness and innocence! Dear to the hearts of all lovers of nature! The opportunity of raising those tiny bells of beauty should never be omitted. The process of forcing them, that they will beautify our homes in the dreary winter months, is extremely easy. I have never failed once, and I would that those who think the garden the only proper home for these bulbs would allow them a secluded corner of the window-garden, for I am sure they would appreciate them much more as a house-plant than ever be-

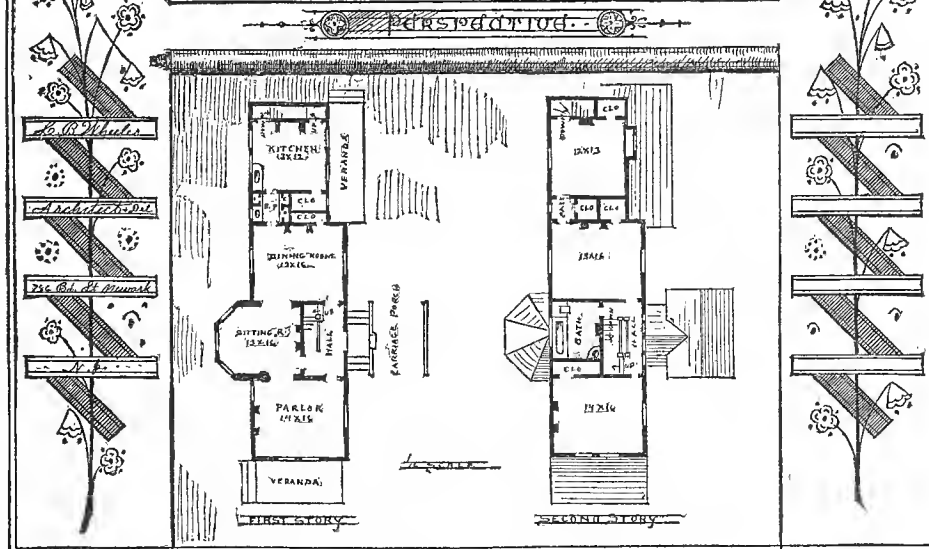

fore as a hardy one. I force them in this manner. About the middle of December I plant them, allowing eight or ten bulbs in a seven-inch pot. As they are

time after, and keep them at a very high temperature by giving bottom heat, which may be accomplished by placing in a basin of water and setting them upon the back part of the stove, and keeping the water at 100°, having the soil thoroughly moist. Very soon tiny green spears will appear from each bulb. It is then time to lower the temperature a little each day. After the second leaves have expanded, and buds appear, they should be removed to the window-garden and frequently watered with liquid manure. The snowy, perfumed bells, in contrast with their bright green protecting leaves, will rival many of their gorgeous companions, and you will surely be rewarded for your trouble in the enjoyment of their perfect beauty and fragrance. After blossoming, deprive gradually of water and light, and lay away in the dry soil to rest until another autumn.

Snow-drops, Crocus, Narcissus, and all hardy bulbs, with few exceptions, may be forced in the same manner and with as much success as the Lily of the Valley.

The Oxalis is a bulb requiring little care, as is well known to all flower-growers, and there are few small plants which furnish us a greater number of blossoms than these "gems of Erin," and it gives us much greater satisfaction if we allow it complete rest during the summer months. I treat it as other bulbs, quite similar to Calla Lilies, except it does not require forcing by hot water. They grow nicely in a north window, but they enjoy occasional glimpses of sunshine, and if placed in a sunny location for a short time each day the flowers will appear more rapidly, and seem to smile and thank us for our thoughtful kindness. Every winter its pink and white foliage afford me much pleasure. I treat Hyacinths in the same way as Callas, and each bulb repays me

with two or three spikes of immense and perfect flowers. If amply supplied with liquid manure, the bulb is very much strengthened and beautified. IVYLIN.

DESIGN FOR RURAL COTTAGE.

very economical, and will flourish as well in loose, sandy soil. I am not as particular in regard to that. I leave out doors to freeze well. I bring them in any

## Floral Contributions.

### LILY'S FLOWERS.

Let me preface by saying that Lily was one of that large class of persons who hug the delusion that they are unfortunate in their undertakings in general, and in particular if they presume to meddle with any of the enchanted subjects of Flora's fairy realm. "One must have natural genius to succeed with flowers," is the favorite saying of these self-tormentors, forgetting the fact that genius, like faith, is not effective without "good works." My heroine's belief in this species of fatalism was fostered by several untoward ventures in gardening in early youth. When a little girl at school in the "centennial" city, each member of her class was given the care of one plant. Lily being an adorer of flowers (I speak advisedly), and not comprehending the needs of her deities, killed hers with kindness. It was watered several times a day with ice-water—"it is so refreshing in hot weather"—the earth dug up around the roots, and last, but not least, was repotted three times in as many days, owing to the breakage of the pot in being carried all over the portions of the house to which she had access. Fortunately her zeal could not extend to the other plants, much as she pitied their apparently neglected condition, and they were flourishing finely. This failure caused many tears, but failed as a lesson, the moral not being understood. A second attempt fared still worse, as she redoubled her attentions and succeeded in killing it in a shorter time. She now fully believed that she was not of the "circumcised," and was not to approach the "Holy of Holies," but to worship afar off. Many years after, while riding in the suburbs of a western city, the sign "Selling out below cost," on the grounds of a nursery and greenhouse, attracted her attention. This temptation could not fail to capture any woman of sense, and Lily went boldly in. The surly florist's good little wife—to whom "ladies who did not know what they wanted" were turned over—was patient, and explained the needs of many of the plants so clearly that Lily felt emboldened to try again. Of course her first selections were blooming Geraniums, Fuchsias, Heliotropes and Roses. "They were so easy of culture," the woman had told her. "In winter, give all the sun you can get, water once a day with tepid water—Heliotropes and Fuchsias more if they appear dry—once a week a little, a very little, ammonia in the water; wash the plants once a week, being careful to handle gently, so as not to disturb the roots, and do not repot until you understand more about them; better let them remain root-bound than attempt repotting in the hit or miss style." This last counsel was very difficult to obey, as Lily's first thought was to put her plants in nice large pots, their present quarters being so crowded they would surely be grateful for the change. On intimating this idea to the florist he smiled and advised her to do as she thought best, and not fail to let him know the result. This decided her to follow the advice of the wife, and "understand more about them" before making any changes. She accordingly set to work industriously to learn about the care of flowers, consulted newspapers and magazines for floral subjects (the CABINET was not issued at that time), cultivated the acquaintance of successful amateur florists; interested her friends in the good work, and finally succeeded in raising flowers to her own satisfaction—and surprise—and that of many grateful recipients of her floral bounty.

Those little pots troubled her so much, that her first

care was to acquire a proper knowledge of the soil. The first ingredient, with the majority of authorities, was leaf mold. This necessitates many delightful trips to an old forest about five miles from the city. The giant old trees, almost falling to pieces with age, had stood sentinel for years over the swift flow of the grand old "Father of Waters." No young growth had been presuming enough to force its way among these patriarchs, and they stood alone without descendants on whom their mantles of watchfulness could fall. The ferns here, starting up among the mossy, gnarled old roots, were finer and more delicate than their high-priced exotic sisters, and on being transplanted to the sitting-room, accommodated themselves wonderfully to their changed quarters—lying down, it is true, but after a month's rest starting up again as airy and delicate as Titania's veil. The sand was the next desideratum. It must be silver sand, if there is a cave in the bluff opening on the river bank to go to; common sharp sand may answer even better, if found by a sparkling brook or lonely lake where Lilies grow. Distance, which lends enchantment to the view, confers also virtues and powers on sand—for flowers. Good garden soil and a little old manure for many kinds were the remaining ingredients for a good soil. By this time Lily's knowledge had so increased, that small pots were no longer a bugbear, and the long deferred repotting did not result in the sacrifice of the blooms to "plenty of root room." The exceptions were foliage plants and Chinese Primrose. A paper of seed of these latter planted in a cigar box during the last of March, in the aforesaid good soil, produces a great many little plants. During the hot weather in May (the upper Mississippi region is famous for arid heats before the leaves appear on the trees), the box was placed on the north side of the house, when it was observed that the little plants were rapidly disappearing under the ravages of a little fly. They were then removed to the house where the remaining fourteen were carefully watched, and transplanted into small pots until July, when they were again repotted in pots of four different sizes, the largest being six-inch pots. This experiment resulted as follows: the six-inch pots produced luxuriant foliage and flowers, the next in size gave flowers somewhat smaller, and so on in the order of size; the smaller the pot the smaller the flowers. A ten-cent paper of Cyclamen seed produced six little bulbs, which withstood all the snares with which the path of young plants are beset. One needs more patience with these than with the Primrose, as only an occasional one blooms the first year. Cobæa Scandens had been tried three years without success, and when at last two little plants made their appearance, great was the rejoicing. Lily attributed her final success to the fact of watering only once a week before the plants were up. The seeds rot if kept as moist as is necessary for other seeds. These plants, set out in the open ground in June, attained a height of twenty feet when an early and severe frost in September killed them when covered with buds. Lily soon discovered that a common collection of plants will endure an occasional pinch of frost without permanent injury. During one winter, all her plants were frozen three times. On one occasion the earth in the pots was frozen solid, and yet she did not lose one. The frozen plants were immediately taken to a very dark cellar and left to thaw out slowly—some taking a whole week—and afterward introduced gradually to light and warmth. Callas and Heliotrope suffered most, but all were finally restored.

Cuttings of Geraniums and Fuchsias grew under any kind of treatment short of total neglect; Roses,

Heliotropes and Begonias somewhat more difficult, and requiring constant watchfulness. A box two feet square with panes of glass fitted into top and sides served to cover them and bring back vitality on the slightest appearance of wilting. Nothing was found as fine as the vines Major Variegatissima for a lawn vase or large hanging basket; the roots endure any amount of frost apparently without injury.

Her final success in having blooming flowers during the winter is attributed to the weekly washings, the amount of light, and the comparatively low temperature which are secured by means of a large bay window separated by sliding doors of glass from the sitting-room. These can be closed during sweeping or when the temperature is too high for the plants. The temperature in this miniature conservatory rarely rose above sixty-five degrees during the day, and frequently fell to forty degrees in the night. Lily's experience with the more tender exotics was attended with many failures as well as successes, of which more anon.

FORGET-ME-NOT.

### TREATMENT OF CALLAS.

I have found that the secret of successful bulb culture of every kind is in granting them a season of complete rest—which means, gradually depriving them of all moisture and light—this period commencing after blossoming.

The Calla Lily being one of my favorite plants, I was determined to learn by experience a successful method of treating this bulb. The following way is precisely as I proceeded, resulting in the most admirable success. My Callas always blossom from December until May. Almost immediately after, the leaves, one by one, show signs of decay. I then place them in a shady location, a north window being desirable, and water about every two or three days for three weeks, and finally once a week until all the leaves have withered away. Then I place them on their sides in a totally dark place (for if exposed at all to the light they lose their strength by throwing up small unsightly leaves). I allow them to rest undisturbed until the middle of September, when I exchange the dry, exhausted soil for a mixture of equal parts of sand, garden mold, and well decayed cow-manure. After thoroughly washing the pot, and covering the bottom an inch deep with charcoal (to procure a good drainage and insure health to the roots), I fill the pot with the prepared soil. I then plant the bulb, breaking from it the small tubers, and supply with water and light as gradually as it was before deprived of it. The sunlight and moist soil soon awaken it from its unbroken slumber, and the broad glossy leaves burst from their confinement and unfold at an astonishing rapidity, and before we are aware, our labors are rewarded by a bud which soon unfolds its banner of purity and loveliness. As soon as the bud appears, or when one is expected, I set the pot in a basin of hot water, removing when it becomes cold; and if convenient to repeat it frequently, the plant will grow with greater luxuriance. The average size of my Lily leaves is eleven inches in length and eight inches in width. I also use liquid manure nearly every time I water them, not forgetting to shower the leaves as often as they become dusty. I would add that the small tubers, broken from the bulb at the time of repotting, should be treated in the same manner as the parent bulb. If those who have not been successful in the past with their Callas will strictly follow the above rules, I know that failure will be as unknown to them as it has been to me.

IVYLIN.

## The Home Circle.

As correspondents desire our field widened to include other topics as well as flowers, we have done so, and now call it The Home Circle, and welcome all items of interest and sentiment.

Every subscriber and friend is invited to make this department the medium of communicating any and every thing that can give pleasure, instruction or entertainment, and also to ask questions regarding those subjects upon which we have spoken. Either the editor or "Aunt Carrie" (C. S. J.) will reply.

**Book-Case.**—Can any of your readers tell me how to make a book-case? I have a great many books, but have not the means to buy a book-case, but still would not like to have them spoilt by the dust; also how to make ottomans of round and square boxes; also how to make scrap-jars. By so doing you will oblige a young housekeeper who is inexperienced, and though anxious to beautify her home, has not the means to buy expensive articles. PEARL PRICE.

**Answer**—The best book-case you can make, that will protect your books, is as follows: Get a set of brackets—either iron or wood, simple triangular pieces answering very well—and nail two of them against studding on the wall, six feet from the floor, and about five feet apart; another pair six or eight inches below these; again another ten or twelve inches below. In order to accommodate books of different sizes, about one foot from the floor place the last set, and on these nail plain pine shelves, neatly stained—as also the brackets, if of wood—in imitation of walnut, oak or mahogany, and when dry, varnish. Along the edges fasten strips of scarlet cloth or leather, pinked out on each side, with brass-headed tacks along the centre. In front, against each corner of the top shelf, fasten picture nails, and around them twist the ends of a strong piece of wire, on which hang curtains, with small rings along the top so they will slide easily back and forth. Here you will have a cheap yet most stylish arrangement, for such cases, hung with rich tapestry, are now very fashionable in England. The cases are low, and extend round the room in all blank spaces. On the top place a set of jars—hereafter described—or plaster busts. Tycoon reps will make really rich-looking hangings, and cost a mere trifle.

If you wish to use doors, get more frames made the length and half the width of your shelves, and tack green baize, moreen, or even colored glazed muslin, over with brass-headed tacks.

To make ottomans, take any boxes available, and, turning them upside down, fasten casters or round, smooth drawer-knobs on each corner; cover the sides smoothly with any material convenient; make a deep cushion size of top, and, with pieces of zephyr twisted round the finger, and a long mattress needle, make the tufted appearance seen in upholsterers' work, by buttoning through in regular divisions.

Make a puff or two ruffles, and fasten round the upper edge with brass-headed tacks, and you will have a neat ottoman. Cheese-boxes answer well for round ones, and an entire set of large and small ones, with a divan made in the same manner, but finished with a set of cushions and a couple of barrel chairs, will give a room quite a luxurious appearance.

Now for your jars, my pearl, visit some crockery store, and select one or more common earthenware jars, of as quaint or graceful form as you can find; rub off all rough places with fine ashes or rotten stone. Then decide on what kind of china you wish to imitate—ancient Egyptian, toile Indienne, Japan-

ese, Rose-du-Barry, or Pelissy styles of Sevres china; Wedgewood, or Minton-ware—and tell me in a postal, when you shall have a full description next month.

**Affghan Stitch.**—"Y." With regard to the affghan stitch for bag—make a row of chain stitches the width of article desired, then take up each one of these chain stitches, keeping them on the needle to end of row; you will now have a long row of stitches on your needle, the point or hook of which will be at your left hand; now "drop off" these stitches one by one, until you get to the right-hand end again; now begin taking up these stitches as before, keeping them all on the needle, by slipping your needle-hook *only* under the little straight threads of the former row, which are plainly visible. This is the peculiarity of this stitch, and which gives the canvas-like appearance, so requires particular attention. When you arrive at the left end again, commence and drop off as before; and when to the right end, take up again. This is all there is in affghan stitch, and it is very simple. I hope you will find I have made it plain.

**Washing and Churning.**—I have wished, oh, so very much, dear Mrs. R. W.—e, that I could give you a call and have a chat regarding all those matters which so trouble you. I have long promised to get up a good practical book on housekeeping and cooking, and have them well forwarded; then you shall learn many things you do not yet appear to understand, and which so earnest a seeker after knowledge certainly deserves to know. You will make a fine housekeeper, I feel sure. As regards clothes-washing—there was a season, during our sad war, when I was obliged to perform my own household labor, even to the washing and ironing, and I feel sure it is a woman's duty to make these laborious operations as easy as possible, either for herself or her servant. The first thing I did was to purchase a good wringer, washing-machine, and a little kerosene stove with patent flat-irons, having moveable wooden handle. On Monday I gathered together the clothes, assorted them into three lots—fine, middle and coarse—which I put loosely into coarse muslin sacks. I then made a boilerfull of suds, using one cake of any good washing soap, and two cupfulls of the following: sal soda, 1 lb.; stone lime,  $\frac{1}{2}$  lb.; water, five quarts; boil, stirring constantly, five minutes; then let it settle, and boil slowly a short time; pour off the clear liquid and put into a tight jug. Let the water boil; stir and divide—if the clothes are in separate tubs—using cold water until the suds are only quite warm, and covering deeply. They remained in this until Tuesday morning, then I made another boiler of hot water and added until that in the first tub was pleasant to the touch, rubbed through the washing-machine—in which most of the clothes in my case were soaked—passed through the wringer, then just scalded in weak suds, examined, and after rinsing through a clear and blue water, starched where necessary and hung out—generally before nine o'clock in summer and eleven in winter. Used the first warm suds for flannels. Dried these in a warm place.

When ready, sprinkled with a whisk-broom and packed in a basket until the following morning; seated myself before the ironing-board or table, and with the little stove at my right hand, made play of the work of ironing.

All this may appear extremely troublesome, but it really occupied very little time, considering the work, and required no serious wear and tear of muscle or energy.

Now about the churning. This winter I have churned generally once each week or ten days; kept the milk until *almost* turned, in a closet in the kitchen, cold at night; the day before churning stood the cream

jar behind the dining-room stove, and had churning done in the afternoon, the butter invariably "coming" in twenty minutes—often in ten; if slow, stand the jar in a pail of warm water.

**Chocolate** is made thus: to each quart take half a cake of baker's chocolate, finely grated; boil one pint water, and mixing the chocolate to a paste with a little cold, add it, and boil steadily a half hour; then add one pint of rich milk, and boil for ten minutes longer; sweeten to taste, and pour into a pot kept expressly for the purpose; serve in hot cups.

**Graham Bread.**—Prepare a sponge, as for wheat bread, and mix into a very soft dough, but knead long and thoroughly. Wheat bread, when put to rise, should have a towel put over the mass, dredging first lightly with flour, then place a tray so as to cover completely. When made into rolls have a bread napkin and a warm tea or breakfast plate to cover over each loaf; before placing in the oven dip a feather or brush in melted butter or lard and lightly paint the top, and your bread will never "crust." When removed from the oven wrap in a sprinkled towel, place each loaf on end against the kneading-board, and throw the blanket or towel lightly over the whole. In summer place the loaves to rise away from the stove, but in cold weather cover warmly and place behind the stove each time.

The oven should not be too hot. If you cannot count thirty while you hold your bare elbow in it, it is too hot; but keep the heat steady for one hour for a pan holding three pints. Rolls and biscuit both require a quick oven, and should not remain in more than fifteen to twenty minutes or they will become hard. Corn bread requires a quick, steady oven.

Some varieties of potato require cold, others boiling water; when done, pour off all water, place on the stove and watch closely while the steam passes off, no cover on, of course. If boiled with skins on, press each one in a towel between the hands.

**Beefsteak.**—The gridirons with covers prevent smoke escaping, but I do not like them particularly. Take a "tenderer," or a dull knife, and, *before cooking*, pound the entire steak, not allowing the tenth of an inch between the strokes. Use clear coals, on which sprinkle a little salt; use no salt on the meat. Turn constantly for twelve to fifteen minutes; then place between hot plates, covering the meat first with bits of butter in which pepper, salt and a dust of flour have been rubbed; turn over twice in the gravy thus made, and if no chafing-dish is used, send to table between the hot platters, with a napkin over. Never "hack" while cooking. Will give mince-meat recipe among recipes.

**To Can Peaches.**—If possible procure the large, firm, white freestone varieties, but we have put up even little seedlings that were delicious and kept for three years. Sugar over night, or for several hours at least prior to cooking, putting eight pounds of sugar to one bushel of fruit; put on and let the kettlefull come gradually to a boil, removing all "scum"; have your glass jars on a stand or table, with wet towels placed beneath them, and with a jar-funnel and small dipper fill the cans with fruit and syrup; wipe the mouth and screw down the lids, or put on the cap and cement if used. Our peaches are beautifully white and sufficiently sweet to require no more sugar. Canning may be made a tremendous operation, or merely a pleasant morning's work, as you carry it out. There is no need to annoy yourself by any such process as you mention. Tomatoes peel after scalding. Put on in own juice; as soon as the kettle comes to a boil, can in tin as quickly as you conveniently can.

## Flower Gardening.

## SEED-SOWING.

"A wonderful thing is a seed—  
The one thing deathless forever!  
The one thing changeless—utterly true—  
Forever old and forever new,  
And fickle and faithless never."

You hold in your hand a tiny seed. Very small, you say; but what possibilities are wrapped up within the little brown atom! There lies the germ of a plant, the leaves, the blossoms, the flowers, and the next generation of seeds. Were we to see the process of germination and development for the first time, we would all exclaim: "A miracle!" But it is repeated so constantly before our eyes, that we cease to regard it as any thing marvelous, and forget that in this process we have one of the most striking evidences of Divine agency upon the earth. As each season fulfills its mission in the growth and maturing of vegetation, it yields us from its garnered store the seeds of numberless varieties and classes of plants that, although the parent plants may be cut down by the breath of the Frost King, they may live again the next summer in the forms of their offspring.

Seeds vary indefinitely in form, size, and natural tendencies, and require a great diversity of treatment. The seeds of plants indigenous to the soil, like our weeds, will grow under almost any circumstances, and in spite of neglect and abuse. But we desire to possess the floral and vegetable treasures of all climes, and therefore if we expect our foreign favorites to gladden us with successful growth, we must study the natural conditions under which each thrives in its native soil, and, as far as may be, fulfill those conditions. Some general directions, however, may be given, that will aid us in our efforts to make beautiful our flower-beds, or our garden successful.

First, our plans must be laid in good season. It requires faith to lay out flower-beds and garden-walks, even in imagination, while February winds are whistling and snow-drifts hide the face of Mother Earth. But it must be done, and preparations made for the summer beauty we covet, if we expect any measure of success. In February, then, make out your lists. If you are supplied with seed of the varieties you desire, well and good; if not, study your seed-catalogue, make out your order, and send to your florist at once.

Of the rarer species of flowers, especially the double varieties, it is more satisfactory to get seed from the florist every year, as those saved by the unskilled grower are apt to be semi-double. Flowers growing near each other are very liable to mix, and deteriorate in many ways. This is well illustrated by self-sown pansies, which in blooming often show the strangest markings, the result of mixture from the different varieties. Therefore, if pure varieties of choice

species are desired, get fresh seed from headquarters every year.

Having received your seed, it will be necessary to turn your attention to planting such as need to borrow time from the early spring, to be ready to bloom in due season in the summer. Do not plant all varieties indiscriminately, as soon as received; for while some need the longest time you can give them, others do not thrive when planted too early. Your floral catalogues will give the needed information on this subject, and they cannot be studied too carefully. As a general rule, annuals desired for early bloom will need an early start in the house. A few varieties have long tap roots, which do not bear transplanting well; these should be sown when they are to flower, when the season is sufficiently advanced.

Having obtained all the information possible in regard to your seeds, you are ready to begin operations. It is supposed that you have a box of rich, fine-sifted earth, taken from around some old barn or hen-park

over each other in their eagerness. Then the flannel was removed, the little seedlings given air and sunlight by day, and a warm corner by night, constant care being taken that they should not be chilled.

My experience with eypress seeds was very peculiar. It was quite late in the season, and they were needed to fill a vacant spot in a flower-bed. I put them in hot camphorated water, and left them for twenty-four hours. At the end of that time I found them sprouted, many of them with shoots half an inch long. I planted them in the bed, and in less than a week they were up, and growing finely.

Smilax seeds are among the slow germinators. I have had them lie dormant two or three months before putting in an appearance, but camphor helps them forward wonderfully. It is also of great value in restoring the vitality to old seeds, often proving efficacious in very doubtful cases.

All seeds planted in the house do better if covered with flannel until they come up; it protects them from

changes of temperature, and keeps them moist. Light is not necessary to germination, but as soon as the young shoot is in sight, then sunshine and air are indispensable to healthy growth.

Too much water is nearly as prejudicial to seeds as too little. Never pour water over the earth in which they are planted, but sprinkle the dirt carefully, so as to keep up a gentle moisture.

Much more might be said upon this subject, but space forbids. These few practical directions have been written for women who cannot command a hotbed in which to start their flowers and early vegetables, but who, with limited appliances, desire to enjoy these beauties and luxuries. If these few suggestions, born of earnest effort and varied experience, shall help any to even a measure of success, their object will have been gained.

AN ORIENTAL VINE-COVERED COURT.

in the fall, and stored in the cellar for the spring's use. Cigar, pipe, candy boxes, square oyster cans, with one of the sides removed, are excellent to plant seeds in, as they are shallow, light, and easily handled.

A very important point is the preparation of seeds for planting. Most varieties are hastened in their germination by soaking over night in warm water. A bit of personal experience may not be amiss. Several years ago there appeared in Scribner's Magazine an item regarding the effect of camphor upon seeds, and experimenting with the idea thus gained, I obtained wonderful results. Taking tomato seeds, which every one knows to be slow in starting, I poured boiling water upon them, putting in two drops of camphor, and letting them soak in a warm place until the next day. Then I planted them in well warmed earth, covered them with several thicknesses of flannel, and set them directly under a large stove, in which fire was kept night and day. They were not allowed to get dry, but were watered occasionally with quite warm water. On the morning of the fifth day, the little loops came hurrying up, helter skelter, almost tumbling

And, dear sisters, let us remember that we are continually "seed-sowers," and that the fruits of our daily sowing will spring up in our homes, and wherever our lives touch other lives.

"Plant blessings, and blessings will bloom;  
Plant hate, and hate will grow;  
You can sow to-day—to-morrow will bring  
The blossom that proves what sort of a thing  
Is the seed—the seed that you sow."

MRS. S. B. TITTERINGTON.

**Vines for Shaded Places.**—I had a north wall, from which high, projecting buildings on the east and west shut out the sun entirely, and German ivy grew over it twenty feet high, forming a mass of most thrifty green. I procured the ivy from the florist the 1st of May, well rooted, and with vines a yard long. I cut it back closely when I transferred it from the pots to the ground, watered freely all summer, and twined the vines on twine. The soil was half sand and half garden loam. I also had Madeira vines grow in the same location, but not very thriftily. The Bignonia or trumpet vine will also grow in the shade. M. L. A.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

By AUGUSTA LARNED.

### CHAPTER VIII.

"There are points from which we can command our life,  
When the soul sweeps the future like a glass."

Virginie got out of the boat in the little wooded cove and began to walk rapidly back toward the Hall. She had forgotten the sick boy who was awaiting her return, for she was completely absorbed in the idea of escape from a menacing danger. She shrank back from herself with a feeling that the time might come when she could no longer control her life. She must fly while strength yet remained. Her heart fluttered like a frightened bird with the thought of those impetuous, burning words of love that had been poured into her ears. She had given her heart ignorantly and unconsciously, but now the knowledge that she was loved brought no joy, only despair and anguish. She felt basely wicked. What was there in loving or being loved that could atone for the sin of treachery to the friend who had trusted her with such generous, open-hearted confidence?

For a long time Virginie had been secretly determined to leave the Hall, and her thoughts and plans had all looked to that end. She had written to Pastor Viardot, but a fortnight must elapse before his answer could arrive, and now she was without means to make the journey back to Geneva. Her uncle, who filled her with fear and loathing, and who yet possessed a strange power over the poor girl, had by mysterious missives summoned her to more than one secret interview since their first meeting in the pine grove. She dared not expose him to her friends, and his covert threats filled her with shuddering dread for their safety. She had given him nearly all the gold pieces in her little purse at an interview in the grounds. And it was from this interview, late in the evening, that Nanna had let her into the house looking white and scared.

Although Freeborn had grumbled at the small sum which the little purse contained, and had accused her of a deplorable want of all proper affection and feeling for him, in not bleeding Miss Braithwaite, he had promised to leave the neighborhood. His lurking presence near the Hall filled Virginie with a creeping terror, for she was sure this sinister man had possessed himself of every secret connected with the place, and a vague sense of danger hovering over her kind friends and protectors destroyed sleep and appetite. She seemed held in the grasp of a nightmare, and yet the time that must elapse before an answer could come from Pastor Viardot brought a certain relief, for it gave her the power to watch over the safety of the house, and to assure herself that Walter Freeborn had actually quit the country. Night after night she lay broad awake, with a painful tension of the nerves, waiting, watching, dreading she knew not what.

For several days past he had left her unmolested, and she was beginning to breathe a little more freely, when Edgar Swayne's account of the burglary at Deanport had brought all the old terror back with tenfold force upon her heart. She had nearly fainted at the breakfast table, and it was impossible to conceal her agitation from Bradley, whose eye she had felt searching down into her secret. Those moments when Edgar was detailing his suspicions about the mysterious stranger at the mine were terrible to live through, but as well as the confusion of her senses would allow her to gather, she heard that the man had disappeared, and it seemed to give a gleam of hope in the darkness. It was horrible to be made an accomplice in the man's crime, to have guilty suspicions polluting her pure bosom, for it was impossible not to believe the worst of Walter Freeborn.

If he had participated in the Deanport affair, the country now being roused, the mine would no longer be a safe hiding place. Virginie had pondered sadly upon this all the morning, and now the scene with Bradley in the boat had brought a new and overpowering sense of danger and shame, and though almost penniless, she was prepared for immediate departure from the Hall. The place was fresh with subdued gold, and frescoing, and crimson carpets, soft to the feet, and with the scent of varnish on the new, rich upholstery. Virginie arrested her steps at the sight of a pile of letters on the lobby table. She had no correspondents in this country, but the thought occurred to her that Parson Viardot's message might have come sooner than she had calculated, and she saw amid the heap a long, slender envelope addressed in her name. It bore no foreign postmark, and Virginie took it up shudderingly, foreboding a mysterious summons to her uncle's new place of concealment. She ran with it up the stairs, and locked herself in her own room.

The letter when torn open revealed a sheet of exquisite scented note-paper, traced in the finest feminine hand.

"Dear Mademoiselle Duval," it ran, "you will be sur-

prised to receive a letter from one so nearly a stranger to you as I am. Our intercourse on the steamer was very slight, but having heard from my son of the great disappointment which attended your arrival in this country, my interest in you could not fail to be awakened. Your residence at Halcourt Hall has doubtless been of benefit both to yourself and to my niece Winnifred, but by putting myself sympathetically in your situation, I am confident that a mere life of dependence will not long satisfy one who has the power to place herself in a more becoming and congenial sphere of life and duty.

"I know, dear mademoiselle, that you are amply qualified, both in mind and manners, being well versed in music and the modern languages, to fill the place of governess in one of our best families. Such a position involves little hardship, and the young person who occupies it is generally treated with more kindness and consideration than in a similar position in the old world.

"With an instinctive regard for the scruples that must arise in a mind as delicate as your own, and a knowledge of the various annoyances that a sensitive spirit is subjected to when in a state of dependence, even among attached friends, I have ventured to proffer my services in procuring for you a pleasant home, where none of these burdens need be felt. If you will come to my house here, it is freely open to you for any length of time you may find it agreeable to remain, while we compare ideas as to what will best render your future both useful and happy. I will add that I have now in mind a dear friend in Maryland, who would gladly receive you into her beautiful home, and give you the educational charge of her children. That your movements may be quite unembarrassed, I will send a sum to defray the expense of your journey, as soon as I hear that the plan meets your approbation. Do not hesitate about using it, dear mademoiselle, for you can return it at your own convenience.

"Of course you are well aware that my son is betrothed to his cousin. When the marriage takes place their establishment will necessarily be put on a different footing, and perhaps it may be agreeable to you to have settled plans and prospects in life before the event occurs. I shall be more than glad to occupy toward you the position of friend and helper which my son undertook to fill. He would befriend any woman, however poor or old, who needed assistance, but new affections and duties may cause him to overlook your interests, and I have therefore taken the liberty of volunteering my aid and friendship.

"Believe me ever sincerely yours,

"EDITH HALCOURT."

Virginie, already crushed and beaten down to the earth, felt this new humiliation to be more than she could bear. Gentle as she was, her pale face burned with anger and shame, as she crumpled the hateful letter in her hand, and longed to fling it back in the face of the hard, cold, elegant woman of the world who had tried to cover up her selfish designs with smooth words and proffers of friendship.

Though inexperienced in the ways of life, she felt the covert insult in nearly every line, and penetrated the motives of the writer. This woman had extorted from her son a promise blighting to all his hopes of happiness, and now she would sweep out of her path every obstacle in the way of her ambition. No, she would never put herself in Mrs. Halcourt's power, and allow her to probe down to the sad, hopeless secret hidden in her heart.

Then came a great revulsion of feeling, and the memory of the wrong she had done, the deceit she had practiced toward Winnifred, swept over and humbled her to the dust. She would force herself to accept Mrs. Halcourt's proffered aid, as a penance for her sin—at least until the way opened for her return to Geneva. Then for a long hour she lay with her face buried in the pillow, crying out, in the depths of her loneliness and friendlessness, to God and the good angels, to her dear dead parents, to keep her safe from temptation and life-long remorse. If the love in her heart could slay her and do no harm to others, she would welcome death as a blessed relief.

At last Virginie arose, and, heavy eyed and pale, but tearless, seated herself at her little table and penned a cold and formal note to Mrs. Halcourt, in which she thanked her, and accepted the situation in Maryland, saying that she would go directly to the place as soon as she received directions for the journey. The money for her expenses she would also take, with the understanding that it was to be paid out of her first quarter's salary. Virginie paused, counting the days; two, at least, perhaps three must elapse before an answer could reach her. How could she remain at the Hall and meet Bradley Halcourt with the knowledge that lay between them, and be tortured by the unconscious endearments and caresses of Winnifred? What could she do—where spend the interval? Suddenly there occurred to her the name of Hopedale, a little village among the hills, that lay upon the railroad some ten or fifteen miles from Halcourt. She had never been there with Winnifred, no one would recognize her as belonging to the Hall, but she knew it lay to the north, and was reached by the rugged mountain roads. She could make the journey on foot, and if one day did not suffice she would stop over night at

some friendly farm-house. There was still enough money remaining in the little purse to pay her way for a few days in a cheap country place. At the bottom of her note Virginie appended the request that Mrs. Halcourt would direct to Hopedale. For the evening she determined to feign illness and lock herself in her room, not even admitting old Nanna with her tea. Poor child, there was no need of feigning. Such nights and days had told terribly upon her delicate frame, and now she felt a strange lethargy creeping into her limbs, and a dullness stealing over her brain. But it was settled firmly in her mind that she would escape out of the house early next morning, before any soul was stirring, and leave behind her a note for Winnifred.

Nothing remained now but to carry the letter to the post-office. As she tied on her hat she felt glad that it was all settled, and there was no longer occasion to think. She was almost past that now. O, if she could only creep away into the dark and sleep forever!

Virginie had completely forgotten the sick boy, and now the memory came back with a pang of reproach, through the dull aching that filled her, as she saw Mrs. Finster watching in the path, the heavy baby in her arms, and her slatternly dress looking as if it might any moment slip off her form, totally devoid of hips.

"O! what has kept you so, miss?" she began, in a querulous tone of remonstrance, which Virginie's kindness had given her the right to use. "Jakey has fretted himself most out of his mind. I'm 'fraid the fever and light-headedness is comin' on again. He just needs you as he does the air he breathes. I had no idea you was a-going to do more than take a row round the lake with that young man, Miss Braithwaite's intended, and when you didn't come back I was just beat."

"I am so sorry Jakey has needed me," said Virginie, with deep humility. "I had to go up to the Hall, and there I found a letter that required answering at once, and now I must walk to the post-office in time for the mail. Tell Jakey I will hasten back as soon as possible, and will not leave him again to-day. If I can find an orange over at the store he shall have it."

Mrs. Finster could not help noticing the heavy-lidded eyes and pitiful, wan face, framed in a mist of golden hair.

"You look sick yourself, miss," said she, beating up the baby as if he had been a feather pillow, "and not fit to drag over to the post-office. Let Hendrick take the letter. He's got a nimble pair of legs and would get over the ground quicker nor what you would. I'll time him by the clock so that he can't play trumps. Poor Jake would be so done up not to see you now, and him with his tongue parched up in his mouth like a bit of dry luther."

"I will gladly let Hendrick carry the letter," said Virginie, with an immense sense of relief, for her feet were like two lumps of lead. She paused a moment and looked at Mrs. Finster. "Could you keep me here to-night? If it is not inconvenient I will stay by little Jake and nurse him for you."

"O, how kind you be to the likes of us, miss! I could worship the very ground you step on! But it's poor pickin' you'll have here; I do the best as ever I can with such a pack o' children, and the wind has been contrary for a few days and the fish won't bite, and Finster's such a soft-hearted creeter when the children are sick and things go wrong, he has to drown his sorrow at the tavern. Miss Braithwaite has promised to do fine things for us, now she's rollin' in money, and could ride in a gold coach. But I s'pose she's all high-tighty took up with her beau, that handsome young man. No matter; I'm too proud-sperited to ask help, and now there ain't a dust of tea in the house. But I'll send up sly to old Nanna and borry a drawing on account of you."

"No," said Virginie, putting her hand in her pocket; "I have money, and Kendrick shall buy a pound of the best they have at the store, and there will be a little sum left to get Jakey an orange."

"Never mind the orange, Miss, and God bless you; the poor boy don't want nothing but the light of your face. There, I hear him groanin'. Come right in."

Bradley brought the boat to shore and fastened it high and dry on Finster's beach, but he made no explanation as to the disappearance of Virginie, for at that moment the mother was within doors attending to her sick boy. The tumult of his feelings was an exquisite kind of intoxication. He lost sight of everything but the knowledge that Virginie loved him, and that awoke a passionate awe, a deep religious sense of bliss that brought tears welling up into his eyes. He wandered about in an aimless way, lost in his sensations, not thinking or caring where his feet might take him, when he found himself at the junction of the wooded path with the hill road, at the very spot where Virginie had flown almost into his arms like a frightened bird on the day of his arrival.

Bradley had been walking in a magic wood, while a strange, unreal happiness thrilled his frame, and he was now brought back to reality by the shock of remembrance. He had slowly and patiently put together all the signs of Virginie's secret trouble, until something like the truth

dawned upon his mind. The scene at the breakfast-table only confirmed his suspicions that she had been dogged and frightened by a man claiming to be, or who really was, her lost uncle, and who had insured silence by threats and violence. It was a joy to feel that now he had the right to free her from this mysterious torture, that his arm and his heart were a shield for the poor, sad girl's defense, her deliverance from the baleful influence that of late had been disturbing her pure life and troubling her sensitive conscience. Edgar Swayne's account of the stranger lurking about the mines had given him the clue he needed. He could think of only the one woman that the world held for him, and what he would do in her cause. All else had shriveled into insignificance. He meant to break the conventional tie that bound him to Winnifred at once, confident that the rupture would only wound his cousin's pride. He would renounce mother, fortune, friends, all if need be, to cleave unto the one God and nature had made his.

It was a steep climb up that hill path, and suddenly, about half way to the top, the road emerged from the woods upon a broad, black track, where the coal-trucks were coming and going in endless procession. The land had a blasted look, with scrubby oak-patches and ferruginous rocks cropping out, for here the coal measures lay close to the iron. The entrance to the mine lay a little over the mountain ridge, in a sheltered hollow, where the miners' cabins were grouped about a quarter of a mile apart from the black sheds and buildings connected with the works. Now many laborers were engaged in the slow business of sinking a new shaft, and in extending and repairing some of the old disused galleries. The creaking of machinery was constantly heard, while the pumps poured out streams of water that made dirty yellow brooks and runlets, and great piles of *d bris* were heaped about the pit's mouth.

Bradley, in his boyhood, had been very familiar with the mine, which he had explored from end to end in company with a friendly old guide, who told him wonderful yarns of his early days passed in the deep Cornish mines. Now, as he threaded the dirty wet lane that ran between two rows of wretched miners' cabins, picking his steps among fowls and garbage heaps, he looked about for the little lad known as Sharp Ben, who had given Edgar Swayne his information concerning the stranger. But at that moment the boy was picking and sorting coal, with his grimy fingers, a toil to which he was doomed except for a few hours daily, when Winnifred had decreed that all children under a certain age should attend the school—her new pet—which she had just set up. There had been no end of grumbling among the parents at this attempt, as they judged it, to take bread out of their children's mouths, by "putting a little useless book-learnin' into their noddles." But Winnifred had persisted, and the youngest workers were paid for full time, and received their schooling gratis.

The temple of learning, where Mr. Swayne was working very bravely and devotedly, was a mere rough shed, hastily altered; but Winnifred had already secured plans for a new building, which, besides its main purpose, could be used for Sunday services, social meetings and lectures. All this was included in her plan of civilizing the rough people brutalized more or less by their hard lives, and which she had talked over and arranged with Edgar Swayne.

Among the houses where the women were washing, cooking, scrubbing and clattering pots and pans, while the wee little ones, too small to pick coal, stared at him with round-eyed wonder as he passed, Bradley sought for a particular cabin, with which he had once been familiar. He stopped at last before a door where a gigantic, bony, north of England woman was standing to cool herself, and to escape the smudge she had raised in the interior of her room. Her hands were propped upon her hips, and her face was bold and red and defiant. The old judge had imported a number of these miners from the great coal and iron district, the black country, as it is called.

"Does old Nat Driver live here?" Bradley inquired, in a civil tone.

"Hoot, mon! old Daddy Driver's been dead and buried these three year gone. He got full drunk one day and slipped down the pit's mouth and broke his neck. Me and my mon, Smoky Duff, and our gell ten year old come Michaelmas, have lived here risin' of two years, and a poor place it is," she grumbled, "with the rain beating in through the roof. The old boss wouldn't give a board or a penny worth o' nails to save a body's life, and here's the young missus up in arms about the schule, and comin' to meddle and make in things no business of her'n, takin' the callants from their work and payin' full time, as if ever a body should hear the like of that onreasonableness. She's overbearin' and masterfull, puttin' down her foot to say what shall and what shan't; but they do say she's goin' to get married, and have grand doin's down to the great house, and then she'll fash her head no more about the mines, and things 'll be harder than ever. They allus is harder after a let-up. But I shan't cry to have the schule shet. I see no scholar myself; nuther's my mon. I've never heard that schulin' helped a mon to save his light, or kep' him from swallerin' the damp, or helped him at heavin'; but our gell Polly is so took up about learnin' and readin'

books, and that fuleishness, my mon and me thinks most likely she'll turn out bad."

"I have heard of you and your husband, Smoky Duff," said Bradley, as he stepped inside the cottage, "and also of the gentleman who has been lodging with you for a few weeks past."

The woman started back into the gloom of the cabin with a gesture of surprise and anger. "If you've come pryin' and peepin', begone with you, and all I can say is that you've put your head in the wrong trap. I wouldn't have you parson-schulemaster sneakin' around the place. When he come pokin' his nose into my business I drove him off with my tongue. Next time I'll take a broom or a jug of hot water to him."

Bradley seated himself on a stool near the truckle-bed with the coolest nonchalance. "Why do you get angry and accuse me of prying into your affairs because I spoke of this stranger? I have come to you as a friend."

The virago looked darkly for a moment at his half-smiling unconcerned face, and then her scowl began to clear. "Hoot, mon, how should I know friend from foe wheu there's rumors of robberies abroad in yon town, and if it was known we had lodged a stranger, me and Smoky might be suspicioned for aidin' and abettin', as it's called; but you do look like a fine young gentleman, as wouldn't dirty your white hands with sich work. Mayhap you're the friend the doctor spoke of. He said he was expecting to get some money from a friend, and then he would pay me for his lodging, and keep, and his bit of washing."

Bradley clasped his hands around his knee and laughed lightly. "So you took me for a sheriff's officer, or a spy, when I am the most harmless man alive. I have no ill designs against you or the doctor either."

"Well, now," returned Nancy Duff, still more mollified, "I thought you must be a friend of his'n. Poor gentleman, it's a shamo to suspicion him. He was poorly when he first came, and staid in bed a good deal, and took his porritch as quiet as a lamb. He was that peaccable I never did see, and he took a great shine to our little Poll, and of an evening helped her figure on her slate, and the drops he gave Smoky did him a sight of good for the cricket in his back."

"Drops?" repeated Bradley, interrogatively.

"He peddles his doctor stuff round the country now you know. Fash my head, what do he call 'em? But I can show you the bottle."

"Do," said Bradley, with quiet alertness.

Mrs. Duff went to a dark corner cupboard, and brought back a little vial with a printed label, which announced that "Dr. Walters' Universal Panacea and Elixir, for the cure of all known diseases, was prepared and sold exclusively by himself." He took the vial, a harmless looking thing, and turned it about in his hand. The virago, whose confidence he had won, turned her broad back toward him for a moment, to stir some mess that was cooking over the fire. There was a little piece of writing-paper wrapped around the cork to hold it fast. It was in fact the end of an old letter. Bradley turned toward the window, and, drawing it dextrously out, smoothed the scrap of stained, crumpled paper in his hand. It was that thin, sheer kind used mostly for foreign letters, and on the inside of it were traced a few faint lines in a feminine hand. They were quite sufficient. Bradley stood still for a moment without attending to Nancy Duff's remarks, which had run on in an uninterrupted stream.

"I do know Dr. Walters," said he, turning round, and then he stepped to the cabin door and closed it quietly, and returning, faced Nancy Duff, who had eyed his movements with gathering astonishment and suspicion. Bradley took from his pocket a little roll of money and slowly unfolded it.

"You have been kind to this man," said he, facing Smoky Duff's wife, "and I want to reward you. Take this and answer me one or two questions."

"O, your honor," cried Nancy, "I'm an honest woman, 'deed I am, and if harm should come along of the money to me, or my mon, or little Poll!"

"No harm can come," said Bradley, with quiet decision. "Take it and keep your own counsel. Now tell me when Dr. Walters left this place. It is absolutely necessary that I should know to insure you and your husband from trouble."

Mrs. Duff hesitated and scanned his face with her keen eyes, then she glanced at the money in her hand.

"Three days ago, your honor."

"And you do not look for his return?"

Again she faltered, but the money and Bradley's eye were potent charms. "I can't say for dead sure. He may, your honor, to-night, seeing he left the medicine-box and some of his clothes in the attic where he slept."

Bradley took a little diary from his pocket and rapidly traced with a pencil on one of the blank leaves the following words:

"You are strongly suspected of complicity with the Deanport masked burglars. You are watched, and will be arrested on suspicion if you remain in this place another night. This is from a friend, who warns you of your

danger and advises you to instantly quit the neighborhood."

He tore out the leaf, folded it, and gave it into Nancy's hand. "Give that to the doctor immediately when he comes, and if you should happen to know where he is at this moment, convey it to him at once. But not a word, not a breath to your husband, or that bright girl, Polly. If you follow my directions to the letter you shall be liberally rewarded. Do you hear?"

Nancy Duff seized the paper, gave him a significant look, nodded three times, and Bradley was gone. He walked rapidly away out of the cluster of miners' huts, glad to feel the cool air blowing on his face, for his mental excitement was intense, and he wanted time to recover himself and to think clearly again. As he struck into the path that led down the mountain there was the sound of rapid steps behind him, and some one called his name. He turned and saw Edgar Swayne dashing along over the slope.

"Pardon me for troubling you, Mr. Halcourt," said he, as soon as he could recover his breath. "I saw you coming away from the miners' village, and it seemed quite providential, for I have been in urgent need of some safe and secret means to send a message to the telegraph station at the depot. I should go down myself but Bob Smithers' wife has just lost her baby. She is a good, gentle, patient soul, and it is pitiful to hear her moan and sob over the empty cradle. The young ladies at the Hall took a kindly interest in her last summer, and I have promised to hold a little service this afternoon. You will see by the message to Dalrymple that I have got hold of what I believe to be important testimony in reference to the burglary. There is not a moment to lose, and if this man is secured probably it will lead to the capture of the whole gang. I shall tell Miss Braithwaite all about it when I see her, but I must remain here to night, for there may be lively work. If you will personally see that this is sent to the sheriff at Deanport by telegraph, I think you will be doing a service to the public."

"I will attend to the matter," said Bradley, curtly, as he took the open envelope from Mr. Swayne's hand, and received that gentleman's thanks, given less coldly than any words he had ever spoken to him before. Edgar turned hastily back, and Bradley stopped in the path feeling sick and giddy from a sense of something that had stolen away the strength of his manhood. What had inspired Swayne with such a diabolical zeal in the public cause? Slowly he opened the message and read as follows:

"HALCOURT MINES, October 18th, 18—

"ALFRED DALRYMPLE, Sheriff of Deanport: A stranger calling himself Walters, and purporting to be a quack doctor, has been lurking for some weeks about the Halcourt mines. He has been recognized as a notorious character, who has figured under various aliases, and it seems probable that he was the ringleader in the recent burglary committed in your town. He has a confederate here, the wife of a miner named Smoky Duff, in whose cabin he has lodged. He will be here to-night. Send up by the late train a sufficient force to surround the cottage. A wagon will meet your men at the station, and I will be here to guide them to the place.

"EDGAR SWAYNE,  
Schoolmaster at the mines."

Bradley's knees seemed to give way, and he sat down on a log by the roadside, for the light had suddenly darkened before his eyes. Should he, a gentleman, who had always prized his honor before his life, betray a trust, and help to shield a criminal from justice? Then there swept past him the vision of a sad, wan face, framed in a mist of golden hair, that seemed to implore him with wide open, pitiful blue eyes. He must shield her from shame; he must save her from being dragged into the courts. Nothing had as yet been proven against this man. It might not be wrong to give him a chance to escape. Bradley rose to his feet, looking strangely haggard. He seemed to have grown old in a moment of time. Slowly he tore the dispatch into bits, and scattered it to the winds.

(To be continued.)

[For the FLORAL CABINET.]

#### CYPRESS VINE.

Leaning gently from my window,  
Swaying softly in the breeze,  
Is my pretty cypress, growing  
With a modest, graceful ease.

One by one the buds are peeping  
Through the fragile, leafy vines,  
Fairest beauty now unfolding,  
While around the frame it twines.

How I prize its tiny blossom,  
As I watch it day by day;  
Cheering me in lonely moments,  
By its little petals gay.

Tendrils clasping one another  
With a sister-like embrace—  
Teaching me a noble lesson,  
As its tenderness I trace.

VICKIE BLUE.

THE PROPOSAL AND ACCEPTANCE.

## Household Art.

## SOME NEW IDEAS FOR THE PARLOR.

Nothing so much destroys the look of parlor as suits of furniture and angular arrangements. It is far better to have pieces of two or even three sets of parlor furniture, if you will buy furniture in suits. The arrangement of furniture in this show-room, as a rule, reflects the mind of the owner. The crotchets, kinks, or go-by-a-line woman will arrange her apartment after the fashion of her mind. There is no end to the fine effect that may be produced; it is a question of money as to the richness and magnificence of the room; but the beauty and artistic feeling of the room is not a question of cash. There are parlors and parlors. The amount of money lavished on them is not a test of merit, and every man and woman with a maximum of taste and a minimum of money, by clever arrangement of common things, can vie with upper-ten neighbors. In a case of this kind artistic feeling and common sense has the advantage of surplus cash. The writer will not attempt a model parlor, but simply suggest novel treatments, from which the housekeeper can select such ideas as will please the owner or will best suit the conditions of the apartment.

A novel effect can be made by the use of cheap, gaudily painted Japanese fans. Three of the same general tone of color, spread open-spaced in a circle around the chandelier and against the ceiling, will make a handsome centre-piece. The butts of the fans will have to be sawed off some distance from the handle and then tacked to the wall. To hide the jointure, they should be pushed under the brass washer. They can also be used with effect to cover an unsightly pipe-hole, provided it is equi-distant from the side walls.

There is a general tendency to overcrowd the wall with pictures. Better a very few large pictures than a number of small ones, in considering the general make-up of the room. Paintings and engravings should not be indiscriminately mixed in groups, and small pictures should be grouped together rather than hang unaccompanied on the wall. Family portraits, unless possessed of intrinsic merit, become the sitting-room or bed-chamber, but not the parlor. Some pictures may be suspended by the artificial vines of ivy or autumn leaves, advertised nearly everywhere. Behind others a bottle of water standing on a shelf or supported by a string, in which living vines can be planted, in time will twine up the cord and around the picture-frame. One of the most artistic methods of bestowing a picture, especially if it be the gem of your collection, is to place it upon an easel made of some dark wood. Your carpenter can make one for you at a trifling cost, out of pine, if better wood cannot be obtained, which may be stained in imitation of some of the handsomer species.

One great rule to be observed is to avoid the littering up of the mantel-piece with a variety of small articles, such as mugs, plaster casts and china figures. A couple of long vases of odd pattern, with a handsome clock, or some of the many unique articles of *vertu* which have become so abundant is much more tasteful. A multitude of books or daguerreotype cases generally find their way to the mantels or centre-table in the hamlets and villages, and are out of place, and help to mar many an otherwise pretty room. One handsomely illustrated volume, or two at the most, are in better taste. The appearance of the card-case and imitation receiver savors too much of affectation to ever be allowed in the parlor. A vase

for cut flowers, which is always better with the flowers arranged in seeming confusion, and vines trailing to the floor and over the table edge, may in the winter be replaced by a wax bouquet, if the owner can make up her mind to do without the glass cover and can submit to their transfer. What-nots are a nuisance after the admirable designs of Mr. Clarence Cook for curiosities, and small fry generally, which of course do not belong to a parlor at all, but rather to the library, music, or billiard-room. If you have nothing but a small mirror, do without any in the parlor. Japanese scrolls, hung on rollers, can be used with effect, especially if the tendency of the room is too dark or subdued. Better one large than two or three small ones.

The fireplace may be filled with rockery, or an old stump with ferns, ivies and moss. A bright-plumaged specimen of the taxidermist's skill adds greatly to the picture. I know of no one thing in a parlor, among the many devices in ferns, etc., that can at all compare with this design, if carried out with proper spirit.

A remarkably handsome mantel-piece or framing to doors and windows may be made by using unpainted pine framework throughout. Over the fireplace a sentence in German text may be drawn in pencil, and in other places geometrical designs or arabesques in bold, decided figures; or vines and flowers with an occasional bird or two may be attempted if the person who executes the drawing is a free hand, otherwise you had far better stick to angular figures. Then with a steady brush go over the whole work, filling around the pencil mark, and not inside of it. The best coloring matter to use for this purpose is the finest kind of black varnish, shading inside the lines with india ink and camel-hair brushes. After this is thoroughly dried, several coats of the very best carriage varnish. The richness of the unpainted pine may be much heightened by sandpapering the varnish off a couple of times; but the tendency is to blur the outlines, and unless great care and dexterity be observed your work is irretrievably spoiled. The naked wood, after this treatment, will very closely resemble inlaid gold work. In a room, however, art would be best served by attempting the mantel-piece alone. The same principle we have applied to furniture, etc., with most excellent effect. Little conception of the richness and high tone of the wood can be had until the work is seen.

A white-painted mantel-piece is an abomination; better plain black or stained wood. A few hassocks and rich rugs may be distributed around. In this, as with many other articles, if the tone of the walls and carpet is dark, the minor articles should be bright, which will greatly diminish the sombre tendency. The rugs and stools, under ordinary circumstances, should not be of shade or color of the carpet and walls, but will look well if they match in a general way the lambrequins, or if the pattern is the same as that of the carpet in different colors, especially if in bold geometrical figures. Gracefully hung curtains suspended on brass rods or rings have a much handsomer effect than the very finest blinds, even should the former be of the plainest material.

Singing birds are a nuisance in the parlor, their proper habitation being the veranda or sitting-room. Wardian cases, aquaria and ferneries add to the beauty of a room. A handsome bookcase may be placed in the parlor, especially if ornamented with busts and protected by curtains instead of glass doors. In place of the vase of flowers, or a'ditional thereto, a very pretty ornament may be made by using a high wicker sewing stand and filling it with cut flowers; or for a small sum you can purchase a photographer's head-

rest, and attaching a basket or metal pan to the top of the movable iron rod, fill it with cut or living flowers, vines, etc. The rod can then be raised or lowered to suit the growing foliage. A few large brackets may be placed in odd corners rather than in the broad side wall, on which to place such nick-nacks as generally find a place on the what-not.

The corners of the room deserve attention, especially in a sparsely furnished room, and are susceptible of many different treatments, some of those suggested by Mr. Clarence Cook being of the greatest variety. A bust on a bracket or pedestal fills a corner nicely, and handsomely if the bust or statuette is rather large and of rare workmanship, and will admit of curtains divided in the middle and drawn back at the sides with cord and tassel. Light rose or blue curtain with silver or yellow fringe or Grecian border, should be suspended on a half circular rod and topped off with a Moorish cap of the same material, with border or fringe at the juncture of the same. The background of the figure should be maroon, or possibly black, in order that it may stand out better. A handsome vase might be used in the same method, but the effect is not as good. A trophy corner has also a fine effect in a room. Brightly burnished arms and flags may be effectively grouped in a corner, either based on a small pedestal or half way up the wall and standing out from them; crossed cutlasses, Turkish arms and an ancient shield, spears, bows, arrows and the like, make a bizarre design for a centre-piece over the mantel or between windows, or better still, in the library.

As before remarked, all these, or modifications of them, will go far to make your best room a pleasure to the eye. There is great danger of overdoing the adornment; the more so if the room be small, and great care should be taken not to overload the walls or the floor with an incongruous collection of hangings and furniture. There are very few who are gifted with good taste and judgment sufficient to handle a mass of material and reduce it to a happy adjustment. The general tone of the best room in summer should be airy, comfortable and restful to the eye. The winter parlor should be very warm in tone and fill the eye with color. Easily overturned tables, chairs and unsubstantially fastened brackets, pictures, etc., should ever be guarded against. One wants to take in pleasure through the eye as well as in conversation, and a well arranged apartment is a great quickener of conversation and happy thoughts. The parlor should be unique as well as suggestive to the organs of sight. One delights to see something in the general outfit that is different from the ordinary inbecilities of house-furnishing. Then, too, the room is taken as a reflex of the owner's tastes and habits. If he or she be gifted with romance, it crops out in furniture, carpets, pictures, and *bric-a-brac*. It is a criterion of taste and artistic sensibility, and the owner of a fine parlor compliments the world at large in preparing a fine apartment wherewith to please all other eyes besides his own; for, say what you will, all of us live, more or less, in fear of the censure, and covetous of the praise, of all the rest of mankind, even down to such a practical matter as the appearance of our shabbiest room, to say nothing of our best. The parlor should not be too fine and bandboxy, so as to oppress mankind with the length of your purse; nor so fine as to make it uncomfortable for your own family; and your friends fearful of motion in the grand chamber, lest all the magnificence should come tumbling about their ears. The sight of magnificent furniture, wrapped in the swaddling clothes of brown holland, is a melancholy one.

## SIGNALS OF DANGER.

Disease, like the rattlesnake, usually gives fair warning before it strikes. A failing appetite, a furred tongue, nausea, headache, want of proper action in the bowels, feverishness, lassitude, nervousness, an uneasy feeling in the stomach, etc., are all symptomatic of a coming attack of indigestion, biliousness, colic, fever, or some other positive form of disease. When thus menaced resort immediately to **Tarrant's Effervescent Seltzer Aperient**, and thus avert the attack. Acting simultaneously upon the digestive organs, the liver, the bowels and the nerves, this refreshing and agreeable alternative will soon restore the system to its normal condition of health, regularity and vigor.

SOLD BY ALL DRUGGISTS.

## COLGATE & CO.'S VIOLET TOILET WATER. NEW EXCELSIOR LAWN MOWER.

IT HAS THE LARGEST SALE OF ANY LAWN MOWER IN THE WORLD.

It has been adopted, and can be seen in practical operation on Central Park and all the other City Parks, New York; Government Grounds and City Parks, Washington; Boston Common, Boston; Prospect Park, Brooklyn; and on almost every prominent Park throughout the United States and Canada.

**THE GREAT TRIAL** of Lawn Mowers was held in New York City, June 25th, 1874. There the Excelsior came into competition with all the best Lawn Mowers in the world, and was awarded the **HIGHEST Premium**.

Four sizes for hand-power; four sizes for horse-power.

NEW YORK, MAY, 1877.

## BULBS.

I have had such good success with a few bulbs, for the past two winters, that I must call upon the flower-loving sisters to rejoice with me. Crocuses are not much of a comfort out of doors—the stems are so very short, one has to get down on the ground to see them; and then they are sure to open upon some deceitful sunny day, and we run out without a shawl to look at them, and are chilled to the bone, by the searching wind, before we can take refuge in the house again; but when they are in pots, we are masters of the situation. I get the bulbs as early as possible in the fall, buying named bulbs always; plant three of a kind in a four-inch pot, water them well, and placing the pots in the hot-bed, have them covered six inches deep with tan bark. There they must remain until winter sets in—two months is about right, to develop roots.

Their winter quarters is an east window in a hall which is warmed by a drum; there are also two warmed bedrooms opening into it, the doors of which always stand open; but as the window is at least twenty-five feet from either of them, it can't be overly warm. A board just wide enough to hold the pots is laid down, and the four Crocus pots and one of Due Van Thol tulips stand upon it, from the time they are brought into the house until they are turned into the ground in the spring. On cold nights the board is lifted upon a chair in the corner near the drum—it takes but a moment, and is easier than to carry two pots at a time; if the days are very cold, a newspaper is laid between the pots and the window—but it is not often necessary. In about two months, they commence blooming, and all come out together—solid purple, white, purple and white striped Crocus, and the three red Tulips for a contrast. The yellow Crocus I cannot recommend; they won't grow over three inches high, and soon fade; but the others are just lovely—from six to eight inches high, large blossoms, each remaining fresh at least five days, and a number of flowers from each bulb—one white one has had seven blooms; the brilliancy and delicacy of their colors is astonish-

ing, when one considers how little sun they get. A thrifty hanging-basket of Coliseum Ivy hangs in this window to add to its attractions, and it has been greatly admired by visitors, as well as a source of much enjoyment to ourselves.

In a south window in my bedroom, I have another board, on which are two superb Hyacinths—a white one, with two stalks, and a red one—also a pot of lemon-colored dwarf Tulips, and two pots of Sweet Violets, that won't bloom. I wonder if anybody does manage to have Violets bloom in the house—but the Hyacinths console me for this failure. While I was in Chicago I took pains to look in the windows of the florists, but saw no Hyacinths that would compare with ours; we have two or three in the conservatory, also, but these are the finest. This room is considerably warmer than the hall—but as we open the window a little ways at night, usually, the board is moved upon the chair with the others. Of course, the pots are watered when they need it, and they take considerable water when in bloom, and very little until they do so. We do not ask these bulbs to bloom again in the house; Crocuses, especially, are so inexpensive that we think they have given us the full value of our money, so get new ones every fall.

Dyer, Ind.

Mrs. J. M. B.

## HINTS AND EXPEDIENTS.

The rose-queens, robed in silken white, pink, yellow and deepest crimson and velvety purple, had fluttered away to the silent chambers in which they hide from all the months but June, except Prairie Queen; she swung her last bells merrily in the first July sunshine. Most of the spring and early summer flowers had gone, and the later ones had not yet bloomed; but beds of Phlox, Portulaca and such perishable flowers were in their prime.

Church bouquets were wanted, and what could they be made of? Certainly nothing in the garden was suitable but the Prairie Queen. Early Saturday morning, with the aid of waterproof and rubbers, the question was solved. Walking over the hill, with that open-eyed loitering most apt to lead to woodland discoveries, (which are so often only a comprehensive sight of what we pass every day), there was a sudden glimpse of white among the scattering bushes, which proved to be the snowy spikes of Indigo Plant. They were soon cut with long stems and put into the basket.

Now which way? A few moments' hesitation, then the inevitable turning toward the hill of resonances, one of those occasional hilltops where all manner of flowers and vines and shrubs grow in loving company, though in other localities they only grow isolated. Just in the edge of the swamp at the foot of the hill was a single wild Lily, which soon nestled in the basket with the other flowers. The lower edge of the hill was widely bordered with a shining mass of mandrake leaves, spreading eagerly and crowding each other to hide their one precious jewel of a flower, trying to burst its wrappings. Above there were tangling vines and quaint shrubs and stately grasses. The handsomest vine-sprays and handfulls of a tall nodding grass soon filled the basket. Down in the swamp there were faint bits of red to be seen. More Lilies? Yes, and for every one reached two or three more were in sight.

Turning homeward with laden arms and basket, the vivid Lilies nodding softly against the dewy grass at every step, brought to mind their text, "consider the lilies of the field, for they toil not, neither do they spin." No toiling or spinning, yet what secrets they have of subtle chemistry, baffling our senses after all labored investigations and theories.

An hour after returning home the bouquet was completed. In the centre was a single stem of three lilies, thickly encircled with the tall nodding grass; then a row of the spikes of snowy, pea-like blossoms; more nodding grass; then a heavy row of lilies glowing radiantly behind the veil of the fine, misty grass; then short spikes of the white flowers and the heavy grass, finished with the vine sprays and the most perfect Peony leaves. The bouquet was large and loose, that each flower might assume a natural position, yet firmly confined by the stems.

With such large bouquets, and, indeed, many smaller ones, it is a good plan to make them *upside down*, holding the stems firmly with the fingers of the left hand, while adding to the bouquet with the right, turn it slowly around as you work. It can thus be made much more even and easily.

For an edging Peony leaves can hardly be surpassed. They should be selected as mature and perfect as possible, and arranged in a close circle around the bouquet, leaving the pointed ends to extend out beyond the bouquet a little ways. Peony leaves are also fine to put into the bouquets of some flowers.

After the large bouquet was finished, the "Prairie Queens" were made in two round bouquets, with nothing but Peony leaves for filling and edging.

To remedy the water-lilies' habit of closing at night and so hiding their beauty, the outer green petals may be neatly plucked off, leaving large, white, waxy buds that can be used very effectively. If for daytime, Phlox (annual) and such flowers may be used, when they would be insignificant in the evening.

A large ornamental vase may be filled in this way: fit a common milk-pan in it so the edge of the pan is level with that of the vase; fill the pan half full with water, then swath the vase from brim to pedestal with the thick, handsome wild vine called "Sarsaparilla," or some other equally luxuriant; put the stems carefully under water and weight them down with small stones; arrange the delicate curling ends artistically around the pedestal, and take care that all the leaves face outward, and the whole vine looks natural; hide the brim of the vase with a thick row of Peony leaves; in the middle of the pan set a basin on the stones, so that its edge may be an inch or two above that of the pan; in the middle of the basin set a round tin can or tumbler. A rather rough outline of a pyramid is thus formed. Putting in enough water, commence at the outer edge and fill in with a row of darkest Phlox, then one of variegated or ornamental leaves, and so on alternately until pan and basin are full; then in the tin can put a cluster of bold leaves, such as those of the variegated Calla, and a bright truss or two of Geranium. The color in the rows of Phlox should grow lighter from the outer edge, until the last is white. Both flowers and leaves should be so smoothly arranged as to hide the unsightly dishes and make a low, perfect pyramid. Now decorate the whole by putting the stems of several long trails of Smilax in the tin can and winding the vines carelessly but artistically around and over the flowers, letting the ends drop lightly over the vase edge on the heavier vine beneath. Finish with heavy grass in the centre around the Calla leaves, and weave a fine mist of more delicate grasses over the whole vase. The stems can be inserted without disturbing the flowers. Grass is not used as much as it might be, and when used is apt to be introduced formally. If used naturally it enhances the beauty of flowers as much as moss does that of moss-roses.

Thus, with a little ingenuity, and an humble attention to that most perfect artist, Nature, we need never despise any material.

KATE PRICE.

## Household Art.

## ZEPHYR-WORK.

I have been a subscriber for the FLORAL CABINET for several years, but have never, as yet, seen anything in its columns about zephyr-work. I think if some of its readers could see my wreath, they would desire to have one also. It has been admired by many. To those who understand making hair-work it will appear very simple to do, as the weaving is done almost the same in one as in the other. The only difference is, that the wire is crossed on the top of whatever you are weaving on, instead of underneath. But for the benefit of those who do not understand what we mean by weaving, I will endeavor to make my explanations as clear as possible, so that they may feel able to undertake the work. The materials used are: zephyr of different colors, fine hair wire, a smooth stick of about three-fourths of an inch in diameter, scissors, gum-arabic, a table-knife and a fine-tooth comb. Cut your zephyr into pieces of about a yard in length, and your wire into pieces about ten inches in length. Now we are ready to begin. Double your wire into two equal pieces. Place the wire at the point where it is doubled on the top of your stick, holding the stick in such a manner that your thumb will be on top of the wire on the upper side of the stick; now take a piece of zephyr and place one end between your thumb and the wire, wind it once around the stick, winding from you, and throw the end over the hand; then take and cross your wire by drawing one end toward you and the other end from you, drawing tight and firm under your thumb; again take your zephyr and wind it around your stick and your wire as before, making sure to cross the wire at every winding. Each winding is called a stitch. After you have woven the required number of stitches, twist your wire two or three times tight to the zephyr, so as to keep the stitches from coming open. Then draw your work off of your stick and cut each stitch in half. Smooth it out carefully on your knee so that there may be as many half stitches on one side of the wire as on the other. Place your forefinger firmly on the wire and begin to comb with your fine-tooth comb; commence at the edge and comb into the wire very slowly; comb each side until no more wool combs from the zephyr. Care must be taken in the weaving to have the wire crossed tight to the zephyr, else, in combing, whole threads of zephyr will comb out, which will spoil the appearance of your work. Next take and hold the wire between the thumb and forefinger at the point where you twisted it when you were done weaving, and comb it all over in the direction of the wire so that the wire is completely hid. After you have all combed, place it carefully in a book and under a heavy press for about twenty-four hours; then you can take it out again. Have your gum-arabic prepared, and, with your table-knife, spread the under side of each piece—that is, the side with the wire on—with the prepared gum. The next day you may trim the pieces into leaves of the desired shape.

To make white lilies, cast on twenty stitches of white and five stitches of yellow zephyr. To make yellow lilies, take one strand of yellow and five stitches of white zephyr. To make red lilies, take one strand of scarlet and five stitches of white zephyr. Trim all the leaves to resemble the petals of a lily—long and pointed—and bend so as to curve backwards. For stamens, cut four pieces of yellow zephyr of about half

an inch in length, and tie them into two equal parts by twisting the wire firmly. Have four stamens in each lily. To make pansies, make three weaves of royal purple and two weaves of canary yellow of five stitches each, also five weaves of purple and yellow mixed, made by casting on three stitches of purple and two stitches of yellow. In forming your pansies, take your two petals of canary yellow and three petals of your mixed weaves for one. For the other, take three petals of royal purple and two petals of the mixed weaves. I think the lilies and the pansies are the prettiest flower that can be made in zephyr work. To make a Star of Bethlehem, make three weaves of nine petals each, trim to a point, and join together. In making pink roses, cast on six stitches of white and twelve stitches of pink zephyr, trim the ends round, and form your rose as you would a wax one. For red roses it is not necessary to use any white; only the plain scarlet zephyr of eighteen stitches in each weave. I have in my wreath three Stars of Bethlehem of each of the different colors, pink, white and blue, two pansies, one of each of the different lilies, one white, one pink and one red rose, and a few buds. On both sides of the wreath is a row of plain green leaves. At each end is a small bunch of grapes, one bunch being made of purple and the other bunch of green zephyr. The grapes are made the same as you make small balls, using wire for tying instead of zephyr. Flowers made in this way may also be arranged very prettily in a bouquet.

Last summer we altered our sitting-room. On one side there had been a large cupboard, which we removed, leaving a portion of the wall to be replastered. On the day the plastering was to be done, father was called away on business which could not be postponed, leaving the plasterers to do their work alone. As is often the case, when men are left to do their work without an overseer, so it was in this case. The plaster was laid on unevenly, and in some places, where old plastering had remained, instead of taking that off they plastered right over it. You may imagine what an eyesore that wall was to us. We placed a large bookcase in front of it; still all around it the wall showed. We were determined not to have it that way. We went to the woods, gathered a quantity of the different kinds of moss, and in the fall a large variety of autumn leaves, taking care to procure a number of pretty small ones. Then we persuaded father to cut us out two pretty brackets of half-inch pine boards; also, two picture-frames. We then covered the brackets and frames with moss and made a moss cross, twining them all with pretty autumn leaves. On one side of the bookcase we hung a bracket, with the cross over; on the other side a bracket, with a picture over. Above the bookcase we hung a very pretty motto, in a moss frame. Then from the motto down each side of the bookcase, to meet with the cross and picture, we trimmed the wall with ferns and autumn leaves, forming an arch around the bookcase, and completely hiding the ungainly wall. On each of the brackets we placed a small vase holding a few feather flowers, autumn leaves and Egyptian wheat. I obtained my idea of making moss brackets and frames from Mr. Williams' book on "Household Elegancies." But in that it said the moss should be pasted on. I tried pasting but could not get it to stick, so I tied the moss on with fine thread. The thread sunk into the moss and did not show.

Persons living in the country or in small villages can obtain a number of beautiful things in the fall from the woods and surrounding country that can be made into ornaments for decorating their homes. I

have a grass basket which is quite a thing of beauty; it is composed of wheat, oats, and a species of fine brown grass gathered in the summer and put away for winter use; also some fall weeds, skeleton leaves, bachelors' buttons, seeds from the cotton plant, &c. Another very pretty ornament is to make a cross or anchor of white paper stars and twine them full of small ferns. Last winter I made two small picture frames of colored stars, which are very much admired. A beautiful way of trimming an oval frame is to have a card tacked on the back of the frame about an inch from the edge, and then place ferns all around the frame, sticking the stems under the cord to hold them in place. After you have the frame trimmed, hang it up and trim the long cord with ferns.

E. A. R.

## VARIOUS KNICKKNACKS.

The well known sponge garden sprinkled with hemp or canary seed, can be made more ornamental in this way. Make a card-board basket in any graceful shape you like, and cover it by glueing on rosettes of tissue paper fringe. The fringe is made by taking strips about an inch and a half wide and then cutting them fine crosswise, leaving a piece on one side a quarter of an inch wide for a heading. Each strip of fringe can be readily twisted into a rosette. The paper may be pink, pure white, or shades of green in imitation of moss. Set a glass or earthen dish in the basket, and in it place your sponge.

## A DRUM MATCH SAFE

Is quite an oddity, readily fashioned by deft fingers. Make a round box of stiff card-board, three inches in height and the same in diameter. Line the inside with tinted paper, and bind the edges by pasting over a narrow bias strip of brown silk or muslin. Fasten in a bottom to the box, pasting sand-paper on the outside, and tinted paper on the inner side. Next, cut a strip of firm muslin, one and three-fourths of an inch wide and long enough to reach around the box. On this paste triangular points of red and white cloth; each triangle should be one and three-fourth inches long and an inch wide at the base; place the points of the white triangles at the base of the red ones, and cover the edges where they join with gold cord fastened with cross stitches of black silk. Now, paste this prepared strip around the middle of the box and border each edge with a cord or fold of brown silk. Make two rings of card-board three-fourths of an inch wide, and fitting closely over the box; cover with brown silk, pasting the edges down smoothly on the under side. On the outside stitch fine gold cord in a series of points from edge to edge, and fasten with cross stitches of black silk, as before. Put one of these rings on each end of the box, just so as to cover the raw edge of the brown silk cord, and hold in place by pasting. For a cover, cut a round piece of card-board, fitting into the ring, paste sand-paper on the under side and cover the outside with white leather, which must come over the edges; a bit of white kid glove will answer if well cleaned. Make too tiny drum-sticks of wood, cross them and fasten securely to the cover, so that they may serve as a handle.

M. F. B. ADKINSON.

Spots can be taken out of marble with finely powdered pumicestone mixed with verjuice (juice of sour fruits). Cover the spots and allow the stuff to remain for twelve hours; then rub clean, dry and rinse.

## Household Elegancies.

## WINDOW WITH DOUBLE CURTAINS.

The curtains and lambrequins shown in our illustration are of figured damask—of cigar color—with plain damask, richly embroidered, for the lambrequin. The lace curtains are of costly point, with under shade of fine muslin and embroidery.

The majority of people who have means will purchase them from some upholsterer, but there is a great body of families who will prefer to do the work themselves, and save the large expense.

To do this, first procure, of some one of the pretty woolen stuffs now to be bought for a comparatively small sum, sufficient to make the curtains, reaching from the top of the window to the floor; and should the window be small, better to measure far above it, which will give the impression of greater size; if the material is of double fold, one width on each side will be all-sufficient, and if the material is not unusually heavy, it might better be lined throughout, purchasing a bolt or two of colored cambric, and thus obtaining it much cheaper. Procure also a few yards of plain material, matching the ground of the color somewhat; this for the lambrequins and border to the curtains. Get also an entire piece (or two, perhaps,) of coarse Swiss muslin, or neat, small-figured Nottingham lace curtains. Now we have our materials, and will proceed to make up the curtains; but first, perhaps, we might better make the cornice, which is easily done by using carved ornamental pieces, first preparing a strip of wood, five inches wide, on which the ornaments are fastened. If desired particularly elegant, the wood and carvings may be ebonized and gilded; or if preferred the entire work may be enameled and gilded.

The under shade is made of Swiss, and is prettily finished with a fluted ruffle and gathered into long puffs from top to bottom.

The curtain trim with a band of the plain material, on which large figures of black velvet are fastened with application embroidery, using gold-colored braid on the edge, or button-hole stitching of yellow silk. Instead of lace curtains, take a half width of Swiss muslin, trim the edge with fluted ruffles, and fasten on the inside of the heavy curtains.

The effect is precisely the same as though the entire curtain now hung beneath, and, as will be seen, with far less expense.

The lambrequin is "shaped," as shown in the illustration, from the plain goods, and a design cut from black or other colored velvet is embroidered in application work of chain or button-hole stitches, or edged with yellow braid. The lining is put in after this is done. Heavy woolen fringe finishes the lambrequin and curtains. Cords and tassels drape back the curtains on each side.

## BEDSTEAD WITH CANOPY.

The charming effect given to the pretty bedstead presented in our illustration makes one willing to take some little trouble to produce such a result. Neither is it so difficult a matter that any one need fear to undertake it.

The bedstead itself is really a most simple affair, and our model was made for the small sum of ten dol-

lars! though a home-made one, consisting merely of a box of proper size, with plain board head and foot-

WINDOW WITH DOUBLE CURTAINS.

BEDSTEAD WITH CANOPY.

boards, are all that is necessary, as the entire wood-work is covered with a neat quilted rug, edged with a

border, embroidered and finished with woolen fringe. This cover may be of silk or any goods preferred, and is made to fit the frame, with a roll bolster fastened on the head-board; a frame of half-circular form, placed on two brackets, is fastened against the wall, ten feet from the floor, in the centre of the side of the bedstead, and sustains the curtains and lambrequin of the canopy, the form of which is shown in the illustration. This frame should be sufficiently deep to extend across the bedstead for several feet. The curtains are held gracefully back by ornamented curtain-bands.

## CHROMO PAINTING.

BY MRS. E. B. GONZALES.

Most ladies are fond of "household elegancies," but many have the mistaken idea that to obtain them one must spend a great deal of money, or be possessed of marvelous skill. But a little money and more perseverance will accomplish wonders. People that are fond of pictures may have as many as they like—pretty ones, too—and at the same time cultivate their taste and utilize every engraving that falls into their hands.

Get a carpenter to make a stretcher the desired size, (bookbinders' pasteboard will do for a small picture); stretch some coarse, unbleached muslin over the frame; tack it firmly; great care should be taken to draw the muslin tightly, that dampness may not affect the picture when completed. Make some flour paste; strain; wet the muslin thoroughly; lay the engraving on a table; cover it smoothly with paste; mount on the stretcher; raise the ends alternately, and with a hair-brush press the air from under the picture. Dry twenty-four hours. Boil equal parts of linseed oil and beeswax; cool in a cake; warm the wax slightly, and rub the picture until it is glazed. Run the fingers over the surface, that you may be positive that it is well covered. The following articles are required for chromo-painting: Palette and knife, (for these a piece of glass and a well-worn tea-knife may be substituted), artist's brushes of various sizes, some spirits turpentine for cleaning purposes. If the paint becomes dry on the glasses, they may be readily cleaned by boiling in a solution of potash; put them into the liquid when cold. If care is taken to rub them often with a cloth wet with turpentine, the necessity for boiling will seldom occur. Macguilp is made of equal portions of mastic-varnish and turpentine, and strong English drying-oil, and is used for moistening colors when painting; standing in the sun for a few days improves it.

In painting, commence at the top and paint downward. Lay the dark colors on that part of the picture most heavily shaded; the lighter any part of a picture may be, the more delicate must be the tint applied. The colors required are silver-white, flake-white, Naples yellow, yellow ochre, king's yellow, raw sienna, burnt sienna, vandyke brown, ivory-black, vermilion, Prussian blue, ultramarine, carmine, yellow lake, chrome yellow, three shades of chrome green, chrome orange. Carmine and vermilion mixed make an intense red. By mixing these colors any shade desired may be produced; for instance, carmine, blue and white make purple. A little experience will teach the amateur how to modify shades.

It is cheaper to buy black, white, and burnt sienna in pound cans, for obvious reasons.

## Fireside Reading.

### THE DAIRY MAID.

The girl engaged in molding bread  
Shall make some sweetheart flutter  
With hope to get the dairy maid  
To make his bread and butter.

She may not play the game croquet,  
Or French and German stutter,  
If well she knows the curd from whey,  
And makes sweet bread and butter.

In meal and cream she's elbow deep,  
And c'nnot stop to putter;  
But says if he will sow and reap,  
She'll make his bread and butter.

The dairy maid, the farmer's wife,  
Shall be the toast we utter;  
Alone, man leads a crusty life,  
Without good bread and butter.

**A Thick-headed Husband.**—A pious old lady, who was too unwell to attend her meetings, used to send her thick-headed husband to church to find out the text the preacher selected as the foundation of his discourse. The poor duce was rarely fortunate enough to remember the words of the text, or even the chapter and verse where they could be found; but one Sabbath he ran home in hot haste, and, with a smirk of self-satisfaction on his face, informed his wife that he could repeat every word, without missing a syllable.

The words were, "An angel came down from heaven and took a live coal from the altar."

"Well, let us have the text," remarked the good woman.

"I know every word," replied the husband.

"I am very anxious to hear it," continued the wife.

"They are very nice words," observed the husband.

"I am glad your memory is improving; but don't keep me in suspense, dear."

Just get your big Bible, and I will say the words, for I know them by heart. Why, I said them a hundred times on my way home."

"Well, now, let's hear them."

"Ahem. An Ingen came down from New Haven and took a live colt by the tail and jerked him out of the halter."

**Prof. Elicott Evans** tells this story concerning his grand-uncle, Joseph Elicott, and the chief Red Jacket: The two having met at Tonawanda Swamp, they sat down on a log which happened to be convenient, both being near the middle. Presently Red Jacket said, in his almost unintelligible English: "Move along, Jo." Elicott did so, and the sachem moved up to him. In a few minutes came another request: "Move along, Jo," and again the agent complied and the chief followed. Scarcely had this been done when Red Jacket again said: "Move along, Jo."

Much annoyed, but willing to humor him, and not seeing what he meant, Elicott complied, this time reaching the end of the log. But that was not enough, and presently the request was repeated for the fourth time: "Move along, Jo." "Why man," angrily replied the agent, "I can't move any further without getting off from the log into the mud." "Ugh! Just so white man. Want Indian move along—move along. Can't go no further, but he say—'move along.'"

**The Sister.**—No household is complete without a sister. She gives the finish to the family. A sister's love, a sister's influence—what can be more ballowed? A sister's watchful care—can anything be more tender? A sister's kindness—does the world show us anything more pure? Who would live without a sister? A sister that is a sister in fidelity, in purity, in love, is a sort of guardian angel in the home circle. Her presence condemns vice. She is the quickener of good resolutions, the sunshine in the pathway of home. To every brother she is a light and life. Her heart is the treasure-house of confidence. In her he finds a

fulness to the juvenile who informed, a large bunch of the purple plumes was presented, while he, on rejoining his incensed comrades, with that same smile called childlike and bland, merely remarked, "If I was too little to climb, I wasn't too little to tell on you."

**"What exquisite preserves, Mrs. Smoothly!** How do you have such splendid luck with every thing you put up?" complimented one of the ladies at the tea-table. "What are they, by the way?" Mrs. Smoothly is taken by surprise, but recovers herself and calls the servant. "I have not tasted them yet," she said, "and have really forgotten what I ordered the girl to put on for you. Bridget, what are these preserves?" "Thin, ma'am? Thirty-five cents a can; sorry the nickel less wud the grocer take, and thim big green things in the dish beyant is fifty cents for a little glass jar." Tableau of silence, and a good-hearted, honest girl out of a job two hours later.

**A strange clock** is said to have once belonged to a Hindoo prince. In front of the clock's disk was a gong swung upon poles, and near it was a pile of artificial human limbs.

The pile was made up of the number of parts necessary to constitute twelve perfect bodies, but all lay heaped together in apparent confusion. When the hands of the clock indicated the hour of one, out from the pile crawled just the number of parts needed to form the frame of one man, part coming to part with a quick click; when completed the figure sprang up, seized a mallet, and walking up to the gong, struck one blow. This done, he returned to the pile and fell apart again. When two o'clock came, two men arose and did

A QUIET NOOK.

fast friend; a charitable, tender, forgiving, though often severe friend. In her he finds a ready companion. Her sympathy is as open as day, and sweet as the fragrance of flowers. We pity the brother who has no sister, no sister's love; we feel sorry for the home which is not enlivened by a sister's presence. A sister's office is a noble and gentle one. It is her's to persuade to virtue, to win to wisdom's ways; gently to lead where duty calls; to guard the citadel of home with sleepless vigilance and virtue; to gather graces and strew flowers around the home altar. To be a sister is to hold a sweet place in the heart of home. It is to minister in a holy office.

**He was only a four-year old** who pulled the door-bell the other day, and upon the lady of the house answering the call the innocent remarked: "Please, ma'am, but I comed to tell you some fellows are stealing your lilacs." Somewhat like Tennyson's Maud, this information caused her into the garden to go, where she surprised these felonious florists, and caused them to hurry over the fence. In token of her thank-

likewise; and at the hours of noon and midnight the entire heap sprung up, and marching to the gong, one struck, after the other, his blow, making twelve in all; then returning, fell to pieces as before.

**A fond father** sent his young hopeful of four into an adjoining room to get a book. The boy came back and said it wasn't there. "Yes it is, my son," said the father; "it's on the table." The boy went back and reported again that there was no book there. The father got impatient and sent another child for the book, and in the mean time the mother brought the book from a different room, with the remark, "Here's your book; it was on the mantelpiece." The gentleman composed himself to read, and about ten minutes afterward discovered young hopeful still standing by his chair. "Father," he said, solemnly, "there's a fib about somewhere, and I didn't tell it."

**Walter Savage Landor**, it is said, entering a ball-room, saw therein a young lady who pleased his eye. He cried, "The prettiest girl in the room; I'll marry her!" And marry her he did, straightway.

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

BY AN OLD HOUSEKEEPER.

*Bread.*—(Including two receipts for yeast—two for bread, &c.) The mysteries of "panification," as the scientific cooks term bread-making, are few and simple, but requires more attention and judgment than any other branch of cooking.

One rule I would advise every housekeeper to establish from the very beginning, as "unalterable as the laws of the Medes and Persians which changeth not," and that is, never to allow poor flour to be used for any purpose whatever, especially for bread-making, for unless this one article be of the best quality, baking after baking will prove but failures, and a vexation of spirit to the ambitious baker.

Give me nice Graham flour, if you see proper, and I will make you sweet, light, brown bread therefrom; but no sticky, blue, plaster-like "white" flour, that when squeezed in the hand, forms a tough-ball; on the other hand let it be of a rich yellowish-white tinge, have an oily feeling under pressure, rolling off from the hand in feathery flakes.

The second point of importance in bread-making is the yeast; and herein are more failures than can be attributed even to poor flour, for a wise housewife will insist upon having fine flour, when perhaps she will not be so careful with her yeast, and will either from carelessness or ignorance, utterly fail. I say ignorance because so many even experienced housekeepers are constantly asking the question "How do you judge yeast? by what means can you tell whether it is 'lively' as you term it?"

My answer is—by taste and smell! If good, the taste if a little is touched to the tongue, will be rather biting, not sour by any means, but quick and somewhat pungent; while the odor is that of weak ammonia or fresh ginger-beer, and the color, the opposite to "leaden"—a clear yellowish-white. If sour, blue, and lifeless, like unleavened buckwheat batter, empty the jar, and at once make a fresh supply with "rising" from some other source.

*Hop and Potato Yeast.* (No 1.)—There are many varieties of yeast—hop, potato, milk, corn-meal, salt, &c., but the one old receipt handed down in my own family for many years, has, I believe, no equal. It is this:

Take eight good-sized potatoes, peel and slice into cold water, put three coffee cupfuls of loose, or half-cake of pressed hops into a thin bag, tie securely and boil for half an hour in three quarts of water, with the potatoes. When soft, remove the potatoes, mash them in a paste with one pint of flour, adding one teaspoonful ground ginger, and when cool, beat well in one large cup of yeast, or one cake of leaven, soaked in tepid water. Cover closely and place in a warm spot to "rise" for twenty-four hours, when turn into jars which can be closed air-tight, but do not fasten down the cover, or cork tightly until it has ceased to "work" lest the bottles be broken. (I have used the Mason self-sealing glass jars for several years past, and nothing can be better for keeping yeast pure and sweet.) Place the jars, after tightening the lids, in a cool place. This yeast will keep for two weeks in winter, but in summer it should be made weekly.

*Yeast—Self-Working.* (No. 2.)—I said I never used any but the above receipt for yeast, but I have a few times in my life been so situated that my yeast ran out, and I had no opportunity of obtaining any from other sources, in which case I have made the following with perfect success.

Take two handfuls of good hops, which tie in a bag and boil in one gallon of soft water for an hour or more. Allow it to cool and with it make a batter of three coffee cups of flour, beating until perfectly smooth, and gradually adding half a pound of brown sugar, one tablespoonful of ginger, and one handful of salt. Put into a shallow vessel, cover lightly and place in a constantly and uniformly warm spot for two or three days. On the fourth morning, peel a dozen potatoes, parboil them, and grate into the batter, and allow to stand another day, stirring occasionally. Then put into jars and fasten the covers securely, placing in a cool cellar or refrigerator. This yeast will remain sweet for a length of time, and is excellent.

*To make good Family Bread.* (No. 1.)—For a family of six, where warm bread is used for breakfast, and baking is done other times weekly, take about one gallon of fine flour, or less if measured before sifting, put it in to a large pan, or kneading bowl, and with a strong spoon, hollow out a well in the middle, using care to leave a quantity of flour on the bottom, or the sponge will stick to the vessel, which will give trouble. Next take one quart of warm milk and water, equal parts, and six teaspoonfuls or one teacupful of lively yeast, which stir together; adding one small teaspoonful bi-carb. soda dissolved in water, and pouring the mixture into the cavity in the flour, turn in as much of the flour as will make a thick batter, beating it perfectly smooth. Strew flour quickly over the top, cover with a cloth, and place in a warm spot in winter, and a cool one in summer, over night. Should this be done during the day, however, allow to remain until the flour on the top is seamed with cracks, and the bubbling sponge breaks through the openings. Next place the vessel on a low table, or strong bench, and with a spoon stir in all the flour possible, wipe the spoon out clean with the fingers, and laying it aside, sprinkle in one handful of salt, throw on a handful of flour, and with hands and fists, proceed to work, and knead in as much flour as will make a rather soft dough, which test by thrusting one finger into the mass, to which it should not cling. Now if you are not strong, or feel weary by this time, instead of continuing to work, and knead this batch, take a bash-chopper, hatchet, or even a large knife, and chopping or dashing the whole mass, double it together, and again use the chopper, thus continuing for fifteen minutes, by which time the air-bubbles will all have been opened, and the dough in proper condition to rise. Form it into one large ball, which place in a pan, well greased or floured, and pressing the fist down into the centre, cover with bread-blanket and towel; turning a warm plate on top, place behind the stove until it has risen; which will be known by the indentation on the top, becoming obliterated, and cracks appearing on the surface. This, if it has been made up at ten o'clock in the morning, will probably be about twelve, when the mass must be again turned out on the moulding-board and cutting it into three loaves, work and chop each one a few minutes, until a smooth loaf is formed, which turn into well-greased tin pans, circular or box shaped as convenient, again press in the centre with the fist, and covering the blanket and towel over the loaves, turn a tea-plate on each one and place behind the stove again, for about one hour or less, when with a sharp knife make a cross-cut slash across the centre of each loaf, and place in a moderately heated oven, quickening the fire towards the latter part of the baking, which for such loaves will require about three-quarters to an hour. When done, if the crust appears hard, rub a piece of nice suet or butter over it, and always wrap in damp towels, with the blanket thrown loosely over, placing the loaves against the moulding-board on the back of the table, until cool, when put into tin or wooden boxes, keep the bread towels around each loaf. It is my custom to use the third piece of dough for tea rolls; working in a piece of shortening butter, sweet lard or beef drippings, the size of an egg. This place in a kitchen closet until one hour before tea-time, when roll out and cut with a biscuit cutter, or rubbing the palms of the hands with butter or lard, take up a piece of dough and knead it into round balls, which place closely side by side, in shallow-tin pans, and covering, as with bread, set to rise for three quarters of an hour, then stab each one with a fork, and place in a quick oven for fifteen minutes. When done proceed as with the bread, sending to table between napkins.

In winter, I frequently add another pint of flour, and mixing a larger amount of sponge, set this at six o'clock in the evening, making up the dough about ten o'clock, place it in a moderately warm room to rise, along with a breakfast loaf, made by cutting off a piece of the dough sufficient to fill a quart bowl, and moulding it into an oblong or round cake, about one or one and a half inches thick, which is turned into a baking-pan well greased, and covered with blankets, and another pan of the same size turned over it. In the morning score the top with a sharp knife, forming squares, which will allow breaking after baking. Bake in a quick oven, and when done proceed as with rolls. I have here given the quantity of bread required for a family of six persons; when the baking is done on

Tuesday, Thursday, and Saturday, and waffles, muffins, &c., are used each day for breakfast, I prefer small oblong pans with perpendicular sides, though when the baking is necessarily large, it becomes necessary to make four or five long-shaped loaves, placing them side by side in a large baking pan, rub lard or dripping on the edges to prevent the loaves adhering.

*Brown Bread* (No. 2). The sponge for this is the same as for white bread, which, having risen, put into the pan, or kneading bowl, three quarts Graham flour, one quart wheat and one pint of corn meal, a handful of salt and the sponge; into which stir one small teaspoonful of molasses, merely to impart a general sweetness to the flour, not by any means rendering the bread what might be called sweet. This dough should be like a thick batter (just beyond the point of stirring with a spoon), which may require the addition of a little more lukewarm milk and water. It should be made over night, as it requires long rising. Make into round loaves and bake each one in a separate pan, well greased. Bake in a moderate oven and for a long time, allowing perhaps an hour for a quart-pan loaf. If well kneaded and nicely baked this delicious bread will amply repay for the sticky hands, and should be found on every table, where there are children and dyspeptics especially.

*Brown Flour Rolls* (No. 1). Take off a piece of the dough, as with wheat bread, and work into it a tablespoonful of shortening. Make into long narrow rolls and allow to rise for two hours; then with a sharp knife score each one longitudinally and rub melted butter over the surface of each one. Bake in a moderate oven, quickened towards the last; cover closely in a damp towel for five minutes, and send to table covered with a napkin.

*Light Rolls* (No. 2). Set a sponge with one pint milk, made sufficiently warm to melt one cup butter; one teaspoonful salt, two eggs, one tablespoonful white sugar, pulverized, and one small teaspoonful bi-carb. soda, in sufficient flour to make a batter; beat briskly for ten minutes, adding four tablespoonfuls of lively yeast; cover warmly for several hours, or until the flour on top cracks; then add flour to form a soft dough, which knead and work until perfectly smooth; or better still, chop or gash it as before described until all air-bubbles disappear; place in a quick oven and bake for fifteen or twenty minutes; paint the crust with a piece of butter rubbed quickly over; cover with a damp towel for a few moments to soften the crust, and cover with a cozy napkin before sending to table. These are the French rolls which have been enjoyed in the cafe in Paris and our own Centennial, and if properly made will be quite as delicious to the taste and beautiful to the sight.

A very nice roll, much esteemed in our own family, is made by turning dough that has risen twenty-four hours on to the board, and rolling very lightly until half an inch thick; cut with a cake-cutter into small rounds and fold one half over the other, somewhat in turn-over style, rubbing a little melted butter or lard on the parts folded; then putting to rise for another half hour, or more perhaps; then baking as before directed. These rolls appear well when nicely done, and if desired, the lid may be raised and a piece of butter placed between the fold.

*Bread Napkins* are made of two half yard squares of linen, or damask, quilted together in squares and trimmed around the edges with fringe, lace or scallops in embroidery. They may be made extremely ornamental, and should be placed not only over hot bread, such as rolls, twist, etc., but on the cold loaf, usually placed on the wooden trencher, though it should not hang so low as to hide the beauty of this, when handsomely carved. C. S. J.

**Vegetables** should never be washed until immediately before prepared for the table. Lettuce is made almost worthless in flavor by dipping it in water some hours before it is served. Potatoes suffer even more than other vegetables through the washing process. They should not be put in water till just ready for boiling.

**Before** washing almost any colored fabrics soak them in water, to each gallon of which a spoonful of oxgall has been added. A teacupful of lye in a pail of water is said to improve the color of black goods. A strong tea of common hay will improve the color of French linens.

## MUSIC BOOKS.

### GOOD NEWS! GOOD NEWS!

A Sabbath School Song Book of great beauty, by R. M. McIntosh, is undeniably one of the best, and is already popular. Price 35 cts.

**SARONI'S THEORY OF HARMONY.** (\$1.25). Just out. A thorough and excellent work. Is commended to all who wish to study the science, as the maker has, in a large degree, the talent of making difficult things easy to understand.

### THE SCHOOL SONG BOOK.

A new and superior Class-Book for Normal Schools and Female Seminaries, is compiled by one perfectly familiar with the needs of such schools. By C. Everest. Price 60 cts; \$6 per doz.

**JOSEPH'S BONDAGE.** By J. M. Chadwick. Just out. Is a bright and attractive short Oratorio or Cantata. Sure to please, from the beauty of the story, as well as the attractive music. (\$1.25 Bds.; \$1 Paper.)

Either book mailed, post-free, for Retail Price.

### OLIVER DITSON & CO., Boston.

C. H. Ditson & Co. J. E. Ditson & Co.  
843 Broadway, New York. Succrs to Lee & Walker  
PHILADELPHIA.

**40** Finely Printed Visiting Cards (9 tints) with your name on them all for only 10c. STAR PRINTING CO., Northford, Conn.

**Lightning Needle Sharpener**, for all Machines. Sells at sight. 35 cts. Agents wanted. J. J. GREEN, Boonton, N. J.

## THE FLORENCE OIL STOVE,

For Heating or Cooking.

### TWO STOVES IN ONE.

Safe.

Odorless and Durable.

Can be used without chimney-flues, as it generates no smoke or noxious gases.

Meats and Bread cooked by this stove are better flavored and more digestible than when cooked by coal or wood.

### THE HEATER

furnishes an abundant supply of pure, moist heat, easily regulated to any desired temperature.

The FLORENCE received the only Centennial Medal awarded to Oil Stoves. Report of the Judges: "It is simple in construction, easily managed, and well adapted to its intended purpose."

MADE BY THE

## GOSSAMER Waterproof Garments

Get the Genuine! Beware of Worthless Imitations! Ask for the Gossamer Waterproof Garments, and see for yourself that our trade mark, "GOSSAMER WATERPROOF," MANUFACTURED BY GOSSAMER RUBBER CLOTHING CO., BOSTON, is stamped on the loop of the garment. None are genuine without they are so stamped. Our garments never under any exposure, to either cold or warm weather, adhere together, or grow soft and worthless. No Lady or Gentleman should be without one of our Rubber Garments. Weigh from 9 to 16 ounces, can be easily carried in the pocket. Send for Illustrated circular. GOSSAMER RUBBER CLOTHING CO., 259 Devonshire Street, Boston, Mass.

Mention Floral Cabinet.

## Madame FOY'S CORSET SKIRT SUPPORTER

Increases in Popularity every year.

And for HEALTH, COMFORT, and STYLE, is acknowledged the BEST ARTICLE of the kind ever made. For sale by all leading jobbers and retailers. Beware of imitations and infringements. MANUFACTURED SOLELY BY FOY & HARMON, New Haven, Ct.

**50** VISITING CARDS handsomely printed, 10 cents and 3 cent stamp by return mail. No nicer ones in the world at any price. One agent writes: "I know about fifty places to get cards, and like yours the best." "Neatest and best we ever saw." "Never so well suited before"—or similar expressions, come by nearly every mail. My list of 2,267 kinds of cards, 103 samples of type, agents' list, etc., with each order. Write names plainly, and if you are not more than suited, I will refill your order or refund your money. W. C. CANNON, 712 Washington St., BOSTON, MASS.

## FUN

1 pk. acquaintance cards, 1 pk. hdkf. flirtation, 1 pk. scroll, all sorts, for 10 cents and stamp. Fun Card Co., Middleboro, Mass.

## Leamon's Dyes Color Silks.

## Leamon's Dyes Color Woollens.

## Leamon's Dyes Color Cottons.

## Leamon's Dyes Color Anything.

Crimson, Violet, Yellow, Purple, Green, Maroon, Scarlet, Slate, Brown, Black, Blue, Red.

Each Dye colors from one to two pounds of goods any shade, with certain success. Warranted to be the best and cheapest colors for family and fancy dyeing.

### ANY CHILD CAN USE THEM!

A book giving full directions for all uses, with a beautiful sample card, showing how to make 36 colors, sent to any address for a 3-cent stamp, or the same with a package of any color on receipt of 25 cts.

# Grandest Offer Ever Made TO LOVERS OF FLOWERS.

W. C. WILSON & CO., have taken great pains in putting up the following collections, and they guarantee them to be in every respect as represented. The quality of our Seeds and Bulbs is not to be excelled by any in the world. The quality being considered, we challenge any seed establishment to offer as large packets for the money. Send for our Illustrated Catalogue, mailed free.

W. C. WILSON,  
W. S. ALLEN.

### FLOWER SEEDS.

THE FOLLOWING SUPERB COLLECTION OF 25 SORTS FOR \$1.00.

One packet each Aster, Alyssum, Balsam, Amaranthus, Double Daisy, Convallus, Candytuft, Cyclamen, Cypress Vine, Dianthus, Globe Amaranthus, Hollyhock, Marigold, Mignonette, Musk Plant, Nasturtium, Parsley, Sweet Peas, Phlox Drummondii, Petunia, Penstemon, Portulaca, Verbena, Primula, Ice Plant. No substitution allowed.

### GLADIOLUS.

The new American Seedling Gladiolus, "Isaac Buchanan," is the finest Gladiolus ever introduced—color, pure bright yellow, each \$1.00.

12 extra choice Seedlings, - - - \$1 50. 12 extra fine mixed sorts, - - - 75c.  
12 " " 2d size, - - - 1 00. 12 " " 2d size, - - - 50c.  
12 superb named sorts, - - - 1 00.

For every bulb that fails to give satisfaction we will gladly replace.

### DOUBLE TUBEROSES.

12 Pearl Tuberoses, fine bulbs, - - - \$1 00. 12 Bulbs, 2d size, - - - 75c.  
12 extra large size bulbs, - - - 1 00.

### DAHLIAS.

12 ex. choice named sorts, large flow'g. \$1 25. 12 ex. ch. named sorts, Bouquet or Pomfere, \$1 25.  
12 " mixed sorts, - - - 1 00. 12 " mixed sorts, - - - 1 00.

Our collection of Dahlias cannot be surpassed. The above are first class young plants that will prove equally as fine as large roots which are much more expensive.

### LILIES.

Lilium Auratum (very scarce), extra large bulbs, measuring 2 1/2 inches in diameter, each - \$1 00.  
2d size, - - - 50c. Lilium Rubrum, fine bulbs, - - - 20

Other sorts too far grown to offer.

### MISCELLANEOUS.

Amaryllis Johnsonii, magnificent bulbs, already started, each - - - \$2 00  
Vallota purpurea Superba, 35 cents each, 3 fine bulbs, - - - 1 00  
Calceolus Esculentum, each - - - 50  
Tigridia, 1 each Pavoia, Grandiflora, Conchiflora, - - - 25  
Canna, large root, - - - 25

### PLANTS.

The following collections are offered at the under mentioned cheap rates on the condition that the selection is left entirely with us.

50 Fine Budding Plants, - - - \$5 00. 200 Fine Budding Plants, - - - \$15 00  
100 " " 10 00. 300 " " 25 00

## W. C. WILSON & CO.,

45 West 14th Street, New York.

## DOUBLE TUBEROSE BULBS.

Superior in Quality and Size.

First Quality Large Flower-Doz. 100. 1000.  
ing Bulbs, - - - \$ 75 \$4 00 \$20 00

Second Quality Flowering Bulbs, - - - 50 3 00 20 00

A few hundred Extra Large Bulbs, - - - 1 00 5 00

Dwarf Pearl, first quality Flowering Bulbs, - - - 1 50 10 00

If sent by Mail, 25 cents per dozen EXTRA.

### MILLER & HAYES,

PRICE 12 CENTS.

## SKETCH OF A SUMMER HOUSE.

The sketch upon this page is one of a Rustic Summer House, erected at River Edge, N. J., upon the grounds of William S. Carman.

It is made of heavy red cedar, with the bark left on, and even the branches for several inches, except upon the inside.

At one side of this summer house, and extending half around it, is a rock work well filled with Sedum, Echeveria, Cactus, Aloe, Plumbago, Lobelia, Ivy, etc., etc. The upright poles, as well as those of the roof and peak of the summer house, are reversed, so that the larger ends are placed where the smaller ones usually are in structures of this kind.

A substantial—almost massive—look is thus produced. The vines spread over a greater part of the roof, and, ascending the peak, attach themselves to the twigs of the trees near by, or flow back again upon the arbor in festoons, quite in keeping with the disorderly beauty that this intricate piece of gardening has been designed to display.

Between the summer house and the rock work, a deeply shaded space of several feet is filled with hardy Ferns, Pansies, and Violets.

On the back and the other side, a connecting semi-circular plot is filled with Rhododendrons, Kalmias, Mahernias, Azaleas, and Roses. These, exposed partly to the east, partly to the south, and planted in muck, taken from what is now the lake, mixed with ordinary garden soil, grow satisfactorily and bloom abundantly.

A part of the summer house on this side is reserved for rapid-growing summer vines, such as Cobœa and Maurandya.

Plants started in the house and put out in spring, very soon cover the space, and add a freshness and variety of bloom and foliage that cannot be produced when hardy vines alone are employed.

**Roses.**—The best soil for Roses is a strong loam; the deeper it is the better. It should be well drained.

## THE FUCHSIA.

BY W. C. L. DREW.

For natural elegance and beauty, I know of no flower which equals the Fuchsia. It is eminently the flower for amateurs, whether for summer or winter decoration. There is no flower of equal pretensions so easy of culture and propagation, and so adapted to a widely diversified range of circumstances.

The Fuchsia is of South American origin. There

slips at a very high price to a nurseryman of her village, who made a fortune out of it.

Fuchsias are propagated from slips and seed. Slips are the surest and best way, and where plants true to color are desired, are the only sure way. All the new varieties are originated by seeds.

### PROPAGATING BY SLIPS.

As this is the best way, a few words on the method will not be out of place. No secrets are required, no hothouse or greenhouse is necessary; an amateur can succeed as well as a nurseryman.

Take your slips off with a heel; that is, break them off where they branch out from the main stem, slipping, not cutting, them off. Have ready a box of very fine, nice soil, composed of sand, garden soil and manure well rotted, or leaf mould, which is better; have it well mixed, plant the slips with two or more leaf joints under ground; water them with lukewarm water; never let the soil get dry, and nearly every slip will grow. From April to October is the best time to slip.

Many people complain that Fuchsias are hard to start from slips; this is owing to cutting slips off without regard; they should never be cut, but slipped off with a heel attached.

Having started them, they will need attention as to training, which can be done in any manner to suit the fancy. A neat little trellis may be made or bought, over which it may be trained, or they may be made into neat little bushes by nipping out the centre shoot when about a foot high, which causes side shoots to start, which should have their tops nipped

out again when of proper height.

Some varieties make excellent winter bloomers, but as they are classed separately in nearly all catalogues, it will not be necessary to give a list of them.

If a window or greenhouse is not convenient for saving the plants over winter, in October they may be taken up, the soil shaken off, and placed in a box of dry sawdust over winter.

SKETCH OF A SUMMER-HOUSE.

is a very pretty story as to its introduction, telling how a young sailor boy, leaving home against his mother's will, at the last moment promised to bring her a handsome present. As he was about to start for home, from a South American port, he remembered his promise, and obtained a Fuchsia plant, which he carefully tended on the home voyage, and gave to his mother on his return: how she cherished it, and sold

## Floral Contributions.

## SUMMER TREATMENT OF WINTER-BLOOMING PLANTS.

The plants that have brightened our homes and lives when all without was bleak and bare, are certainly entitled to kind care in return, especially if we wish a continuance of their well-doing. That which would be beneficial for one, would be sure death to another, and, having tried this treatment many summers successfully, can truly say, go do thou likewise.

We will begin with the ever-faithful cheery Primrose; they have a way of growing up out of the earth like an onion, and seem to have but a slender hold; at the least touch they sway back and forth. Remove from the earth, and shake all from it; with a sharp knife cut the lower part of the long root, provided there are enough of fine fibrous roots near the crown; if not, use a larger sized flower-pot and set deeper; do not give rich earth, for it will cause luxuriance of foliage and but few flowers; water well and keep shaded a few days; then either sink the pot in a cool shaded spot in the garden, or keep on a shady piazza, and give but little water all summer. The last of May they can be put out, and returned to winter quarters by Sept. 1st.

Oxalis should be dried off in April, taken from the earth, and kept in a dark, dry place; replant the last of August.

Carnations that have blossomed all winter might be planted in the ground, first cutting well back, and those cuttings will make nice plants for winter. They do not force well a second winter.

Roses that have bloomed freely should be shaken out of the earth and dipped root and branch into water and washed; cut severely back, and repot in fresh soil; after a rest of at least two weeks in a cool place away from sunlight, take them to a bright sunny place in the garden and sink the pots. This can be done any time in May; water whenever dry.

The soft, feathery blooming Stevia and Eupatorium have most likely grown to be great bushes, taking up more than their share of room. Cut the tops nearly to the earth, shake off the dirt, and cut a good portion of their roots. Treat them in like manner with the Roses, only give less sun. If young plants are started, keep pinching all summer; in that way you will have double the quantity of bloom. Bring in before frost.

From the Callas we will remove all the earth; wash the roots, cutting away all decayed substances, and most of the young bulbs; repot in rich earth; water well, and stand them under the shade of a tree, keeping them dry all summer. About the last of August bring them on to a piazza, and water freely, if you would have them bloom by November.

Bouvardias should be well cut back, given fresh earth, and when the roots become well established, say in two weeks, plant in the ground any time after the 10th of May. During the month of August, the roots need a little protection by mulching. They do not fancy the cool nights and mornings, and should be in the house by the second week of September.

Cyclamens, when through blooming, give them but little water; repot them in new soil, and treat in like manner as the Primrose.

My Laurestinus for a long time proved very ungrateful for all the good care I bestowed, and refused to repay me with one blossom. I had done just what

I should not have done. After changing the earth and giving a chance to recover its disturbance, sink the pot in the sunniest spot the garden affords, and by Thanksgiving it will greet you with its beautiful pearly flowers.

There is no plant more showy or attractive than the Azaleas. They require great care and close attention all summer; the soil should be light, mixed with a little peat, but they do not need replanting every year, and only a little trimming to keep in shape. It is safest to keep them on the stand on the porch; they require more water while resting than any other plant. Should they by accident become very dry, set the plants into a tub of water for a good soak, for its roots are such a bunch of knots, that it requires a great deal to reach the inner ones.

Euphorbias and Poinsetias are of one family; are tender hot-house plants. About the 1st of June repot the plants in a size smaller pot than they have been growing in; they revel in heat, so give them plenty of sun; water whenever dry. If they become water-logged, they yellow their leaves, and if too dry, they wither. Bring in early and then give larger pots. Many advise planting them both in the ground; but it is so difficult to lift them successfully, I have been afraid to try.

In sinking these pot-plants, always put either coal-ashes, brick, or broken glass underneath, to keep the angle-worms from taking up their quarters for the winter and making themselves troublesome.

Jessamines, both yellow and white, plant in the ground.

Of all the varieties of foliage plants, the Gesneria is the most exquisite; its leaves are like embossed velvet. This is a bulb, and needs to be entirely dried off; leave in the pot where grown; keep dry and from the mice. About the 1st of August they will plainly show their rest is at an end, and they want to fulfil their beautiful mission. Replant in peaty earth; give but little water until the leaves are well grown, and keep shaded from the strong sunlight.

Of the varieties mentioned, the most of these will be found in any choice collection, but like a family of children, all cannot be reared or governed alike. Through the interchange of plans and thoughts valuable aid we may gain. Tears even, like raindrops, have oftentimes fallen to the ground and come up in flowers.

IRENE H. WILLIAMS.

## THE NIGHT-BLOOMING CEREUS.

We have just been introduced to THE LADIES' FLORAL CABINET, and it was while engaged in cultivating the acquaintance so fortunately begun—for we vote this latest acquisition to the circle of our friends as marvelously congenial—that memory brought forth from among her carefully preserved art-treasures, one of the rarest pictures in all her choice collection, and, holding it up before us challenged for it anew our delighted admiration.

To begin at the beginning and tell you how it chanced that Memory's halls became enriched by a thing at once so beautiful and so rare, it will be necessary to relate a little personal experience.

While on a visit to friends in Chicago last summer, callers came in one evening, and amid the animated conversation that followed, our attention was suddenly arrested by the words: "It bloomed this evening." "What is it?" we eagerly questioned, and after hearing the magic name, two other important queries fol-

lowed: "How far is it from here?" and "Can't we go and see it?"

Our kind friends were only too glad to give us a pleasure, and in a few moments we were on our way.

Upon entering the grounds where this magnificent display was made, we saw a group of people collected about a man holding aloft a good-sized lantern that cast a brilliant light over a plant placed just outside the green-house door upon a stand elevated two feet, perhaps, from the ground, and appearing, at that distance, to bear the disks of four large sunflowers!

Shades of Flora and all the Graces! How our excited imagination lashed herself in self-imposed penance for the exultation of ten minutes before.

A sense of disappointment, almost of chagrin, stole chillingly over us, but we meekly permitted our friends to draw us through the crowd until we felt ourself face to face with the object of our interest.

A faint, subtle, indescribable perfume admonishing us, we raised half-reluctant, half-eager eyes, and, oh! Were they flowers or fairies? Do blossoms live and move and have a conscious being? Then we are sure that these were whispering and nodding to each other and to us, under the very gaze of mortals.

We stood spell-bound and only dimly conscious of the remarks and comments of our friends.

There were threatening indications of a storm about us, and the evening air was full of weird murmurings, in which these singular creatures—each one a royal princess in Flora's kingdom—seemed to share.

For the first time in our life, we were thrilled through and through by, what seemed to us, a responsive intelligence in flowers, and experienced a slight embarrassment, as if guilty of taking a liberty in coming there to examine there exquisite beings with bold and curious glances.

The plant itself resembles, to some extent, the Snake Cactus, and can lay no claim to beauty on its own behalf. This one had an interlaced network of growth, perhaps a foot and a half broad, and somewhat more than a foot high, supported by a light framework of wood.

The blossoms reared aloft their queenly heads with very little to show that they had other support than their own fairy lightness.

There were four of them. One or two had blossomed the previous evening, and there were still one large and one small bud remaining. Unprepossessing prophecies of future loveliness.

Had the outer row of petals upon these flowers extended outward instead of curling gracefully backward as they did, we dare not say how much each blossom would have measured. In their natural form the smallest of the group could not have been less than seven inches across; but they were very nearly the same size.

The outer row of petals are long and narrow; the exact shade of color known to fashionable ladies as *ecru*. The inner row are short and wide, like the white petals of the water-lily, which they resembled in tint and texture. These extend forward and hold the richest store of golden stamens.

The pistil divides—if my memory-picture is true to life—into three parts, each exquisitely delicate flue bending lightly backward in dainty, creamy contrast to the white petals and bright golden stamens surrounding and enclosing their base. These long, feathery flues could not have measured less than five or six inches in length, and were the crowning beauty of what seemed absolutely perfect before.

BEULAH.

## Gossip with Correspondents.

**A Flower Garden of Herbaceous Perennials.**—The first day of May, and my flower-garden is ablaze with beauty! Snowdrops, Bulbocodiums, Crocuses, and Scillas, have passed away and the Hyacinths are come! "Red, white, and blue," royal purple, yellow and rose, both single and double! Added to them are the early Van Thol tulips, scarlet, white, rose, yellow, and red, and the double Tournesol gorgeous in rich and yellow! The native *Mertensia virginica* is very beautiful; with its long, gracefully-drooping racemes, which are rosy purple before opening into a lovely cerulean blue! But the most regal plant among them all, is a single red-brown Imperial, that is three feet high with ten large bells upon each stalk! One must peer into its cups to realize all its beauty, the beautiful markings of the flower and the pearl lying at the base of each petal.

A mass of blue grape Hyacinths have been in bloom some time, and now the dwarf blue Isis is added to the display. The large family of Narcissus, the Lily of the Valley, Snow-flakes, and the Parrot and late Tulips are coming on. The curious fall Crocus, that ripens its seed in spring and blooms in the fall; the Lily family, hardy Gladiolus, the Ornithogalum tribe are all fully represented. Seven varieties of Peonies, and as many of German Ivies adorn my garden. The Hemerocallis and Funkias are also here. A bee Larkspur stands in one corner, and aside from its flowers, it is an elegant plant.

I have five other varieties of Delphiniums besides; *D. Formosum* is splendid, and a double celestial blue, with white centre, is especially lovely. *Campanula grandiflora* and *Pentstemon grandiflora* are both very desirable, the latter with its spikes of large lilac flowers renders it a conspicuous plant, and with us it is a biennial. Scarlet perennial Poppy is showy, but ephemeral. *Lychnis Haageana* is a favorite of mine; the plant is dwarf, but has such large vermilion-colored blooms.

Of Aquilegias or Columbines, I have more than a half dozen colors, both double and single. One curious variety is entirely without nectaries, and as double as a rose. For several years the "yellow birds" have taken all the seed. I find the "early bird gets" the seed as well as the "worm." Both white and rose-colored perennial Peas give me much satisfaction. All the above, from bee Larkspur, I grew from seed.

Of trailers, the creeping Phlox, Moneywort, and *Vinca minor* (Periwinkle, or Myrtle), and, I am sorry to add, ground ivy. Monkshood and *Lamium variegata*, have pretty foliage, but the latter is anything but sweet-smelling.

When the covering was raked off the flower-beds in March, the blue perennial Flax, *Verbena Montana*, white Lily, and three sorts of Sedum were fresh and green. White and purple perennial Phloxes, *Ranunculus* (buttercups), Blackberry Lily, (mine is from seed, a pretty, graceful, reflexed little lily, but not a lily, either), and *Achillea millefolium*, with its fern-like foliage and corymbs of crimson flowers edged with white, closes the list of my plants. *Gypsophila paniculata* must not be excluded, for it adds to a bouquet (as a writer in the CABINET said), what a bit of rare lace does to a dress.

In a sheltered spot is my "wild garden," composed of Solomon's seal, "Jacks in the pulpit," clumps of both crimson and white Hepaticas, the spotted-leaved *Erythronium*, and last, *Dodecatheon Media*, the Queen

of prairie flowers. Flower-seeds, like corn, were a failure in Illinois last year, as one Canterbury Bell, varieties of Dianthus, and my "Hollyhock walk," alone show that any were sowed the past summer.

Did not space forbid, I should like to tell of my success with window-plants, tender bulbs and Caeti. My plants have been collected from the east and the west, north and south, from seeds, bulbs, roots and cuttings, all through exchanges, that have brought me likewise many pleasant correspondents. Many of them, both friends and flowers, I owe to the FLORAL CABINET, for which I am sincerely grateful.

MRS. KATE SHERMAN.

**Rustic Baskets.**—I have not seen any mention made of rustic baskets like mine; so I will describe them, as they have been very much admired. I have two, one in front of each front window, made of small branches of trees, about half as large as a man's wrist, driven into the ground and grape vines woven in and out until it is about two feet high and then filled with rich soil. Two vines twisted together form the handles. Of course you can make them any size you like; mine are about three feet in diameter. I have a bed of pink *Verbena* in one and scarlet in the other, and in addition, I sow flower-seeds every spring. These, with my box plants, are all I can undertake to keep alive through the summer. CLEAR LAKE.

**My Flower-Garden.**—Last summer my flower-bed was three feet wide and reached two-thirds across the garden, which is a large one. In it was planted three rows of seed; in the middle was planted London Pride, Zinnia, variegated Petunia, Mignonette, red and white Petunia, Pearl and variegated Balsam. In one row was *Verbena*, *Antirrhinum* (Snap-Dragon), Sweet Alyssum, Phlox Drummondii of different colors, Diadem Dianthus, *Cacalia*, single Portulaca, *Amaranthus*, and Candytuft. On the other side is Sweet Alyssum, Dianthus, Heddewigii, Pot Marigold, Sweet William, *Acroclium*, German Asters, Dianthus *Laciniatus*, and mixed Balsam; also a small bed along the grape vine, which is lengthwise of the garden; this is a bed of Petunia, a perfect mat of sixteen different shades, with now and then a Canterbury Bell. Dianthus, Sweet Alyssum, and Candytuft; it was a perfect beauty, covered with bloom all summer and till the first of November, and even at the middle of the month I picked a bouquet of Petunia, Sweet Alyssum, Dianthus, and Chrysanthemum. I gathered bouquets of *Verbena*, Sweet Alyssum, and Mignonette on the first of November.

My friends that visited me through the summer, admired my flowers very much, and thought it must take all my time to take care of them. When I tell them it takes only one hour a day, they are surprised, the flowers look so thrifty, and the ground is so mellow and clear of weeds.

When I go into the garden they seem to nod their graceful heads in thankfulness for the care that is bestowed on them; this pays me well for my hour's work each day. It being a damp summer, I did not have to carry very much water; but when I did, I watered them in the evening and in the morning; they look so bright and fresh, it rewards me well for all my trouble.

It is better to have a few flowers well cared for; they make our homes seem so bright and cheerful. I cannot see why all people do not love flowers, their pretty bright faces peeping up at us, continually thanking us for the few moments of care we give them each day. I think they are a blessing each and every home ought to be adorned with.

X. N. SUBSCRIBER.

**Rugs.**—I have made some articles recently that differ somewhat from any I have seen described in the CABINET, and may assist some farmer's wife, like myself, to make home more attractive, while employing leisure moments. The first I made was two pulled rugs, woollen rags pulled up through coarse coffee sacking, differing from those described in the CABINET. In design, No. 1 has a large black eagle, with wings expanded as though flying, for a centre; the rug being two feet wide and three and a half feet long; three inches from the edge I drew a line, but instead of leaving square corners, as on the outside edge, I made each corner to form a scallop rounding toward centre of rug; now from this line to the eagle I filled in with hit or miss stripes, and from the line to the outer edge (for the border) I filled in with scarlet stripes. This rug is called pretty.

No. 2 has a small circle for centre, in which, as though swimming on light blue water, streaked with white foam, is a white swan, with gray wing, yellow beak, and black eye; the circle is made distinct by pulling in two rows of black, then three rows of red rays; at a pretty distance from the circle is an oval ring of purple, black and red, so this circle seems to lay in the oval; from one to the other is filled with hit or miss stripes. This rug is the same size as the first, and filled from the oval to the edge with black, and a fringe adds much to the beauty of each.

Next I made a card-basket composed of eight sections, of pretty shape, and medium size; I bound each section to make it more easy to join them when covered; covered them with points made from blue tinted ribbon paper, in the same manner as the corn-husk work described in the CABINET last year; line each section and the bottom with white merino, sewing in with each piece of lining a heavy green silk cord; make the handle in the same manner, cording it the same, and sew quite fast to the basket; now in the small space in the centre of each section and handle sew a straw flower, if you have a pretty rose, and three green leaves, for each place, and embroider a rose and leaves on the white lining at bottom of basket, and for each section. Your basket will be very pretty. Mine is simply corded and trimmed with straw flowers.

I have made two pretty rugs from cotton cloth. Braided rugs, I call them. Take three strips of cotton cloth; calico and muslin do nicely. Braid them the same as you would straws, only sew the pieces when joining them. Knit a strip three inches wide and one foot and a half long for the centre. Knit this of one color; around this sew three rows of the braid, cutting and laying one over the other where they meet; these rows should be bright colors; then three rows of plain, or one colored, braids, and add them in this manner until your rug assumes the desired size. These make pretty oval shaped rugs and look well when placed beside a bed, if the carpet should be a "rug carpet."

My mind is still stored with knowledge concerning numerous articles to be found in my rooms, but this chat with the CABINET readers has now grown too lengthy. At some future time perhaps I may tell you more about housekeeping in the Old Rock House.

MRS. EMMA TREICHLER.

**Water for Plants.**—The best for the gardener's purpose is rain water, preserved in tanks sunk in the earth, and rendered tight either by puddling, or bricks covered with cement. To keep these tanks replenished, gutters should run round the eaves of every structure in the garden, and communicate with them.

E. L. B.

## Flower Gardening.

### A LOVELY FLOWER GARDEN.

During a pleasant walk upon a lovely day last summer, when earth and sky were radiant with beauty, I passed a small but neatly arranged flower-garden, and stopped for a moment to enjoy its beauties; but among all the fair blossoms that met my gaze, my attention was most drawn to a bed of lovely Pansies. Lifting their large beautiful heads above the mass of dark green foliage, royal in purple and gold, and running through all the degrees of shade to the palest violet, it was a picture to become ineffaceably fixed in my mind, and has made me richer and happier for its possession, and I still often turn back to it with the greatest pleasure.

I have often, when weary with toil and laden with care, found rest and strength, and drank in deep draughts of delight, in gazing for a few moments upon the unfolding beauties of my own loved flowers. What a pleasure to watch the gradual development from the tiny shoot to the full-grown plant with its wealth of leaves and blossoms, often filling the air with exquisite fragrance. What more beautiful sight can there be than a bed of gorgeous Verbenas, glowing in all the shades of scarlet, crimson and purple, intermingled, with here and there starry clusters of pure white; or of velvety Petunias with their rich coloring and delicate veinings and shadings, such as only the hand of the great Artist could pencil.

But radiant as are these summer beauties, there are so many choice and beautiful perennials that adorn our gardens that we must give them their due share of admiration; and almost unrivaled among them stand the Lilies, the queenly lilies. Surely, Solomon, in all his glory, was not arrayed like one of these. Tall and stately, some waving their yellow cups like golden censers in the summer air, some gleaming out white and pure as some fair spirit, so filling all the air with their fragrance, while others lift their royal heads, so glorious with brilliant coloring of scarlet and purple and gold, as to transcend all powers of description.

Of these lovely flowers, I have several varieties in my own garden, some of which are common and old-fashioned, and others more rare, but all are very beautiful to me.

And now I must say a few words for the Roses, for among all the gems of the flower-garden, these are, to me, the fairest and sweetest. So rich are they in perfume, so perfect in form and coloring, combining so many rare and delicate tints, and possessing so many excellencies, that they stand almost alone in their beauty. Could I have but one kind or class of flowers for out-door culture, I should prefer Roses to all others. But dearly as I love them, from some unknown cause I have not been very successful in the culture, especially house Roses. Some time ago, I purchased of a well known florist, several varieties, mostly Tea. After recovering from the effects of their long journey, they grew rapidly, putting out the most luxuriant foliage, and nearly all blossomed. Never will I forget my delight in watching the unfolding of those exquisite buds into the perfect flower, and inhaling their delicious fragrance.

There was a Washington, with its clusters of snowy white; a Madame Damazin, with its delicate creamy petals, softly tinted with rose; a Louis Philippe, of the richest, deepest crimson; a Madame Margotten, throwing out magnificent blossoms of golden yellow, with a deep pink centre, and a Duchess de Brabant,

blushing very lovely amid the bright green foliage, and others that I will not take time to mention.

But perhaps I bestowed too much care and attention upon my favorites, for they were frail as fair, and very short-lived indeed. During the winter they began to droop, and lose their leaves, and pine away in spite of all my efforts to save them, until nearly all were dead; only my Marechal Neil and Duchess de Brabant remaining. These both produced some splendid blossoms in the summer, for all their slender and not very thrifty appearance, that were as beautiful as heart could wish.

I have been quite successful with my house plants this year, and though my collection is not very large, I have some fine plants, and they are a source of much pleasure to me, brightening many a lonely hour, while they furnish food for thought and study in their varied forms, habits, and needs for promoting growth and beauty.

My plants are not numerous, it is true, but a few choice and well cared for, are preferable to a great number of worthless ones. I have an Achyranthus which has been especially admired by everyone. It is a large bushy plant, more than two feet in height, and combining every shade in its large beautiful leaves, from the palest pink to the darkest crimson and maroon. It is, without exaggeration, a magnificent plant. I have some half dozen varieties of Fuchsias which are great favorites; a lovely double white, and one a soft pink and crimson, which, with its luxuriant growth and rich masses of dark shining foliage, is something truly splendid; and several others of the various shades of purple and crimson, which have paid well with their constant abundance of rich blossoms.

My Geraniums also have been a source of both pride and pleasure. The beautiful tricolor, Mrs. Pollock, and the ivy-leaved Holly-wreath, and most lovely of all, a double one of the brightest and purest pink, the florets of which were each a perfect little rose, measuring nearly an inch and a half in diameter. I have quite a variety of Zonales, part of which are seedlings of my own raising, and are very beautiful both in leaf and flower; a few other pretty foliage plants, some seedling Heliotropes, a scarlet Salvia, and Chinese Primrose, with some baskets of drooping vines, make up my small collection. As to their culture, so many useful suggestions and excellent methods have been given through the pages of the CABINET, that I could tell nothing new, and will only say that I pot them in good rich soil, and water whenever the earth is dry, and the plants show a need of it (not at any regular times), using soft warm water, adding a little ammonia occasionally, and stirring the earth about the roots frequently to keep it mellow.

And now I would only say to every weary, toiling one, to all who have many cares, and but few pleasures, and still possess a love for the beautiful, if you have a spare foot of earth, or one sunny window, cultivate a few flowers, if it is only two or three varieties, and you will be amply repaid for all your trouble in their unfolding beauties. You will find rest and refreshment for both body and mind, and in caring for them you will find only a pleasure, and better still, something that will lift the thoughts higher, and make them purer for their refining influence. May we all, whatever be our mission in life, do our work well and nobly, and at the same time not forget to love and cherish the beautiful things spread out before us in the great realm of matter, that a loving Father has so kindly and lavishly bestowed, and thus be drawn nearer to Him who has made them all and clothed the earth with such wondrous beauty. M.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

### CHAPTER IX.

"The many-colored threads of fate  
Are weaving webs of strange device."

It was near midnight in Finster's cottage, and the tired mother lay asleep with her children, while Virginie kept watch by the bedside of the sick boy. He had been restless and wakeful for hours, and the patient nurse had smoothed his pillow and given him cooling drinks, singing to him in a voice as low and sweet as the cooing of a dove. She had quieted the fever, at last, by her gentle, magnetic touch, and he was sleeping with the faintest dew of perspiration on his forehead, and one little hot hand clasped in hers.

The shaded kerosene lamp burned low in a corner of the room. Virginie sat in Mrs. Finster's rocking-chair with her light hair unbound and falling about her shoulders. Her great blue eyes, so weary with weeping and watching, were wide open staring at the bickering shadows. She wondered if she should ever sleep again. How many hours was it since Bradley Halcourt had spoken those rash words that burned in her brain and throbbed through her whole being? She was praying in a confused, frightened way, "Keep me from temptation. Deliver me from evil." How could she ever again meet the frank, true eyes of her friend, with the memory of those words of love and that kiss tingling on her lips? Her heart was so full of shame and contrition she could have fallen at Winnifred's feet and bathed them with tears of repentance.

Virginie might have stolen out of the cottage and fled away into the night had not reason and reflection still been strong in her. Mrs. Halcourt's letter could not reach Hope-dale before Thursday night. It was now Tuesday. Might she not venture to remain secluded in the fisherman's cottage, nursing little Jake, over the next day? Minnie was too busy and too happy to miss her, and she would rely with all her soul upon the promise of protection which she had extorted from Bradley. It was a great comfort to put off the necessity of immediate action—of thinking what she would do—even for a few hours, for her frame seemed drugged with languor, and only by a strong effort of will could she exert herself at all. Thus she sat outwardly pale and calm, trying to bear, and to be patient until daylight came.

The moon had risen, but it gleamed out fitfully between heavy masses of dark cloud, and a sad low wind began to wail in the forest bordering the lake, while the little waves rippled mournfully against the shore. Between two blasts that scattered showers of dead leaves, Virginie first heard a low tapping at the pane. She bent forward, and grasped the arms of her chair, her lips apart, her cheek blanched, while her heart seemed to stop beating. It was the same signal by which Bradley had summoned her in the morning. She did not answer, but sat gazing into space as if petrified. But the tapping continued, and a voice said in a half whisper, "Mousie, are you there?"

It was not Bradley's voice, and she rose reluctantly, and went forward, and softly raised the sash.

On the other side of the screen of leaves which the night-wind was rustling, stood Winnie, wrapped in her great furred cloak, with the hood drawn over her head, and looking preternaturally tall and shadowy.

"I must speak to you," said she, in a penetrating whisper; "I have Hector with me, and you need not wait to get a wrap; my cloak is big enough to cover us both."

The boy was still sleeping; Virginie stole back to the bed to assure herself of the fact, and then crept out of the house through a little passage. She shivered as Winnie embraced her, and drew her in under the shelter of the big warm cloak, and in silence they began to climb the bank with Hector's feet pattering on behind them. Among the trees it was almost palpably dark with faint patches of moonlight here and there cast down from between the shifting clouds. But Winnie, by a kind of cat-like instinct, kept to the path until they had got into the black shelter of the great pines, and below their eyes could discern the glimmer of the lake that lay spread out in a vague, whitish expanse. Then she sat down on the pine needles and drew her friend into her strong arms, while the dog kept rustling here and there, and the great boughs sighed overhead.

"Why do you tremble so?" she asked in a whisper "Are you afraid? That cry is only the hooting of a screech-owl."

Virginie longed to shrink away from the warm protecting clasp, but she seemed held in a vise, and with a deadly sinking of the heart, she murmured, "No, I am not afraid; but why have you come out here in the night?"

"I could not sleep, Mousie. I was wretched, and terribly nervous, and when I found you were away from home I was just ready to raise the roof. I wandered like a lost spirit into Lady Betty's room, and all over the old Hall, and had more than half a mind to send and have you fetched back. But then I decided to come for you myself, so I waited until all the people were abed and asleep, and then I stole out for I knew the night air would do me good."

"Are you ill, dear mademoiselle?" Virginia asked in a whisper, shivering and cowering in the dark, for the wind had brought down a great dead limb with a sharp crack.

"No, no, I am never ill," Winnie answered, hurriedly. "I am only restless and out of sorts. Oh, Virginia, I don't know what ails me. I believe I am a fool, an idiot. I hate and despise myself, and I could never speak to you as I do if it wasn't for the dark that hides my face," and suddenly she dropped her head on her companion's shoulder, and gave way to a violent outburst of tears and sobs, frightful as such an explosion always is from one who cries hard.

Virginia felt that constriction of the heart that presses the life and hope out of young bosoms. Her exclamation was a sob of agony, "Oh, mademoiselle, what has happened? Is it Mr. Fortescue?"

"Don't name that creature," cried Winnie, as soon as she could get her voice. "I loath the very thought of him, and have told him never to come near me again."

"But why?" and the whisper in the dark faltered.

"Why, darling, my love," sobbed Winnie, as the confession was wrung out of her, and feeling her face burn in the dark. "You are so pure-hearted, so true, you will never understand it, and you will despise me as I despise myself."

"No, no," said Virginia, making a great effort over the words. "It is I that ought to get down and cling to your knees for pardon."

Winnie was absorbed in what was passing within her to the exclusion of all else. Her voice broke and she seemed strangely humble. "I have only allowed that ape-faced Fortescue to dangle after me, and whisper silly nothings, because I hoped it would vex Bradley."

"And your cousin has scolded?" gasped Virginia.

"No, no," with another passionate outburst of grief and impatience, "he does not care; he is as indifferent as a marble statue. You do not understand, you cannot know, you have never felt as I do. I thought I was strong, but I am miserably weak. I meant to rule myself, and never give way to this folly and madness," she moaned on in the darkness.

"And your cousin?" returned Virginia, holding out through these moments of torture she knew not how. "He has made a scene, perhaps?"

"No, no," sighed Winnie; "he does not care enough for that. He would not mind if I was lying dead at his feet. I believe he would be glad, for this marriage must seem odious to him. He never would have consented except for the promise he made his mother. I believe he hates me, Virginia. And how can we go on in this way years and years? Oh, it is hideous to think of. I hate myself because I cannot give him up, and tell him to go out of my sight."

The last drop had been shed into poor Virginia's cup, but the crisis seemed to calm and steady her, and she said, in a tone that sounded sharp, almost shrill, in her own ears:

"You love him dearly, with your whole heart and soul?"

"Do not ask me," groaned Winnie, "I am beside myself. Did I not vow never to pine away, a love-lorn thing, like the Lady Betty? I am too young and strong to die, and I shall not go mad, but I may turn wicked, Virginia, unless you help me. I have only you in the world to cling to now. Can't you comfort me a little, and show me a gleam of hope? Maybe in time, in a great many years, he might come to feel differently. I would not expect much. I would be humble. I would subdue my pride and break my will. I would think only of pleasing him. But to have him dislike me always, and grow harder and colder, oh, that is too dreadful to bear."

Winnie's tone of pleading and entreaty, not unmingled with tears, was a prayer for consolation poured into her friend's ear, and she clung more convulsively than ever to her side, almost hurting her with her strong arm.

The pause before Virginia could gain power to speak seemed simply horrible, and at last when the words came, they were very cold and measured:

"I am sure your cousin will love you sometime, mademoiselle. You are worthy of his love."

Winnie heeded nothing but the import of the words. Though poor and scant, they were like the bread of life to her.

"Oh, say that again, Virginia; say it every day and every hour. I can live on the least crumb of hope, and you shall teach me how to win him; you shall make me all over. I know men don't like women who assert themselves. You shall teach me to be gentle and docile. Do you know a horrible fear has sometimes come over me; the fear that he loves another. It was like fire on my

bare flesh. If he is heart-free why shouldn't I win him in time?"

"Oh, you will win him in time," repeated Virginia, mechanically, and then with a kind of wrench, she broke away from her companion's arm, and rose up before her from the place where they were sitting. Her face was deathly pale, and just at that moment the moon shone out upon it between dark clouds, and upon the long fair hair streaming over her shoulders. She looked more like a spirit than a mortal.

Winnie felt a little creeping fear of her that was quite a new sensation.

"You are ill," said she, tenderly, getting up, and standing beside her. "How selfish I have been not to find it out before! You are killing yourself nursing that red-headed boy, and I am to blame for permitting such a sacrifice. Come, we will go call up his mother, and then you shall come home and sleep in my bed, and I will take care of you."

Virginia rejected her friend's supporting arm, and even the clasp of her hand.

"I cannot go back to that house," she said, in an unnatural, sharp tone. "I must return to the boy, for I have promised to watch with him, and he needs me."

For an instant, Winnie stood rooted to the ground with surprise and consternation. She had never before heard such a tone issue from Virginia's lips. When she spoke, it was more in grief and remonstrance than in anger.

But Virginia had turned and begun to thread her way through the trees.

"Do you care more for that boy than you do for me?" cried Winnie, following down the path. "He is in no sort of danger, and I have shown you how much I need you. I have laid bare my heart's core. And you only seem bent on killing yourself. This is not kind, Virginia. It is not like you. I never saw you perverse before. I thought you had the temper of an angel, for you never gave me a single pang. Now I am shocked that you should treat me in this way."

They had descended the bank very rapidly, and Virginia was again in dense shadow. She stopped and her voice was forced and strange:

"Think of me as you will, mademoiselle, I cannot go back to that house to-night."

"You have given me a blow in my heart," gasped Winnie, in a voice thrilling with sorrow and reproach. "No human being but yourself could have made me believe it possible."

Virginia did not stay to hear more; she fled over the cabbage patch into the cottage, and her friend was left outside alone in the night, stunned by the blow that had fallen upon her, not knowing why it had been dealt, or what it meant. She stood a minute or two rooted to the ground, gazing blankly at the dark outline of the fisherman's house. Something cold and moist insinuated itself into her hand. It was old Hector's muzzle, for the faithful creature was rubbing himself affectionately against her dress. He recalled Winnie to reality. She found that the earth had not given way under her feet; that the heavens were still stable. All was calm and still, for the wind had gone down, and the moon coming out again cast weird shadows down the old oak avenue.

Winnie crept slowly through the trees, for this new trouble had awed her restless mood into silence. She let herself into the dark house at a little side door of which she kept the key, and, taking off her shoes, stole noiselessly to her room.

Winnie's strong nature had quivered under this shock to her tenderest affections. For hours she lay in bed staring before her with eyes propped wide open, torturing herself with conjectures and surmises as to the reason of Virginia's strange behavior.

She dreaded the coming of light; she dreaded to have to meet her again. Her heart was bruised and sore, for all the happy past seemed shivered to pieces at one stroke. Everything was changed between them, and why was it so? The words that had been spoken were nothing, but an indefinable change in Virginia had impressed itself upon her never to be effaced. It was the cold shade of death that had crept between them.

Sometimes Winnie sobbed in her hard, violent way. She could not have it so. It was too dreadful. All her world, so rich and splendid, seemed crumbling to pieces.

Once a serpent crept into her bosom, and stung her. Perhaps Virginia loved Bradley; had learned to love him on the steamer. But Winnie was loyal to her friend's truth, though suffering from this change in her affections, and she put the creeping thing away as if it had polluted her heart.

Truth and health triumphed over this tumult of feeling, and, at length, far on toward morning, Winnie fell into a deep sleep. She was intensely interested in a vivid dream which she could never recall, but all the time there was the sound of knocking upon her door; that kind of knocking which we hear in sleep, but do not heed. However, the knocking increased. She opened her eyes to find the sun shining in between the curtains of her windows, and

with a mist of sleep hanging round her she got up, slipped on a dressing gown, and opened the door to encounter the broad figure and perturbed countenance of old black Nanna.

"Oh, little Miss, dat furrin gal," the old woman whimpered. "I dreamt of snakes las' night, honey, an' I knowed suffin was wrong."

"What about Virginia?" the young mistress asked sharply, now broad awake.

"Pears like I've scart yon, honey. You's pale as bleachin' cloth. Dat yaller-haired gal is like de apple in yore eye. Dat pore white trash, Finster's wife, she sent up to say how as Miss Jinny was took bad in de night, and has gone off light-headed, and is cryin' for you dat are put out wid her, honey, and won't forgive her nohow."

Winnie leaned for a moment against the wall. She was weak from the rush of emotions that had come into her heart. Pity, love, and sorrow were struggling there, but thankfulness was uppermost.

It was all plain to her now. The delirium was coming. It had made poor Virginia appear strange and unnatural, but she had been too selfish and purblind not to perceive the cause. Winnie felt an impulse to pray, though she had never been taught to pray. The instinct arose within her, and bedewed her heart, and made it soft. When she opened her eyes they were full of tears.

"Get the carriage instantly," said she, in her clear, decisive tones. "We will fetch Virginia home."

Mrs. Finster was on the lookout, with the heavy baby sucking its thumb over her shoulder, and the rest of the children huddled together in an awed, little group when the carriage drove up to the door.

"It's a mercy you've come," she began in a very lachrymose tone. "I never was so beat in my life as when I found her lying on the floor at the foot of Jake's bed, with her head burning hot, and her eyes staring wide open, but not knowing me more than the dead. And then how she did talk, and sing, and laugh? It would have just broke your heart to hear her. Now she has fallen into a stupor like, and I routed Finster out of the house, and made up the bed clean with the only whole sheets I've got; and there she is breathing and moaning in her sleep, so it's dreadful to hear. Poor Jake has took on so about her, I thought he'd have a collapse himself."

Winnie cut short Mrs. Finster's lamentations by pushing past her into the low, untidy room, in one corner of which stood the bed, where Virginia lay with a purple, congested flush on her face, her baked lips wide apart, and the sunny hair scattered over the coarse pillow. It was a sight to wring Winnie's heart, but at that moment she must not give way; she must act. Motioning Nanna to the bed-side, she said in a low voice, "You and I can lift her easily to the carriage."

Softly as the words were spoken, they seemed to thrill through Virginia. For an instant the lethargy was shaken off. She shuddered and cowered away from Winnie's touch, and moaned out, "Don't take me away from here. Let me stay here and rest."

But Nanna, with one firm movement, lifted her in her arms, and laid her drooping head down on her broad, motherly bosom, and thus she lushed and soothed her all the way, like a sick baby. She even carried her, unaided, up the broad staircase at the Hall, declaring she was only a feather in weight.

"Take her into my room," whispered Winnie, as they were going up.

Virginia opened her eyes full and wide, and the same shuddering and shrinking came over her. "Put me in my own bed," she half sobbed. "I shall die if you lay me there."

Winnie knew she ought not to be hurt by the poor girl's ravings, in her delirium; but somehow she was. It recalled all she had suffered during the night. She was glad there was no time to brood over her thoughts. So Virginia was laid in her own little bed; and for two days she knew not what was happening about her.

Bradley had passed a wretched, sleepless night between hours of self torture, and irrational gleams of joy awakened by the consciousness that Virginia loved him. Haggard and unrefreshed, he arose just at dawn to nerve himself by a few hours in the fresh air for the interview with his cousin, in which he meant to break with all his past, and set his face toward a new life. He would tell her the truth, and throw himself upon her generosity. It was maddening to think that any imputation of evil would be cast on Virginia; but he was there to guard and shield her.

This step he meant to take without her knowledge, for he knew he could never gain her consent, and it was impossible for him to carry longer a load of deceit. He was about to take his fate into his own hands. And the resolution once formed, he was calm and almost joyful.

When he returned to the house, Winnie stood in the great entrance hall, holding an earnest half-whispered conference with the country doctor. He was rooted to the ground by the first words that reached his ear.

"And you think it won't be necessary to cut off her hair?"

"No; I hardly think it will go the length of brain fever. There are some ugly symptoms, but the leeches will likely check them. The young lady must have had some kind of a shock; bad news from home, perhaps. I understand she don't belong round here."

"Oh, no," returned Winnie, positively, "nothing of the sort. I think she has got some malarial poison in her system. She has been nursing a sick boy down in a cottage by the lake where it is damp and unhealthy."

"Oh! ah!" returned the shrewd, farmer-like doctor. "I never knew malaria to produce just such effects; but I will call again this afternoon. Be particular to apply the ice, and give the medicine as ordered."

Bradley stood rigid and motionless until his cousin had accompanied the doctor to the door, and then she turned and approached him with a half timid air quite new to her.

"Have you heard about poor Virginia? You know she was taken very bad down at Finster's. We brought her home in a high fever, and at times she is dreadfully delirious. I felt sure she was killing herself, and I tried to make her come away last night; but she was dreadfully perverse. I never knew her so before. It was this coming on."

Bradley felt such a grip upon his heart he could not speak, but he was conscious of making an almost superhuman effort at self-control.

"Does the doctor think her in danger?"

"Yes, he thinks there is danger, but he is more encouraging than we could expect. She is so young perhaps she may throw off the brain trouble in a few hours."

Bradley's manner was colder and more impassive than before, as he said, "Had I not better go and summon a doctor from Deanport?"

"No, I think not," returned Winnie. "Dr. Rudd is said to be quite skillful. Papa hated the whole tribe, and would not let one of them into the house, and I have never been sick in my life; but somehow he has inspired me with confidence. He says if there is not a decided change for the better by to-morrow morning, he will call a consultation of physicians."

"Let me know if I can be of any service," said Bradley, as he hurried away, feeling that he could bear up no longer. This new and consuming anxiety had obliterated every other thought.

Winnie was vexed with him for receiving the news so coldly.

"He looks fagged to death," she thought, "but he has no more heart than a stone." However, she had reason to change her mind, for though Bradley was obliged to turn away to hide his anguish of heart, when he had recovered a little from the shock he could do nothing but wait and watch for his cousin's emergence from the sick-room to get reports of Virginia's condition. His whole manner had changed. It was so gentle, so humble, that a new hope fluttered in her heart. Surely, they were drawing a little nearer to each other. Bradley, though his face was haggard, had never seemed so kind as on that day, and the next, when the whispered conferences were going on about the hall and staircases.

The poor girl's delirium was at its height, but she was very gentle and pathetic—in fancy wandering with her dead mother over the Alpine pastures, gathering harebells, and listening to the bleat of flocks, and the song of birds. She was away back in her happy lost childhood, and spoke only in French, sometimes singing snatches of the songs her father had taught her. Bradley heard these bursts of delirious singing as he hung about the passage, or set his door open to listen. He was reduced to a pitiable and abject state of misery, and sometimes he secretly waylaid old Nanna on her way to and from the sick-room. The old darkey shook her head, and her eyes were full of tears:

"De pore lam' is mighty bad, Mass'r Bradley; but de Lord transposes, and I'se prayin' for her powerful strong. De Lord can hear old black Nanna. He's no suspecter of pussus, an' I neber prayed in faith, believin', dat I didn't git an answer shore, for honey, I allus prays 'de Lord's will be done,' an' whichever way it turns, it's de Lord's will; don't ye see dat, honey."

The hours wore on without any perceptible change. The doctor came and stayed most of the night. He was confident a favorable crisis would occur in the morning. Bradley never knew how he got through the time. He sat up all night in his dark room, ill with anxiety and dread, and constant smoking only made him worse. A slight nausea stole over him, and just at daybreak he crept out into the fresh air. The sunrise was sweet and calm, shining goldenly through the bare trees.

He wandered about without aim or purpose through the paths, not knowing or caring where he went, when he saw Edgar Swayne ride up to the stable-yard gate and dismount. Everything had been swept from Bradley's mind by the crushing anxiety and suspense of the past day; but now as he saw the stern light in Edgar's eye, their interview at the mine came rushing back upon his memory, and he advanced to meet him.

The question came abruptly and without preface, "Mr. Halcourt, did you send the message I intrusted to you for the sheriff of Deanport?"

"No; I did not?"

"Will you please to explain, sir, why you did not?"

"No, I cannot do that, at least not at present. I owe you an apology for what may appear strange conduct, and that apology, full and ample, you shall have in time. At present I must allow you to think of me what you please. I can only say that I withheld the message in order to protect an innocent person."

"And I can tell you that your conduct has been basely dishonorable," cried Edgar. "You have connived at the escape of a criminal, and are answerable to the law. I had everything prepared for the capture of that man, the leader of the gang that has infested this neighborhood, and you have defeated me for reasons best known to yourself. But all who have had a hand in this thing shall yet be brought to justice. I have tracked that man through all his aliases—Dr. Walters, Charles Meadows, Long Andrew, and he has been notorious through them all."

"And his real name," said Bradley, eyeing him, and not allowing a sign of emotion to escape.

"His real name I do not yet know; but I shall find it out."

Suddenly a new thought seemed to strike him, and he turned squarely upon Bradley:

"Perhaps you may know this man's true name?"

Bradley did not answer. He stood in a quiet attitude, one hand thrust into his pocket, and the other holding a long-handled meerschaum. Thus they stood, taking each other's measure, Bradley pale, Edgar flushed and excited, until the latter's hostility could no longer restrain itself. "If I thought you knew that man's true name, I would force you to reveal it."

"Oh, is that it?" returned Bradley, looking down from his broad-shouldered height on the slight, nervous student form before him. "Are you a fighting parson of the church militant? I should hate to handle a man of your cloth, and a smaller man than myself, too. You see with just one blow of my fist I could hurl you into those bushes yonder."

"Don't mind my cloth," cried Edgar, quite beside himself now. "I will meet you as man to man, as foe to foe."

Bradley's placable temper asserted itself more and more as Edgar's wrath was gathering.

"No," said he, "I have no quarrel with you, Mr. Swayne. That is all bunkum. I owe you an apology, and an explanation which you shall one day have. You have heaped some injurious words upon me, and if you think I will bear imputations upon my honor more patiently than another man, you are mistaken. But you are angry, and there is some color for your anger, and I will not take advantage of it. A contest of fisticuffs between us would be too unequal. If you are determined to regard me in the light of an enemy, and wish to attack me, you must pop away with a pistol from behind some tree. I shall not molest you."

Bradley turned on his heel and walked away, triumphing as the strong man does triumph who has the advantage of coolness and self-control. Edgar before had hated him, now his breast seemed full of hissing serpents. He leaned a moment on the gate for support, and then almost groped his way toward the Hall. Hardly had he entered and thrown himself upon a sofa, still quivering with rage and pain, when Winnifred came flying down the staircase, in a white wrapper, and with such a tender glad light in her eyes, in spite of weariness and watching, as seldom had been seen there. Virginia was better; the blessed crisis had come. She had fallen into a peaceful slumber, and a cool dew of perspiration was beading her forehead.

Winnie had flown down the stairs to find Bradley, that she might pour the good news into his sympathetic ear. Her cousin's changed manner, and his gentle kindness had made these confidences sweet to her; but in the hall she encountered Edgar.

"Oh, Mr. Swayne, you will be so glad to hear that Virginia is better. You know how ill she has been. At one time we thought her case almost hopeless; but the crisis has come and she is asleep."

Edgar looked up with a miserably pale, haggard face, his eyes blood-shot and burning, and forced himself to say, "I am very sorry she has been so ill."

"It is a blessed thing you were not here during the worst," Winnie returned, "for I see how you have suffered."

Edgar looked at her steadily, entranced by the splendor of her eyes.

"Miss Braithwaite, what do you mean? I do not understand you."

"Mean, Mr. Swayne? Why, nothing, only that I see you have been very unhappy about poor Virginia."

"You are laboring under a strange delusion," said he, in a low voice, standing before her, and keeping his eyes riveted upon her face in a way that made her very uncomfortable.

"I have not been unhappy about your friend. I did not even know that she was ill until you told me."

A crimson flood came slowly up and suffused Winnie's

face. She was deeply vexed and ashamed that she had made this mistake; and, moreover, the young man would not take his burning eyes from off her face, while she seemed powerless to move.

"Miss Braithwaite,"—in the same low voice—"did you, could you, for a moment suppose that I was in love with your friend?"

Winnie, brave as she was, opened her lips, but only gasped. There was something impending she would have given worlds to avert, and her own little schemes all seemed tumbling about her ears.

Edgar put his hands over his face for an instant, and was trembling visibly.

"Oh," said he, in a muffled, choked voice, the sentences coming out disjointedly, "I meant to keep silence. I vowed I would not speak to you. I have been a fool, or something worse, for I have forgotten conscience and duty, even God himself, in the mad intoxication of loving you. You can never know how I have suffered, how I have struggled with myself. You can have no conception of what has gone on within me. Sometimes you have seemed to lure me on, and then again you have treated me with haughty coldness, almost scorn. But it made no difference. I could not help worshipping you blindly, for I only lived when I was in your presence. But it was madness to suppose I could stay here and endure the sight of that man who is so unworthy of you."

"Have you and Bradley quarrelled?" Winnie asked in a timid whisper, feeling that the vigor had gone out of her strong, young frame.

"Yes," he groaned, "we have quarrelled; there can be only one long, eternal quarrel between us. I will tell you the truth, though you may think I am goaded on by insane, jealous rage: that man is base and dishonorable."

Winnie recovered herself instantly, drew up her tall form to its extreme height, and said with cold hauteur, "Mr. Swayne, you forget yourself. I will not hear one word against my cousin, not one word. You may upbraid me, if you will. I have wounded and hurt you with my teasing, girlish caprices, and my thoughtlessness," and suddenly melting with the tears filling her eyes, "I beg your pardon for the pain I have inflicted. I could beg it on my knees."

"Oh, Miss Braithwaite! Winnie!" he cried, in heart-broken tones. "You will remember some day that I would give my life to save you one pang."

Winnie was sobbing passionately; she had utterly broken down.

"Oh, forgive me, forgive," she cried, putting out her clasped hands, "if I have crossed and marred your life. It is dreadful to think of."

He caught her hands in his, and pressed them fervently to his lips.

"Oh, Mr. Swayne," she went on, in a broken, pleading voice, "if we love truly, and grandly, even though that love be unhappy, ought it not to make us nobler? You may scorn me for what I have done, but do not go away from those poor people up at the mine. They need you. Is it not wrong for us to run from our natural and proper work because life has not given us what we cry for? Promise me that you will not go."

He looked at her with an indescribable expression of hopeless misery.

"I cannot answer now," said he; "I must have time to reflect," and he rushed out of the house.

Winnie fell sobbing upon the sofa and buried her face in the cushions. Where was now her self-satisfaction, and little cut-and-dried schemes that were to make everybody comfortable? It seemed as though the illusions of her crude girlhood had been shivered to pieces by one touch of passion and truth, and were lying in confused fragments at her feet.

(To be continued.)

**Our Tell-Tale Lips.**—I have observed that lips become more or less contracted in the course of years, in proportion as they are accustomed to express good humor and generosity, or peevishness and a contracted mind. Remark the effect which a moment of ill-temper or grudgingness has upon the lips, and judge what may be expected for an habitual series of such movements. Remark the reverse and make a similar judgment. The mouth is the fraukest part of the face; it can't in the least conceal its sensations. We can neither hide ill-temper with it, nor good; we may effect what we please, but affectation will not help us. In a wrong cause it will only make our observers resent the endeavor to impose upon them. The mouth is the seat of one class of emotions, as the eyes are of another; or, rather it expresses the same emotions, but in greater detail, and with a more irrepressible tendency to be in motion. It is the region of smiles and dimples, and of a trembling tenderness; of a sharp sorrow, or a full breathing joy; of candor, of reserve, of anxious care, or liberal sympathy. The mouth, out of its many sensibilities, may be fancied throwing up one great expression into the eye—as many lights in a city reflect a broad luster into the heavens. —Leigh Hunt.

NEW YORK, JUNE, 1877.

#### A SUCCESSION OF FLOWERS.

I am no advocate for an indiscriminate planting of flowers. A few well cared for and set out with an intelligent idea of their requirements, will give far more satisfactory results than a host set out for the sake of having everything that Mrs. Grundy has, and a little more.

The plants with which we beautify our grounds require as great diversity of soil and care as do the cereals that our farmers raise. No wise farmer would think of raising Indian corn on ground that was only fit for a crop of white beans, or vice versa. Just so with our Geraniums and Roses. While the former do well in a clay soil and partial shade, the latter require a deep, rich soil and full sunshine. The same holds true with regard to our window-pets. It is folly to expect Begonias, Bouvardias, Heliotrope, or Coleus to thrive in temperature that suits best Azaleas, Camellias, Geraniums, etc. The former requiring a night temperature of from sixty to seventy degrees and a day temperature of from ten to twenty degrees higher, while the latter will do well with a night temperature of from forty to fifty degrees, with a correspondingly high day temperature.

By a proper selection, and in a moderate season, we may enjoy a succession of bloom in the open air from the first of March until the first of December. Our earliest floral treasures are the Snowdrops, Crocuses, and sweet-scented Violets, soon followed by Tulips, Hyacinths and Lilies of the Valley. Before these are ready for their season of rest, we have the Pyrus Japonica, or Japan Quince, Lilacs, Deutzias, Weigelia-roseas, Spireas in variety, and the old-fashioned, but never-to-be-despised Snowball.

By the time the glory of these has departed, our annual Roses should be opening. Then we have ten days or two weeks of beauty and fragrance, provided we have been able to circumvent the slugs which in years past have been so destructive to the queen of flowers.

Dusting the bushes, when wet with dew, with white

hellebore, plaster, or wood ashes, are said to be infallible remedies.

For those desiring the hybrid perpetuals, the following list is recommended as the best one dozen, by four of our prominent florists: Gen. Washington, Caroline de Sansal, La Reine, John Hopper, Victor Verdier, Gen. Jacqueminot, Baron Prevost, Annie de Diesbach, Mad. Alfred de Roquemonte, Triomphe de l'Expositione and Sidonie. But to my mind, nothing can excel the ever-blooming Roses. They are exquisite in form, color and perfume. In our climate it is hardly safe to winter them without some protection, but one is amply repaid for the slight trouble. I would recommend the following dozen: Hermosa, Bon Silene, Malmaison, Safrano, Isabella Sprunt, Agrippina, Bella, Duchess de Brabant, Devonensis, Louis Philippe, Sanquinea, and Woodland Margaret.

For bedding plants, none make a finer display than Jessamines. Probably the scarlet gives the best satisfaction of any other; but in the great variety offered by our florists, and the ease with which they may be propagated, we need only limit the number by the size of the bed.

Then we have Verbenas in countless variety, every shade and marking, except the coveted yellow, and that, I suppose, is only desirable because it is unattainable. Of course, we cannot spare the Heliotrope and Mignonette, so lovely in their modest bearing and delightful fragrance.

For those that wish a larger collection, there are the Pink, Carnation, and China Pansies, Ten-week-stock, Nasturtiums, Asters, Petunias, Phlox Drummondii, Salvias, and Chrysanthemums. Our list would not be complete without some permanent vines. Clematis and Wistaria are both beautiful climbers. Then there are the Honeysuckles; the coral and sweet scented varieties; these with a few running Roses, such as Queen of the Prairie, Baltimore Belle, Multiflora, should be enough to satisfy the most avaricious.

There is another family of vines that I cannot forbear mentioning, although they are not ornamental as bloomers. I refer to the Ampelopsis. First we have Ampelopsis Quinquifolia, or five-leaved Ivy, also called Virginia Creeper. This, in common with the poison vine, or three-leaved Ivy, grows in our woods and by the wayside, and is never more beautiful than in the fall, when its foliage is a brilliant scarlet. Ampelopsis Veitchii is a miniature variety. The young growth during the summer is a dark purple, and changes in the fall to the brightest tints of scarlet, crimson and orange.

Ampelopsis tri-color is a rapid grower, and the young leaves are beautifully variegated with pink, white and green. There is nothing more desirable for covering unsightly buildings, rock-work, old trees, etc., and these vines, unlike our English ivies, have the merit of being quite hardy.

MRS. E. G. BONHAM.

#### HARDY PLANTS AND VINES.

I will tell you first of the Pansy, as that is a favorite flower of mine, and I have been very successful in its cultivation. These lovely and popular flowers are the true Violets, they all being descended from the well known Heartsease, which is known as Viola tri-color. The Heartsease will grow by itself, and care for itself, increase by self-sown seed, and bloom from January until December in sheltered situations. Not so its high-born relative, the Pansy. Its culture is very difficult, unless you pursue the proper mode of treatment.

As I have succeeded so well, let me tell you my method. A year ago last spring, I thought I would make an effort to have a nice bed of Pansies. I procured a paper of mixed seeds and planted them in the house in pots; in March they came up beautifully, grew well, and by the time the ground was ready to receive them they were fit to be transplanted. I set them out where the house shaded them in the afternoon, as they will not bear constant sunshine, neither will they grow under the shade of trees. I watered them every evening, and by the first of July they were blooming beautifully, and in great variety; and often when weary with the cares of life, how they delighted my heart as I gazed upon their beautiful upturned faces, some of them looking so saucy and others so modest, and all so grateful and lovely, (I suppose you all know the Pansy has expression). Well, they bloomed and ripened seeds until I had enough for myself and friends.

When cold weather came the question was, What shall I do to preserve them in their beauty? How cruel to let Jack Frost nip them, they looked so intelligent and so much as if they would like to be cared for. And as I had often tried to preserve them by covering them with leaves and boards, and failed, I thought I would try another plan, and give them a cold frame. So I hunted up some boards, got out my saw, and a window-sash that had been left when we were changing some windows, sawed my boards the proper length and width, nailed them together at the corners, placed the frame over the bed higher at one end than the other, banked the earth well around it, laid on my sash, and had as nice a cold frame as any person could wish, with very little trouble and no expense.

In very severe weather, I threw some old carpet over it and let it alone for the winter. I continued to gather flowers all the early part of the winter, and on New Year's Day made some lovely button-hole bouquets for friends. As soon as the heavy frosts were over in the spring, I removed the glass, and what a glorious bed of flowers I had. People came from all parts of the town to see them, and the Pansy fever raged; all wanted seed, and I gave until the supply was exhausted. I pulled hundreds of flowers some days, and still there was plenty left. And so they bloomed on, until late in the summer they showed signs of exhaustion; then I took my seedlings and fixed up another bed, and in the middle of November, I had my glass on, and expected a repetition of last year's profusion. I have been very particular in regard to details, so that no one need fail. And if this article will induce any lover of flowers to go and do likewise, I will be amply repaid.

And now let me tell you about a vine that is so beautiful that everybody should have it. Cissus Quinquifolia variegata; it is very rare; I have never seen it offered in but one catalogue. It is perfectly hardy in the latitude of West Virginia, Pennsylvania, and Ohio. The leaf is something like a grape leaf, but much more delicate, and beautifully marbled with white. The blossom is insignificant, but the berries are the crowning beauty, the clusters of which are red, blue, and green, all on one bunch, and looking as if they were varnished, and they remain so all the season, and when flowers are scarce, they are a splendid substitute, with which to ornament the parlor or dining-room.

WEST VIRGINIA.

**The Home of Washington.**—Subscribers wishing for this splendid steel-plate Engraving, will take special notice that the limit of our offer to them expires with July 1st. This is far the finest premium we have ever offered, and the certificate for it which we published in March is very valuable. It is well worth \$25.

CAUGHT IN THE ACT.

## Household Enjoynments.

## OLD AND NEW.

About two years ago, soon after my young friends Adolphus and Dulciphina were married, and had set up their household gods in a cottage on Willow Avenue, I recollect making them a visit. Being a friend as well as a distant relative—unfortunately the terms are not synonymous—the bride so kindly pressed me to remain, that an intended morning call was lengthened to an all-day's stay, which included, as a matter of course, a thorough inspection of the new home.

It was pretty, elegant even, overflowing with all of the comforts and many of the luxuries of life, and abounded, as usual, with all the dainty knick-knacks that modern young ladies construct so skillfully; besides there were books, plants, and pictures; not in profusion, but in sufficient number to indicate the tastes of the occupants. A new, nicely furnished and convenient modern house has a great charm for me before the tins lose their shininess and the coal gets low in the bin, and, in short, the saw-dust filling of life crops out everywhere. But after dinner, as we sat in the parlor, a doubt crept into my mind, and I said to my pretty hostess:

"Dulcie, I want to ask you a very impertinent question?"

"Oh, you careful soul!" she exclaimed, laughing, "I only wish you would—a dozen of them; but I haven't the slightest hope of it. Nothing of that sort will ever proceed out of your mouth. What is it?"

"Have you any bed-quilts?"

Dulcie lay back in her easy-chair and laughed till the tears came.

"I knew that was it," she said, "I felt a presentiment of it all the time. No, Cousin Hesah, my bed-quilts are not anywhere just now; and why should they be? I don't want them;" and she recommenced rocking in a slightly defiant manner.

"I think you will," I said, meekly, (for I well knew the modern prejudice against tearing calico in pieces to sew it together again), "and I am sure you will be of my opinion before the year is out. Quilts are far better than your heavy comfortables for summer, not as easily soiled as spreads, and, to my taste, quite as pretty."

Here Dulcie began to laugh again.

"I am so sorry, Cousin, that I haven't a rising sun or a blazing star in the house; I must commence at once, I see, on an elegant log-cabin, like the one that nearly ruined my best hat at the last fair, if I expect you to visit me often."

"I did not mean to defend such inanities," I commenced—but just then visitors were announced, and the subject was dropped.

Early the next summer I received the following note, which explains itself:

No. 9 Willow Avenue, June, 2, 1875.

Dear Cousin Hesah:

If you can look in upon me some day this week I shall be very glad. I am suffering from that contagious but not dangerous disease, the bed-quilt mania, and entreat you to fly to my relief.

Distractedly, yours,

DULCIPHINA SMITH.

Half an hour afterward, I rang the bell at No. 9, but before the maid could show me into the parlor, Dulcie appeared at the top of the stairs.

"Come up here," said she; "I am quite unable to

leave my room except to call people into it," and, upon following her in, I did not wonder. Upon the floor and bed lay five discarded summer suits in almost their pristine freshness, each perfectly lovely once, but hideous now, according to the decree of fashion: a buff linen lawn, a white pique, and three cambrics; a gaily-flowered Dolly Varden, a blue spotted with white, and a green and white striped one.

"What am I to do with them?" said poor Dulcie; "I can't make them over, for no two will go together, nor wear them mornings, for they are unsuitable. If I attempt to bestow them upon the poor, they will be sure to object to the style, and I have about concluded to make a bed-quilt or two, and finish off by inviting all my friends to an old-style quilting, with pumpkin pie and cheese for refreshments. What do you say to it?"

"Capital," said I. "Where shall we begin?"

After much deliberation, we decided upon a "sash-work" quilt of the green striped cambric and the pique, and a star pattern of the buff and blue dresses—buff stars upon a blue ground. For the sash-work we cut the white cloth into blocks eight inches square; there were some half-blocks to come at the sides, and four quarter-blocks for the corners. The green stripes were about an inch and a half wide.

Commencing with a quarter section, I basted a green strip across the straight edge and cut their ends slanting outward. Dulcie stitched this across on the machine, while I took a half-block of white, basted a strip of green across the perpendicular edge, then joined a plain white block to the green, another green strip to the white block, and finished with another half-block of white. When Dulcie had sewed these seams, I joined the row to the corner and they were stitched together.

We went on in this way till the side of the quilt measured eight feet in length, and then we finished the middle row, running from corner to corner, with a quarter-block at each end, and in each succeeding row left out one white block till we, as Dulcie said, "narrowed it off." When we had finished, there were quite enough of the green stripes left for two more quilts. Dulcie bestowed part of them upon an admiring lady friend who dropped in while we were at work one morning,—it is my private opinion that she put them in the rag-bag on reaching home, but I never expect to know,—and laid the remainder aside to go with the Dolly Varden.

Dulcie was a little dubious about the buff and blue.

"I know," she said, "it will be patriotic and Revolutionary, and very much like the flag of our country forever, but it's too much to expect it to be pretty, too; besides I don't want it to give my guests the nightmare and have them celebrating the Fourth of July in their dreams."

But as there appeared to be nothing else to do, she was finally persuaded to set about it, though regarding the task a little unkindly. When done, she acknowledged it to be quite pretty. The buff stars were eight-pointed, made of four double, diamond-shaped pieces, and around each we put alternate squares and half-squares of blue, thus making a square block; these were joined to each other by plain blocks of the blue. There were about fifty of the star-blocks in the quilt when completed.

After both were finished, we held a council of war, at which Adolphus was permitted to assist, and it was decided that the quilting should come off on the Fourth of July. Thirty invitations or more, printed upon brown paper in ye olden style, were duly sent out, and the thirty expert needlewomen who received them re-

turned immediate acceptances; about the same number of gentlemen who were bidden to the "frolic" in the evening, responded "aye" to a man.

The eventful day—a cool one, fortunately—beheld the front and back parlor cleared for action, each containing a quilt, stretched, however, upon such patent frames as our grandmothers—unfortunate souls!—never dreamed of; and at two P. M., precisely, eight maids and matrons, in costumes suited to the occasion, took their seats at each. Martha Washington, I am happy to say, worked with a royal will; one or two more made their appearance presently, and seemed willing to do likewise, as did Abigail Adams, Mrs. Knox, and many others whom we read of. We were greatly entertained by Mistress Dorothy Dudley, who performed Washington's March with much grace and spirit upon an ancient spinnet, borrowed for the occasion from a music store; and a dulcimer, on which Adolphus' great aunt Keziah had made melody in the days of her youth, was vigorously thumped by nearly all the quilters in succession.

After an hour's steady work, the first set of quilters were relieved and bidden to amuse themselves with games of croquet, etc. while others took their places. So well did this plan work, that by seven o'clock, the hour at which the gentlemen were to appear, the ladies were at liberty, and the two quilts neatly folded and laid away.

At about eight o'clock Samuel Adams, who had been hovering around most of the afternoon, led the way to the dining-room, where a "goodlie collation" was set forth. I fear the domine's grace before meat was of modern length, but it suited well the sharp appetites of the hungry quilters. As the tea was passed in tiny, ancient cups, I overheard Mrs. Abigail A—remark to her nearest neighbor, that a rare packet of it, sent by husband from Philadelphia as a present to herself, had been mistakenly appropriated by Mrs. Samuel, but, as it was all in the family, she should never mention it; no, indeed!

Time would fail me to tell of all the good things set before the company. Pumpkin pies had been found a possibility, as Adolphus had discovered at a farm-house a few miles off a supply of that useful vegetable, dried.

Lemonade and coffee, doughnuts and cheese, election cake, boiled ham, yellow pickles, sandwiches of brown bread spread with butter and honey—does not one cry enough! just to read of them? And afterward? There were old-time games, a few worldly songs, and a reel or two, walked through in the manner supposed to have been *en regle* at the Republican Court to music supplied by a very squeaky fife.

At ten o'clock the domine and his lady took a ceremonious leave, and the remainder of the guests soon followed, the gentlemen all declaring that somebody ought to have a quilting every year, but for some reason the ladies did not echo the sentiment as strongly as they might.

HESAH BROWN.

CANARIES.—Make just half the fuss directed in the bird-book over the matter, and you will have, doubtless, better success in raising birds. Never give them sugar, but all the red pepper they will eat. It is the best thing for them. And if your bird feels hoarse at any time, put a piece of fat salt pork in the cage, and see how the little fellow will enjoy it. Give him flaxseed once in a while, and if he appears dumpy, occasionally give a diet of bread and water, with red pepper sprinkled in.

## Household Art.

## MY SLEEPING-ROOM.

My sleeping-room has received so many compliments, and so many have asked me how I made the many fancy articles which add so much to the beauty of a room, and which find a prominent place in the room in question, that I will endeavor to describe it in order that the readers of the CABINET may have the benefit of the description.

Blue and white are the predominating colors, but it may be copied in blue and drab, or any colors desired. I bought some turquoise blue paper and papered the wall two and one-half feet above the mop-board; separated it into panels, with strips of white satin paper one and one-half inches wide; I raised the bands with papier-mache, rounding with the finger. I then procured some embossed designs of flowers, pure white, and pasted them on the centre of each panel, raising as the bands. I had the wall above the panels tinted with blue, finished with border of blue and white, the panels being furnished with silver mouldings.

My carpet is blue and white. I made curtains of white Swiss, taking two widths for each window, trimming with fluted ruffle; over these I have curtains of blue brocade. I made lambrequins by cutting a strip of the muslin fifteen inches wide, trimming with fluted ruffle; then I cut a strip of the brocade, the same width, cut in points three inches deep, fastened this over the white and finished with moulding. I fastened the curtains back with fastenings made to match the lambrequins. I fastened my curtains together about fifteen inches from the top, pinned on a small chromo, framed with a wreath of white leaves made by cutting them from white velvet in the shape of ivy leaves. I then cut leaves the same shape from crown muslin, stiffening them with gum arabic; I pasted them to the under side of the other leaves, at the same time fastening a wire through the centre; fastened them to a large wire wound with velvet, brushed the leaves lightly with liquid gum and dusted with glass-dust.

I made a little stand, two and one-half feet high; covered the top with blue cambric, then with white muslin trimmed with fluted ruffle; the sides I covered with blue cambric, then with gathered muslin. I have hangings of white Swiss, fastened above the glass, and one either side of the stand. Under the glass I have a bracket made serviceable as a comb-case; it is made of perforated paper, worked with blue worsted and silver paper placed underneath; half the pasteboard cover is made to lift up; the whole cover is concealed by a mossinot of blue and white: the top and sides are trimmed with silvered bugles. On either side the glass I have a match receiver, one for used and the other for unused matches. These I made by cutting petals from blue and white velvet like those of a lily; brushed the wrong side of them with gum arabic; fastened together, using white petals for the inside and blue for the outside. For toilet set mats, I cut rounds of blue velvet two inches larger than the bottles, cut the edges in points; made wreaths, as directed above, just large enough to allow the bottles to stand inside and fastened them to the mats. Made a pine cushion of blue silk, put a side-plaited ruffle around the sides, and finished the top with white leaves, made same as before, with exception of the glass-dust.

My handkerchief box I made by cutting two squares, for top and bottom, of pasteboard, also strips for the sides two inches wide; the inside I covered first with

a layer of cotton batting, then with white silk quilted with blue; the outside I covered with blue velvet trimmed with a wreath of white leaves, shaped like maple. My glove-box is made to correspond with handkerchief-box. For hair-pin box I cut a large maple leaf from blue velvet, stiffening it the same as white leaves, brushed it lightly with liquid gum, and dusted it with glass-dust; I also fastened a small pasteboard box to the back of it; this makes a very pretty ornament, as the leaf lying carelessly on the side completely hides the box.

I made a washstand the same height as toilet stand, covered the sides with blue cambric gathered under white Swiss, left open through the centre, the opening being hidden by ruffles. The space under the stand will be found very convenient. The top is covered with white oilcloth, the edge cut in points; a star cut out of each point and blue cambric pasted underneath; for splash cloth I took a square of oilcloth pinked around the edge; covered this with paper, excepting two inches for border and an oval space in the centre in which was placed a group of ferns, spattered with blue-ink and removed the paper. I made mats to correspond for soap-dish, bowl, etc. I also made two barrel chairs. I need not give full directions for those, as they have probably been given many times; one is upholstered with blue, the other with white over blue cambric; made footstools to match. Also a tidy for blue chair of white canvas; worked a wreath of three shades of blue; worked around the edge and fringed out; tidies for the arms to match; and a tidy for the white chair of blue worsted.

I made my pillow-shams of Lonsdale cambric, trimmed with fluted ruffle; cut a piece of bobbinet fourteen inches long by seven wide, darned it with linen floss, and inserted it in the centre of the shams; darned a strip two and a half inches wide, which I inserted in the shams two inches from centre piece; placed blue cambric under the bobbinet, with sheet-shams to match.

Owing to the limited space, I must omit the description of the remaining furniture, pictures, etc., which complete the arrangement of my room.

MRS. NELL C. UPHAM.

## AN OLD-FASHIONED ROOM MADE BEAUTIFUL.

I want to tell the readers of the CABINET how to make even an old-fashioned room pleasant; yes, I might say almost beautiful. I am a reader of the CABINET, and as I glance over some of the titles, I see in many, "How to Make Our Homes Pleasant."

I am one of the rather unfortunate ones, as far as Johns and Isaacs are concerned, having neither one nor the other. I also live in one of those old-fashioned houses, so what I write about will be from experience.

I do not remember seeing anything about making straw brackets. I have just finished one, and those that see it say it is beautiful. Take two pieces of pasteboard six inches broad at the top and tapering to a point, for the sides, (this is for a corner) and sew them together at the back, then take another piece for the top, or shelf, five inches long in front or for face; then sew on straws lengthwise, letting them come below the foundation; after covering with straw, brush them over with black-walnut stain and varnish. It looks like ornamental carved work.

We have two south windows filled with flowers, and they are things of beauty. I think you would laugh to see the dishes and pots that hold them, that is, if you saw them as they were originally. They

are what used to be meat cans, neatly painted, and perhaps a picture now and then to brighten them. When I have tinfoil, I paste that on my rusty dishes and immediately they are transformed into silver ones. I had a plant given me one day, but could not find an empty dish to put it in. I searched for a long time, and found nothing but an old coffee pot.

"Oh, dear!" says sister Nettie, "do for pity's sake find something better than that."

But I already had an idea ("a bright idee," as grandpa says). I took the pot—a tin one—made some holes in the bottom, filled it with earth, and then began work in earnest. I painted it drab, with a rim or edge of red; but still there was the spout to be seen sticking out on one side. It did not look right, so putting a small tunnel in the spout, I filled that with earth, and painted it to correspond; then taking an old tin cup, I wired that to the handle and finished with the others. I planted ivy and yellow myrtle in the small dishes and a scarlet geranium in the centre. I have never been ashamed of my novel arrangement in regard to that dish.

But I want to tell you how I treat my ivy. I had one last winter that ran seventy-two feet, which I looped or festooned all around the room. I take hen manure, sand, and good rich earth in equal parts, mix thoroughly. I think there is nothing better.

But I will return to my subject. Did any of my readers ever make husk-mats? I have made two. Take the inner husks of Indian corn, then with a common table fork split the stiff ends as finely as convenient; then braid, leaving the fringed edge out about two inches to form a soft-looking surface. I colored mine blue and red, dipping the ends in dyes made as for ribbons, etc. I used aniline dyes. I have also made a hanging-basket of husks. I think it is quite equal to the phantom-basket. I have in my mind a pretty picture frame made from them. I have not made it yet, but think I can. I have been making some pretty frames of straw which I colored at the same time.

I hope you have all tried the barrel chairs. I think every one ought to make one at least. I often read of some one that has made this thing, and that thing, but such almost always have a John to do the carpentering. Now, I have to do all this myself. I have learned to saw by a mark, and get it straight, too. I have been making a table from a wooden box in the garret. I have not had it on exhibition yet; but think I will for the benefit of the readers of the CABINET. I had a cunning little bracket given me to hold a vase of grasses. I prized my gift, but had no ornamental vase to put there. I did not have a chance to get one, so I had to make one. I took some pasteboard, wet it with warm water, and pressed it on to the sides of a wine glass, that is, so the sides would just meet nicely, and left them to dry. After this was perfectly dry, I covered it with tinfoil and made the standard stiff by pressing some putty on the inside. I have never been ashamed of it, although placed in a room with things of more value. When this is filled with pressed maple leaves, with a few stalks of oats and grass, I think you would say it was pretty enough for anyone.

I found some green moss in a kind of spring or shallow well. I spread it on paper and dried it, and it has kept its color for a whole year. I used mine for a mat for a fern basket. I took common shavings from pine or cedar and braided: then formed into a basket and sewed it.

I hope the readers of this paper will try these things. Homely though they may seem, I am sure they will be fully repaid.

AUNT SUE.

## Household Elegancies.

## GARDEN WORK-BASKET.

This square basket of white wicker-work, provided with two handles, a cover, and a loop for closing the latter, is seven inches high, eleven and a half inches long, and seven inches wide. Unbleached percale in two shades is used for the trimming. The outer decoration consists of two flounces, respectively two and one-fifth and four and one-fifth inches deep, scalloped at the bottom and edged with white tatting. The flounces would look equally pretty embroidered with button-hole stitch in black or white. The cover, which is provided in the centre with a pin-cushion four and four-fifths inches long and two inches wide, is decorated with ruchings two inches wide, of two shades of percale, scalloped on each side. The two handles are affixed beneath a bow of percale. Line the inside of the basket smoothly with percale, and fasten at each corner a long strip of muslin finished with a gimp at the top, thus providing the basket with four pockets. Affix to the cover, which is one inch thick, a piece of card-board of the same size, covered with percale, and provided with straps of muslin, and cord (as plainly shown in the engraving) for the reception of scissors, fan, thimble, cotton, etc.

GARDEN WORK-BASKET.

## FOOT-STOOL OF PLUSH EMBROIDERY, WITH WOODEN FRAME.

Materials, a piece of canvas seventeen inches square, double zephyr in four shades of cherry color, card-board, twisted fringe, etc. This sort of embroidery is very practical, as neither brushing nor pressure will hurt its appearance. According to the following directions and the clear illustration, it is very easily comprehended. The frame consists of four boards, each four inches high and about fourteen inches long.

EMBROIDERED FOOT-STOOL.

Of course it may be made larger or smaller, but then the embroidery must be arranged to correspond. The engraving represents a part of the embroidery full size; the letters *a*, *b*, *c*, *d*, indicate the gradual manner in which each stripe is worked; four of these stripes, each worked of one shade, constitute a square. Our model consists of twenty-five such squares. Various colors may be taken instead of different shades of one color; it is best to choose them to harmonize with the furniture of the room.

Although the work is executed of double zephyr, the canvas taken must not be any coarser than represented in the engraving; it is even better to take it a little finer. The closer the threads of worsted adjoin each other, the more beautiful and durable is the em-

broidery. Each stripe is worked over six squares of the canvas. Begin in the centre of the stripe and work a row of twelve cross-stitches, each stitch passing over two squares of canvas; a thread of worsted is inserted beneath the cross-stitches. The manner in which this is done is clearly shown in the engraving at the letter *a*. A strip of card-board, cut as wide as four squares of canvas, is placed over the row of cross-stitches, and over this another row of cross-stitches is worked as shown at the letter *b*. This is succeeded by still another row, worked over the full width of the stripe, as indicated at the letter *c*. Letter *d* represents a completed stripe, and the manner in which it is cut open, the scissors passing beneath the stitches, close to the card-board, which is then removed. The three remaining stripes of the square are worked in the same manner, each of one shade. The engraving clearly represents the arrangement of the various squares. However, the stripes must not be cut open until the whole embroidery is completed, as otherwise the open threads would be very much in the way, as also liable to be mussed by the constant turning of the work, which is unavoidable while in process of construction.

When cut open, hold the work over hot, steaming water, which will cause the open threads of worsted to join evenly, and give the whole a beautiful finished appearance. The frame, consisting of four boards, is crossed over on one side by wide belting, then covered by white muslin. A cushion is affixed at the top, over which the embroidery is stretched. The stool is finished off all around by a heavy twisted fringe about four inches deep. Tassels may be added at the corners. A loop of cord affixed on the sides is extremely convenient for pulling the stool about.

## LIGHT SCREEN—EMBROIDERY OF BEADS AND CRAPE.

Materials, a piece of green silk sixteen inches long and fourteen two-fifths inches wide, pieces of black crape, black silk soutache, very fine black woolen

cord, round black beads in two sizes, steel, glass, milk-white and chalk-white beads, etc. This screen is a very practical defence against the sunlight as well as the lamp-light. The stand, very simply constructed of brass, may be ordered of any tinker. It is twenty and four-fifths inches high, and thirteen and three-fifths inches wide. The height of the frame is fifteen and one-fifth inches. The embroidery within the frame, worked of crape and beads on a ground of pale-green silk, has a beautiful effect against the light. It is best to work it in a frame. Stretch the silk in a frame, after having drawn the outlines of the design and lined the silk with thin white gauze. The leaves are filled in with chain stitches of white cotton, and then worked of the various colored white beads. Veins, tendrils, and stems are made of steel beads, and the black beads, which are arranged like bunches of grapes, have each two steel beads attached as calyxes. The petals of the flowers are of crape, and very easy to make. Each consists of a square piece of crape, folded over into a triangle and gathered in at the open sides.

For the large rose three sizes of petals are requisite; the largest two inches square; the next, one and three-fifths inches square, and the smallest, one and one-fifth inches square. The smaller roses have but two rows of petals, and for these the largest size is left out. For the blossoms, only the smallest size of petals is used. Standing loops of steel beads, and several large black beads, constitute the centres of the larger flowers; for the small roses, a large black bead, surrounded by a ring of steel beads, suffices. The arabesque border is worked

LIGHT SCREEN.

with black silk soutache, the inner row decorated with steel beads. A large black bead, enclosed by a ring of steel beads, marks each corner; the winding border all around is made of glass beads. Green silk lining covers the stitches on the wrong side. The lining and embroidered part are connected by means of a fine woolen cord.

## Hireside Reading.

### DON'T STAY TOO LATE.

BY AUNT JEMIMA.

One of the advantages of being "about thirty" is that one now and then can put in a word of good, motherly advice to the other sex. So I'll begin at once, and say to any single gentleman reader who chooses to listen—Don't stay too late.

At the store or office? No. You know very well I don't mean that. I am not fighting imaginary dangers, but real ones, I mean simply, don't stay too late when you go to spend a quiet evening with a young lady. It is not fair; it is short-sighted, and it is pretty sure to wear out your welcome. Even if the poor thing is eventually to allow you to stop until death doth part, that is no reason why you should bestow too much of your tediousness upon her at the outset. When she really wishes your visits to be longer, you'll know it; even then be chary of the moments after eleven. At any rate, don't suffer yourself to be misled by the usual commonplace forms of detention that, in nine cases out of ten, arise from a sudden consciousness on the lady's part that she may have been betraying her weariness rather too plainly.

It won't hurt you at all to be longed for after you are gone; but beware of ever causing a girl to give a sigh of relief when the hall door closes after you. There is a sandman for the parlor as well as for the nursery; and after a certain hour, except in special cases, whenever he finds the eyes too well drilled to succumb to his attacks, he sprinkles his sand around the hearth. After that, your best efforts to please are wasted. Every word will grate, every winning attempt be met only with the silicate of emotion.

I know all about it. I've received young gentlemen visitors in my day; yes, and enjoyed receiving them, if ever a girl did. I'd think all day that perhaps John, for instance, might come in the evening; and on these occasions I've come down to tea with a rosebud in my hair, and a happy flutter in my heart. Yes, and I've started at the knock at the front door,

and when at last he came in, smiling and bowing, I've looked just as if I didn't care a single bit. There were others, too—not Johns, by any means, but friends who were always welcome, and whom it was right good and pleasant to see. But that fact did not make null and void all somnific law; it didn't make father and mother willing that the house should be open till midnight; it didn't make it desirable that I should feel a rebuke in everybody's "Good morning!" when, with throbbing head, I came down late to breakfast. No, you may be sure it didn't.

Therefore, I learned soon to honor those who knew that it was time to go when half-past ten came; while those who didn't know were the bane of my existence. Now, never think that these friends stayed from kindness to their weary hostess—not at all. They stayed probably because they had not the taste to go. They

So, dear single gentlemen, whoever and wherever you are, the next time you go out to spend a quiet evening with a lady, remember my words. Young girls are human; they require rest and sleep; they are amenable to the benefits of domestic system and order; they have a precious heritage of strength, health, and good looks to guard.

Don't go too late, and don't go by inches. "Good-bye" is the flower of a welcome. If you wish it to retain its aroma, the fewer leaves it sheds the better.

**Pretty Speeches.**—To be able readily, and without premeditation, to say the right thing is an enviable gift, and may be made a wonderful instrument of conciliation and pacification. Ladies are the fair and proper recipients of pretty speeches. The Duc de Nievernois made an ingenious one to Madame du Barri, who was endeavoring to persuade him to withdraw his opposition to some measure she had set her heart on.

"It is of no use, Monsieur le Duc," she said, "you are only injuring your influence, for the king has made up his mind, and I myself heard him say that he will never change."

"Ah, madame, he was looking at you," replied the duke. Could any but a Frenchman have ever conveyed determined resistance in so polite a form?

There was an ingenious amount of devotion implied in the remark of a love-sick millionaire, when the object of his affections became ecstatic over the beauty of the evening star.

"Oh, do not praise it like that!" he cried, "I cannot get it for you."

It is no wonder that Tom Moore was such a general favorite, if he often said such charming little things as he wrote. We think the very prettiest, quaintest quip ever penned is in one of his love-songs.

"The lesson of sweet enrapturing lore  
I have never forgot, I'll allow;  
I have had it *by rote* very often before,  
But never *by heart* until now."

Irishmen generally do manage to say prettier things than others can. They have a certain confidence or assurance which enables them to blurt out whatever comes uppermost in their minds; that is why they make bulls. A man who is always shooting must miss sometimes.

GRANDPA'S CHAIR.

liked the warm room, perhaps, and dreaded the cold street; but beyond that they lacked the simple grace of taking themselves off promptly and handsomely. Ah! what a gift that is in a man or woman, to know when to go, and knowing it, to stand not upon the order of going, but go at once. I know a few such persons. They radiate peace and restfulness, or they sparkle and scintillate, or they arouse and inspire you, as the case may be.

An hour glides away, then another, and in the midst of another you are conscious only of a gentle "Good-bye" flash and they are gone. Then a hundred things rush upon you—you wish you had asked them this, or told them that; you think how pleasant it was to meet them, and you long to see them again.

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

BY MRS. J. J. RANDALL.

**Hop Yeast—Self-Working.**—Boil two ounces of hops in four quarts of water for thirty minutes; strain it, and let the liquor cool down to new milk warmth, then put in a small handful of salt, and one-half pound of sugar; beat up one pound of the best flour with some of the liquor, then mix all well together. The third day, add three pounds of potatoes, boiled and then mashed; let it stand till the next day; then strain and put it into bottles, and it is ready for use. It must be stirred frequently while making and kept near the fire. Before using shake the bottle well. It will keep in a cool place for two months, and grows better with age.

**India Pickles.**—One oz. West India pepper, one oz. black Spanish pepper, two oz. white pepper, four oz. allspice, four oz. ginger root, four oz. cayenne, and one pound best English Mustard.

**Recipe for Making Six Gallons of Pickles.**—First cure vegetables in brine about three weeks, cauliflower, small onions and cucumbers; when cured take them out of brine and place in crocks. Boil all of the spices except mustard, in two gallons of vinegar for thirty minutes; mix the mustard in a little cold vinegar and put it in with the boiling vinegar; then pour over the vegetables while hot. The spices should be tied in a small bag before putting in the vinegar, and if you have several crocks they should be divided equally and tied in as many bags, and when boiled a sack left in each crock; use best cider vinegar if you can get it.

**Neapolitan Cake.—Black Cake.**—One cup butter, two cups brown sugar, one cup molasses, one cup strong coffee, four and a half cups sifted flour, four eggs, two teaspoonfuls of soda, two of cinnamon, two of cloves, one of mace, one pound raisins, one pound currants, and quarter pound citron. **White Cake.**—One cup butter, four cups white sugar, two cups sweet milk, two cups cornstarch mixed with four and a half cups sifted flour, whites of eight eggs, two tablespoonfuls of baking powder, one half teaspoonful extract of bitter almonds. Bake the cakes in round pans with straight edges; the loaves should be one and a half inches in thickness; after baking, when the cake is all cold, each black loaf should be spread with a thick coating of lemon and sugar made as follows: the white of one egg thoroughly beaten, the grated rind of two and the juice of three lemons, and powdered sugar enough to make a thick frosting, then lay a white loaf on each black one, and frost as you would any other one.

**Spiced Currants.**—One peck of currants carefully picked over; not necessary to strip from the stems. Heat them and strain through a sieve, so as to get juice and pulp; scald the pulp just long enough for the scum to rise; add equal quantities of sugar. Two tablespoonfuls of ground cinnamon; two of ground cloves tied in a muslin bag; four lemons sliced thin and the seeds taken out; boil until reduced one-third; boil slowly; then add two pounds of raisins stoned and stewed tender in a very little water; let it cook a few minutes longer; bottle and seal tight.

**Blueberry Cake.**—Two cups sugar, one cup sour cream, three eggs, four and a half cups sifted flour, one teaspoonful of soda, half cup melted butter stirred in the last thing; dredge one pint of blueberries with flour; stir in carefully to prevent them from breaking. It can be made of all cream and no butter; or all milk and a half cup of butter. Bake in shallow tins to be eaten warm for breakfast or tea. It is also a good dessert eaten with cream and sugar.

**Boiled Icing.**—Two-thirds of a cup of granulated sugar; two tablespoonfuls of water. Boil until the syrup begins to thicken or hair a little; while hot beat in the white of an egg beaten to a stiff froth.

**Doughnuts.**—One cup sugar, one tablespoonful butter, two eggs, one cup sweet milk, one-fourth of a nutmeg, one quart of flour, one tablespoonful of baking powder. Stir the butter and sugar together; beat

the whites and the yolk separately, and add to the butter and sugar; then stir in the milk. Sift the flour and baking powder together, and stir the other ingredients into the flour. Take out on kneading-board; roll out and cut into rounds; make a small hole in the centre of each; let them lie about fifteen minutes and fry in hot lard.

**Baked Beans—Without Pork.**—Pick over one pint of small white beans and parboil, then turn off the water, and pour boiling water over them; let them steam very slowly on top of the stove all the afternoon; then put in the baking dish—iron is best—and season with pepper and salt, a tablespoonful of syrup and a lump of butter as large as an egg; pour on just enough water to float them, and bake an hour or two; then finish baking them in the morning.

**Graham Pudding.**—One and a half cups sifted graham flour, half cup molasses, quarter cup butter, half cup sour milk, one egg, half cup raisins, half cup currants, one teaspoonful soda, spiced to taste: steam in a buttered pudding mould two and a half hours.

**Corn Starch Cookies.**—One half pound sugar, half a pound corn starch, a little less than half a pound butter, one cup sweet milk, one teaspoonful of baking powder, one of essence of lemon.

**Stewed Pigeons and Cabbage.**—Prepare pigeons for stewing, and put on just enough water to cook them tender. When the water has all boiled away add a large piece of butter, and let them brown a few minutes; have some cabbage shaved fine to lay under the pigeons after they are browned, and pour on just enough water to cook it. When done, add a cup of cream, and season; boil up once and serve. Veal stew is good cooked in the same way.

**Roast Goose.**—After cleaning rub thoroughly with soda and pour boiling water over it. It takes away any strong taste or smell of goose, and renders it more tender. For the dressing, butter slices of bread and season with salt and pepper; beat up one egg, pour in a little milk, and moisten the bread. Season the goose inside and out, stuff and lay in a baking pan with a little water. When it begins to bake baste very often, first with butter, afterwards with the drippings in the pan.

**Lemon Pie.**—The juice and grated rind of one lemon, one cup sugar, one cup boiling water, one teaspoonful butter, one teaspoonful corn starch, and one egg; stir the butter and sugar together; beat in the yolk of the egg, wet the corn starch with a very little cold water, and then pour on a cup of boiling water and add to the other ingredients. Cook over a kettle of boiling water; make a nice pie-crust and bake. When both are cold put together and frost with the white of an egg and two tablespoonfuls of sugar. Place in the oven a few moments after the frosting is on.

**Pudding Sauce.**—One-half pint syrup, juice of two lemons; simmer fifteen minutes; add half of a grated nutmeg and half of a cup butter; stir smooth.

**German Bread.**—One pint of milk, one cup sugar, two tablespoonfuls butter; two-thirds cup yeast; make a rising with the milk, yeast, and a little flour; when light, add the sugar, butter, and flour, enough to make a soft dough. Flour the paste-board well; roll out half an inch thick, put into pans and spread a little butter over the top. Sift over the whole one tablespoonful of sugar, one tablespoonful of cinnamon. Let it stand for a second rising, and when perfectly light, bake in a quick oven. To be eaten with coffee.

**To Cook Eggs.**—Put in a pail, pour boiling water over them and cover; let them stand where they will keep hot, but not boil, for fifteen minutes. They have a rich, creamy taste which cannot be obtained by cooking any other way.

**Lemon Snaps.**—One large cup sugar, three-fourths cup butter, two eggs, two teaspoonfuls of hot water, half a teaspoonful soda. The juice and grated rind of one lemon: flour to make stiff enough to roll. Roll very thin, cut in shape, and bake in a moderately hot oven.

**Potatoe Balls.**—Mash potatoes in the usual way, make into balls, and dip in beaten egg; lay on a buttered plate and brown in a hot oven. They cook nicely laid around roast beef.

**Cream Cakes.**—One cup sugar, four eggs, one large cup flour; beat the sugar and yolks together until very light; add the beaten whites and the flour; stir all together for fifteen minutes. Try them dropped on buttered paper, if they do not run; bake a light brown. If not stiff enough, add a little more flour; scrape out a little of the inside of each cake, and fill with whipped cream; then put the two flat sides together.

**Cream for the Cakes.**—One pint of cream whipped light, half an oz. of gelatine dissolved in one gill of hot milk, whites of two eggs beaten to a stiff froth, one small teacup of powdered sugar; flavor with lemon; mix the cream, eggs, and sugar together; flavor, and beat in the gelatine and milk last. They should be quite cold before adding.

**Beet and Cabbage Salad.**—Equal quantities of boiled beets and raw cabbage chopped fine; season with salt and pepper.

**Dressing.**—One cup vinegar, half a cup sugar, one tablespoonful butter, two eggs; stir the butter and sugar together, add the beaten eggs, stir in the vinegar, boil one minute and turn over the salad.

**Graham Muffins.**—Two cups sifted graham flour, one cup sifted white flour; rub into the flour a piece of butter the size of an egg; sift in one teaspoonful baking powder, half a cup sugar, one and a half cups sour milk, two eggs, one small teaspoonful soda, dissolved in hot water, add the last thing; bake in iron pans heated smoking hot before you put in the batter.

**Corn Meal Muffins.**—Two cups sifted corn meal, one cup sifted white flour, piece of butter the size of an egg, one teaspoonful baking powder, half a cup sugar, two eggs, one and a half cups sour milk, one small teaspoonful soda, dissolved in hot water, put in the last thing; bake in iron pans.

**Stewed Onions.**—Young onions should always be cooked in this way: cut off the tops and skin them; cook in just water enough to cover them until half done; turn off this water, and add enough hot water to cook them tender; salt the last water; when done drain and put on milk enough to float them when the milk is hot; add a tablespoonful of flour, stirred smooth, seasoned with salt and pepper.

**Stewed Cabbage.**—Chop young cabbage and cook in two waters; when tender, drain and add milk or cream about half a cupful; season, and let stand on back part of stove and stew gently for ten minutes.

**Oyster Soup.**—For one can of oysters use one quart of water, two tablespoonfuls of butter, two tablespoonfuls of rolled crackers, one and a half tablespoonfuls of milk for each person; heat the water and juice of the oysters; when it boils add the oysters, and season with salt, pepper, and butter. When it commences to boil again, count thirty seconds and it is done. Put the milk and crackers in a tureen, and pour the soup over them.

**Baked Tomatoes.**—To two quarts ripe tomatoes (scalded and peeled) take one pint bread crumbs, one tablespoonful butter, and half a pound sugar; put a layer of tomatoes in an earthen dish, or baking-pan, then sprinkle crumbs and sugar, then tomatoes and crumbs alternately till the dish is filled, and bake well.

**Tomatoes for Breakfast.**—Have ready boiling water; throw in the ripe tomatoes; let them remain a few minutes, say five, then remove the skins, and season with butter, pepper and salt. Another way of cooking tomatoes is to slice and fry them (dipped in bread crumbs) like apples.

**Onion Sauce.**—Boil eight large white onions, change the water several times while they are boiling; when done, chop them on a board; to keep them a good color, put them in a sauce-pan with one-fourth pound butter and two tablespoonfuls of rich cream; boil them a little, and serve in a sauce-boat.

**Easy Muffins.**—One quart flour, two teaspoonfuls (level) of soda; one teaspoonful salt, two well-beaten eggs, one tablespoonful butter; mix with butter, milk, or clabber, and bake quick.

**Madame FOY'S  
CORSET SKIRT SUPPORTER**  
Increases in Popularity  
every year.

And for HEALTH, COMFORT,

**Window Gardening.**

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

**RICHLy ILLUSTRATED WITH EXQUISITE ENGRAVINGS.**

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who  
wish to adorn their houses in the easiest  
and most successful manner with plants  
or vines, or flowers. Instructions are  
given as to the best selection of plants for  
Baskets or Ferneries and Warden Cases.  
Several chapters are devoted to Hanging  
Baskets, Climbing Vines, Smilax, and the  
Ivy, for decorative purposes. Bulbs for  
House Culture are fully described; also  
ornamental Plants for Dinner Table  
Decoration. Other topics are well con-  
sidered, such as Balcony Gardens, House  
Top Gardening, Watering Plants, Home  
Conservatories, Fountains, Vases, Flower  
Stands, Soil, Air, Temperature, Propaga-  
tion, Floral Boxes, the Aquarium, Rustic  
Conveniences for Household Ornament,  
and directions in detail for the general  
management of in-door plants for the  
entire year throughout the winter, spring,  
summer and fall. The volume is pro-  
fusely illustrated with choice engravings,  
and pains have been taken to make it one  
of the most attractive books ever issued  
from the American Press. For sale or  
supplied by Bookstores everywhere, or  
sent postpaid by mail on receipt of price.

Price \$1.50.

**Every Woman Her Own Flower  
Gardener.**

By Daisy Eyebright (Mrs. S. O. Johnson.)

A delightful little volume, written by a  
lady fond of flowers, as a special help and  
assistance to others interested in out-door  
flower gardening. Simple directions are  
given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants.  
Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Ever-  
lasting Flowers, Ornamental Grasses, Coleus, Paeonies, Shade Trees, Garden Vegetables, Old  
Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures,  
Watering Soils, When and How to Plant, Dahlias, Lilies, Gladioli, Verbenas, Cannas, Balsams,  
Portulacas, and nearly all the popular varieties of flowers and shrubs. The book contains 148  
pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of  
ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or sup-  
plied by Bookstores everywhere.

Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

# THE LADIES' **Domestic Cabinet**

BY HENRY T. WILLIAMS.

VOL. VI.

NEW YORK, JULY, 1877.

No. 66.

PRICE 12 CENTS.

## FOUNTAINS IN A SPANISH PARK.

About thirty miles to the south of Madrid, the capital of Spain, lies a princely domain surrounding a magnificent country mansion. This is Aranjuez, the summer residence of the King. It was designed and constructed under the directions of Philip the Second,

Triton fountain, which stands in a shady and secluded spot. The arrangement of the water jets and of the bronze and marble sculpture is exceedingly artistic and effective. Broad double avenues of elms traverse the park, leading to the centre; and the walks are lined with box and laurel hedges. The purple buds of the cactus and aloe stand out against the green of

in a common sitting-room. I have one which measures four feet and five inches from top of soil; the largest leaves are four and one-fourth by three and three-eighths inches. Another measures thirty-eight inches, and has been loaded with buds and blossoms since the first of March. I don't know as they are anything unusual, but I never chanced to see as fine specimens

FOUNTAIN IN THE PARK OF THE KING OF SPAIN.

and is reached by a well-constructed road connecting it with the capital, as well as by the Madrid and Alicante railway. The palace of Aranjuez contains many noble works of art; but the chief attraction to natives as well as visitors is the park, with its ornamental gardens and fountains. Our engraving represents the

the rare shrubs; and the air is filled with the fragrance of the orange blossom.

## FUCHSIA.

I want to tell the readers of the CABINET about my Fuchsias, which surpass anything I ever saw grown

grown in one winter in a common room. I have a Begonia that grows finely and looks thrifty, but some of the leaves when about half grown begin to dry at the ends and finally drop. Can you tell me the cause? It has good drainage. It is want of root room?

A SUBSCRIBER.

## Floral Contributions.

## FLOWER-GARDENING FOR COTTAGE HOMES.

The object of this article is to endeavor to assist that woman who is her own flower-gardener, in order that she may be enabled to make the best and longest display of bloom, with the least amount of trouble, or expenditure of time, energy and money. Without any desire to appear hypercritical, I would say that the many illy-planned, badly-planted gardens scattered over our country, may be attributed to the undertaking too much, and the not doing well what is undertaken.

Whether our "piece of pleasure-ground" be park or court-yard, lawn or garden, the most important points are to arrange it judiciously, and secure, by wise planting, a constant display of verdure and bloom. We will suppose there is a three-foot border running around the hedge of flowering-shrubs which gives such a charming finish to the boundary-line; also that one or several ornamental beds are arranged as jardinettes on the grass-plots. Now we may at once secure a vast amount of bloom and the loveliest verdure by utilizing the edges of both beds and borders, and instead of following the example of Mrs. Golden, and ordering costly tile borders, we will form rustic ones, made of mossy stones, white clinkers, bits of rock, stumps and roots, all artistically arranged and filled in with pockets of light, rich soil, and according to the prescribed form of the terra-cotta jardinettes, we will arrange, in place of the prominent receptacles for conspicuous plants, that number of tubs or kegs, covered tastefully with gnarled roots and branches in the usual "rustic" style. Perhaps some may not be acquainted with the jardinet, and I will therefore describe the manner of forming what I term my "cottage jardinet." First measure off upon the turf a circular or other form of bed, as large as desired, and having dug it to the depth of three or four feet, spread over it a foot of old, well-rotted manure, and again dig it thoroughly, mixing in sand or wood ashes, thoroughly leached, if the soil is not light and pliable; this should give a bed raised about two feet above the surface, around which a wall is built, rising a few inches above the surface of the bed, and with the four rustic tubs securely planted among the stones, one on each side, and ends equidistant, allowing them to project above the wall, and extend out a few inches beyond it.

Though there are numerous elegant and attractive edgings for beds and borders, I have never seen one that exceeded this simple one of "rock and root work," after being covered with

## PERMANENT EDGINGS.

To establish attractive borders for our beds, is an important consideration with the "rough-and-ready" gardener, whose time is generally so precious as to be counted by the moments, and to obtain a permanent one that is indeed worthy of attention, the following is the one we will adopt:

Into those pockets and crevices, between the stones and rocks, and in the hollows of stumps, where the nice, light soil has been carefully packed, we will plant all those lovely trailing beauties, which are so dear to the artistic eye of the truly fine in taste; only using care to cover the edge next to a carpet of turf with yellow, white, or deep-colored foliage, while along a bright yellow gravel-walk, silver and gray, or some delicate tints, with rich greens and browns, must be established; here we may use for instance the blue Lobelia, Perilla, Amaranthus (Melancholicus), etc.;

the deep dark tints of which are wondrously effective. I cannot imagine a more chaste, more sparkling, more altogether attractive and classical plant for this purpose, however, than the Ivy, and that prettiest of all Ivies, *Hedera helix marginata* (Silver-leaved Ivy); but the deep green of the *Hedera helix*, and the white and yellow varieties of the variegated Ivies prove equally imposing in proper positions.

For a rich, dense edge of silvery foliage, nothing can excel that treasure *Juniperus Alpina* (Canadian Trailing Juniper), or for a deep rich green, *J. Prostrata*, which by pegging down the shoots, will spread in wide, waving circles, beautiful to behold. These possess, too, the advantage of being evergreens, affording beauty even during winter, while through the summer they may be further beautified by mixing with thin *Sempervivum Californicum*, *Antennaria tomentosa*, *Saxifraga umbrosa* (London Pride), *Sempervivum tectorum*, *Sedum aere*, *S. acre variegata*, and *Stachys lanata*, *Lysimachia nummularia* (Moneywort), *Trostelia orina glauca*, *Tussilago farfara variegata* (Colt's foot), *Vinca major*, *V. minor*, *V. minor variegata*, and *Lonicera brachypoda aurea* (Golden Japan Honey-suckle). Many scores more of lovely creepers might be added, but I give only those which may be relied on, as permanent plants of easiest culture.

Our edgings and borders finished, we fill the four tubs in our jardinet with some imposing plants suited to the season, or establish one of the exquisite dwarf evergreens in each, such as that precious little novelty, the round *Arbor Vitæ*—a chance seedling of peculiar beauty—*Globe Arbor Vitæ*, another treasure of surpassing beauty; the Hedge-hog Juniper, smallest of all conifers, forming a dense ball of glaucous green foliage one foot in diameter. In lieu of these, plunge pot-plants into the soil, commencing with the early Spring bulbs or shrubs, such as the *Deutzia gracilis*, *Spiræa*, etc., etc., vases, baskets, etc.

The center of each jardinet affords a fine position for some prominent adornment, such as a pedestal, made of a section of tree-trunk, or wooden post, covered with rustic work, and surmounted by a vase or basket of corresponding character filled with plants.

No more imposing object can be imagined than a mossy tree trunk, five feet in height, partially covered with some delicate vines, as the *Akebia quinata*, *Adlumia cirrhosa* (Silkvine) or Ivy (all hardy), supporting a rustic basket, made by nailing one or three common peach-baskets on the flat horizontal surface of the trunk, then with pliable wire (taken from discarded broom stumps, perhaps), fastening pieces of crooked, gnarled, and twisted branches over the sides, nailing pieces of mossy bark here and there, and finally twining grape vines around the bottom and across the top in lieu of a handle.

These baskets, grouped as one, present a most tasteful appearance in the early spring, and by sowing seeds of annuals among the bulbs, intermixed with Ivy (which will hang over the sides and twine round the handle), it presents a most attractive appearance, and may be kept in constant bloom throughout the season.

A beautiful effect is given by making a variety of such embellishments, using baskets of different forms, and vases made by covering boxes, pails, and kegs, which will form designs quite artistic in character if carefully manipulated. With a large cheese-box, a good imitation of the Roman vase may be made, that is in form, preserving the rustic character throughout. A Grecian vase, stand on a solid square block of wood (which cover neatly with bark alone), arranging on each face the chaplet of bay leaves, cut four pieces of

mossy bark, and arrange so that the small leaves almost meet at the top, overlapping each other from top to bottom where a knot, made of shavings, tacked firmly on the pedestal, will continue perfect for an entire season. The large projecting handles, extending high above the rim on each side, are best made of curved branches selected with care for the purpose.

Our next step is to stock the borders and beds, so that a continuous bloom is secured, and this I would advise to be effected by means of the "plunging system," so far as bedding plants are concerned, for by raising a good supply of Geraniums, Salvias, Fuchsias, Ageratums, etc., from cuttings, the beds may be kept gay during the entire season; therefore we should first fill our beds with Hyacinths, Tulips, Narcissus, Jonquils, Iris, Crocus, Snow-drops and Dracænas, with the dwarfest of the Evergreens and low-growing, blooming shrubs; then the spring flowers passing away, the summer blooms "take up the pleasing tale," and Asters, Campanulas, Balsams, Clarkias, and a host of other beauties give forth their perfume and display their gorgeous colors beneath the summer sky.

## A CHEAP DISPLAY OF ANNUALS.

Though large sums are expended each year in the purchase of flower seeds, it must be admitted that we but seldom see the flowers raised therefrom turned to the best advantage. To do justice to this class of plants, the soil must be light and rich, that is, the best of them require such food, and will not do their best without it. After finishing our beds and borders as just advised, there will be found much space, among the bulbs and around the little evergreens and shrubs, for many a clump of annuals, and if well selected, a charming display of color will well repay the cost of seed and slight labor of sowing. My first suggestion is, use a few fine varieties, rather than a mixed host of poor kinds; next plant with a view to fine effects and follow the "clumping" system thus: Red clumps, sow Rose of Heaven (*Agrostemma-rosa*), using seed plentifully, *Crimson Candytuft*, *Clarkia Elegans* (*Dianthus Chinensis*), *Indian Pink*, *Taponaria Calabirena*, *Silene pendula*, and *Viscaria oculata*. These will form bright Magenta-colored clumps: White Candytuft, white; *Malcolmia maritima*, white; Sweet Alyssum, white; *Verbena*; *Pyrethrum*, dwarf; *Phlox Drummondii*, white; *Collinsia bicolor*, white; Geraniums, white.

Yellow—*Athanasia anoua*, (for a high central clump); *Bartonia aurea*, *Calendula officinalis superba*; *Erysimum Perofskianum*, (the finest yellow flowering annual known) giving its rich golden orange blooms, all the season (sow seed in March) *Eschscholtzia Californica*, and *Septosiphon aurea*.

Blue—*Campanula carpatia*, *Eutoca viscida*, *Gilia achilleæfolia* and *G. minima cœrulea*; *Kaulfussia omelloides*, *Lupinus subcarnosus*; *Veronica glauca* and *Myosotis*.

For large masses, use Dwarf Tropæolums Anterhinums, and Scarlet Flax (which is a gorgeous plant for our "rough and ready" garden; make a rich spot and sow seed in March in lines; cover lightly and protect until well established, then let alone, and you will have a rich treat that will dazzle you in June;) Peony-flowered Poppy, Sweet Peas, Portulaccas, *Sanvitalia procumbens*, Stocks in variety "dwarf Bouquet" being best, *Viola Cutea* and *V. coruuta*; *Nemophila*, *Abrona*, and Pansies, use as medium clumps.

CALLA.

## Answers to Correspondents.

**Passiflora Cœrulea.**—How can I grow Passiflora Cœrulea? I have one ten years old which has not yet flowered. ABBIE FRENCH.

**Answer.**—Very few of the Passion flowers bloom until they are old; then they seldom fail to give an abundance of flowers. We suppose your plant is out of doors, (for this species is hardly worth growing in a greenhouse, as there are so many finer species which occupy no more room), therefore grow it well in rich soil, with plenty of water, and as soon as the plant has a woody stem it will give you plenty of bloom. Prune in early spring. The flower is on the young growth.

**Growing Mareschal Niel Rose.**—How shall I treat the Mareschal Niel Rose? Mine died last year with my best care. MRS. L. W. F. MANTENE.

**Answer.**—There is no special treatment required. Give a rich soil, well drained, and the plant will soon grow large. This rose to do well should be planted out, as it is too rampant a grower for pot culture. When it attains size it blooms very freely. If budded on a strong stock it blooms more freely than when on its own root.

**Name of Plant. Libonia Floribunda.**—Can you give me the name of the plant which I inclose? It began to bloom about Christmas, and will it continue through the winter? MRS. L. S. PAGE.

Woodstock, McHenry County, Ill.

**Answer.**—It is Libonia Floribunda, a very pretty and free-blooming greenhouse plant. If well grown it covers itself with a profusion of bright yellow and red flowers which last well on the plant, but are not of value as cut flowers as they wither rapidly. Common greenhouse culture is all the plant requires.

**Where to Obtain Mistletoe.**—Can any of your readers inform me where I can get some Mistletoe? At our next "Yule Log" we wish to revive an old-time custom, just to please the young people.

ANNA H. STOREY.

**Answer.**—The true Mistletoe (Viscum) is not a native of America, but about Christmas is often imported from England by florists. The American Mistletoe (Phorodendron) is native south of New Jersey, growing usually on elms and hickories. If you have friends at the south you might obtain this. The berries are white, and we suppose the effect of the "young people" passing under it would be the same and as satisfactory as if you had the true mistletoe.

**Day Lilies in the Parlor.**—Can the Day Lily be grown in pots for the house? I have nice south windows. Please tell me how to treat them, soil, sun, temperature. NELLIE.

Ayer, Mass.

**Answer.**—There are two species of plants commonly called Day Lily, Hemerocallis, with yellow or orange-colored flowers, and Funkia, with white or blue flowers. Both are hardy herbaceous plants. We have seen the light yellow Hemerocallis forced in a greenhouse, and the flowers were quite as fragrant and more delicate than in the garden. We do not remember having seen Funkias forced. We fear under house culture you would not succeed in obtaining early bloom, say April for the Hemerocallis, and May for the Funkia. The culture would be: Pot the roots from the garden in common soil just before the ground freezes up, choosing the round thick crowns; let the

pots stand in a shed or cellar (if they get frozen it will not injure and may benefit them); after January first bring the pots into the room and give all the light and heat possible. Do not give much water until the plants begin to grow, but keep them moist. When growing do not allow them to become dry. If you try the experiment, the CABINET would be pleased with a report.

**Peony Growing.**—Two years since I got some fine Peonies, and though I have done all I could to make them flourish, I cannot get them to bloom. They come up every spring, but soon die down without blooming. Can you tell me what to do?

LELA EASTLAND.

**Answer.**—Your Peonies are in too light a soil. The plants are hard to kill, and will come up year after year, but unless they have a rich soil they do not bloom well. Dig in well rotted manure around your plants in the autumn, and keep the soil rich so the crowns may become strong, and they will bloom every year.

**White Worms on Anemones and Lily of the Valley. Treatment of Cactus after blooming.**—My Anemones and Lily of the Valley are literally eaten up by small transparent worms whose presence I cannot account for, having baked soil before planting them. Have noticed small black flies around plants this winter.

What treatment does a "Swallow-tail" Cactus require after flowering at Christmas profusely?

**Answer.**—1. It is easier to suggest a remedy for the worms than to find the cause. The flies may have laid eggs which hatched into worms. Shake out the tubers carefully, wash them with lukewarm water, and repot in fresh soil (which is not improved by baking). If any of the tubers are decayed, cut out the diseased part if desirable to save the plant; but it would be best to throw away your plants and get new ones. Worms seldom attack a healthy bulb or tuber.

2. By "Swallow-tail" Cactus you mean Epiphyllum truncatum. After flowering, keep it rather dry till towards spring, then as it begins to grow repot it in sandy loam with good drainage.

**Slugs, Snails, and Ants in Ferneries.**—My Fernery looks well but will get slugs and snails in it which eat the plants, also small flies and black ants. Can you tell me how to kill them?

Philadelphia.

HARRY W. SIMON.

**Answer.**—Cut potatoes or yellow turnips in halves, scoop out the pieces and lay them in the Fernery. The slugs and snails will go to them, and are easily caught. Sprinkle a little fine sugar through a dry coarse sponge; the ants will go into the sponge and are easily destroyed by putting the sponge in hot water. We do not think the flies do any injury to your plants.

**Destroying White Earth Worms.**—Please tell me how to destroy the white earth worms which are killing my plants. I have tried strong lime and tobacco water without success.

Tyrone, Pa.

MRS. J. G.

Peru, Clinton Co., N. Y.

and  
H. J. F

**Answer.**—The best way would be to repot your plants in fresh soil, draining the pots well. The worms do not eat the roots unless they are diseased. Cut off all dead roots; shade the plants for a few days until they recover from the repotting. We wonder "tobacco water" did not kill your plants.

**Flowers for Vases.**—What flowers shall I plant in vases that have the sun on them from ten in the morning until it sets? MRS. JANE.

Washington, D. C.

**Answer.**—For the centre, Canna Adele Levallois, which is low growing and has dazzling crimson flowers, or Draecena ferrea or terminalis, then Centaurea candidissima or Ciueraria maritima, both white foliaged plants; next Coleus or Achyranthus, this in any variety (both to be kept low by pinching), then edge with Gazania splendens, Othonna crassifolia, or Mesembryanthemum eordifolium variegatum. If more common plants are required, let the centre be Coleus and fill in with gay-colored Petunias. In any case, give plenty of water; the cause of failure in vase planting is that the plants are allowed to dry up.

**The Christmas Rose—Olea. fragrans.**—Can you tell me, through your paper, about the Christmas Rose, and where I can get it? Where can I find Olea fragrans? Is it a good house plant?

Alleghany City, Pa. MRS. J. W. ELVERHART.

**Answer.**—The Christmas Rose is botanically Helleberus niger. The leaves are evergreen, the flowers very large white or pinkish, produced in November and December. The plant is hardy, but the flowers are apt to be injured by early snow, therefore it is better to grow the plants in a cold frame. In England it is very generally grown, and plants may be imported from Messrs. Baekhouse, of York, for about \$20 per hundred. We do not remember seeing it for sale in this country; perhaps Louis Menand, Albany, N. Y., could supply it. There was formerly plenty at the Botanic Garden, Cambridge, Mass; the gardener might supply it in exchange.

Olea fragrans is a neat, rather tall growing greenhouse plant, with foliage resembling a Camellia. The flowers are very small in clusters, while turning yellow as they fade, exquisitely fragrant. It would do well as a parlor plant, but there are many things much more showy. The flowers of the Olea only last a short time, in early spring, and the rest of the year there is only foliage. Plants can probably be obtained at any of the large greenhouses, as the plant is not uncommon.

**Answers to Correspondents.**—The readers of the FLORAL CABINET will realize something of the popularity of this department, when we inform them there are waiting publication over 300 letters, all asking questions. It is not in the bounds of possibility to answer a question the same month received, but every question shall have attention and a reply and be published as soon as we can. There are 20 printed pages full, each as large as this, waiting their turn to be published.

**Exchanging Plants.**—We discontinued publishing offers of subscribers to exchange plants, bulbs, etc., with each other because in every case the rush of applicants was so far beyond the capacity of the subscriber to supply, that the offer at last became an annoyance, and the offerer always writes to us to stop it. Any one who offers to exchange must expect to receive 200 to 500 replies. Few realize how large our circulation is, or how eager people are to get things free.

**Names of Plants.**—Many plants are sent to us for names. We regret want of time to answer by personal letter, and think it better to send to nearest florist. Most sent to us come in bad order, and our space is really too limited to be filled up with other than the most necessary information, most agreeable to the largest number of readers.

## Flower Gardening.

### A GARDEN OF MY OWN.

I always admired flowers, and longed for a flower-bed of my own. I had read many lengthy articles about raising flower seeds—all good no doubt—but they were beyond my reach. Now, a hot bed, or a cold frame is a great help if you can have one, and not very expensive if you have a father, husband, or brother who will make you one; but I am aware of the fact that there are a great many families where the men are always too busy for such things. Do not be discouraged ye lovers of flowers; I have never had a hot bed or cold frame; but I have had beautiful flowers. I found some old boxes, nailed some strips of leather on the ends for handles to move them with. I then filled them nearly full with light sandy soil, which consisted of decayed sod and sand; then sowed the seeds in rows in the boxes, and took an old sieve and sifted some soil to cover them with. My reasons for sifting the soil is, the seeds can be more evenly covered. Many of the smaller seeds when covered with soil that is lumpy spend all of their vitality in trying to reach the light; and when they do reach it their strength is exhausted, and they turn yellow and die; or if they do manage to live, they are sickly-looking plants, and the flowers they produce, if any, are small and stunted.

Some of you may say, "That is all sham, I have just as nice flowers as anybody and I don't sift the soil either."

Remember, friend, that "there are exceptions to all rules." I had reference to the small seeds produced by some of our tender flowers.

After covering the seeds I cover the boxes with glass, and set them on the veranda, which is on the east side of the house. If the nights are very cool I bring them into the house; if the sun shines very hot I raise the glass from the boxes, just a little, to prevent the seeds from scorching. I do not have the boxes quite full, leaving two or three inches so that the plants can get a good start before I have to remove the glass. I have thus been enabled to have good strong, thrifty plants ready for the border as soon as the weather will permit me to transplant them.

I find that I can take better care of the young plants, if I sow seeds that require about the same length of time to germinate in the same base. The Asters, Phlox Drummondii, Nemophila and Coockscomb require from four to ten days in a favorable situation. The Calceola, Datura, Verbena, Tropæolum, and others require from twelve to eighteen days. If you are just commencing the culture of flowers do not try to do too much.

A few thrifty plants of the hardier flowers well cared for will give you more pleasure than a garden overstocked with pale sickly plants of the choicer varieties. In order to make a wise selection it is essential to know the habits of the different flowers, and also what place you wish them to occupy. The Sweet Pea will make a beautiful hedge; but if planted in a bed of Asters or Phlox it will only disappoint you. A nice bed of Pansies we all admire; but if they are planted in a hot, dry place they will prove a failure; and we will be no nearer success if we assign the Par-tulacca to some shady place; exchange their positions and you will be surprised with your success.

When preparing a place for your Pansies in some cool shady nook do not forget to leave a corner for the

little Nemophila; for treatment that will secure success with one will prove equally successful with the other. You must have a bed of Phlox Drummondii. I think there is no flower that surpasses it in brilliancy when cultivated for a mass of colors. This little flower is a native of America, and was first discovered forty-one years ago in Texas, by Drummond, a collector sent out by the Glasgow Botanical Society. The bud before opening resembles a flame, hence the name Phlox, or Flame.

If you wish a showy bed on the lawn with but little labor, you may have it by obtaining a few Striped Petunia seeds. Do not leave the Asters out of your collection. I had some beautiful ones this summer. For the background I had the Washington, one of the largest varieties, next the Imbrique Pampan, and then the Dwarf Bouquet.

For baskets, I think the Tropæolums are excellent, T. Peregrinum being my favorite. In making your collection for the garden, do not forget to select a few with which to brighten your home during the winter. Vines are indispensable in this collection. We all know the value of Ivies. The Madeira vines are also excellent, thriving under adverse treatment. The Cobea Scanden is another of my favorites, it grows so rapidly and bears such a profusion of large bell-shaped flowers.

I have often heard people speak of the difficulty in starting these seeds. I will tell you how I start them. Fill a box with light sandy soil; then take the seeds, which are large and flat, and press them edgewise into the soil; cover the box with glass, and do not water them until they start, unless the soil gets very dry. I had a Geranium (General Grant) which I raised from seed; it grew five feet high, and had numerous branches. It continued in bloom all last winter and summer. I also had one which I started from a slip that was over seven feet high.

I think if we had a little more botany in our paper it would benefit many of our readers. Friends, if you want good, reliable instruction about the cultivation of flowers, save your pennies until you get one dollar and thirty cents, and then send for the THE LADIES FLORAL CABINET, which also contains excellent recipes, and many valuable hints for beautifying our homes.

MARY J. SEWARD.

### CHURCH FLOWERS.

In a back number of the CABINET, Mitchella Repens, in an article on Church flowers, asks what she shall use for green for her bouquets. For the past four or five years I have furnished most of the flowers for the church in our village, and of course anything that is written in regard to bouquet-making is of unusual interest to me. Believing that what is worth doing at all is worth doing well in bouquet-making as much as other things, I have studied and toiled to do it well, and while not pretending to have reached perfection, yet, whereas once it seemed a disagreeable duty, by practice and a more extended knowledge of plants and flowers, it is now a labor of love.

For green, I use Hemlock, Asparagus, and Ground Pine, Lycopodium, which in this section—Central Massachusetts—grows plentifully in the woods. I gather it in handfuls and keep it in the cellar where it will keep for weeks without wilting. There is no plant that I know of that is so useful for keeping flowers from crowding each other and for the borders of bouquets as this.

KALMIA CATIFOLIA.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

### CHAPTER X.

"Oh, yet we trust that some how good  
Will be the final goal of ill,  
To pang of nature, sins of will,  
Defects of doubt, and taints of blood."

It was a moonless November night with a creeping chill in the air, and hoar frost sparkling on the grass borders. Stars trembled above the bare tree tops in the clear dark, and the wall-clock had just chimed midnight, when a slight, girlish figure crept down the great staircase. She slipped ghost-like along through the shadows, close to the wall of the passage, and noiselessly undid a side door and let herself out into the night. There in the darkness arose the sound of a half-stifled sob, that seemed to come from a breaking heart. She took hold of the porch railing, for her knees were weak from recent illness, and seemed to totter under her. Then suddenly she cast herself down and kissed the threshold, with a heart bursting with sorrow, while she prayed for the dear sleepers under that roof she was leaving forever.

Poor Virginia! there was still great confusion in her ideas. She did not well know how her sickness had come to pass, or how long she had lain unconscious on the floor by little Jake's bed, before they carried her to her own room in the Hall, where she found herself on waking from delirium.

She shrank with terror from the thought of what she had probably revealed in her moments of wandering. All her thoughts were flurried. She tried in vain to get hold of the right end of things, but only two scenes stood out in her memory like points of flame: the interview with Bradley in the boat, and the confession Winnie had made to her in the pine grove seemed burned into her brain.

The doctor had enjoined the most perfect quiet, and for several days and nights she rested with her eyes closed in a dim twilight state, though vaguely conscious of all that was going on about her. She remembered that she had spoken harsh, abrupt words to her friend that fatal night, but what they were it seemed impossible to recall. So she dwelt upon the old, deeply-rooted impression that Winnie would change to her, with the dim consciousness that she had changed.

But Winnie was her constant, untiring nurse, hovering about her bed at all hours of the day and night. As she grew stronger, she strove to repress the impulse to shrink away from her touch and her caresses, but the pale lids quivered while she pressed back hot, hopeless tears.

As memory asserted itself, at moments, the past rushed back upon her with a weight of agony she could not bear. She tried with all her feeble strength to put it by, and set herself toward the resolve to leave the Hall, which had once been thwarted. Now she would go if force was given her to crawl on hands and knees.

For some days she had been convalescent, and a faint relish for gruel and toast was reviving in her. The doctor gave permission for her to get up and walk about a little, and sit well wrapped up in the sunshine. But Virginia feigned a weakness she did not feel, and resisted every effort to remove her from her own room. Winnie was tender and affectionate, but she did not importune her with conversation, for the doctor had given strict orders that the patient must not be excited. But the sick girl saw an unwonted glow of joy and hope in her friend's face, and felt a new magnetic life tingling in the tips of her warm fingers.

It was at night, with scalding tears welling from her eyes, that Virginia perfected her plans for escape. She had no attendance but old Nanna, and was left more and more to herself. All through the burning fever, except in the hours of delirium, she had been conscious of Bradley hovering near her. With her quickened sense she had heard him steal to her door to listen to her breathing. The low, anxious tones of his voice came to her from the hall where he waylaid the doctor, or old Nanna. She knew he had shot the birds which were served up in her sick-room,

and that the consuming trouble of his mind would not let him sleep at night, for she heard him moving restlessly in his own room, or trampling the gravel paths long after the others were asleep. Her mind was filled with pity, and love, and inexpressible dread of what might happen. It was this which had led her to creep out under the stars that still November night.

Virginia held clasped in her hand a scrap of paper which had come to her wrapped around the stalks of a little nosegay of blush roses, borne in on the tray by old Nanna, when she brought her tea.

"Dar's a posey for you, honey," said the old woman, beaming on her with maternal fondness. "Mass'r Bradley sent it. He's a notion you're powerful lonesome; and little Miss says she'll have you toted down stairs to-morrow and took a drive in de kerridge. Don't look so peaked and scart like, honey. I'd be a-thinkin' you was a mighty sight better ef I could see you larf. Your eyes are too big and solemn. 'Twont do to be allus a-thinkin' and a-thinkin', and a-broodin' and a-broodin'," and the great black hand caressed the little wan cheek.

As soon as she had trotted away, Virginia with trembling fingers unwound the thin paper from the flower-stalks, and saw that there were words written upon it. As well as her agitation would allow, she read as follows:

"Dearest, if you do not see and speak to me, I shall break bounds. I cannot longer endure this state of agony and suspense. I dared not speak to W. while you were lying low, but now she must learn that I am yours, body and soul, for life and death. It was like the torture of the doomed to be kept away from you in your delirium. I thought I should go mad, and now I abhor myself for the part I have to play. Oh, my darling! my life! my love! have pity on me. Send me a single word by old Nanna, whom you may trust, and earn my eternal gratitude."

How could she leave him and break his noble, generous heart! But through all the agony of that hour she still meant to be true to herself, and loyal to what seemed her duty to her friend. With heart-breaking prayers and sobs, the poor child crept down the avenue under the dark trees, that stretched out menacing arms, and made shadows that frightened her. She carried a little bag too heavy for her feeble strength, and in shifting it from one hand to the other, felt something rough and hairy thrust itself up against her side.

"Hector, is it you, dear old fellow?" He gave a leap and a quick glad bark. She remembered that since the alarm of burglars, he had been let out of the kennel to protect the place at night. "Go back, sir," she said in a firm, low voice, but the creature would not leave her; he leapt to her shoulder and caressed her face, and at last she was fain to let him trot beside her, thinking he would soon turn homeward.

The Finster cottage was there before her with no light in the dark window, for Jake was out again; and had crawled up to the Hall once or twice to inquire after his friend. She thought, with a pang, that this poor boy was the only being who had loved her there she had not harmed. Ill and weak, and out alone in the darkness, oh, how she longed for a haven of rest. Life had been unkind to linger on in her when she yearned for the sleep that knows no waking. Her heart was torn in pieces by pity and love and remorse; her strength was sorely broken, but still she kept on through the ghostly trees, terrified with every sound, but resolute to crawl forward while breath remained.

She could hear the lapping of the waves against the shingle, and once the temptation came to end all by a leap in the dark water; but she put it away with a shudder as she hurried on as rapidly as her feebleness would allow. She felt her knees tottering under her, and there were strange dizzy turns, and flashes of pain through her head, and creeping chills, and tremors in her limbs. Sometimes she laid hold of the bushes by the way, or stopped to pant, and clasp her throbbing side.

There was a little flask of wine in her bag, some of that which the doctor had ordered. She felt for it once or twice, and put it to her lips, hardly conscious that old Hector was still pattering along by her side.

Virginia was no courageous heroine, but a weak, timorous girl, frightened by the moaning of the night wind, and the step of any small woodland creature that came across her path; but as she went forward through the darkness, all fear was taken away, and she seemed walking through the valley of the shadow of death, with her mother's hand clasped in hers. She looked up at the stars that sparkled with frosty brightness, and reassured herself by keeping her face steadily fixed toward Hopedale, the little town on the railroad ten miles distant, where she had told Mrs. Walcott to direct her letter. She had never been to that remote village, but she knew the road that led there. It was a place with which Winnifred had no associations.

The road was not hard to find even in the dark. She took the right hand turn and skirted some fields and fences until the path struck into a little travelled highway partly

grown up to grass. The country was wild and lonely, one of those rough mountain sides that had been run over by a great fire, and had grown up to bushes. Here and there, at long intervals, there was a rude clearing, and the cabin of a wood-chopper, or an Irish settler. The way was vague and spectral, and dim in the night, and Virginia felt less protected than she had done in the thick wood, but Hector was still trotting cheerfully along beside her, wondering, perhaps, in his canine mind, as to the meaning of this strange, nocturnal excursion, but determined to see it out.

The air freshened as it drew toward morning, but exercise over the hard road brought the blood into her chilly finger tips. She wondered that so much life still remained in her, and at the strength of youth. She was not aware that in the darkness she had made a wrong turning. Her heart felt a little lighter as she tried to forget herself, and to urge her slow steps on, counting the trees, the crooked lines in the brush fences, and the dreary stone heaps. She tried vainly to estimate how many of these would make a mile, but with every device her progress was snail-like, and when the pallid dawn came up over the fields, revealing the dim outlines of this rugged country, she found herself in the edge of a clearing, where stumps and felled trees and piles of brush and corded wood were heaped confusedly together.

A woolly mist began to curl up from the frosty earth, but there were as yet no weak red streaks in the east. Now the heaviness of her limbs, and the faintness in her brain made the thought of creeping in among the timber to rest awhile most grateful. Perhaps in an hour's time some farmer would come along in his wagon, of whom she could beg a ride. If not, she would go over the fields and make a long detour to Hopedale, stopping at the first house to buy a piece of bread and a cup of milk.

Virginia crept in among the timber, and sought among the chips and dead leaves for a dry bit of ground. She folded her gray shawl closely about her, and made a pillow of her little bag. Hector had been drawn away by the scent of some wild creature among the brush. At the moment when an irrepressible drowsiness, deep, sweet and dreamless, like oblivion, began to steal over Virginia, there struck upon her dulled ear the sound of a man running up the hill road with short, quick pants in his breath, his iron heel striking sharp sounds out of the flints. There was something menacing in the sound, and a thrill went through her and brought her to consciousness. She staggered up to her feet, peered around the corner of the timber pile, and saw the man running along the road clearly in the early dawn—she saw what she could never forget to her dying day. His head was bare, and he had pulled off his coat and was carrying it upon his arm. He got over the ground with wonderful celerity. His eyes were blood-shot but watchful and alert, as if ready to stand at bay like a savage beast; but in his dark face there was the sinister, baleful light of triumph. In an instant, almost in the flash of an eye, he had passed.

Virginia stood reeling upon her feet, and raised her hands despairingly to her head, while a stifled cry broke from her heart.

What had she done to leave the Hall unprotected, the door unbarred, to allow the watch-dog to follow her? What had happened down there? Was it robbery, was it murder? Was Bradley wounded, dead perhaps, shot through the heart by that perfidious man, whom she had believed to be in hiding far away, but who like a fiend had waited and watched, and at last had accomplished his fell purpose.

She knew she would be sought for now; there was no getting away. She would be accused and reviled, and must meet those she had wronged. She turned instinctively to go back, but there was a ringing in her ears, a confused throbbing in her brain. She sank to her knees and crept a little way along the ground, and then the blackness of darkness came over her, and she fell forward prone upon her face.

The old Hall did not get up very early of a morning. It was too slow and stately to bestir itself until sometime after sunrise. Winnie loved her luxurious morning nap, but on this November morning, which was sunless and gray, she seemed, in her dreams, to feel an ominous wave of excitement throb through the house. Drowsily she heard the opening and shutting of doors, the sound of hurried footsteps, the whispers of the women servants, and the deeper tones of the coachman and gardener, until suddenly roused to the fact that something had gone wrong, she sprang to her feet, slipped into her dressing-gown, and opening her door confronted a group of terrified faces.

Nanna began wringing her hands and vociferating: "Oh, little Missy, don't scold ole Nanna. I'se dat weak you could knock me ober wid a feder, honey."

"Is Virginia worse?" cried Jinnie. "Why in Heaven's name didn't you call me in the night?"

"Taint Miss Jinny, honey, she's sleepin' like a kitten in wool; but," catching her breath, and turning a peculiar dusky pallor, she half-whispered, "it's de safe in ole mass'r's room."

"The burglars broke in last night," said the gardener, cutting Nanna short, "and they have robbed the safe."

Winnie advanced into the hall without speaking.

"Robbed the safe," she repeated at last, "and not a soul of you were awakened by the noise?"

"Must have been de debble in carnal," said Nanna, "come stealin' in wid a stockin' ou his cloven huff, for de souf door was wide open, an' I locked it las night, an' put up de chain good an' fast."

Winnie looked about her half-bewildered, and at that moment Bradley hearing the unusual sounds, and anxious about Virginia, descended from his room on the floor above, while Mrs. Braithwaite, with an architectural night-cap on her head and her dress huddled all awry, came hastily out of her bedroom.

"The burglars were here last night," said Winnie, addressing Bradley, with her voice keyed high with excitement, "and they have rifled the safe in papa's room. Only two days ago I got home a considerable sum of money from the bank to pay for the new works at the mine. The place must have been shadowed who knows how long? Poor old Hector, I wonder if they fed him poisoned meat?"

Bradley was stunned even before he could take in the meaning of her words. He grasped the bannisters for support, and for a moment the power of speech seemed absolutely gone.

"Oh, dear," groaned Mrs. Braithwaite, sinking down heavily, like a middle-aged ungrammatical Cassandra, "I always told you things would go wrong if you insisted on keeping strangers in the house, and now they has gone wrong."

"Have you examined the safe to see how much is missing?" Bradley asked, as he at last rallied his voice, though there was a deadly sinking at his heart.

"Come with me," she exclaimed, and then turned and imperiously dismissed the servants: "Go about your business at once; you need not idle here; Mr. Halcourt will do all that is necessary."

She ran to her father's room, the long dark hair enveloping her shoulders like a cloud. Mrs. Braithwaite came limping on behind into that chamber which, during her husband's lifetime, she had never entered without dread. The safe door stood open, and only the large package of bank notes was missing; not even a tin box containing some valuable heirlooms of the Halcourt family had been touched, and all the papers remained in their places neatly docketed and tied up with red tape, just as the old judge had left them. Bradley bent down to examine the lock. It was perfect and entire.

"There are no signs of violence," said he, slowly, "neither of detonating powder or prying instruments. The person who opened this safe must have known the combination of the lock. Have you ever confided it to any one, Winnifred?"

"No," and then she started as the scene with Virginia flashed back upon her mind. "Yes," reluctantly, "I did tell Virginia the numbers that she might help me remember."

"It's that girl," shrilled out Mrs. Braithwaite, exultantly. "I shouldn't be a bit surprised, for I never had any kind of confidence in her."

"You are wicked to say so," cried Winnie, turning fiercely round upon her mother. "It is simply infamous to accuse a poor, defenceless, sick girl of a crime like this. I will venture my life upon it that Virginia knows no more of the robbery than I do. I will confront you with her, and prove to you that she is as innocent as an angel of light. If she tells me she has never confided this secret to another, I will believe her against the whole world."

A gleam of adoring gratitude shot from Bradley's eyes. He did justice to his cousin now; she was a noble creature. But he was so sick at heart, so burdened with dread that he could scarcely follow Winnie as she ran to her friend's door, and standing there in the passage with the heavy masses of her hair sweeping in a dark cloud around her, her face pale, and eyes glittering with excitement, she tapped on the panel.

"How soundly she sleeps!" She tapped louder. There was no summons. With a frightened face, glancing back at her cousin, she turned the handle. It yielded; the door opened, but the room was empty. Winnie stood, with Bradley and her mother behind her, as one stupefied, gazing vacantly at the little white bed with its undinted pillows, the small neat table with a few flowers in a glass, the chair where she had sat looking so pale and pretty in her blue wrapper only last night. Then she raised her hands to her head with a groan, wrung out of her very soul, as the truth forced itself upon her.

"Tell me where she has gone," she cried, turning desperately upon Bradley. "You know very well she was sick and weak and could not walk far. She must have wandered off when the delirium came upon her in the night, and we shall find her lying dead perhaps down by the lake, or under the trees. The idea of Virginia robbing me is preposterous"—taking refuge in a burst of scorn. "She knew she could have anything I possess;

she was too scrupulous to take even the price of a gown. I tell you she has wandered away ill, and out of her mind."

Bradley, through this passionate and tender outburst, had not spoken, scarcely breathed, for the shock of Virginia's flight had fallen upon him with stunning force. Now his eyes fell on a piece of folded paper that lay on the table, and he took it up mechanically and placed it in Winnie's hand. As she unfolded the scrap which was traced with weak wavering lines, and literally blistered with tears, she read the following:

"Try to forgive and to forget me. I have not meant to do you wrong, for I have loved you dearly. I have prayed and wept and struggled against temptation, but I am weak, and must fly, for sooner would I die a thousand deaths than harm a hair of your head. You may revile me and scorn me, but my heart will always adore your goodness, and breathe out prayers for your welfare. Farewell forever. VIRGINIE."

Winnie's hands trembled so violently that the paper fluttered down to the floor.

"What does she mean by doing me wrong, and fleeing from temptation?" she asked, with a convulsed face. "What is this mystery that is enveloping me on every side?"

Bradley had turned his face to the wall; he could not speak, and the misery of his weak conduct in paltering with truth planted its fangs deep in his soul. Winnie seemed to tower far above him; he dared not meet her eye; and seeing him thus crushed and beaten down with a secret load of grief and remorse, she cried out passionately:

"Why in Heaven's name don't you speak?"

"I thought it was strange he should want to keep that girl in the house," volunteered Mrs. Braithwaite, filling the doorway with her bulk, "and I told him so, but I suppose he was taken in by her, just as you were, Winnifred?"

"Do be still, mamma," cried Winnie, with hopeless impatience. "I won't hear Virginia accused of any crime; but there is something behind all this, and I will know the truth."

Edgar Swayne had come up the stairs unheeded in the excitement of the moment. His face was haggard, and his great coat was splashed with mud, as if he had ridden hard. Now he pushed past Mrs. Braithwaite's form, and presented himself to Winnie.

"Miss Braithwaite," said he, abruptly, "I have just heard of the robbery from the gardener, and I think I can tell you who it was that rifled your safe last night. If it had not been for that man," pointing with undisguised scorn at Bradley Halcourt, "who stepped in to shield a criminal from justice, I should have had him behind prison bars before he found the opportunity to rob you."

"Who are you speaking of?" Bradley asked, facing him with haughty coldness, though pale as ashes.

"Of Walter Freeborn."

"Walter Freeborn?" repeated Winnifred, in a dazed, bewildered tone. "Why, that is the name of Virginia's uncle."

"Yes; and do you want to know who Walter Freeborn is?" returned Edgar. "He is an escaped convict who broke prison more than six months ago, and for the past few weeks has been skulking about this place, holding secret interviews with his niece; and now it would appear that she has become an accomplice in his crime. It was doubtless through her aid that he rifled the safe, and then they decamped together."

"You lie in your throat," cried Bradley, turning upon him as if he would rend him.

"Oh, Bradley," cried Winnifred, joyfully, springing between them, "how glad I am to hear you defend her. But why," wringing her hands, "did she not tell me the truth about this dreadful uncle? Why did she deceive me? I would have forgiven anything. I never would have thought evil of her. I would have sheltered her in my arms, and saved her from him. Oh, why has she gone away with these terrible suspicious clinging to her skirts?"

"She did not confess to you," said Bradley, "I am as sure of it as I am that I live, because that man terrified her into silence with threats and menaces. I aided his escape because I detected this dreadful secret, and knew that the horror and fear shadowing her life were killing her. I divined it, though she never told me the truth."

The color left Winnie's lips. Something in Bradley's tone had struck an icy foreboding to her heart.

"But why did she go away?" asked Winnie faintly. "Why, if she was innocent of all complicity with this man, as I believe before heaven she was, did she steal out of the house like a culprit in the middle of the night?"

Bradley felt pushed to the edge of the precipice; he must take the fatal leap. He nervously himself for it, and was outwardly almost calm, as he turned and said in a low voice, low but distinct to every one present:

"She went away because I love her with my whole heart, and soul, and strength. I told her of my love when

I knew it at last. I did not mean to tell her," he added, humbly, "and it was a fatal act. It has driven her out of this house, God knows where, when she was ill, and scarce able to drag herself away, because she would not stay here to wrong you, and her conscience was killing her. I am the criminal, but she is guiltless before heaven. If she is found dead in the fields, it is my selfishness that has done it. Oh, my God!"

The burning tears welled up into his eyes, his voice was choked with sobs.

The effect of this revelation on the different faces of the group was a strange study; but everything swam in blackness before Winnie's eyes. A thunderbolt had crashed down on her proud young head, as it falls on the leafy top of a stalwart young oak in the forest. It was such a moment as makes a vigorous creature suddenly old, hurtling a life out of self-satisfaction, and false security and triumph, into an abyss of pain and despair. She covered her face with her hands, and tottered forward to a chair. In a moment she had started to her feet again with a sharp lonely cry of anguish:

"You duped me, you cheated me, oh, fool, fool that I have been! You have carried on a love intrigue with her, my friend, here in this house, while precluding yourself before the world as my affianced husband. And she listened, well pleased, to your love tale, and responded to it, while I betrayed myself, all unconscious, in her bosom. Oh, my God! who would have thought I should live to see this hour? Oh, it was cruel, cruel."

Again she sank down and covered her face, and terrible resistant sobs shook her whole frame.

Bradley stood almost over her, pleading in tones of passionate entreaty.

"When you have calmed yourself, Winnifred, you will see all this sad story in a different light. You are noble and generous, and the time will come when you will be just to her, when you will even pity her for the terrible struggle through which she has passed in trying to be true to you. For myself, I expect nothing but your scorn and contempt. I cannot make you understand my cruel position. You have loved her dearly, but there is no such feeling in your heart to plead forgiveness for me."

Winnie was crushed as by a sudden stroke, and she trembled convulsively through her whole body.

"I do not understand you, Bradley," she said, in a strange tone; "my brain seems frozen."

"I mean," he returned with gentle sadness, "that there was no question of love between us. Our union would be merely a marriage of expediency, a thing that nature abhors. I meant to show you my heart that day Virginia was taken ill—to throw myself entirely on your generosity, and to ask you to release me from an artificial bond that would soon gail you as it galled me. I told you when we talked of this that I would release you from your obligation, should you desire it, even were we standing at the altar. I had not waked then to the meaning of my feeling for her. The knowledge came when I saw her suffering. But now I claim your generous forbearance. I ask you with deep contrition for the pain I have caused you, to let me go in search of her, that I may prove to you and to the whole world that she is the innocent victim of a base man, and no less," he added, in a stifled voice, "the victim of my love."

Winnifred was stunned and almost incapable of motion. The life had ebbed out of her, and Bradley's words appeared to come from a long distance. But pride and will were still alive. She struggled up to her feet, rigid and erect, looking taller than her wont, her face like marble, and her eyes shooting out terrible glances of scorn.

"Go," said she emphatically. "You have cheated, and tricked, and deceived me; now go to her. I will not detain you longer."

The strength went out of her limbs, and slowly she sank down fainting and almost insensible. The mute signs of suffering were so visible in her, that Bradley paused with a terrible cloud of pain sweeping before his eyes.

"Winnie," said he, in tones of entreaty, "if what I did not dream of is true, if I have wounded more than your woman's pride, I beg your pardon even on my knees. No, it cannot be that you are suffering the pangs of unrequited love. Oh, Winnie, I am all unworthy of you! Hate me! scorn me! revile me!"

The hard sobs again convulsed her bosom. She did not weep easily, and the emotion seemed to rend its way outward.

She made a sign with her hand that he should leave her, and slowly turning with one long, sad look, he went away. Edgar had rushed out of the house the moment of Bradley's declaration of his love for Virginia, and now when the numbness and the sense of shock had a little passed by, Winnie lifted her head and gazed about her. The daylight hurt her eyeballs, and shot sharp darts of pain through her brain. Slowly she got upon her feet, almost groping forward with a sense that all support was gone. The old satisfaction and feeling of predominance, the old triumphant self-confidence had been struck away. She was alone save that her mother still sat there in heavy

silence, with her large helpless hands crossed in her lap, and a bewildered look of stupor, a dim groping kind of distress glimmering in her face.

Winnie looked around. Bradley was gone. Virginia was gone. They were both lost to her forever. As the terrible consciousness swept over her, her eye fell on her mother, and suddenly she tottered forward, and fell on the floor near her, and clasped her knees, and laid her head in her mother's lap. By an instinct long unused, the poor dull-witted woman put her arms around her child, the beautiful, brilliant, triumphant creature, who, after years of indifference, had at last come creeping as a suppliant to her knees! With plaintive murmurs she timidly touched her hair and chafed her cold hands.

"There, don't cry, don't cry, Winnie. I always knew that foreign girl would bring harm. I said so from the first, when you began doting on her. But I am beat about Bradley. He was the best little boy I ever knew; but it did seem strange he should want that girl kept here; and I suppose all along she was using her arts to get him away from you."

"Don't, don't," said Winnie, wincing, as if the blundering speech had stung her. "You can't understand that, mamma, and I cannot explain. But you see how I am beaten down to the earth. Love me a little, and comfort me if you can, mamma. I have been wicked to you, and have neglected and hurt you. This is my punishment. Can you forgive your child? Oh, this trouble is heavier than I can bear."

The poor woman began to sob, and her face worked with unwonted emotion. Some frozen feelings were again softening her poor, lonely old heart.

"You were a pretty baby," said she, simply going back into the dim past. "You were fond of me then; and I often wake nights and think I feel your little soft hand against my face. But when you got old enough to sense things your father took you away from me, and I never had any more comfort. I was your own mother just the same, though," with a pathetic touch of humility. "I never did pretend to be quick about things, but I had human feelings for all that."

"Don't, don't," cried Winnie, moaning out her despair. "All the past has been hideously wrong. I have made you suffer, and I am sorry, but I can't think of it now. Love me a little if you can. Let me feel that all is not taken away, that there is something human to cling to even if I have been wicked."

A new strength and purpose seemed to come into the poor mother's soul, and she lifted up her child, and took her in her arms, and laid her head down on her bosom, where it had not rested for years. Furtively she put her lips to Winnie's forehead, and smoothed the rich dark hair, and an hour passed and still the girl was lying in her mother's arms.

At last she was roused out of her lethargy by the sobs and groans, and loud laments of old Nauna, as she came in hauling Steenie by the arm, though he resisted this violence with all his might. His frightened wool stood more on end than ever, and a pale ashen hue had overspread his face.

"Oh, little Miss, I knowed if dar was mischief goin' dis lim of Satan must be in it shore. I koted him chokin' over his brekfust. He couldn't swaller a mossle, honey, and den I sarched him, as wid de bosom of 'struction, and look here, honey," letting the whites of her eyes go into total eclipse, while she opened her great black hand, and displayed an elegant little lady's watch, enamelled in blue, and with a spray of diamonds on the cover. "I foun' dis on his pusson, honey, and he's got his foot in wid de bug-lums, shore. Git down on your knees to your missus and 'fess," and she pushed the boy down trembling and shivering in every limb, and held him with her strong hands.

Winnie roused herself in a bewildered way, and took the little watch.

"Where did you get this watch, Steenie?"

"He gived it to me," his teeth chattering as if they would fall out of their sockets.

"And who is he?"

"Dat dar stranger man. Oh, you'll have me hung on de galluses like Gandy says. Oh, oh!"

"Stop crying this minute, and tell me where you got the watch, or I shall send for an officer."

"Oh, don't send for no ossifer. I'll tell, I'll 'fess de livin' truf. Dat man gived it to me in de barn; an' he gived me suffin sweet to drink—rum mebbe; an' he scart Gandy about de spooks; an' he got me to put notes in Miss Jiny's room; an' he coaxed me to tell him dem figgers on de safe. I heard you tellin' 'em over to Miss Jiny, an' I knowed well enuff what dey meant; an' deu he gi' me de watch."

Winnifred stood holding the watch in her hand.

"Oh, Virginia!" the cry seemed to escape her involuntarily. Then she rallied her forces, and pushed back the long dark hair from her face. "Something must be done," she said, half to herself. "My God where shall I find help?"

## THE LANGUAGE OF FLOWERS.

BY UNCLE CHARLIE.

This elegant book, during the past year, has found many admirers, and is now sent out in its second edition, enlarged and improved. The Poetical Selections are from the best authors, and the section devoted to Floral Conversation, among other good things, contains a most fascinating story.

There is also a section devoted to the Sentiments of Flowers, which gives a list of all known Flowers and their meaning, and another to Floral Decorations, in which the subject is treated in reference to special occasions, such as Thanksgiving Day, Christmas, Easter, Decoration Day, Birthday celebrations, Weddings, Funeral ceremonies, the Church, etc.; there is also a chapter on Cemetery Decorations, and others on preparing skeleton leaves, drying flowers with their natural colors, autumn leaves, sea mosses, etc.

It is issued in two different styles to suit purchasers—in neat, enameled paper, at 25 cents per copy; for those wishing a handsome gift-hook or table ornament, it is beautifully bound in extra cloth, and sold at 50 cents. Will be sent by mail, postpaid, on receipt of price. Address,

HENRY T. WILLIAMS,  
46 Beekman St., New York City.

## VALUABLE NOTES FOR FLOWER GROWERS.

**Moist Air for House Plants.**—Every florist and plant-grower (says the *American Garden*), will answer the often repeated question, "How can I make my Window Plants flourish?" by saying, "You must keep the air moist." How to do this is, however, a troublesome and unsolved problem. We have found by experience that the simplest solution to the problem is the use of a common whisk-broom. Take a pail of tepid water every evening; dip your broom in it and whisk it over the plants till everything is moist. Your plants will enjoy this bath and the insects will not. Insects dislike nothing so much as abundant dampness. The most troublesome enemy of all—the red spider—will soon leave for dryer quarters.

"But," says some nice housekeeper, "I shall spoil my carpet if I keep up such a daily showering." So you will if you do not protect it, but, with a good sized piece of oil cloth under your plant-stand, as there always should be, you may spatter away as much as you like.

**Success with Calla Lilies.** "Aunt Addie" in the *New York Tribune* thus tells her success with Calla Lilies:

In almost every collection of house plants may be found the Calla Lilly. Ladies call attention to "my Calla" with affection and pride in their tone. It is justly a favorite with all amateur floriculturists. The little care it needs, its indifference to ordinary atmospheric changes, its large, showy leaves, and the purity and grace of its flowers render it certainly a highly-to-be-desired plant. And then again it never says die. No matter how puny its foliage or how white or spindling it may grow, it presents a pleasing appearance, and gives one some little space for hope. But in very many instances we see thrifty, healthy-looking plants that we are told cannot be made to bloom. They put

forth leaf after leaf of rich dark green, satiny-looking organs, but no bud of promise appears to gladden the eye and the heart of the anxious watcher. I speak feelingly, from experience. I have tested all the many directions which have come under my observation, but all with like results—no buds. Even the entire-rest plan did not succeed with me, for Easter came and not one Lily. Disgusted, I determined to try a little private judgment. Knowing the decided distaste most bulbs have to being removed, I put my Callas in a pot filled two inches up with pieces of broken crocks and charcoal, then used light rich soil, with plenty of sand and black muck, watering with very warm water. I set the pot in a dish three inches deep, poured off the water that drained through, and poured very hot in it so as to get as much bottom heat as possible. This was for winter treatment.

During the summer months I took the pot out of the saucer and set it in the flower bed, on the shady side of my garden. In the winter I stood it on a table by itself, in a sunny window, with these results: My plant is over three feet tall, and thirty-eight leaves on it, one fine lily and two buds. The young bulbs are doing beautifully also. During the last summer I had a lily each month, much to my friends' and my own surprise. The pot is very nearly concealed by luxuriantly growing *Crassifolia*.

**Used-up Hyacinths.**—A good many persons, says the *Gardeners' Chronicle*, are at a loss to know what to do with the Hyacinths and Narcissi that have gone out of flower. They don't like the idea of throwing them away, and they are disfigurements in the greenhouse.

Two or three courses can be recommended: one is to open a trench in any spare corner of the garden, and plant them in it, turning the bulk of earth out of the pots without disturbing the roots and simply remove the crocks.

Some fine mould should be placed about the bulbs, and the soil put back and firmly pressed about them. Treated in this way, the Hyacinths, Tulips, Narcissi, etc., will ripen their bulbs and growth, and come in very useful next autumn for planting out in beds or borders. They will, however, need to be watered in dry, hot weather.

Another good mode is to open holes along the fringe of a shrubbery border, almost beneath the lowermost branches, and plant out for permanent effect. In such a spot they come into flower early in the spring, and they are sufficiently out of the way not to interfere with the summer planting, if the margin of any shrubbery border admits of its being done.

**Treatment of Cyclamens.**—In answer to the questions how Cyclamens should be treated until they are potted off for flowering, when this should be done, and in what soil, the *Villa Gardener* says:

Cyclamens do not do well because they are badly treated. The neglect begins as soon as they have finished flowering. The idea prevails that the moment the last flower fades the plants should be dried off. If growers would only bear in mind that the chief mode of increasing the number of Cyclamens is by seed, that alone would save the plants from treatment so unreasonable and ruinous to next year's flowers. These flowers are formed by the leaves after the current year's blossoms have faded. Hence, the importance of carefully tending, watering, and, if need be, feeding the foliage till fully grown, or till it begins to fade in course of nature. The best place for completing and maturing growth is a cold frame or a sunny corner out of doors. After the leaves fade, the

Cyclamen will take a period of rest without forcing it by total dryness.

The best plan for resting Cyclamens, is to plunge them in a cold frame, alike sheltered from heavy rains, and the roots kept from being burnt by the sun on the sides. Opinions may also differ as to the best season for potting Cyclamens. Some pot just as the flowers begin to come up; others as the corns manifest symptoms of starting in the autumn or early winter.

The first course is perhaps the best. The soil that suits them best is a mixture of loam, leaf mould, and decomposed manure, freely sanded into openness and grittiness.

The drainage should be perfect, as stagnant water at base of bulb is fatal to Cyclamens. The best season to sow Cyclamens is February. As soon as the plants are up they should be picked off, and then shifted on in succession as soon as they fill the pots with roots. If this is properly attended to, and the young plants are pushed on in a bottom and surface heat of 60 to 65 deg. the plants may be made to flower within the year.

**Flowering of Sweet Peas.**—A correspondent of Mr. Vick says he meets with extraordinary success as follows:

I prepare a trench eighteen inches deep, and fill with ordinary garden soil enriched with perfectly rotted stable manure. About the first of December I sow the seeds in this trench, eight inches deep—that is, the seeds are eight inches under ground, when the trench is quite filled. Over the trench I place a foot of fresh stable dung, which is removed about the first of April. The plants appear a few days later, having been apparently growing through the winter, and are then treated in the usual manner. My plants bloom in extraordinary abundance, from June until September. My soil is a heavy loam abounding in the various salts of lime, and this, doubtless, accounts in a great measure for my success. But the chief cause, I think, arises from the fact that the roots do not suffer from drought, as they would if nearer to the surface, and also from my diligently picking off every bloom as soon as it begins to fade. Once allow the energy of the plant to expend itself in forming seeds, and the bloom then is comparatively over. I may add that I deluge with water once a week during the hot weather.

**A Good Way to Start Tuberoses.**—Another correspondent of Mr. Vick says:

I have hit on a good way to start Tuberoses. I plant them in old tomato cans, without punching any holes for drainage, set them on the mantel over the kitchen range, and keep warm and wet. When well started I move them to a cooler place, and at the proper time set them out in the garden. In this way I have raised during the past two years vigorous plants, yielding from twenty to thirty-five blossoms each. Contrary to the teachings of at least some of the books, the Trailing Arbutus (*Epigaea repens*), can be brought into bloom at any time during the winter. I have had beautiful bunches of flowers at Christmas. The simple plan is to take them up late in the fall—December will do if the ground is open—and plant them in a fernery or warden case. They will take care of themselves. The common ferns of the woods, too, will push up, and unroll their fronds, the scarlet berries of the Wintergreen and the Partridge berry will swell, and remain fresh all winter, and the evergreen vines of the woods will grow as if it were spring. I always go to the woods for the contents of my fernery.

### BURMESE COURTSHIP.

The Burmese are Buddhists, and Buddhism has nothing to do with marriage. In other words, marriage is contrary to the principles of the Buddhist religion. The true Buddhist is supposed to endeavor to escape from the universe of being; from a succession of transmigration of the soul which would otherwise continue forever. The Buddhist priest not only leads a life of celibacy, but will not sanctify the marriage tie by his presence at a wedding. He has too much pity for those who marry or are given in marriage, and who are thus unable to escape from unending trans-migrations. The result is that the young people have it all their own way, and the parents as little as the priests prevent their thoroughly enjoying themselves after their own ideas of admiring and being admired, loving and being loved. Consequently, Burmese courtships are about the pleasantest things in their way which are to be found in all the semi-civilized world, from Mandalay to May Fair. They have nothing to do with capture, purchase, or dowry; with Welsh bundling or Scotch whistling. They are always nice, generally strictly proper, although not unfrequently accompanied by very serious quarrels, when different gentlemen aspire to the same fair hand.

A Burmese damsel is demure, laughter-loving, and self-reliant. Her manner is graceful and pleasing. She wears a bright silk petticoat, a white jacket, a gold necklace, and has glossy black hair decked with flowers. She often smokes a green cheroot. Of course she has admirers, and she gives them all a fair chance. Every evening she receives a visit from all these young gentlemen; and such is the waywardness of human nature that the same swain will often pay similar visits on the same evening to other young ladies of the same village or township. Thus courtship is always going on, and courting time has been an acknowledged institution from time immemorial.

Here some explanation is necessary. The Burmese evening is divided into three watches—namely, children's bed-time, old folk bed-time, and young folk bed-time. Children's bed-time is sunset, or shortly afterward. Courting time begins soon after children's bed-time, and continues long after old folk bed-time, which is about nine o'clock. Young folk bed-time depends a great deal upon the will and pleasure of the

young people in question; say about eleven o'clock. When the hour of courting approaches, the young lady trims her little lamp, so that it gleams through the window, and takes her seat upon a mat on the floor. Meantime the young gentlemen have been putting on their best bright silk putzoos, a nondescript garment something between a pair of trousers and a petticoat, have donned their clean white jackets, have tied colored silk handkerchiefs on their heads in the most approved style, and have turned out altogether

over. How the lady receives each lover, especially in the presence of other lovers, is more than we can describe. She herself requires considerable attention, and the old people never interfere. Indeed, why should the old folk interfere? The young folk can take care of themselves, and are only doing what they themselves did in the days when they were young.

These evening gatherings are generally very innocent, and the marriages which follow them are generally very happy, although sanctified by no priest, and only held together by the ties of mutual affection or the obligations of civil law. Jealousy, however, is a master passion in Burmah, and if a damsel is too kind to one of her admirers, the chances are that the offending lover is stabbed, speared, or shot. Indeed, a jealous rival, who suspects that the object of his affections is alone with another rival, will not unfrequently astonish the happy pair by running a spear through the floor of matting on which they may be reposing, and then there is a regular Burmese row, terminating very seriously sometimes.

This courting time in Burmah is nothing more than a relic of the old Hindoo institution known as the swayamvara, or choice of a husband by a maiden. This swayamvara was once practiced by the old military caste in Hindustan, but has long since passed away from the shores of India. No doubt it was one of the Kshatriya customs, which the Buddhists carried with them to Burmah when they were expelled from India by the wars and persecutions of the Brahmans some ten or twelve centuries ago. Thus the world moves on, and doubtless it will be discovered in due time that other old Kshatriya customs may still be found in Burmah. Gambling away a wife, which is often mentioned in Sanskrit tradition, and would be impossible in the India of the present day, has not unfrequently occurred in Burmah.

"I WONDER IF I COULD DANCE?"

in the height of Burmese fashion. They enter, they seat themselves on the mats round the fair one, and then the "chaffing" begins. If a gallant has been unsuccessful in a boat-race, or has tumbled into the water, or has paid too much attention to another damsel, or has been deserted by another damsel, or has made himself ridiculous in any other way, the chances are that his feelings will be hurt before the evening is

He was an applicant for the position of writing teacher in one of the public schools. They gave him a copy-book, and asked him for a specimen of what he could do. He took up the pen, and, in a handwriting that looked like a flash of lightning that had mistaken the direct road, wrote as follows: "Sorrer doesn't kill folkes as fast as green gooseburys."

## Household Topics.

## "ORDER IS HEAVEN'S FIRST LAW."

"Dear me, there goes the door-bell! Girls, quick, help me put this room to rights. Sarah, take the bread-pan into the kitchen, and Mattie, do arrange the books and papers on that table." So nervous little Mrs. Watson bustled about, trying to do a dozen things in a few minutes, and, as a consequence, the front door was not opened until the visitors had rung twice, and were getting to be impatient. They were two young ladies and their brother from a neighboring house, who, knowing that the Watson's had a young lady visiting them from a distance, had come to call upon her.

It being a cold winter's night, and no fire in the parlor, of course the callers must be shown into the sitting-room, which, it must be confessed, had a decidedly upset appearance. Little Charley, the five year old, had been building houses and then tearing them down, so that his blocks were scattered in every direction about the floor, ready to trip up the unwary. Mr. W. had taken off his boots and set them carefully behind the stove, while he replaced them with his slippers. One of the boys had been whittling, and the chips had flown hither and yon. Some one had brought in a quantity of stockings to be mended, thrown them into a chair, and there they still lay. In fact, the chairs had to be cleared of their contents before there were enough for the use of the company. The sewing machine had almost disappeared underneath an accumulation of unfinished work, an open piano was strewn with sheet music, and so on, *ad infinitum*.

But who does not know how soon even an orderly room will become disarranged after the family has taken possession of it for the evening? And in this case the room could not have been called tidy when they came in from supper. After the callers had been seated, and introductions given to the visitor, Miss Laura Ellison, Mrs. Watson felt called upon to apologize for the disorder by saying it was the family room, and it was impossible to keep it tidy at all times. This created rather an uncomfortable feeling all round, most certainly to the hostess, and to the callers themselves, who could not, most assuredly, in the face of the disorder, make any disclaimer to Mrs. Watson's words.

However, the conversation soon became general, and Mrs. W. having busied herself in picking up one thing and another, took Charley up stairs to bed. Mr. Watson had betaken himself to his newspapers, and before long, the young people had some music. Then the callers took their leave, and, after lingering by the fire a few minutes, Mattie proposed retiring. "For see, girls," said she, "it is after ten o'clock, and I for one am sleepy."

So without doing anything towards righting the still disorderly room, she started upstairs, her sister and their guest soon following. But while preparing for bed, she remarked, "I don't know when I have been so mortified as I was to-night, to think that Louisa Ward and her brother and sister should come in upon us, and find us in such a heap! How do you manage, Laura, at your house to always keep everything in such nice order? If we could only have a fire in the parlor, and use it evenings, we never should be caught so; but father thinks it is a great waste of fuel, and that is why we moved the piano into the sitting-room. Of course, in the evenings we do have a warm parlor, we are sure not to have any callers."

"It used to be just so at our house," replied her friend, "until at last I took the matter in hand out of sheer desperation, and by seeing to things myself, I generally manage to keep the sitting-room ready for company at any time. But it was only by constantly picking up and putting away, and by 'line upon line and precept upon precept' to the boys, that I could get them to look after their own things and put them away when they were through with them."

"Well, to-morrow I will take some lessons from you, if you are willing," said Mattie.

"Certainly," Laura replied, "and, excuse me, Mattie, but I noticed both nights I have been here that you did not close the piano. Now, that is one of the things which mother required of me when we first bought ours, to see that it was closed every night, and at the same time, I put the cover on the sewing machine and lock it down."

"That is a good idea," said Mattie, "and to-morrow I will begin to be orderly. But I am too sleepy to talk or even to think any more."

True to her promise, Mattie began after breakfast the next morning her task of "arranging things." In the first place she attacked the sewing machine, folding up and putting in a large wash-basket in the closet all the unfinished work. After fastening down the cover she looked around to see what to do next.

"If mother did not have to have so many plants," sighed she. "They take up so much room, and there is not a window left to look out of."

Here Laura came to her rescue by saying:

"Why don't you get your father to make a box to fit before one of the windows, and fasten it upon legs like a table; then you can put in a layer of earth, and set the flower-pots in it. You would be surprised to see how many plants could be crowded in. Mother had one made, and we like it better than any plant-stand we ever had."

Mattie doubted if her father could be prevailed upon to make one, but said she would see about it.

Just then Sarah said, coming in from the kitchen with a woful face:

"We shall have heavy bread again to-day. It did not get a good start last night, for it had to be put off in the cold when the company came, and it has not caught up. But I have got to bake it whether or no before dinner, and trust to luck to do better next time."

Mattie looked at Laura, and said:

"That is another objection to turning a sitting-room into a parlor. A bread-pan standing behind the stove is a rather unsightly object, is it not? But when the fire is out in the kitchen, what can we do?"

Laura replied:

"That very thing puzzled me, too, for some time until I invented a crocheted cover for it. Mother mixes her bread in a large wooden bowl, and we draw down the cover, (it is scarlet and black), and then we have a cane-seated stool which we put behind the stove, and after the bread and its cover are placed upon it, it looks quite ornamental. The only trouble is, I have to watch when strangers are present for fear they should mistake it for an ottoman, and sit down on it!"

"Well," exclaimed the girls, "you are a genius. Who would have thought of that but you, Laura?"

"Why," she replied, laughing, "I had so many times been mortified by that dingy looking bread-bowl, that I tried to think of something to hide it. And I made another knitted cover, smaller round, but longer, like a bag, to slip over the jar which mother uses to mix our buckwheat cakes in."

"I will make one for mother for Christmas, if you will show me how, Laura," said Mattie.

"With pleasure," replied Laura, "and if you have any flower-pots that look shabbily, I can show you how to make some pretty covers for them out of bed-ticking and blue or scarlet worsted braid."

So Mattie was fairly started in the good work of keeping things in order. Her sister Sarah was her mother's assistant in the kitchen, but Mattie's health never having been strong, she was spared any heavy work, and had been considered the "young lady of leisure" of the family. But her new object of interest took up much of her time, and she did not rest until she had taught her brothers, what her mother, with all her desire for order, had failed to establish, and that was, that each one was responsible for his own belongings. She looked up a pretty box for Charley's toys and blocks, which she deposited in a corner of the closet, and taught him to put his playthings there when not using them.

Finding she could not prevail upon her father to help her in the matter of a plant-box, she saved up her money for a month, and then had one made to order. Mrs. Watson was much pleased, and in "the new departure" all the family found themselves more comfortable.

Mattie now has a house of her own, and it is as neat and tidy as one could wish to find. MRS. M. H.

## HOME-MADE LOUNGES.

Many pretty and useful articles can be made for home comfort and adornment, if one only knows how to go to work. Mrs. Henry Ward Beecher, in the *Christian Union*, gives some instructions about making lounges and brackets, which we copy for the benefit of our readers:

Very pretty and comfortable lounges can be manufactured at home with very little trouble or expense. If the husband or sons have any spare hours, or skill with saw, hammer, and nails, they can snatch leisure moments, now and then, and make the frame; or, if they are not skilful, a carpenter, in an hour or two, could make it, and give it a proper shape to suit the part of the room where it will be put. After the slats are nailed on, if there is any place near by where a few springs can be obtained, they will make the lounge much more comfortable. Over the springs cotton batting, hair, or moss, should be laid, then a thick, strong canvas or bagging, that the springs may not wear the outside cover. When this is nailed down smooth and tight, taking care that the stuffing is spread on evenly, without lumps or hard spots, put on the cretonne chintz or woolen outside cover, and nail it down strong. Finish by nailing with brass or black nails, a gimp and fringe plaiting or ruffle to cover the edge, and you have a neat lounge, quite as comfortable as most that you buy. Three large, square pillows, filled with feathers, hair, moss, or "excelsior" (a kind of poplar shaving made expressly to pack furniture in), and covered to match the lounge, are a great convenience for a straight lounge, placed, as it should be, close to the wall.

Pretty and very useful corner brackets can be shaped and made without difficulty, and covered with embroidery, damask, or reps. Round the shelf or bracket a piece of the same material with the furniture cover or lambrequin may be cut in points, or scalloped and finished with heavy fringe. These pieces are often beautifully embroidered on Java canvas, and the brackets, when finished, are quite ornamental as well as useful. Leather work, or pine cones, varnished, are often worked up into very fanciful brackets, and are quite strong and durable.

## Housefurnishing.

### HINTS FOR HOUSE-FURNISHING.

Perhaps some of the readers of the CABINET have a room which they would like to have furnished, yet they have so little money they think it will be impossible to do it. A room furnished according to the following hints would look home-like and comfortable at very little expense.

If you cannot afford to buy a carpet, oil the floor with good linseed oil, and lay down rugs wherever you can find a place for one. One way to make a pretty rug is to braid rags, sew the braids together in strips, then put a border around this of a contrasting color; or make a round one by sewing the braid round and round in the old-fashioned way until the rug is large enough.

Another way is to take burlap, cut it any size you wish, fringe out the edges, work a border around it with double worsted in some contrasting color; the Roman key or the Grecian braid are pretty patterns for a border. Work a monogram or a figure in the centre, and your rug is completed. Instead of zephyr you can ravel out an old scarf or "cloud;" color it some bright color, and it will be far cheaper than worsted. Then there are rugs made by drawing carpet rags, cut on the bias, through burlap and then shearing. Another way is to take a piece of dark cloth (an old coat will do nicely); cut it any shape you choose and apply figures cut out of bright colored flannel; sew these on in button-hole stitch; or, instead of applying figures, cut circular pieces out of variously colored flannel; have some larger than the others; place a large circle of light-colored cloth on the black, on top of this a smaller one, and then a still smaller one; tack these firmly in place. If carefully made these are very pretty.

Paper or tint the room if you can; if you cannot, do the next best thing, which is to cover the walls as much as possible with pretty things. Wind a rope with cedar, or sew autumn leaves on a strip of cotton; put this up as a cornice; have the same around the window and door casings; make wreaths, crosses, anchors, harps, etc., of cedar and autumn leaves, which are to be put wherever there is a vacant space on the wall.

I made a pretty cross by sewing green moss on stiff paper cut in the shape I wished; on a strip of calico I sewed pressed ferns and autumn leaves; this I twined around the cross gracefully, allowing one end to droop over one arm. I cut letters out of stiff paper and sewed on them the dry moss which grows on the roots of trees in swampy places; these I tacked on the wall over the door. My motto was "Welcome." Sprays of cedar are pretty over doors and windows, as well as bouquets and wreaths of autumn leaves.

You will want a lounge; which may be made by taking a box of the proper size; have a strong cover put on with hinges, as your lounge will be a good receptacle for bedding and articles not in constant use; pad the top well with curled hair, hay, or cotton batting; cover smoothly with calico, put a curtain around it; add one or two large square pillows covered with the same material, and a strong loop to raise the cover by, and your lounge is finished. Several smaller boxes covered in the same way will make nice ottomans. Old chairs which have been put away as too shabby to use, mended and covered to hide defects, are as easy as new chairs. Barrel chairs are made by cutting a barrel into the shape of a chair;

rope is then put across bed-board fashion to form the seat, the back and sides are padded, and then it is all covered smoothly with enameled cloth, calico or worsted goods; a cushion is made of the same material.

If you have not got an old table which you can spare for your room, "John" can make one, if he is at all handy with tools, which, when varnished and covered with a large table cover, will answer every purpose. I am not much of a carpenter, but I made a toilet table by setting an old shoe-box on end and nailing on the top of this a board of the right length and width. I padded this, put a curtain around it, and it was finished; one or two shelves in the box would be convenient.

If you have pictures which can be framed, your walls need not look bare long; you can make cone frames by gluing cones on a foundation; moss or lichen frames by sewing the moss on stiff pasteboard; rustic frames, by gluing bits of bark, twigs, etc., on a foundation, or by taking wood with the bark left on, cutting the proper length and width and fitting carefully at the corners so they will be true. Then there are frames made of paper stars, of perforated paper worked with worsted, and frames of different kinds of seeds and grain; yellow corn makes a pretty frame, and also rice sprinkled thickly over a frame made of pasteboard; then color with stain varnish; and any one can make straw frames. Many fancy articles can be made of straw by soaking the straw in warm water and then flattening them and glueing them on your foundation.

In this way you can make baskets, letter-cases, wall-pockets, paper-racks, boxes, brush, comb, and card-cases, brackets and many other articles. Of the bark of white birch you can make many fancy articles besides those of which I have just spoken. Twigs of the Norway spruce also make up very prettily. Those fungi which grow on the trunks of trees make nice brackets by simply varnishing them and nailing a strip of leather on the back by which they can be suspended.

For a corner bracket cut a piece of wood in a three-cornered shape, only rounded on the outer edge; nail pieces on the side of this, by which it can be fastened to the wall; stain the top a dark color; make a lambrequin by working a pretty pattern on canvas cut in deep scallops; put on the edge a heavy bead fringe, and tack to the bracket with ornamental tacks. A simple way to make a lambrequin is to cut a piece of rep or flannel in deep scallops, pink the edges, cut leaves out of black velvet or cloth of a contrasting color, and apply them to the rep with button-hole stitch.

Other brackets may be made of very heavy pasteboard cut in fanciful designs, and covered with rice, cones, or almost any kind of seed, glued on in fanciful designs. If you can, get John to make brackets of cigar boxes, and have him put up a mantel-shelf; stain the top; then make a deep lambrequin to hide the supports, which of course will not look as well as they would if made by a professional cabinet-maker.

Then by all means have some flowering plants in the window. By the way, tin fruit cans make nice flower-pots; cover them with lichen, moss, or bark. Crocheted covers are pretty; crochet them the right size and shape; starch very stiff, and dry on the pot they are intended to cover; then varnish with stain varnish.

Much more might be said on this subject of home-furnishing, but I see that this article is long enough. I hope some of you will try these suggestions; if you

do you will be surprised to see how comfortable and home-like your room will look at little expense.

With best wishes for your success in this undertaking, I remain your friend in all matters pertaining to fancy work and home decoration. MARY E. MURRY.

### PICTURE FRAMES.

Every one wants picture frames. I scarcely ever go in a house, that some one does not tell me of some picture they have, but can't use them because they cannot afford to buy frames; and such was my trouble for a long time; but now I make them, even for very large pictures, and every one pronounces them beautiful. Some, indeed a great many, have taken them for handsome carved walnut frames.

My method is very simple and easy. I first have a rough wooden frame made, no matter how rough, and cover it with dark brown cambrie or calico; when that is dry, lay it flat on a table, and glue on it the sealy bark from the sycamore tree. After you have covered your frame in this way, varnish it with copal varnish. Then cut small slips of wood with the edges rounded off, and cover with gilt paper, to look like the moulding in walnut frames; be sure to cut the pieces to fit exactly, and tack them on your frame. If in glueing on the bark it should curl, tack it on with a small tack.

A pretty ornament for a parlor is very easily made in this way: Have a wooden cross made of timber, one and three-fourths inches square; make the cross eighteen inches high by twelve inches across the arms; then place it on a base formed of two pieces of board about an inch in thickness; the top piece must extend out around the cross some distance. A good size for the proportions above named is one and a half inches by five inches; the second board must be placed under this, and must be one and a half square inches larger, so it will form a base, like two steps, leading to the cross. In the centre of the base cut a hole and fix in the cross firmly; when this is completed, cover it over with white paper without lines; then spatter it over until it is quite dark—almost as dark as granite—with India ink; dissolve some India ink in a saucer, dip an old tooth brush in it, and pass it lightly over a hair-pin; this will cause the ink to fall in tiny spatters on the cross. It takes some time to make it really dark, but if you persevere, your patience will be rewarded. When this is done, take the brightest autumn leaves you can get, and form into a wreath; begin down on the base with quite a cluster, as if it was growing there; place a small tack now and then under the leaves, and use fine wire in forming your wreath. This can be worked over the tacks, and not be seen; commence, as I said before, at the bottom of the base, down low, rather to one side, and bring around the cross, then under the arm, and over the top, falling gracefully over and below the other arm.

You can't think how beautiful it is, and how rich and gorgeous the leaves look. I made one some time ago; it brightened the whole room in which I placed it. If your leaves should curl or fade, you know they can be easily replaced every fall; but they last for months. E. W. H.

**Oatmeal for the Complexion.**—A writer in the *Household* says that she uses oatmeal twice a day to make her face smooth and rosy. Take the dry meal, a little on a preserve plate, pour on just enough cold water to make thin, strain through a little sieve, and dipping a cloth into the water, wash over the face once or twice and let it dry. The result will be a beautiful complexion.

## Household Elegancies.

## A BEAUTIFUL PORTFOLIO FOR PRESERVING PRESSED LEAVES AND GRASS.

A pretty and substantial method for preserving leaves and grasses is shown in our illustrations:

Cream tinted paper of moderate thickness is cut into as many pages of uniform size as may be desired, and upon one side of each page the leaves and sprays are fastened with floss silk or the narrowest ribbon. The cover is composed of card-board, and ornamented with spatter work; two loops of cord extend from the lower cover at each side, and are caught over buttons upon the upper one, holding the edges firmly and closely together.

Another mode shows the pages arranged in one continuous strip, and then folded to the size of the cover; the method first described, however, will be found preferable.

shape. Sew it on to pasteboard of the same shape; bend this rounding. Cut out a back to fit it, and let the back extend up and form a cross; cover the cross with black velvet; cut a strip of white perforated card-board somewhat narrower than the cross; one for the standard, one for the arm, and one for above the arm; sew these on as they will not stick fast to the velvet with mucilage; then cut strips a little narrower than the first ones, and so on until you fill out the whole cross; these can be fastened on with mucilage. For the front part where it is sewed together, cut a strip of tin foil an inch and a half in width; with small scissors

PORTFOLIO FOR PRESERVING LEAVES, ETC.

## JARDINIERE.

The framework is of bamboo. These frames are sold at most fancy-work shops, with a tin tray to put the flower-pots into. To hide the tray, drapes of embroidered cloth are placed in each division; these are pinked or cut in points at the edges, and ornamented round with simple design in embroidery. A scroll in braid or embroidery ornaments the middle of each drape.

## HOME-MADE ARTICLES.

Why not make them? Any one that has any ingenuity can, by saving pieces and bits of this and that, form them into beautiful things which will make any home pleasanter.

A very rich lamp mat can be made by taking a piece of dark red velvet, cut it round, (I prefer it quite

sors cut a fringe on both sides, leaving enough in the centre to stick it on by; place five of these strips on, having every one a little narrower than the preceding one; then take a small natural leaf, cut some by it out of the green part of the curtain; vein them with a brown crayon pencil; wind some wire with green zephyr; lay a small pleat in each leaf, sew them on the wire, make a few small flowers to imitate vine flowers, fasten them on, sew the bottom of the wire in each corner of the pocket, and make a small loop to hang it up by.

A handsome card-basket can be made, having the foundation of stiff pasteboard; cut a strip a finger wide and three-quarters of a yard in length; join together and scallop the top; cut a bottom to fit and join together; gather some sweet corn husks, the inside ones are best; color some of them pink with ani-

trim the top of it with husk work, line the under side with white silk, also inside of basket with white silk. Sew a cluster of preserved autumn leaves on top in the centre of the handle. The husks make much richer work than paper does.

A delicate and pretty hanging basket for corner of a room may be made in the following manner:

Make the foundation of pasteboard, in the shape of a bird's nest, only larger and longer. Take a strip of tissue paper, double it four times, having it three or four inches in width after being doubled; cut a fringe on one side, leaving enough on the other side to stick it on by; with a knife crimp the fringe; then pick it apart. Begin at the bottom and paste it on, always fastening one strip a little above the other, and so on until you fill the basket up to the top. As you get near the top make the fringe shorter. Put an artificial rose and leaves in the centre of the basket, on one side, for the front. Make quite a long handle to hang it up by; taking a strip of pasteboard, cover it entirely with the fringe; arrange a few buds and leaves on top of the handle so as to droop forward toward the front of the basket.

Phantom baskets are pretty made of raveled cloth, red, white, and blue.

You can make a rich-looking hanging basket for vines by taking a large cocoa-nut shell and gluing small cones all over the outside surface; glue a strip of grape vine on to hang it up by.

A toilet stand for bed room of simple materials: Plain thin white muslin, over pink cambrie, will produce a pretty effect at little cost. Take a box the size of a washstand bureau; set it up lengthwise, with the open side toward the wall; cover it smoothly with the cambrie; then with the muslin, laying a box pleat about seven inches apart, letting them extend the length of the box; place small pink bows between the pleats, seven inches apart. Cover the top the same as the sides. Finish the edge with a box pleated ruffling. Place a bow on each corner.

PORTFOLIO FOR PRESERVING LEAVES.

large), scallop it around the edge, sew a red worsted rose, a shade lighter than the velvet, in every other scallop, and in every other one a fringe over an inch wide, knit of green variegated zephyr, to imitate moss.

Wall pockets are pretty made out of soiled oil cloth curtains. Cut out a design in one of the corners, (you will surely find one bright corner), in some fanciful

line, and some green; cut a piece an inch square, double it in the centre, then double again. Enough has been said in the CABINET in regard to paper work to enable any one to know how to make and arrange it.

Always dip them in water so as to make them pliable before cutting them. Sew them on, overlapping each other, in forms you like best. Make a handle,

JARDINIERE.

Make two catchalls, one for the waste matches, one for the others, by taking two goose eggs, or gourds; break at one end, empty out the contents. With sharp scissors cut off three-quarters of an inch. Crochet covers to fit them, out of pink zephyr; run a cord around near the top, fasten a cord on to hang it by, sew a bow on each side and three ball tassels on the bottom.

P. C. W.

## Hireside Reading.

### A NEGRO CAMP-MEETING HYMN.

Why don't you do as I Peter did,  
A-walking on the sea?  
He throwed both arms above his head,  
Crying, "Good Lord, remember me."  
Then remember the rich and remember the poor,  
And remember the bound and the free,  
And when you are done remembering around,  
Then, good Lord, remember me.

If I could stand where Moses stood,  
And view the landscape o'er,  
I'd throw these legs as fast as I could—  
And I'd go for the milk-white shore.  
Then remember the rich and remember the poor,  
And remember the bound and the free,  
And when you are done remembering around,  
Then, good Lord, remember me.—*Chicago Tribune.*

**Lively Butter.**—There is an old goat owned in Detroit which has received a great deal of training from the boys. Last Fourth of July they discovered that if they stuck a fire-cracker in the end of a cane and held it at William, he would lower his head and go for them; and they have practiced the trick so much that the goat will tackle any human being who points a stick at him. A few days ago he was loafing near the corner of Third and Lewis streets, when a corpulent citizen came up and stopped to talk with a friend. They happened to speak of sidewalks, when the corpulent citizen pointed his cane just to the left of the goat, and said:

"That's the worst piece of sidewalk in this town."

The goat had been eyeing the cane, and the moment it came up he lowered his head, made six or eight jumps, and his head struck the corpulent citizen just on "the belt." The man went over into a mass of old tin, dilapidated butter kegs and abandoned hoop skirts, and the goat turned a somersault the other way, while slim citizen threw stones at a boy seated on a doorstep, who was laughing tears as big as chestnuts, and crying out:

"Oh, it's 'nuff to kill a feller!"

**Preaching Politics.**—A worthy deacon hired a journeyman farmer from a neighboring town for the summer, and induced him—although he was unaccustomed to church-going—to accompany the family to church on the first Sabbath of his stay. Upon their return to the deacon's house, he asked his hired man how he liked the sermon. He replied:

"I don't like to hear any man preach politics."

"I am very sure you heard no minister preach politics to-day," said the deacon.

"I am sure that I did," said the man.

"Mention the passage," said the deacon.

"I will," he said. "If the Republicans scarcely are saved, where will the Democrats appear?"

"Ah," said the deacon, "you mistake; these were the words, 'If the righteous scarcely are saved, how will the ungodly and wicked appear?'"

"Oh, yes," said the man, "he might have used those words, but I know mighty well *what he meant.*"

**Cyrus, King of Persia,** when a boy, was asked what was the first thing that he learned. In reply, he said: "To speak the truth." This is one of the most important lessons of life, and cannot be learned too early. There is no attribute of our being more beautiful than truthfulness; it sheds a glory upon the whole character; it does away with all distrust, inspiring, in its stead, sentiments of faith and confidence.

A story is told of a shrewish Scotchwoman who tried to wean her husband from the public house by employing her brother to act the part of a ghost and

**Spoil his Poetry.**—There are few jokes that make better fun than secretly piecing out a friend's unfinished line. The trick is a practical and verbal joke in one, and harmless—unless a sacred beginning is burlesqued by a ridiculous sequel.

It is related of Dr. Mansel that when an undergraduate of Trinity College, Cambridge, he chanced to call at the rooms of a brother Cantab, who was absent, but who had left on his table the opening of a poem, which was in the following lofty strain:—

"The sun's perpendicular rays  
Illuminate the depths of the sea,"—

Here the flight of the poet, by some cause, stopped short; but Mansel, who enjoyed a joke, completed the stanza thus:—

"And the fishes, beginning to sweat,  
Cried, 'Goodness! how hot we shall be!'"

**On the Wrong Lay.**—A certain Lincoln county huckster, who deals principally in butter and poultry,

invariably asks a little more for these luxuries than any of his neighbors. When asked his reasons for so doing, he always replies after this fashion:

"Well, sir, that's an extra quality of butter: it was made by my wife's aunt, sir—one of the best housekeepers in the State. Those chickens are a superior article, sir; they were raised by my wife's aunt, sir, and what she doesn't know about raising chickens ain't worth knowing, sir."

This peculiarity has been remarked by his customers, and they are in the habit of commenting on it quite freely behind his back. The other day a very solemn-looking individual entered the store, and, walking up to a basket of eggs, inquired:

"What do you ask for eggs?"

"Fifteen cents a dozen," was the bland reply.

"Fifteen cents?" exclaimed the melancholy customer. "Why, I can buy them, anywhere at ten—but, may be your wife's aunt laid these eggs!"

The owner of the hen fruit hung his head, looked thoughtful for a moment, and replied:

"Take 'em along at ten!"

A letter from one tramp to another was picked up in Fair Haven, Vt., the other day, which closed as follows: "u won't ketch me in this stat agin, my advise to u iz to go bak to york stat, ceep clere of vermont for it iz not a good hum fur a sensativ tramp."

"Skip the hard words, honey, dear," said an Irish school-mistress to one of her pupils; "they are only the names of foreign countries, and you will never be in them."

GRANDMOTHER'S TEA-PARTY.

frighten John on his way home. "Wha are you?" said the guidman, as the apparition rose before him from behind a bush. "I am Auld Nick," was the reply. "Come awa' man," said John, nothing daunted; "gie's a shake o' your hand—I am married tae a sister o' yours."

A learned and eloquent bishop was very anxious to convert a Parsee, who was making some stay in London. "I cannot think," said he, "how any man of intelligence and education, whose mind has been enlarged by travel and association with men of different opinions, can worship a created object, such as the sun." "Oh, my lord bishop," returned the Parsee, who had not been fortunate in the weather since his arrival in England, "you should see it; you have no idea what a glorious object it is."

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

BY MRS. CAROLINE E. COCKS.

*Aunt Sophia's Plain Wheat Pudding.*—One quart of sweet milk, one pint of flour, five eggs, half a teaspoonful of salt. Wet the flour gradually with the milk, add the salt, then the eggs, beaten very light. Bake in a quick oven three-quarters of an hour. Eat with hard sauce.

*Hard Sauce.*—One teacup of light brown sugar, half a teacup of butter, one teaspoonful of milk, flavor with lemon or vanilla, cream the butter, add the sugar, milk and essence, and stir until white and frothy.

*Aunt Jany's Plum Pudding.*—One pint of milk, two eggs, half a pound of beef suet, one pound of currants, one pound of raisins, quarter pound of citron, one teaspoonful of soda, one of cinnamon, one of cloves, one-half of salt; flour sufficient to make a stiff dough; mince the suet very fine; beat the eggs; then rub the flour and suet together; add the other ingredients. It is best to mix it over night. Boil three hours and eat with hard sauce. (See Hard Sauce.)

*Breakfast Dish.*—Half a pound of smoked beef cut thin, one pint of milk, one egg, sprinkle of pepper; cover beef with cold water; let it simmer five minutes, then pour off most of the water; add the milk and beaten egg; simmer one minute, and you have a fine dish for breakfast or lunch.

*Ham Omelette.*—Five eggs, one-fourth pound of ham, three-fourths cup of milk, one tablespoonful of flour; first cut the fat of the ham in very small pieces, and put them in the omelette pan; cook a few minutes, then add the lean ham cut in the same way. Be careful not to burn while cooking. Mix the flour and milk together, a little milk at a time; beat the flour and milk together, add the beaten eggs, and pour all on ham in the pan; do not stir it, but let it remain on a moderate fire until nicely brown. Run a knife round the edge, put a plate on the top, and turn it out.

*Tomato Soup.*—One quart can of tomatoes, one quart of milk, one pint of water, half a teaspoonful of soda, five soda crackers, one tablespoonful of butter; let the tomatoes boil five minutes; season with salt and pepper, add the water and milk, with soda in the milk. After coming to a boil put in crackers rolled very fine, and the soup is finished fifteen minutes from the time commenced. Eaten with crackers the taste is almost equal to oyster stew.

*Clam Soup.*—Fifty hard clams, one quart of milk, five soda crackers, one tablespoonful of butter; wash the clams well in two or three waters, put in a pot with one quart of water; cover close; when open take out of shells, settle and strain the juice; put it in a pot with the clams; boil ten minutes; add milk, pepper, butter, crackers rolled fine, and boil one minute.

*Beefsteak and Onions.*—One and a half pounds of beefsteak, one-fourth pound of beef suet, one quart of onions; cut the suet in thin pieces; lay on the bottom of a flat pan; put in the steak cut about three inches square; peel the onions, cut in thin slices and lay on the meat. Sprinkle with salt and pepper, cover tight, and cook over a slow fire for one hour.

*Breakfast Dish.*—When you have beefsteak left from dinner, cut it in small pieces; to one teacup of this put two teacups of onions cut in slices, three cups of potatoes cut in small chunks; sprinkle with a little

salt and pepper; cover with boiling water, and let it simmer one hour over a moderate fire.

*Codfish.*—One pound of salt codfish, one egg, one pint of milk, one tablespoonful of butter; pepper; soak codfish twenty-four hours before using; change the water twice; put on fire and let it remain twenty minutes; pick it very fine; add the milk and beaten eggs; sprinkle of pepper; butter, and let it simmer five minutes.

*Fresh Mackerel.*—Wash the fish clean, dry with a cloth, sprinkle with salt and pepper, and rub a little flour on them, have your pan hot, put in a spoonful of lard, lay the mackerel in, skin up, and fry a nice brown; turn over; when brown on both sides, serve on a dish.

*Corn Fritters.*—Twenty-five ears of corn grated, one egg, two tablespoonfuls of flour, one cup of milk, one teaspoonful of salt; mix the flour and milk and beaten eggs well together; heat your pan hot and fry in hot lard.

*Potatoe Fritters.*—Fifteen potatoes, one pint of milk, four eggs; boil your potatoes and mash them fine as possible; then add a lump of butter the size of an egg, a little salt, the milk and eggs and thicken with a little flour; drop with a spoon in boiling lard and brown on both sides.

*Strawberry Shortcake.*—Five cups of prepared flour, one cup of butter, half a cup of sugar, one pint sweet milk; rub the butter in the flour, making it like tea-biscuit, with the milk after adding the sugar; bake in jelly pans; cut in thin slices; butter each slice; have the strawberries well sugared; put them between and on top; eat with cream and sugar.

*Economy Cake.*—Three cups of sugar, two cups of sweet milk, four cups of flour, two eggs, four tablespoonfuls of butter, two teaspoonfuls of soda, four of cream of tartar, half a nutmeg.

*Ginger Nuts.*—One teacup of butter, two of molasses, one tablespoonful of ginger, half a tablespoonful of soda; sufficient flour to mix stiff; cut in cakes and bake quickly.

*Corn Bread.*—Four cups of Indian meal, two of flour, one-fourth cup of molasses, one teaspoonful of salt, one of soda, one or two eggs; mix well and bake three-quarters of an hour.

*Wheat Pancakes.*—Three eggs, one pint of milk, one tablespoonful of butter, one teaspoonful of soda, one of salt; flour to make a batter; mix well together; have ready a round pan with hot lard; put in four tablespoonfuls of batter; brown on both sides; put on a hot plate; spread with butter, sugar, and a little nutmeg; make another one in the same way and lay on top of first one, and so on till all the batter is used. Cut in pieces as you would a pie.

*Buckwheat Cakes.*—Five cups of buckwheat, one and a half cups of Indian meal, half a cup of wheat flour, one cup of yeast, one teaspoonful of salt; mix over night with sufficient warm water to make a batter.

*Rusk.* One pint of sweet milk, half a pound of sugar, half a pound of butter; warm the milk; melt the butter and sugar in it; add two tablespoonfuls of good yeast, a little salt; add flour enough to make it as thick as cake; when light, knead it again a little stiffer; when again light, knead over; cut in cakes; put in your pan; let it rise again, bake about twenty minutes. Take it out, wet the top with a mixture of brown sugar and water, or syrup and water.

*Biscuit.*—When your bread is light take off a piece of your dough; roll it out, dot it with butter; turn it over and roll the butter in well; let it rise again, make out in cakes and bake in a hot oven fifteen minutes.

*Meat Croquets.*—Take any cold waste meat, or beefsteak, cut off all gristle, etc., chop the remainder very fine, add twice as much mashed potatoes, one egg, a little butter, salt, pepper, and a small quantity of allspice; work thoroughly together; make into small cakes and fry in hot lard.

*Meringue Pie.*—Three lemons, two tablespoonfuls of corn starch, six yolks of eggs, one tablespoonful of butter, two teacups of white sugar; take out the seeds from the lemons, grate the rinds, chop the remainder very fine; wet the corn starch with a little cold water, then pour on to it two teacups of boiling water; let it come to a boil; add the sugar, and when it is cool put in the yolks of the eggs, the chopped lemons, juice, and butter, stirring all together. Line two pie plates with crust; pour in and bake; beat the whites to a froth, adding six tablespoonfuls of sugar; pour over the pies while hot, and bake two or three minutes till a light brown; be careful not to burn.

*Pumpkin Pie.*—One large cup of cooked pumpkin, one egg, one pint of milk, one teaspoonful of salt, one tablespoonful of ginger; sweeten to taste; mix thoroughly and bake with an under crust.

**Recipe for Mangoes.**—Take mangoes, cucumbers, snap-beans, radish pods, and gherkins for the pickles. Cut a slice from the side of each mango and remove every seed. Put them all in a jar, and having boiled as much strong salt and water as will cover them, pour it on them hot, and cover them thickly with grape leaves. Do this every morning till they are quite green, and then every other morning till you are ready to put them in vinegar. They will at first be yellow, but will turn green after repeated scaldings. Make a stuffing for the mangoes as follows: twelve ounces ginger, half a pound garlic, one pound or less of horse-radish, one pound white mustard seed, two ounces cloves, two ounces black pepper, two ounces allspice, two ounces celery seed, the whole mixed into a paste with sweet oil. The ginger should be crushed in a mortar, the horse-radish scraped, and cut into small pieces. After stuffing the mangoes, sew in the slices that were taken out, put them and the other pickles in a jar, sprinkling the stuffing that may be left between them, fill the jar with cold vinegar, and in three weeks pour that from them, and fill the jar again with strong cold vinegar.

**To Make Souse of Hogs or Pigs.**—Select as many heads and feet as you wish to souse; the whitest are the best; put them in cold water and let them remain a day or night. Then remove and have them nicely cleaned; cut off the ears and have them cleaned also. Put them again in water, sprinkle with salt; shift or change the water twice a day. Let them soak till they look white, but not till they smell in the least, which is likely, unless they are strictly attended to. When sufficiently soaked, remove, clean again nicely, and boil in plenty of water till well cooked. Then remove all the bones from the heads and feet, chop the meat well, season with salt, black pepper, and allspice to your taste, and while hot press it into dishes or pans and place weights on each till cold. When ready for use, slice and eat with vinegar. A very nice way is to slice it, dip into batter and fry. In seasoning the souse, also put in vinegar with pepper and salt, and set the vessel on the fire. Stir the whole well together, and press into cakes as above.

**Madame FOY'S**  
CORSET SKIRT SUPPORTER  
Increases in Popularity  
every year.

And for HEALTH, COMFORT and STYLE, is acknowledged the BEST ARTICLE of the kind ever made. For sale by all leading jobbers and retailers. Beware of imitations and infringements. MANUFACTURED SOLELY BY FOY & HARMON, New Haven, Ct.

**50** VISITING CARDS handsomely printed, 10 cents and 3 cent stamp by return mail. No nicer ones in the world at any price. One agent writes: "I know about fifty places to get cards, and like yours the best." "Neatest and best we ever saw." "Never so well suited before"—or similar expressions, come by nearly every mail. My list of 2,267 kinds of cards, 103 samples of type, agents' list, etc., with each order. Write names plainly, and if you are not more than suited, I will refill your order or refund your money.

**Window Gardening.**

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

**RICHLY ILLUSTRATED WITH EXQUISITE ENGRAVINGS.**

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who wish to adorn their houses in the easiest and most successful manner with plants or vines, or flowers. Instructions are given as to the best selection of plants for Baskets or Ferneries and Warden Cases. Several chapters are devoted to Hanging Baskets, Climbing Vines, Smilax, and the Ivy, for decorative purposes. Bulbs for House Culture are fully described; also ornamental Plants for Dinner Table Decoration. Other topics are well considered, such as Balcony Gardens, House Top Gardening, Watering Plants, Home Conservatories, Fountains, Vases, Flower Stands, Soil, Air, Temperature, Propagation, Floral Boxes, the Aquarium, Rustic Conveniences for Household Ornament, and directions in detail for the general management of in-door plants for the entire year throughout the winter, spring, summer and fall. The volume is profusely illustrated with choice engravings, and pains have been taken to make it one of the most attractive books ever issued from the American Press. For sale or supplied by Bookstores everywhere, or sent postpaid by mail on receipt of price.

Price **\$1.50.**

**Every Woman Her Own Flower Gardener.**

By Daisy Eyebright (Mrs. S. O. Johnson.)

A delightful little volume, written by a lady fond of flowers, as a special help and assistance to others interested in out-door flower gardening. Simple directions are

given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants. Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Everlasting Flowers, Ornamental Grasses, Coleus, Paeonies, Shade Trees, Garden Vegetables, Old Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures, Watering Soils, When and How to Plant, Dahlias, Lilies, Gladioli, Verbenas, Cannas, Balsams, Portulacas, and nearly all the popular varieties of flowers and shrubs. The book contains 148 pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or supplied by Bookstores everywhere.

Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

No. 67.

PRICE 12 CENTS.

## PRETTY WINDOW GARDENS.

Upon this and a succeeding page are given illustrations of some very beautiful ways of decorating windows and rooms with the living greenery of our popular window flowers. There is no home but can be vastly improved by the addition of a few plants; and there is no description of furniture that can compare with the delicacy, grace, and refining influence of window vines, blossoms and plant beauties.

It is hardly necessary to describe in detail all these engravings. It will be easily seen that the decoration of the windows on this page are far superior to those on page 116. And this difference is easily explained by the use of so many climbing vines. Figs. 1 and 2 are especially charming for the tasteful arrangement of the vines, and the addition of the vase in the first, and the spray of leaves and ferns, above and before the looking-glass in the second, make an inexpressibly tasteful effect.

In Fig. 3 is a sketch of a simple bracket which any one can make, the rustic fence being purchasable at any florist's at a cheap price. In several of the illustrations will be noticed wall pockets containing plants. This idea can be extended more freely than it usually is, and plants of beautiful foliage put in them in various places against the wall, every one of which will do far more than pictures to brighten a home. One of the most beautiful homes we have ever seen, had under each picture, fastened to the wall, a pretty group of leaves, ferns and moss. And the verdict of

visitors was for the woodland treasures in preference to the costly pictures. These illustrations, we believe, were engraved by Mr. Vick from photographs of the homes of some of his ardent floral admirers.

FIG. 3. WINDOW PLANT STANDS AND BRACKETS.

est profusion from the middle of April until the last of August, after which they produce a few scattering ones until frost. These flowers are very fine for bouquets. The seed should be sown from the first of April until the last of May, and from the first until the last of September. For plants to bloom in early spring, in patches where wanted to bloom, as the plant has a tap root and is quite difficult to transplant, cover about one-eighth of an inch in depth, and thin to four or five inches apart before the plants become spindling and weak; at this distance they will make a compact bed and will be a complete blaze of beauty all the summer. Apart from its beautiful flowers, the leaves are very ornamental, being many-parted.

Plants from seed bloom about the middle of August and sometimes in July. Seed should be saved from the first blooms that open, as they are the largest. Allow none to seed except those you wish to save, as it will cause the plant to produce very small flowers, and in time will stop it from blooming entirely, I would advise all who wish something showy to grow this plant. There are several other varieties of *Eschscholtzia*, but this is the only kind I have tried.

W. G. IVY.

**A Magnificent Ivy.**—A lady in Yardville, N. J., who bought an Ivy last fall, less than six feet in length, took such good care of it during the winter that when it was planted out in June, it had grown three hundred feet, and one of the main branches was forty-five feet long.

## ESCHSCHOLTZIA.

*Eschscholtzia Californica* is one flower that I would recommend to all lovers of hardy plants. It is a hardy perennial of easy culture, blooming the first year from seed. It succeeds in any common soil, the richer the better, however, as it produces larger flowers and deeper colored foliage. The blossoms are of a bright yellow, shaded with deep orange in the centre. They are about one inch in diameter on young plants, on old ones about one and a half and sometimes two inches across, borne on long foot-stalks thrown well about the foliage, and are produced in the great-

## Floral Contributions.

## SOMETHING ABOUT PLANTS.

Naturally, I have quite a love for plants, and during the last four years circumstances have caused that love to develop into a grand passion. The circumstances were these:

One morning, about four years ago, I realized the fact, which my friends had realized for some time previous, that I had a disease about me which would render me an invalid for life and that my life might stretch over many years. Only those who have been in like distress can even imagine the extreme bitterness which mingled with all my thoughts that morning. At length I resolved that my living should not be wholly disagreeable to others as well as to myself, and that the way to help myself overcome the fretfulness and general disagreeableness incident to sickness was to keep the mind fully occupied with other thoughts than of self. I caused my sick-room to hold as many plants as it had places for, and obtained works upon plant-life, thus studying their individual needs. I soon found that while I ministered to them they gave happiness to me in tenfold measure.

This year I have been able to cultivate them out of doors as well as indoors; and while remembering the days of pain they have helped me so much to bear in a less fretful way, I thank the Giver of all good things that He gave us plants and gave me a sense of appreciation of their wonderful life and beauty.

Very many people who came into my room said to me, "I don't wonder you are sick, with so many plants about you!" How could I explain to such what they were to me? How much of happiness and consequent health they gave me? They ought to have known as well as I that only flowers, stems and leaves which are decaying give out poisonous gases. I was careful to have all such picked off and to keep the plants in a perfect state of health.

I think that vegetation is a sure index of the healthfulness of a room; where that will flourish the human life will flourish, too, and, *vice versa*.

On the stove was always a shallow dish which was kept full of water, thus providing a moist atmosphere; once a week every plant had a bath in warm water. This is very easily accomplished by fitting a damp cloth over the earth to prevent its shattering off; while holding the cloth firmly the pot can be tipped in any position desired. If any should become infested with any of the many plant enemies—which is very seldom—dip them in a strong tea made of tobacco leaves; this will give their foliage a bright, fresh greenness, besides killing insects.

Three years ago I sent to a florist for a small quantity of tobacco seed, and since it has sown itself, and, if let alone, a sufficiency for such purposes will grow and mature. Gathered before the frosts come and placed "up attic," one need never dread the care of plants.

Those which have rough leaves and stems, like Chinese Primroses, showy-leaved Begonias, and some Coleus, do not like "dipping;" so the dust can be blown off such. Just here I must tell you how I succeeded with Chinese Primroses, both plants and seeds. Last spring I sent to a florist and obtained three different varieties, and after potting them, seemed to do well until at the end of two weeks I noticed that they were decaying at the tops. I never had seen anything like it before, so I went to books for information, and I concluded it must be that mildew had attacked them.

I dosed them with sulphur, both plants and earth, but all proved of no avail, and in about two months after getting them they were all dead.

Determined not to be beaten in that way, I then procured a package of seeds containing mixed varieties, and sowed every seed, as I supposed I should probably have only a few plants from all. When I wish to germinate choice seed, I fill a box about six inches deep with soil composed of one-third part each of good garden soil, which has been sifted to free it from all stones, and dirt found in decayed apple trees, and fine cow manure; to this mixture I add enough sand to give it a slight sandy appearance. On this I place my seeds, sift just enough soil over to cover them—they are of quite good size—and water with warm water until the earth is soaked; place a glass over the box, and set it on the top of the sitting-room stove. I did this way with my Primroses, and in a week they began to show their tiny leaflets; the next day I removed them to a sunny window and took off the glass, remembering to replace it evenings to remain over them until the next morning.

Plant after plant showed itself, and as fast as any of them attained their fourth leaf, I transplanted them into the same kind of soil with more sand added. When the weather was warm enough, I put the pots out in the garden under a tree, and there they have lived and flourished all summer; this fall they were transplanted where they were to grow through the winter, and finding I had no room for all, curiosity prompted me to count them, and I found there were sixty-eight.

Many of them have gone into other homes to cheer our northern winter-life, but I took good care that they all went where they would be well cared for. I never had plants of any kind do better, and I found them very tenacious of life under adverse circumstances, have crowded them in among other plants, and have them alone, and either way they do equally well, always remembering, however, that they do not like the full blaze of the sun, are impatient of heat, and do not like water on the leaves or stalks. At present more than two-thirds of mine are budded, and many of them are just ready to expand into full bloom.

I think that the best success is had with all choice plants outside of a greenhouse, when they are raised from seeds, or cuttings rooted in the same house where they are to be grown. Then they have the same air from the commencement of their lives.

Cuttings of Verbenas must be rooted and started in September to insure an abundance of bloom during the winter months. They, too, like a very sandy soil, but little water and all the sun they can possibly get. Fuchsias seldom get as much richness of soil as they like; they are capable of attaining great size, and will grow fast and bloom abundantly eight months of a year if given very rich soil and manure; water as often as once a week, always remembering to provide plenty of water for them to drink.

After the season of bloom is past, they want rest and will provide it for themselves by refusing to put forth new leaves, and look much as sleepy children do when forced to stay awake—very uninteresting. I put mine down cellar—the Fuchsias, not the children—the first of November, and water the earth while they are there only enough to keep them from drying out utterly, and bring them to the light and heat the middle of January.

I wish I could induce every woman to have just a few plants, if no more than a few can be taken care of well. Their growth is a curiosity, and if one cares for them, one notes the minutest and most delicate

changes of leaf, bud and blossom, and thus they not only fill the mind with other cares than those of life's daily routine, but they must elevate the thoughts—lead their owners to think of the Creator's creative power and goodness. Who, other than He, had the skill to plan such variety?

A Fernery, after it is filled, is very little care and trouble. I put a thick layer of dry moss in the bottom of mine for the purpose of absorbing all superfluous moisture; above this, small pieces of wood coal to the depth of an inch, and over this the soil, in which can be planted Achyrantes, Begonias, Ivies, any and all pretty creeping vines from the woods, Coleus, Ferns, and almost all tender kinds of plants.

Have the glass case fit tightly; give air by raising this case about ten minutes each day, and give water only when no moisture gathers on the glass, which latter case will not occur oftener than three or four weeks. If the plants cannot have the sun they do not mind, but keep on flourishing, blooming and thanking their owners for giving them such nice, comfortable quarters during the chilly months when their out-of-door companions are forced to cover up their heads lest Jack Frost should behead them some night.

Another combination of plants, whereby space and care are economized, is to put many in the bowl of a rustic stand, or, having had a tinsmith fit to the top of some old stand a zinc pan, arrange them in that. If casters are on the feet of the stand it can be easily moved to suit the convenience of its owner, and by pushing into the soil four small sticks, each a little taller than the tallest plants, newspapers can be readily placed over the whole on those cold nights when protection is needed. Nothing equals paper for that purpose. If any of my pets are particularly tender, I enfold each separately, then placing all together, enclose them in one immense paper covering.

Glazed pots are the only kinds I use; they are always clean-looking, while the unglazed require much washing to keep them presentable, and those which are painted, however handsome they may be at first, in a year or two become unsightly objects. I think any particular kind of plant-holder is not essential to their well-being.

I always insure good drainage by the use of wood-coal broken into bits, and think it preferable to anything else, as, if too much water should chance to remain in the soil, it corrects any acidity that may occur. All plants need iron in the earth from which they derive their life; a small quantity of refuse iron chips or filings, which any blacksmith will be glad to have taken from his shop, dug into the top soil will assist them much to put forth vigorous, healthy-looking leaves, and will deepen and intensify all the hues of colored flowers.

"Your voiceless lips, O flowers, are living preachers,  
Each cup a pulpit, and each leaf a book."

A. D.

**Cypress Seed.**—Every person that has ever planted Cypress seed knows that it takes a long time for it to germinate, and it frequently does not come at all, especially if the ground is not kept very moist. My method of sprouting it is a very simple and successful one. I take a large spoonful of cold coffee grounds and put them in a cup, then sprinkle the seed over these grounds, and cover them with coffee grounds, and in from two to four days the seed will all be sprouted, when they can be planted out, and they will grow rapidly. I have used this plan for years.

MARY B. McMILLIN.

## Answers to Correspondents.

**Black Flies on Plants.—The Best Window for Plants.—Should Plants be Grown in Bed-rooms?**—How shall I get rid of the little black flies on my plants? Is it healthy to have plants in a bed-room? Which is best for plants, a western or eastern exposure?  
JENNIE ELDREA.

Rome, Mich.

*Answer.*—Tobacco smoke will kill the flies; put the plants under a barrel and throw some damp plug tobacco on some hot coals. Let the plants remain in the fumes about ten minutes, then syringe or water the branches. The best exposure or window for plants is east. One hour of morning sun is worth two of afternoon. Window plants should have as much sun as possible. It is not unhealthy to have plants in a bed-room, unless they are in such quantity as to produce dampness. Plants exhale oxygen and inhale carbonic acid. Animals do just the reverse.

**Begonias for Fernery.**—What species of Begonias are best for a Fernery?

Ravenswood, Ill.

MRS. W. VAN HORN.

*Answer.*—Any of the Begonias with large ornamental foliage do well in a Fernery. Some varieties can be found at any greenhouse. The Fernery should be aired occasionally and not be kept very wet or the Begonias will rot. By ornamental leaved we mean Begonia Rex and its many seedling varieties.

**Soil, etc.**—What kind of soil is best for Calceolaria? How deep shall I cover the seed? Is Clematis cirrhosa an annual? Will Cobæa scandens sprout in the spring from an old root?

Briseo Run.

MRS. J. P. JOHNSON.

*Answer.*—Calceolaria seed is very small and should be sown as lightly as possible, on the surface of the ground; if watered afterwards, will often sufficiently cover it. The soil should be very fine sandy loam. Clematis cirrhosa is a perennial. Cobæa scandens will not sprout from the root, but if a portion of stem is left, eyes will break. The plant is not hardy where there is frost.

**Jasmine Treatment.**—Please tell me whether Jasminum grandiflorum should be put in the cellar after it has finished blooming, or remain where it will continue to grow? I have kept mine on the plant-stand where it will grow, but the leaves and branches dry up.

MRS. J. L. ANDREWS.

*Answer.*—You would probably lose your plant if you put it in the cellar. The fault in your culture is the air of the room is too dry, and perhaps you do not water enough. The tropical Jasmynes are all evergreen, and do not require drying off.

**Begonias.**—What can be the trouble with my trailing Begonia? It hung in a wire basket covered with moss, and grew beautifully all summer, but ceased blooming in June. Now (Jan. '77) it is beginning to bloom again; but when the leaves are nearly half grown they are covered with little watery looking spots, and drop off.

Cincinnati, O.

ESTHER W. HENDERSON.

*Answer.*—You are probably keeping your plant too cold and wet. If grown in heat this species will bear any amount of water, but it requires more heat than most Begonias.

**Billbergia fasciata.**—Coleus turning black.—When does Billbergia fasciata bloom? Are there

more colors than one? What is the treatment? Why do Coleus begin getting black at the top and continue so downward until they die away?

Galena, Ill.

JOHN F. BRENDEN.

*Answer.*—All the Billbergias bloom as soon as the crowns are strong; the season is usually summer and autumn, but some remain in perfection a long time. We know only one color of B. fasciata. From your description, we think your Coleus must have been frost-bitten. The Coleus is a very tender plant, originally native of the hot island of Java, and it is not well to plant any of the varieties in the garden before all danger of frost is past.

**Temperature for Plants.—Coal Ashes.**—What is the temperature for plants in a sitting-room warmed by a coal stove? Of what use are coal ashes?

H. J. F.

Peru, Clinton Co., N. Y.

*Answer.*—The temperature may rise as high as you would generally keep it, if you keep the air moist. It is dry heat which injures plants. Coal ashes are of no horticultural value.

**Turk's Head Cactus, etc.**—Why does not my Turk's Head Cactus bloom? It is thirteen years old, six inches high, fourteen inches in circumference? When does it bloom, and what flower does it have? A neighbor has had a Bridal Rose for three years, and an Amaryllis for seven years, which have not bloomed. Why is it?

E. J. L. C.

East Haddam.

*Answer.*—The Turk's Head Cactus grows to a great size and does not bloom until old; from the size, yours should bloom; but when it does you will be disappointed. The flowers are very small, in a circle near the top, and are pink, red, yellowish, or white. The Bridal Rose is not a rose, but a double flowering Bramble. It should bloom on the young wood very freely. Probably the shoots are too weak; repot it in good soil and give it plenty of sun. The Amaryllis should be dried off in autumn and allowed to rest all winter. Repot it in the spring, and it will probably bloom.

**A Rockery.**—Our house is on a side hill, and we are obliged to terrace the front. I am anxious to save a large maple tree, the roots of which are somewhat exposed and present a rough appearance, which I think may be improved by a rockery being built under it. Please give me your assistance.

Ottumwa, Iowa.

MRS. J. I. DOUGLASS.

*Answer.*—By piling up rugged, angular rocks in a rude way under the roots of the tree, it can doubtless be saved and many delicate plants could be grown in the chinks of the rocks. Make the arrangement as natural as possible, that is, avoid all formal arrangement. The effect you should aim to produce is that the rocks appear as if Nature placed them so that the tree sprung from them. Let the chinks between the rocks be deep and filled with good soil. Many plants which seem to grow on bare rocks send their roots far below the surface and feed upon the alluvial deposit in some chink of the rock, where the lower soil is always moist, no matter how dry the surface may be. The maple tree will in time, however, send out roots which will appropriate your whole rockery. The masses of rock or heaps of stone which we often see as "rockeries" have no beauty and only serve more conspicuously to display the misery of the stunted plants placed upon them.

**Lily of the Valley.—Keeping Geraniums.**—Why cannot I succeed in getting Lily of the Valley to bloom? Out of forty stalks but one has a flower-stem. Can you give me any experience as to keeping Geraniums through the winter tied up in bundles with the dirt removed? What kinds will keep in that way? Would they not do better dried off in the pots? Should the cellar be damp or dry?

Laclede, Ind.

MRS. LUCIE A. SCHROCK.

*Answer.*—Probably the soil is too poor for your Lily of the Valley. The tubers need to be well grown to bloom. In a garden bed probably not one in ten flowers. Manure the bed well with well rotted manure in autumn or early spring; do not let the ground become very dry, and you will get bloom. The flower is worth all the care you can give it. The Zonale or Horseshoe Geraniums will live shaken out in autumn and hung up in a cool, frost-proof dry cellar; but they do quite as well dried off in the pots. Neither mode is the best for keeping them, for they make very good window plants for winter, and do not require annual rest.

**Heliotrope root-bound.**—Does the Heliotrope do well when root-bound?

FLOWER LOVER.

Osborn, Green Co., O.

*Answer.*—It certainly will not succeed. Give it a good soil and repot, as the plant grows large, and the larger the plant the more flowers.

**Culture of Hydrangea, etc.**—What should be the treatment of Hydrangea? Should it be in sun or shade—in wet or dry soil? Should Lilies be set in the open ground, and how early in the season? What should be done with the bulbs after blooming?

Milwaukee, Wis.

MRS. A. C. ALLEN.

*Answer.*—If you mean Hydrangea Hortensia, the plants are best grown in large pots or tubs, as they are not hardy. Let the soil be rich, and give the plants an abundance of water. Set the tubs on a piazza or in the garden in the sun; they will bloom all summer. Let the frost kill the foliage, and then keep the plants in the tubs through the winter in the house cellar. Lilies should be planted in a deep, rich, well drained soil in the garden in autumn or as early in the spring as possible. The depth should vary from two to five inches, according to the size of the bulb. They need not be disturbed for years, and will each year grow stronger and give better flowers. Most Lilies are hardy, but all the species are injured by keeping the bulbs out of the ground. If planted in a very exposed situation, a covering of litter over the bed during the winter is advantageous. A Lily bed should be of rich light soil, never very wet or very dry.

**Aquariums.**—How can I construct an aquarium? Is there any way to prevent the cement detaching itself from the glass?

MRS. J. E. L.

Ada, O.

*Answer.*—A very simple and pretty aquarium may be made by procuring a large glass confectionery case cover, and fixing it upside down in a stand. The best are made of stone, with the glass glazed in lead or set in an iron frame; but they are expensive. If the cement detaches itself from the glass it was not properly mixed.

**Names of Plants.**—Answer to Annie E. Syanes, Lynchburg, Texas. The two small white and blue flowers are species of Vetch (vicia). The larger blue flower we cannot name, but it is not an Ageratum or a Forget-me-not (Myosotis).

## VERBENAS.

No plant excels the Verbena for planting, either in masses or bedding. Its bright colors contrast finely with the green grass of the lawn. It is a universal favorite with all flower lovers. Indeed, no lawn or flower-garden is complete without its bed of Verbenas. They are beautiful both in foliage and flower. Although they are but half hardy perennials, they bloom the first season. And they are so easily grown. The seed falling on the ground, will, if not picked up by the little birds, remain unimpaired through the entire winter, coming up quite thickly the following spring. I get the earliest and strongest plants from self-sown seed; but I always save seed from selected colors, as they range in colors from the brightest red, and a dark blue and purple, to a pure white; and then we have them with such a variety of markings.

Two years ago I procured a variety of striped Verbena plants; and from a particularly choice one, I saved the seed for the next year's planting, and from those seed I had quite a variety. Some were self-colored, and some were striped, and some were speckled and mottled in various ways. Some plants would have a truss all of a color and another one with a single floweret of another color in the same truss. The contrast was quite pleasing. While some are delightfully fragrant, others are entirely devoid of any fragrance whatever. I find the light colored ones the most fragrant.

The original plant from which the seed was saved, was white, striped with red. The Verbena has some enemies. The aphid or green louse sometimes attack it, and there is a kind of white lice that work on the roots, sometimes causing the plant to wither and die. For the first named pest, I make use of the dirty suds in washing. Give them a good showering in the evening. It not only rids the plants of the pest, but it is beneficial in the growth of the Verbena. For the ones on the roots a preventive is a little lime or wood ashes mixed in the soil before setting the plants, as they are somewhat hard to get rid of after planting. Occasionally there will be a plant diseased, which can always be told by its puny growth. Better pull it up and give the vigorous ones more room.

The Verbena delights in the bright sunshine. And I have better success with it of a dry season than almost any other bedding plants unless it is the Portulacas. Like Purslane, it will flourish wet or dry. The Verbena does best in a sandy soil. I mix one-fourth sand, an equal amount of well rotted hot-bed manure and soil from the woods, or sods rotted. The ground should be spaded one foot deep and then set the plants two feet apart. Keep the ground loose and peg down the straggling shoots, which will cause them to root at the joints where they come in contact with the soil, and the bed will soon become a perfect mat of bloom. And the more you pluck of the flowers, the more they bloom.

We have one kind of Verbena that is entirely hardy here with us, in latitude thirty-nine degrees north. It is called Verbena Montana in the florists' catalogues. Young plants of it will bloom all the summer. The older ones bloom earlier. They bloom along with the Tulips. The color is a red, changing to a rosy purple. The foliage is of a lighter green than the tender varieties. It is said to be a native of the Rocky Mountains. I don't know of more than the one kind that is hardy here. I don't know whether the tender kinds will mix with the hardy one. I have grown in the same bed, side by side with each other, the two kinds, and saved seed from both, but never could get but the one color.

The Verbena, although a favorite, is not a good house plant in an ordinary dwelling. It is a little "miffy" about being kept in the heated atmosphere of a room.

The Verbena is propagated either by layering, rooting in a saucer of wet sand, or from fresh slips in water. I have grown them frequently from slips in bouquets. I have seen them grown as basket plants, and as pot plants, but they are not at home outside of a bed or mound, where they can roam at will.

[Written specially for the LADIES' FLORAL CABINET.]

## Winnifred's Will.

BY AUGUSTA LARNED.

## CHAPTER XI.

"What God hath joined let not man put asunder."

"She's coming to," said the man in a half whisper, as he bent down over the unconscious burden on the earth. "Look to the dorg, Ben. If he hadn't howled so distressed like, we might ha' passed her by on the road."

The speaker stripped off his miner's jacket, and rolled it in a bundle to support the girl's head.

GROUP OF WINDOW PLANTS.

"Run down to yon spring under the edge of the hill," again addressing the lad, "and fetch some water in yer cap. I wish we had a drop o' whiskey to put in it; 'twould bring her to quicker nor anything."

The boy, who was no other than Sharp Ben, ran down the hill like a squirrel, and was back again in a moment with his cap half full of water.

A HALL WINDOW.

"She's a comely, pale young thing," said the man in a not un pitying tone, though his voice was rough, "and her clothes shows she comes of good folks. I wonder what took her out wandering in the night time."

"There! she's give a big sigh," said Ben, as he helped sprinkle the water with a vigorous hand. "When I tuk a close squint I knowd that dorg, and now I know the young

'ooman. She's the young 'ooman as com'd up to the mine with the new missis, old Boss's darter. I seed her a-ridin' in the coach, and first I disremembered her yaller hair."

"Hoot!" said the man, drawing himself up straight with astonishment. "That would be a nice fix if you're dead shore you've seen her with the missis. Summats gone wrong at the big house. She's out o' her head, poor thing, for she looks weakly, and they'll be sore perplexed to know what has happened. You're spry in the heels, Ben; and if you take the dorg and carry the news to the young missis, beliko she'll warm your pocket with summat handsome. But lend a hand first, Ben, to get the gall into the cart."

Virginie opened her bewildered and unseeing eyes.

"Come, miss," said he in an encouraging tone of voice, "you're a bit faintish, but bear up now, and we'll lift you into the cart."

She gazed at him with woeful, blank, blue eyes, devoid of any sign of consciousness, though she did feebly strive to struggle up into a sitting posture, and was lifted into the cart that stood near, by the man and boy. They moved the cans of explosive material which they had brought up from below for blasting the new works, into the farthest corner, and laying the sick girl on a horse-blanket, placed the folded jacket under her head. The man was deliberate in his movements. He took out a black cutty pipe and proceeded to fill it.

"Here's a bag," sung out Ben, who had been exploring the bushes, "and here's the gall's hat."

"Gie me the hat," returned the man, reaching down for it from where he was perched; "you take the bag back to the big house. It's all you want to prove you true. I've a bit of twine here in my breeches pocket. You can make a noose round yon dorg's neck, so that he don't give you the slip. Tell the missis she'll find the young 'ooman at Mary Smithers's."

This was indeed Mary Smithers's husband, a reticent man and slow of speech.

Old Hector had been sitting on his haunches looking with sad and solemn eye at the proceedings just narrated. When Ben tried to put the string around his neck, he haughtily refused the indignity, but, as if he knew what belonged to a reasonable being, turned and followed the boy down the mountain.

There was a sharp climb over the brow, and then a rough and broken descent of a mile, down which the cart slowly jolted. Smithers puffed away at his pipe, turning now and then to glance at the motionless form that lay as still and pale as a corpse, though even under the gray shawl he could detect a slight heaving of the chest. The day was joyless, and gray, and very still. "Fixing for a snow storm," thought Bob, as he puffed away at his pipe and let the lean cart horse scramble in his own fashion over the rugged ground.

When the slow vehicle did at last approach the hamlet Bob made a short circuit by a side lane in order to enter the little zig-zag street of miners' cabins without attracting all the eyes in the place. But the precaution was needless, for the street was empty. Nearly every door stood open, and a few hens were picking about, but men, women, and children had all run to the mine. Bob could see the crowd huddled about the shaft's mouth, and at once divined disaster and death.

"Belike someon's tumbled down the pit," he thought, "or the old south gallery has caved. There's been danger ever since the digging commenced, and engineer said a man's foot might bring down the timber work." But Bob was a phlegmatic man, and the suspicion that the timberwork of the abandoned gallery had fallen and buried a dozen of his comrades did not quicken his motions. He had stopped the cart in front of his own cottage, which was tidier than the rest, as could be seen through the open door, which afforded a good view of the interior. There was a high bed made up with a neat patched quilt, and white pillows; at the foot stood the empty cradle which his wife could not yet put away out of her sight. Bob let down the end piece of his cart, and taking the unconscious girl in his arms, laid her down gently on the bed, and drew the quilt over her.

Then he softly shut the door, and, taking his horse by the head, led him over toward the group of people at the works. The women, with children clinging to them, were vociferating and talking loud, especially one little, wiry, black-eyed woman with a lame boy in her arms, who had worked her way to the inner circle. The men stood mainly sullen and silent. They were clad in their grimy working clothes, some of them with lamps in their caps, and picks in their hands. The young engineer was talking to one or two of the men apart from the others. Unfortunately,

the superintendent had been called away on business, and was now absent.

"We won't go down inter no death-trap like that," broke out a fierce little man, with flaming red whiskers, "no, not for no stranger as ventured where he'd no business. I was the first as see him, and I sung out at the top of my lungs, but he kep' right on, and then come the dull heavy sound as if a mountain had slid down the pit's mouth."

"'Twas only the side wall as fell," remarked another. "I went in as far as I could crawl on hands and knees, and the roof was hanging by a hair; a sneeze would bring it down."

"It didn't cave reg'lar," remarked he of the burning whiskers, "and I call it the meanest kind of a death-trap; but if it was a miner in the way of getting bread for wife and weans, as was ketched in a hole like a rat, ropes couldn't hold us back from digging him out, if we knowed we'd be buried forty miles deep in the bowhills of the arth."

A murmur of approval ran through the crowd, that held its ground more doggedly than ever. The pit's mouth had an awful fascination when a human being was walled up or perishing in its black depths.

"He had no belongings with us," said another mau, gloomily. "He was suspicioned for a thief, and was likely hiding away from the sheriff and poss, as they call it. But Smoky Duff was his friend, and Smoky's the mau to git him out of yon hole."

Smoky had kept himself in the background with his cap slouched over his eyes.

"He wern't no friend o' mine," he muttered. "My woman took him in to lodge and feed for pay, and I knowed nought about it."

Nancy Duff had wisely absented herself from the scene.

"I wouldn't have thought, men, you were all cowards," said the engineer, coming toward the larger group, "you whose trade it is to look death in the face every day in the year, and yet you will let a fellow-being perish down there without putting forth one effort to save him."

The swart faces, begrimed with coal-dust, looked only the more dark, and sullen, and glum at these words; but one great giant of a man, known as Long Bill, visibly winced under the imputation of cowardice.

"It's wife and weans as makes a man hang back," he muttered. "The feel of their arms round your neck when you're going down the man-lines, takes the spirit out of you."

"You shan't stir one step," cried the giant's wife, the same little wiry, black-eyed woman who had been stirring up the others to resistance. She thought she had discerned signs of weakening in Long Bill's voice, and now thrust the pale-faced, deformed little boy into his arms. "Have you a spark of human feeling," she cried, turning fiercely upon the others, "to be persuadin' my mon into danger, when he has got a ricketty baby, and me with only one pair of hands, and three others under ten year old to support? Why don't you go yoursel'?" addressing the young engineer, "and you no chick or child to lave behind. Let the boss go!" raising her shrill voice and looking around triumphantly.

It was now the young engineer's turn to wince. He had no "chick or child," as the woman had said, but there was a six months' bride waiting for him down in a lowland city. He was no craven, but he, too, might feel a pair of arms clinging to his neck as he went down to probable death.

"What good would it do for me to risk my life alone," he said, in a low voice, "when the men refuse to follow?"

"Try us and see," was the ready response from more than one surly throat. "If the Boss leads, we're not so slow to go arter him. When he resks his bones, and thinks they're no better than our necks, tain't in us to hang back."

A glance of dismay shot out of the black eye of Long Bill's wife. She had miscalculated the effect of her eloquence. But the engineer roused himself, and looking about with a business air, said in a brisk tone:

"Come, come my men, you are not going to let a fellow-creature perish without one effort to save him, even if he is a doubtful character. Of course you don't mean to go down there without a reward; but I will promise a hundred dollars in Miss Braithwaite's name to the first man that offers."

"Hoot!" cried Long Bill, thrusting his hands more doggedly than before into his breeches pockets. "You don't ketch us with mouldy cheese. Old Boss was tight as glue. How can we be shore the young missis don't take arter him? Don't offer other folks' money; offer yourself, mon, your own blood and bones, and see if we don't foller where you lead, if it's down to hell."

The engineer turned slightly pale and stood silent with his eyes cast down.

"Who's a coward now?" cried Bill's wife, with a taunting laugh, in which the others grimly joined.

Bob, leading his cart, had approached the edge of the

crowd where his wife stood with her apron flung over her head.

"Is't the choke damp?" he asked, jerking his thumb forward.

She shook her head.

"The old gallery they've been undermining. A strange mon got down there, and the old rotten timber-work gave way, so he's buried alive, and the rest of the timber only hangs by a hair. They say a whisper will bring it down."

Bob took off his cap, and scratched his head.

"What 'casion had a strange mon for to go into the gallery?" he asked.

"They say he was trying to hide," she returned in a whisper. "There's officers out searching for him."

Bob nodded slowly, "I knows him, Smoky Duff's chicken. But go to the house, Mary. I brought company home wid me."

"Company!"

"A gall I picked up by the roadside. She was laying in a swoon, white and limp as a wet linen rag. I brought her in the cart and laid her on the bed in the house."

"Poer thing! how comed she faintin' by the roadside?"

"Dunno. Passes me. Ben Harding, as I had wid me in the cart, says it's the young miss that old Judge's darter had wid her last summer, when she comed to the mine."

"Oh, no," cried Mary, putting up her hands. "It can't be the pretty, pale-faced, yellow-haired young leddy that spoke to me so kind, and took such notice of the baby. 'Twas she, Bob, as made the little frocks—the very one my lamb was laid out in."

Mary turned to furtively wipe away the tears with her apron, and then ran hastily down the path toward her own house.

Bradley had rushed out of the Hall half maddened by the crisis of his fate. His brain was confused, and his face ghastly in its desperate misery. A wild tumult raged within him, and nothing was clear but the determination to search for Virginia. An insane notion had full possession of his mind that he should find her dead in the grounds, lying pale and stark under some tree or hedge, with her golden hair dabbled by the night dews.

He sought with feverish eagerness through the shrubbery; he rushed along the borders of the lake, gazing with despair into the clear waters, and looking with sick dread for small footprints in the sand. He found himself in among the dense forest trees, not knowing where he was, or how he came there; but the terrible agonizing quest went on, while his heart tortured itself with reproaches. He had killed her. He was worse than a murderer. He had driven her out to suffering, and privation, perhaps to death.

Hours seemed to have passed in a ghastly dream, when accident guided his footsteps not far from the highway that led to the little hamlet of Halcourt Centre. He knew where he was, and a clear rational thought struck like a sunbeam through the confusion of his ideas. He had been a fool, a madman, not to go at once to the telegraph office, and dispatch to Deanport for aid in rousing the country. He could have cursed himself for the precious time he had wasted. At that moment an impulse seized him to cry aloud for help; but the place was very lonely. The crows were cawing drearily overhead in the sunless, windless morning air. Though an age seemed to have elapsed since he first heard of Virginia's flight, when he looked at his watch he was surprised to find that it was not yet eight o'clock.

The autumn stillness was profound and solemn, and the gray vaporous curtain of the atmosphere transmitted sound from a great distance. As he paused for an instant on the other side of the screen of trees that divided him from the highway, the rhythmic beat of a horse's hoofs, galloping down the road, struck his ear. Here, perhaps, were tidings. In that unreasoning state of mind he leaped over the brush fence, and, taking his hat off, waved it at the advancing horseman. His pale face, blood-shot eyes, and dishevelled dress gave him the air of a madman.

"Stop!" he shouted as the rider came on at full speed. "Have you any news?"

"Yes, I have news," yelled the youth on horseback, without slackening his pace, "I am taking it down to Halcourt Hall."

"Where is she?" cried Bradley, making a spring at the bridle rein, and almost unseating the rider, who was no other than the superintendent's clerk, mounted on his master's horse.

"Where's who? D— you, let go the rein. You must be crazy. Who are you talking about?"

"Miss Duval, the young lady who escaped last night from the Hall in a fit of delirium."

"Oh," returned the youth, unbending with a swift gleam of recognition. "You are Mr. Halcourt. Excuse me, I did not recognize you at first, it was all so sudden. I had not heard of the young lady's disappearance. I was going to the Hall to carry the news of an accident at the mine. There is a man buried in one of the old disused galleries,

that has caved, and the men refuse to go down and dig him out, partly because it is a dangerous piece of work, and partly because he is a stranger of doubtful reputation."

"Who is he?"

"He is called Dr. Walters, but that is not his real name. According to report he is a desperate character, the leader of a gang of burglars. He doubtless took refuge in the old south gallery as a hiding-place, and not knowing the kind of trap he was to fall into."

Bradley stood for a moment silent and immovable, capable now of reflection, for a new turn had been given to all his ideas. This man must not die. He must snatch him out of the pit to wring from him a confession of Virginia's innocence. He must vindicate the honor of the woman he loved whether alive or dead.

"Get off your horse," at last Bradley spoke with authority, and I will take him and go to the mine, while you make your way across to the Hall on foot. But stop a moment; you must first leave this message at the telegraph office at Halcourt Centre, and he hastily wrote a few lines in his pocket diary, and tore out the leaf and folded it.

The young man obeyed meekly; he knew the person before him would one day be master of Halcourt, and deemed it best to conciliate the coming man. Bradley sprang into the saddle, and the horse darted away up the road like a flash of lightning.

The men were still hanging in groups about the shaft, half-ashamed and thoroughly sulky. Some had lighted pipes and seated themselves on the timber piles and heaps of debris, and were smoking in sullen silence. Most of the women had gone back to their houses, but Long Bill's wife was still mounting guard over her son of Anak.

"Why, there's him," she exclaimed, turning round at the clatter of a horse's hoofs. "There's the young missis intended, and he looks stern as a meat-axe. There'll be some big orderin' now, I'll warrant. Bill, don't you put down Charley; don't you dare stir one step."

Bradley sprang from his panting horse, flected about the nostrils with foam, and looked at the group of miners with bitter contempt.

"Are you men," said he, "to let a fellow-being perish down in that black murder-hole without raising a finger to save him?"

A hoarse, guttural murmur, unintelligible in words, ran through the crowd as it shifted and swayed.

"I shall not stay here to reason with you, or try to persuade you into mere decency," he added with biting scorn. "You are not human beings, but heartless brutes." He flung off his coat. "Give me a lamp and pick," he cried, and his feet were already on the descent.

"Stop! for Heaven's sake!" cried the engineer, who had laid hold of his arm. "An attempt must be made to prop the roof with timbers, or the whole thing will give way and crush you like a worm. One man can do nothing alone; and any attempt will be perilous, but it may perhaps succeed."

"Then, why in God's name don't you come along?" shouted Bradley. "Why do you hang back like a miserable peltroon?"

"I'm coming, sir," said the young man, with a blush of shame on his face. "God knows I'm willing to risk my life if you are."

The dark crowd of miners hustled and shouldered each other, and then made a simultaneous rush forward. Long Bill set the little deformed boy down by his mother's feet, though she screeched out after him in vain.

"We are ready to go with you," cried the hoarse voices, touched with some now and genuine emotion, "we'll go willing as water, but we didn't want to be druv into no slaughter pen like so many dumb critters."

"I'm glad if you have waked up to your duty," Bradley cried out to them. "It may not yet be too late to save life. I shall take the lead here, and I expect to be obeyed."

"Ay, sir, ay, sir," sounded from all sides, and in a moment more the perilous work had begun.

The women all ran back to the pit's mouth and set up a doleful wailing; most of them had babies in their arms, and older bairns clinging to their skirts. Long Bill's wife was dry-eyed and vociferous, but the others only wept, and moaned, and finally settled down into patient dumb endurance.

Into the midst of this group Winnifred suddenly came spurting on the back of Thunderbolt. She had not waited to put on her habit, but had thrown the great furred cloak over her morning attire. The proud young face, so beautiful in its bloom and glow, so assured in its glance, so self-possessed in its authority, was familiar enough to the miners' women. They had watched her at a distance with a wondering awe; they had criticised her, too, in their own rude fashion. She seldom went into their cabins, or conciliated them with familiar, kindly chat; even when she wished to do them a favor, which in their ignorance they resisted, as in the case of the school, she carried it with a high hand, and by the force of an imperious will. She

was not a favorite, but she was always an object of interest.

But now her ashy pale face, with the lips apart, and eyes so full of misery, woke their compassion.

"She looks quite beat down from her grand airs," whispered one to another, as Winnie alighted, and gave Thunderbolt into the care of a lad. "And him such a handsome young man. I wonder if she knows?"

"What are you whispering about?" Winnie cried. "Tell me what they are doing in the mine."

The women with dull, sad faces looked askance and nudged each other.

"You tell," muttered one. "She don't know he's gone down."

"No, you tell."

At last Long Bill's wife spoke up:

"Does seem as if you ought to know, miss. That young man, your sweetheart, so they say, has gone down to help dig out the man that's buried under part of the old gallery. And the roof is like to fall and crush him, and the hands as has gone down along with him. No more than a chance if they ever crawl out alive."

Winnie did not cry out. She put her hand to her side, and bent over as if a sharp pain had gone through it.

"Poor thing!" murmured one of the women, "she'll take it hard if worse comes to worst."

"Tain't no worse for her nor the rest of us," responded another under her breath.

"Nothing like so bad," was the speedy answer. "She's rollin' in money, and there's as good fish in the sea as ever was ketch'd, but we and our children will be left to starve if any ill chance befalls the men."

Low as the words were spoken, they came to Winnie's ears.

"What is that you are saying?—that you and your children will be left to starve if your husbands die along with him? God avert the calamity, but if anything happens down there, you shall be to me as my sisters."

Long Bill's wife had begun to sob now in a hard, dry way.

"That's fine to say, miss, but a grand young leddy like you can't be expected to remember all her words."

"So you doubt me?" with a kind of pitying vehemence, while a rush of emotion brought a cool flood against her burning eyeballs, and imparted a sense of relief. "You think I shall forget you, and what has happened to-day? If I do, may God forget me in my need."

She sat down on the end of a stick of timber, and joined the heart-sick, weary vigil of the other women. Little Charley, the deformed boy, attracted by the grand-looking, pale lady, hitched himself along the ground, and began furtively feeling of the fur on her cloak.

"Come here; she don't want you," his mother cried sharply, but Winnie took him up in her lap and nursed him, and the touch of his tiny hand, and the little, pallid, pinched face smiling shyly up in hers, helped her to bear the agony of that hour. At last word came up the shaft that the danger was still great, but not so great as it had been. The men were all at work under Mr. Halcourt's directions; and he was doing wonders.

Winnifred felt a glow of pride warm her heart. Bradley was a hero after all, and worthy of any woman's love. She was glad even if she had lost him forever, and soul and flesh quivered with the agony of that loss.

Time went by uncounted while the work progressed down in the darkness, and life and death hung on a thread. Little Charley had gone to sleep in her arms, and was nestled in the warm folds of the cloak. Winnie sat dry-eyed, but with her face marble-pale, every sense strained in the agonized intensity of waiting and watching and listening for tidings from below. The poor women forgot their own trouble to cast pitying glances at her.

"Poor thing! she can't cry," one whispered to another. "It will break her heart if anything happens him."

At length something came and touched Winnie's shoulder, where she was seated on the timber, a little apart from the others. She turned mechanically and saw a decent, mild-faced young woman standing near her.

"I thought I must come and tell you, miss, that the young leddy is very bad, and quite gone out of her mind."

Winnie roused herself by an effort, and looked in the woman's face.

"What do you mean?"

"Why, the young leddy, your friend. My mon found her lying 'long side the road, and first off he thought she was clean gone. But she come to a little, and he brought her in the cart to my cabin. There she lies just sensin' nothing at all, and 'twould move a stone to hear her piteous talk. She calls on you, miss, and," sinking her voice, "on the young man down yon with the miners."

Winnifred experienced a great shock, for recollection came rushing back upon her like a boiling torrent through the bed of a dried up river. She had forgotten that Virginia was lost, for her whole being hung on Bradley's fate. Now the terrible past was revealed as by a sheet of lightning, and her heart seemed torn in two. How could she

leave that spot while his life still hung in the balance? and yet she must go.

She raised her hands to her head and moaned. Then she slowly rose, put down the sleeping child in its mother's lap, and mechanically dragged her steps to Mary Smither's door. Pushing it open, the bed was before her where the poor girl lay with wild dilated eyes, her bosom heaving with thick pants, and the bale fires of fever burning in her face. Instantly she rushed forward and took the sick girl in her arms. Virginia crept and clung convulsively to her bosom, as before she had cowered away. She seemed to devour her face, pressing hot kisses on her hands, and calling her sometimes mother, sometimes by her own name, with every term of passionate endearment.

Winnifred held her close, and the tears that had so long refused to come rained down in a hot shower. Along with the capacity to suffer, a great well of tenderness had opened in her nature. Indescribable thoughts and feelings rushed over her, and years of intense life seemed compressed into a moment of time. The familiar presence acted like a sedative on Virginia's excited brain, and soothed and quieted, with her head on Winnie's shoulder, she sank into a half lethargic sleep, in which old memories were mingled with murmurs of Bradley's name, and broken accounts of her wanderings. She slept for half an hour and then her eyes opened with a saner look. Winnie bent down and put her lips to her ear.

"Hush, my darling," she whispered; "be quiet, and I will find Bradley and bring him to you."

The words were a powerful charm. Virginia's weary, flower-like head fell back upon the coarse pillow, her lips parted in a sweet smile, and some lovely vision seemed to float before her half-closed eyes.

Winnifred shuddered at the thought of what she had promised. Would it be her cruel task to lay Bradley, maimed and dying, at the feet of his love? A great pang shot through her, for even in death he would belong to another. And then Virginia would escape out of life like a bird with both wings broken; and the future opened before the young girl's lovely eyes like a vast desert tract where no green thing could ever grow.

Now that Virginia was sleeping, she stole out of the cabin into the fresh air. Off at the pit's mouth she could discern a group of dusky miners. Others were coming out, and women and children were running wildly about. Winnie's heart beat thick as if it would burst through her side. She began to run, but stumbled and almost fell. Still she kept on, and when she reached the shaft, quite pale and breathless, the miners made way respectfully.

The cage was coming up, and Bradley with it. She was startled at the sight of him, for he was like a spectre. His coat and hat were off, and his white shirt and other clothes were torn, and grimed with clay, and bloody from a wound in the temple, of which he seemed unconscious. In the bottom of the cage lay something huddled together, a mere mass crushed and disfigured out of all semblance to a human form. One of the men had considerably thrown his jacket over the bruised face.

Winnie pressed toward her cousin.

"Are you hurt, Bradley?" she asked, noticing the wound on his temple.

"No," said he, and then he raised his hand; "or if I am, it is a mere scratch. The men maintained a respectful silence. "We found that poor creature dead," he added, as he turned and pointed to the cage. "He had been dead for hours." Then he approached Winnie, with a look of dumb entreaty and dread.

"For God's sake tell me what you know about her. Is she alive? Do not fear to let me know the worst."

"She is alive," said Winnie, controlling and steadying her voice. "She is here waiting for you."

Bradley could have covered her feet with kisses. At that moment the young engineer, who had done yeoman's service in the dangerous work of digging out, drew near and saluted Winnifred politely.

"You know, Miss Braithwaite," said he, "that these remains must lie where they are until the coroner can be fetched from Deanport."

Winnifred drew herself up to her full height. A haughty light shot from her eye, and her tone had its old assured ring. "I know, Mr. Elicott, that these remains will not stay where they are. I am sole mistress of Halcourt mine, and shall have the body removed immediately to the school-house and prepared for burial."

"But pardon me, Miss Braithwaite, you will be amenable to the law. A lady might not understand what is required in such cases."

"Some ladies might be grateful for your instructions, but I am not," returned Winnie defiantly. "Nobody but myself can suffer. I am full and complete owner of this place, and what is done is done by my orders. Look here, my men," turning to the group of miners, "prepare a litter of some sort, as soon as possible, and take up this body and carry it to the school-house."

"Yes, mum, we'll do it," returned Long Bill and Smithers almost simultaneously, "that is," added Bill, turning toward Bradley, "if his honor says so."

Bradley nodded his head, and in less than five minutes the litter was prepared, and the mangled remains laid upon it, and the little cortege began to move slowly toward the school-house with Winnifred and Bradley at its head, and the miners and their wives and children straggling on behind.

"Lay it here," said Winnie, when she had improvised a sort of bier with two or three of the school benches. They obeyed her orders in silence. The tattered jacket was still over the face, and when the body had been put down, she turned and said resolutely to the men:

"That will do; now you may go out; I will take charge here myself."

A puzzled, surprised look came into the rough faces. The men hesitated and hung back.

"Do you hear me?" Winnie cried, with an imperious gesture. "Now begone."

"Tain't fit for the likes of you, miss, to be left here with such a one as him, if I may make bold to say so, is it your Honor?" Long Bill ventured to say, humbly appealing to Bradley for a confirmation of his opinion.

But Bradley motioned him to go out, and followed himself and shut the door behind him.

Then Winnie was left alone with that thing, lying still and stark upon the rude bier. She walked to the door and locked it, for the key remained on the inside, and then turned with a shudder. Could she approach, could she look on that face ghastly and livid in death, which she had never seen in life, the face of one so strangely mingled with her fate?

She thought of all poor Virginia had suffered, and in spite of her own pangs, her own terrible sense of bereavement, she was glad the stricken girl had been spared this hour. Cowering for a moment, she hid her face, for it was a ghastly, an almost loathsome task she had set herself to do. But Winnifred was a brave girl.

The struggle ended, she went forward and raised the jacket and looked steadily at the dead, discolored countenance with all semblance of humanity crushed out of it. An awful and swift doom had fallen upon the sinner. One long glance sufficed, and then she dropped the covering and went forward with her work.

For the sake of the living, it was her duty to see that no damning evidence of guilt remained on the dead body. Close hidden in the breast she found what she was in search of, and at the end of five minutes opened the school-house door holding a small packet in her hand.

Bradley was awaiting her outside. He had tied a handkerchief about his head to stanch the bleeding of his wound. Mr. Elicott, the young engineer, had joined him with a dissatisfied countenance. He was kicking a bit of turf with the toe of his boot. Winnifred's defiance of law and order still weighed upon his mind.

"Smoky Duff and his wife ought to be made to testify," he was saying just as Winnie approached them.

"Mr. Elicott," Winnie returned with some asperity, "I beg you not to concern yourself about Smoky Duff and his wife. If an investigation is necessary, be sure I shall do all in my power to further it. Meantime, I must request you to distribute to the miners this packet of money, reserving for yourself one-quarter of the whole sum. I give it to them and to you as a reward for your brave conduct."

The young man was almost stunned by the magnitude of the sum which he saw Winnifred had thrust into his hand.

"Why, Miss Braithwaite, this is a great deal of money. You cannot mean to give the whole."

"Every penny of it," she replied and turned her back.

Bradley motioned her one side with his hand.

"Don't you mean to tell me where she is? I am suffering the tortures of the damned."

"I will take you to her now," she answered, "but first there was a duty to perform."

They walked together through the little dirty lane of cabins in silence, but with hearts beating tumultuously. The women had collected about their doors, and were gossiping in groups. When they approached the Smithers cottage, Mary ran out to meet them with a tremulous ray of joy in her face.

"Oh, miss, I think she's a little better, 'deed, I do. She's quieted down wonderful and ain't near so wild. But the doctor you sent for, he couldn't be found, miss. He was off Basset way tending a man in a fit."

"No matter," said Winnie, with a grave smile, "I have brought a better physician along with me."

She paused an instant, for a rush of wings seemed to up-bear her like a strong inspiration. She was no longer an actor in the scene, but an observer of a strange and beautiful drama. Her heart was melted within her; for the first time the meaning of life, and the blessedness of sacrifice came over her to lift her out of self up to some higher level. Softly she opened the cabin door and whispered to Bradley as she gently pushed him forward.

"Go in and save her, for you belong to each other, and she is as innocent as an angel."

## THE Ladies' Floral Cabinet AND PICTORIAL HOME COMPANION.

THE HANDSOMEST ILLUSTRATED JOURNAL OF HOUSEHOLD ART, FLOWERS AND HOME LITERATURE IN AMERICA.

PUBLISHED MONTHLY.

Devoted to Housekeeping, Household Elegancies, Fashions, Music, Ladies' Fancy Work, Social Amusements, Home Pets, Flowers, Window Gardening, Cottages, Garden Decorations, and Illustrated Home Literature.

### SUBSCRIPTION TERMS, 1877.

\$1 30 per year, including Steel Plate Engraving, "The Glee Maiden."  
1 50 per year, including also chromo "Gems of the Flower Garden," or "My Window Garden."  
65 cents, six months, without premiums.  
To club of seven, an extra copy of paper with one engraving free to agent.  
These terms include all charges—for mailing and also postage on paper for one year.

### Back Volumes.

\$1 30 for volume of 1874, 1875 or 1876, unbound.  
2 25 " " bound in cloth, and mailed.  
1 00 " cover to volume, mailed, postage paid.  
1 50 " portable binder and music portfolio, mailed, postage paid.  
1 00 " volume of 1872, unbound.  
50 " numbers July to Dec., 1872, unbound.  
No numbers for sale previous to July, 1872.  
No volumes bound previous to 1874.

Terms for Chromos, Agents' Outfits, &c.  
50 cents for agents' outfit of paper, chromos, etc.  
25 " " " and engraving.

Terms to canvassers sent on receipt of P. O. stamp. Agents wanted in every town.

Address,

## THE LANGUAGE OF FLOWERS.

BY UNCLE CHARLIE.

This elegant book, during the past year, has found many admirers, and is now sent out in its second edition, enlarged and improved. The Poetical Selections are from the best authors, and the section devoted to Floral Conversation, among other good things, contains a most fascinating story.

There is also a section devoted to the Sentiments of Flowers, which gives a list of all known Flowers and their meaning, and another to Floral Decorations, in which the subject is treated in reference to special occasions, such as Thanksgiving Day, Christmas, Easter, Decoration Day, Birthday celebrations, Weddings, Funeral ceremonies, the Church, etc.; there is also a chapter on Cemetery Decorations, and others on preparing skeleton leaves, drying flowers with their natural colors, autumn leaves, sea mosses, etc.

It is issued in two different styles to suit purchasers—in neat, enameled paper, at 25 cents per copy; for those wishing a handsome gift-book or table ornament, it is beautifully bound in extra cloth, and sold at 50 cents. Will be sent by mail, postpaid, on receipt of price. Address,

**HENRY T. WILLIAMS,**  
46 Beekman St., New York City.

## THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING ROSES

**Strong Pot Plants**, suitable for immediate flowering, sent safely by mail, postpaid. 5 splendid varieties, your choice, all labeled, for \$1; 12 for \$2; 19 for \$3; 26 for \$4; 35 for \$5. For 10 cents each additional, one **Magnificent Premium Rose** to every dollar's worth ordered. Send for our **NEW GUIDE TO ROSE CULTURE**, and choose from over 300 finest sorts. We make **Roses a Great Specialty**, and are the largest Rose-growers in America. Refer to 100,000 customers in the United States and Canada. THE DINGEE & CONARD CO., ROSE GROWERS, West Grove, Chester Co., Pa.

Want SALESMEN on a regular salary of a month and expenses, to sell our **WE CIGARS** To DEALERS. Samples FREE. Send 3c. stamp to insure answer. S. FOSTER & CO. Cincinnati, O.

**\$85**

NEW YORK, AUGUST, 1877.

**BOUQUETS.**

Any one can make a bouquet; but by our own observation we know that not every one can make pretty ones, and to a lover of flowers, what is more annoying than to see flowers, which are in themselves beautiful, so grouped together that all harmony of color is lost, and their beauty, form, and symmetry destroyed.

A few general hints before taking up particular kinds of bouquets:

I find that many fail in making bouquets from a lack of green and white, the two essentials of a handsome bouquet. How often have I seen friends gather their flowers—beautiful ones, too—and then say, "Oh, dear! I must get a little green," pick half-a-dozen Geranium leaves, or a few sprigs of some other green, make their bouquet and fuss over it half an hour, and then wonder why their bouquet was not prettier.

Plenty of green must be your first requisite, and I would recommend a variety. Geraniums, that is, sweet-scented of all kinds, of course; then nothing is prettier than the young Rose shoots, common Asparagus is not to be despised; pretty grass is also a great ornament; parsley is exquisite, the bright green contrasting so well with the darker green of Rose leaves; then always try to have sprays of some kind of vine. Among what we call weeds, wild buckwheat is extremely pretty for bouquets for brackets or where it can be trained up in picture cords. Now I will proceed to particular kinds of bouquets.

First, taking those for large vases, or anything requiring more than two or three flowers. How your bouquet shall be made must depend on the number and kind of your flowers. If you have but very few, I would recommend placing sprays of green in your vase and then disposing of your flowers to suit your own taste. If you have a moderate number of flowers a loose bouquet is prettiest, placing your flowers and green so that they will not have an inclination to lop this way and that, but will stay in place. Any flowers of moderate size look well made in this kind of a bouquet, and it is much easier made than elaborate ones.

Nothing is handsomer than a large vase filled with handsome sprays of green of different shades, and one Lily, whether the common white, the Auratum or any of the more rare Lilies. It makes "a thing of beauty." If something more is wanted, say with a common white Lily place a row of scarlet Geraniums around, and the effect cannot fail to please.

Now for the style of bouquet known as pyramidal. To make these satisfactorily, you need a slim stick the same length as from the bottom of your vase to the top of your bouquet. Good taste, an abundance of flowers, and plenty of string, and some time are needed. The first consideration is, what to begin with, few flowers being appropriate, many giving a flattened appearance to the top. Spirea is one of the prettiest, as that nearly always comes to a pretty point; Snap-Drum and Sweet Peas, also among common flowers, do very well. The next step is to surround the top with some delicate feathery green, and then work downward, mixing in flowers and green as they look best, winding them firmly around the stick, but being careful not to wind the stems too tightly, as that makes them droop very soon.

Care should be taken that none of the flowers are crowded, as that entirely spoils the effect; the last thing, a row of Geranium leaves should be placed around. Many prefer to make their whole bouquet of alternate rows of flowers and green; I have seen a few handsome bouquets made so; for instance, one began with a scarlet Salvia with a row of delicate green, then white Candytuft, next green, then scarlet Geranium, etc.

But of all varieties of bouquets, my favorite is that made in some flat dish or in some out-of-the-way thing that one would not mistrust you could put to such a use. I take a common coffee cup and saucer, fill the saucer with moss or sand, place flowers and green loosely in the cup and a few flowers in the moss, or if you have sand, it must be entirely covered with them and green; then you have a lovely little mound. A glass sauce dish placed on a large deep plate furnishes another splendid receptacle for flowers, while no lovelier place can be found for our floral treasures than a wire basket lined with moss with a bowl set in and filled in around with moss until firm, then bowl and moss filled with vines and flowers.

Some flowers are suitable for nothing but flat bouquets; Balsams may be so arranged beautifully, and in no other way do Pansies show their lovely faces to such advantage. Button-hole bouquets are prettiest when most simple; my favorite is one dark rich Pansy encircled with the light purple Heliotrope, the whole framed in with rich green; or if that is too sober, break off two or three separate flowers from a truss of double pink or scarlet Geranium; wind each one separately on a piece of broom-straw and then arrange in a bouquet.

Well, I fear our kind Editor will weary of my commonplace remarks, which will probably all be old stories, so I will stop with one last general bit of advice: Have flowers somewhere or somehow; if you can't have them in Sevres china, cut-glass, majolica, or silver, nor yet in our common vases, put them in a teacup, or a bottle, but have them somewhere and you will be the happier and better for it.

MRS. W. C. HOLMES.

**THE TRAILING ARBUTUS.**

Among the numberless flowers of the wildwood, the Epigaea, or Trailing Arbutus, is acknowledged by all to bear off the palm for beauty and fragrance. So modest and unpretending, infinitely more so than the

oft-praised Violet, for the Violet presents its bright face fearlessly to the gaze of men, while the modest, shrinking Arbutus hides its charms in chaste obscurity under a covering of forest leaves.

But it does not remain long "unseen by man's disturbing eye," for its admirers "watch and wait" for April to come so they can gather these fragrant and beautiful blossoms, and transfer them to their homes to charm the eye of loved ones. It is only the blossoms that can be coaxed into our homes, the plant refusing to live with our garden favorites. No instance is known, I believe, of the Arbutus being cultivated successfully. It has been tried repeatedly, but without success.

An old farmer in Chester Valley, who loved flowers with a species of idolatry, and had a garden stored with plants rich, rare, and beautiful, an humble, conscientious follower of George Fox, but who, like our charming Quaker poet, Whittier, is full and fond of the beautiful in Nature, informed me that he had tried for years to coax the Arbutus from its woodland home; had taken it up in late autumn, with an abundance of its own soil, and planted it with a covering of leaves, but when spring came no flowers appeared; tried it in spring-time, placing it in a great variety of situations, but failure attended every attempt, and, to use his quaint words, as he once apostrophized a basket of blossoms, "Thou art a winsome, but wilful beauty, scorning all my proffers of love and kindness!" If any of the readers of the FLORAL CABINET have had a different experience, I should like to know of it, and the method they adopted.

The season of the flowering of the Trailing Arbutus is almost a festival in our family, and many an excursion is gotten up to gather these sweet flowerets to gladden the æsthetic tastes of friends. Does not God teach us a lesson in these blossoms—a lesson of love and tenderness to earth's humble ones? How often have we moralized over this, as, in brushing aside the crisp, dried, faded leaves, the starry-eyed, "incense breathing" flower was disclosed in all its loveliness. How many beautiful souls surround our pathway in life, so covered with earthly mould, and the faded, tattered garments of poverty and want, that we fail to recognize their value. Nevertheless, it is there, and if we could remove the outside covering we would find souls so pure and true, spirits so humble and loving, looking heavenward for a crown that never fades, despite the unkindness and neglect of earth. How often the beautiful flowers might teach us lessons of love and wisdom if we obeyed Christ's injunction to "Consider the lilies of the field." C. M. T.

**Tradescantia.**—Perhaps some of the readers of the CABINET will be interested to know that the common green Tradescantia—commonly known about here by the names of Inch Plant, Joint Plant, Wandering Jew, Jacob's Ladder, etc.—bears a pretty white flower, in shape and size similar to that of the striped variety, T. Zebrina. After cultivating the plant for years, I was surprised last winter to find it in bloom. M. P. G.

**One of Nature's Handiworks.**—In the doorway of an up-town pharmacy, on the evening of the 22d of July, a plant reared its single flower which had just bloomed and was of singular beauty and at least six inches in diameter. The sepals were of a delicate pink which in the petals faded into the purest white. Within, the pistil and stamens almost cast a halo with their rich golden color. The plant is a variety of the *Cerens triangularis*, but its real name is not known.

## JAPANESE FANS.

In Japan the fan which opens and shuts, called the *agi*, belongs exclusively to the men; and the flat fan, called *uchiwa*, is used only by women. For a Japanese gentleman to carry an *uchiwa* in the street would be such a dire breach of etiquette that I doubt whether any sane one ever did such a thing. Moreover, it is exceedingly impolite to use a flat fan in the presence of a Japanese gentleman, and neither by man nor woman must a flat fan be taken out-of-doors. The masculine native of the "Land of the Gods" invariably carries a fan in his girdle or in the bosom of his flowing dress in hot weather; and not a few carry them all the year round. Among the lower classes the fan is stuck in the back or over the neck under the collar, and is even safely stowed under the projecting cue of hair which lies like a gun-barrel on the smooth-shaven scalp. Formerly, all Japanese gentlemen wore two swords in their girdle. The custom was abolished in 1872; but not a few of them, being long used to their swords, and feeling the absolute need of something to thrust in their place, bought fans on purpose to have one always in their belt.

It is very probable that at least sixty million fans are made in Japan every year. They have now become an article of export to many countries. They are cheap editions of Japanese works of art for the rich and poor of all the world to look at. Some people have an idea that the pictures on them are exaggerations or mere imagination. This is not so. In general, the representations are strictly true to life. The Japanese have no immense manufactories employing hundreds of operatives; no centralized capital; and the division-of-labor principle is hardly known among them. Hence, fans are made by thousands of independent workers all over the country, in hundreds of cities and villages. The place most noted for its production in this line, however, is Nagoya, in the province of Owari. Most of those which come to England are from this fourth largest city in Japan. Kyoto is famous for very fine fans, and her artists excel in delicacy of tints and richness of coloring. Tokio (formerly called Yeddo) also produces several millions annually. Ivory boned and handled fans, made for foreign ladies, and richly adorned with gold lacquer, mosaic, silk, cord, etc., are especially made in Tokio.

There are a great many varieties of fans, and they are put to a great many and curious uses. Besides those in common use, the umpire at wrestling and fencing matches uses a heavy one, shaped like a huge butterfly, the handle being the body, and rendered imposing by heavy cords of silk. The various motions of this fan constitute a language which the wrestlers—fat fellows, who look as though stuffed with blubber by means of a sausage-blower—fully understand and appreciate. Formerly, in time of war, the Japanese army-commanders used a large fan, having a frame of

made of waterproof paper, which can be dipped in water, and which creates greater coolness by evaporation, without wetting the clothes. The *uchiwa*, or flat fan, is frequently made of feathers, leaves, or fine silk. It is oftener made of rough paper, and used as a grain-winnow, to blow the charcoal fires, and as a dust-pan. Probably it is on this account that it holds the lowest grade in the caste of fashion.

The Japanese gentleman—I mean one of the old school—who never wears a hat, uses his fan to shield his eyes from the sun. His head, bare from childhood, hardly needs shade, and when it does he spreads an umbrella. With his fan he directs his servants, and saves talking. Within-doors the graces of the Japanese maiden, and the dignity of the wife, are enhanced by the fan. To the Japanese actor the fan is indispensable, and he brings down the house by the deftness displayed in opening or shutting it. The Japanese dancing-girl makes the fan a very part of herself, and most graceful motions being performed by its help. To the juggler the fan is a necessity, many of his cleverest tricks, including that in which he makes a butterfly hover up and down the edge of a sword, being performed with bits of paper and a fan.

In Japan, people are continually making presents to each other, though the gifts are usually very small. A fan is always a proper gift. In nearly every house are one or more fan-cases leaning or hung against the wall. They are of all kinds, from the cheap tube of bamboo and lacquered wood up to the splendidly-gilt and inlaid case, costing many dollars. In these cases are holes, in which the handles of the fans are put, or silver hooks, between which they hang. On marriage occasions, friends offer costly gifts; those who are acquaintances merely, usually send a fan, on

which are written congratulations. They are often used as cards by proxy callers on New Year's Day.

When a young man attains to office, or an officer is promoted, a fan with a line or two of writing sent him is the equivalent for congratulations in person. It is the custom to ask friends or distinguished persons to write their names, or some original poetry, or classic quotation, on fans, thus filling the place occupied by our mother's, or father's, or our own youthful "albums."

ENJOYING THEIR LETTERS.

iron covered with thick paper. In the centre of the fan was a red ball, on a golden or silver field. The red ball represented the sun, the martial symbol of the Japanese nation. The fans of the present day, having a large, red, silver, or golden ball on a colored or white field, are in imitation of the old war-fan with which the Japanese hero used to signal in the field. In cases of danger it could be shut, and a blow from its iron bones was no light affair.

All the varieties of fans known among us have been made for centuries in Japan. One notable variety is

## Household Topics.

## LITTLE THINGS WORTH KNOWING.

Some things I have learned during my twelve years experience of housekeeping, that I think may be of some service to my sisters of the CABINET, and, with our Editor's permission, I shall try to help others over some of the hard places over which I have been helped. Mrs. Cræsus and Mrs. Dives can know nothing of the trial it is to find the beauty, if not the usefulness of some long coveted article, obtained by many little self-denials, and after long and patient waiting, apparently ruined by some untoward accident, while it is still fresh and new to us; nor with what joy we, who are obliged to count not only our dimes but our pennies, hail a remedy for our mishaps.

For a long time I had wished for a new carpet for our sitting-room to replace one robbed, by years of faithful service, of its beauty. At last my desire was gratified, and a new one whose scarlet ground, covered with brown and mossy-green figures, delighted my eyes, replaced the old. Alas, in its first freshness, an awkward hand upset an inkstand, and streams of Stygian blackness rolled over its bright colors. Then how to remedy it.

Instantly I recalled reading of a similar accident, and the remedy, which I had never had occasion to use before. I at once applied it. Hastily getting a saucer and silver spoon, I at once took up from the carpet all ink possible in that way. Then mixing, in equal quantities, salt and black pepper, I covered all the inked portion with it with a liberal hand. Waiting for a few moments for it to absorb all it would, I then brushed the mixture lightly off, and again applied more, this time rubbing it faithfully in; again waited and brushed it off thoroughly, when to my joy not a vestige of the ink appeared.

Since then, I have had need to use it, till now fresh ink, ink I mean before it has had time to dry, on woolen articles of any description, has no terrors for me if I can only get at my remedy. After it has dried it would not answer. And the remedy is one at every body's ready command.

Brightly polished furniture and picture frames add such an inviting look to the house that the little additional labor required to secure them is well expended. Give all black walnut furniture, whether varnished or oiled, an annual rubbing with linseed oil and a flannel rag, polishing off with another and clean flannel, and if you have not tried it, the new look it will assume will both surprise and delight you. Put but little oil at a time on the rag, and rub till the wood seems moistened with it, then rub well with the clean flannel and there will be no oiliness perceptible. For picture frames, and indeed all except French polished furniture, if marred by fly-specks, I wash them well first with cold tea, dry them, and then treat as above with the oil. Care must be taken to avoid touching the gilt bands near the picture, as they would be spoiled. And after you finish rubbing the furniture, be sure to burn the oiled flannels. Chemists say many a fire supposed to have been the work of an incendiary, owed its origin to the leaving about of oiled woolen cloths; as they will often burn spontaneously. Very inferior walnut frames thus treated, darken and become quite presentable.

I spoke of using cold tea for removing specks from the frames of pictures. I also wish to speak of its good qualities in cleansing all kinds of varnished and grained woodwork, not only from fly-specks, but all kinds of soil. It seems to possess the cleansing power

of soap without its injurious effects. I learned its use from an English publication, and I would not be without a knowledge of its good properties for more than the cost of the whole book. I have used it on all but my piano (that is French polished, and all the rest I have is either oiled or varnished wood) as need required, with good effects, nothing receiving injury from it. Soap is ruinous to varnish, and the tea seems to have for it all the good effects without any bad ones. In cleaning it is always much better, it seems to me, to rub the way of the grain of the wood; to wet a small portion at a time and dry with another cloth at once.

In washing mirrors, be sure to use only a damp cloth, at least one that will not by pressure let drops of water run down, getting under the frame and causing dampness, as that will affect the quicksilver all mirrors are coated with on the backs, and discolored spots and smeary, cloudy glass will be the result. I have often seen coarse cloths used to clean them. Nothing but fine soft ones are fit. I like to clean them first with a damp cloth, followed by another moistened with alcohol, finishing off with chamois. It gives them a nice polish. With them, as with wood, I like to rub in straight lines. The direct rays of the sun, and the heat from lamps striking on them is said to be injurious to them, as it is for oil paintings and chromos.

Possessed of very little strength, and liking my table to be well appointed, it was a trial to me to know how to attain the desired end. To clean the silver was out of my power; not to make the table pretty with it was a constant eyesore. Tarnished silver was worse than none, and to trust it to be cleaned to the ordinary Irish girl seemed to be the ready way to unfit it for use, sure. Gradually pieces were withdrawn to be used occasionally only, when I could get them properly cared for. Then I read of a way to cleanse it easily and rapidly by the use of a solution of cyanide of potassium. Believe me, I would not even mention it here, did I not fear others might see it as I did without a word of caution as to its dangerous nature. So I want to say it is one of the deadliest poisons, and to be kept with as much care as dynamite. And for the safety of the public, to prevent accidents of a heartrending nature, I do wish that all publishers would always make an explicit statement of the dangerous nature of the various chemicals one often sees recommended for various domestic purposes, when they are so, as many might use them ignorantly or unthinkingly.

To return from this digression. I did send for some, intending to use it only myself, and with all possible precautions. The very gentlemanly druggist of whom I ordered it, sent it to me, at the same time sending me a box of a preparation used by himself in keeping articles bright, with the wish that I would try it. I did so, and have used it with satisfaction from that day to this—more than a year—and do not know as there is anything objectionable about it. It cleanses easily and quickly the silver, giving it a good polish. Its name is Oriental Polish, and a very good thing I have found it. I run no risks with the other, and I can now gratify my love of bright silver, not being obliged to call in aid other than my own.

From silver to table cutlery, is but a step. Those who use silver-plated cutlery will not need to know that finely sifted wood ashes sprinkled over carefully polished and thoroughly dried steel knives will keep them from rust, which is so apt to mar cutlery not in daily use; others will value the knowledge. My way is to give them all a thorough wiping, expose them

to the sun's rays or gentle heat, to be sure every bit of moisture is absent, then avoiding breathing on the blades, or touching aught but the handles, to wrap them separately in thick brown paper, as when they came from the store, sprinkling ashes over each. Then put in a knife box in a dry closet. I have kept them months free from rust and tarnish, as I could not previously. A wipe on a towel when wanted and they are fit for the table.

Straw mattings are commonly used in many chambers, and I prefer it in summer for my dining room, it is so easily kept clean. The white seems most desirable to me, as the colored soon fades. Sweep clean; have ready a pail of warm water with a handful of fine salt dissolved in it, and a plate of Indian meal, no soap, as that turns the straw yellow. With a moderately wet cloth covered with the meal, scour well the matting, rinsing it up with the salt water, and even a very dirty matting will look quite fresh. Do but a small piece at a time; use a small quantity of water at a time so as not to soak through, and wipe dry, and your carpet will look almost like new. The little meal left on will sweep off when dry. That takes the place of soap, and the salt restores the green color seen in new mattings.

I wish to say that I have kept for more than a year in fine condition, without once scalding, preserves and jellies put up in this way: I put them in small bottles, like horseradish and pickle bottles, have ready cut from soft, white paper two covers for each bottle; also the whites of eggs, observing to use only the thin, watery part of the white. Fill the bottles hot from the kettle as you would for canning fruit; as soon as one is filled, moisten one of the covers, which should be cut to fit, on the under side with the white of the egg. Cover the top of the bottle with it smoothly and tightly, holding it in position for a moment, when the heat will dry it; then do the other and larger cover in the same way; apply on top of the other, and at once, for greater security, with fine soft cord; tie tightly to the bottle's neck. It is hard on the fingers, the bottles are so very hot, but the end justifies the slight pain. The preserves are air-tight and will keep good any reasonable length of time. All preserves should be kept in a dry, cool place, and if dark, so much the better.

The above is not written for Mrs. Notable and her model daughters, but hoping the hints may be of some service to those like myself, who have had to pick up their knowledge of housekeeping under many difficulties and discouragements, I am, theirs and the CABINET's warm friend. COUSIN MADELEINE.

**Foot Mats.**—Cut all your woolen scraps of cloth and flannel into pieces half an inch wide and three inches long. Black, white, and colored—a great many. Get a ball of jute twine for ten cents, and set up on strong steel knitting needles, five stitches, and knit one row. Knit the first stitch on the second row, and between the needles, at right angles with the stitch, put a piece of your cloth, and knit another stitch. Then turn the end of the cloth that points toward you out between the needles, leaving both ends of the cloth sticking from you, and so all the way across, two stitches for every tuft of cloth. Having knit one row of tufts, knit one plain row of the twine to get back again to the side of the mat where you began. The ends of the cloth must be from you as you put them in.

My mat is one yard square. The centre is of black and the border of bright colors, knit in strips, nineteen inches and nine tufts, one hundred rows of tufts in length. It is inexpensive, all it costs being the twine. Be sure you ask for jute string. ANNA.

## Household Art.

## ON HOUSEHOLD SUBJECTS.

If you wish to have your walls tinted, put indigo or Barlow's blueing in your prepared whitewash; if blue tint is wished, a few cents' worth of glue dissolved in water, and salt added to the whitewash, will prevent it rubbing off. A bright pretty border will add very much to the looks of your room.

## A SLEEPY HOLLOW CHAIR

will add very much to the comfort and looks. Take a barrel and draw with chalk or pencil the shape desired for your chair; then bore holes to admit a fine saw, and saw around, following the marks. Bore holes one foot and six inches from the bottom for the seat and draw strong wire or rope through as many times as you think necessary to hold the cushions. An old bed-quilt will do to cover it first; cover it all over. An old Dolly Varden dress will be pretty to cover it, or pretty chintz; and blue cambric is nice. For economy, two partly worn sheets, bleached nice and white, and blue considerably; starch and iron nicely; then measure off the length of your chair, and pleat all one way about two inches between pleats, or closer if desired, and pleat in this way around the chair. Sew on the quilt that has been previously tacked on. A pleating or ruffle around the seat, and a fold of the cambric or cord, will furnish it nicely.

## TO MAKE SHELVES OR WHAT-NOTS.

Saw shelves the desired size and bore holes in the corners; take wire or strong cord and fasten your lower shelf on first by fastening large buttons with strong eyes on the wire first to prevent the wire drawing through; then string empty spools on, the largest on the bottom; then put on your second shelf, and you may in that way have as many as you wish. Suspend it with spools or cord, and you have shelves strong enough to hold books or any other articles. Spools can be had of dressmakers, or have friends save them for you.

If you wish lambrequins for your shelves, the embroidered ones are very nice, or spatterwork on green, blue, or white velveteen, is beautiful, pinked or fringed around. A more economical way is to take old pieces of black broadcloth, cut in scallops or points, the longest in the centre; then notch or pink around the edge; some pretty embroidery pattern can be traced with chalk or pencil in vines and flowers; then cut out in long notches or round holes, following the pattern traced; longer slits for flowers, leaves, etc. Put blue or red cambric under it, and the pattern will show off nicely; any color is nice under it, or leaves, vines and flowers can be cut out of bright colored velveteen and chain-stitched on the broadcloth or ladies' cloth. Spatterwork lambrequins are nice made of buff silesia, such as is used to line coat-sleeves, and the delicate buff harmonizes beautifully with blue.

## A WASHSTAND OR DRESSING-TABLE

can be made of a common dry goods box the right size, or a half oval pine table. I have seen one made of a barrel set on end and a board two feet wide by three feet long placed on it and covered with cambric, or a sheet can be used. Gather or pleat it, then tack it on the edge of the stand; on the bottom put a ruffle. You can get for thirty or forty cents enough marbled oil-cloth for the top of your stand or table. It is wide enough to cover your table and make a splash mat to put against the wall to protect it. A half yard will

be enough for both, as it is wide. The upper corner of the mat is to be rounded off, and pink it all around, if you cannot paint flowers, vines, etc. on it. The pretty decalcomonic pictures are very nice transferred on the mat. The oil cloth is much nicer than anything else, as it is so easily cleaned when soiled. A shelf, if a box is used, is very handy to place rubbers, shoes, soiled clothes, etc., on.

An ottoman can be made of a tea chest or box; if a tea chest is used, cut strips of leather from old boot tops or shoes and tack on the cover, then to the chest, and the inside of the chest serves for a receptacle for soiled clothes, or shoes, slippers, etc. Pad the top with cotton or pieces of bed-quilts that are too much worn for use; then cover over that a pieced top of bits of silk or velvet. A pretty cover is made of black cloth, and take nicely shaped oak leaves and cut out leaves of velvet on any bright colored material; then chain-stitch them on the black with gold-colored silk, and the veins of brown silk; for the sides you can take the best breadths of an old black dress, or color some if you have no black; then pleat it, and fasten the pleats at the bottom. A cord could be put around the box about an inch from the bottom and it will form a pretty edge, a piece about two or three inches wide to be kilt-pleated and tacked to the cover. A nice ottoman can be made of a small tobacco caddy, which can be had of any grocer. Made same as the chest, except the kilt-pleating on the cover; in place of the pleating make a puff by making reverse pleating about three inches wide. The covering can be made of the best parts of old coats or pants.

## A KNITTED CARPET.

Knit on strong wooden needles, or it could be crocheted in breadths half a yard wide and sewed together; it makes quite a pretty carpet for a bed-room. The cost is trifling to make and have wove a rag carpet with bright pretty colors; old calico dresses can be colored a pretty tan color, with blue and twisted stripe of black and white, or any color fancy may dictate. Three or four dollars will cover all the expense for a bed-room carpet.

## MATS FOR THE FLOOR

are nice made of coffee sacks; one sack is large enough for two; get scarlet or blue, or clouded Germantown yarn, and work a Grecian pattern for the border; in the centre is the word "Welcome." Some have large initials worked. Take four threads in working same as for Java canvas. A nice rug is made by piecing blocks, same as for the log cabin bed-quilt. Sew enough together for a nice sized rug; then sew all around on canvas, or something heavy, for a lining and to hold it in place; a strip of red flannel about three inches wide is pinked both edges, and a narrower piece of black cloth is pinked the same, and stitched on the red around the rug. Another rug is made of odd pieces of cloth cut octagon shape and sewed together. Ball-stitch with coarse Germantown yarn, and a pleated border around the rug of any color desired.

## A WORK-BASKET

is very pretty made of strong wire; take four pieces from two and a half to three feet long; string spools, the largest at the bottom, until the wire is covered; then from the bottom curve the wire nicely in and then out large enough to admit a work-basket; if a pretty basket is not attainable, take a small sized peach basket, cover it inside and out with a bright, pretty color; make pockets outside and small ones inside for thread, buttons, balls, etc.; pleat braid around

the bottom and top, and you will be surprised to see what a pretty work-basket you will have, with your nice standard of spools; paint with burnt umber and varnish.

## A WALL-POCKET

for combs and brushes is made of pasteboard from old boxes; cover it smooth with blue or pink cambric; pleat muslin in fine pleats and put over the cambric; finish top and bottom of the pocket with a ruffle two inches wide, each edge rolled and overcast with blue or pink zephyr, in quite long stitches, then gather half an inch from the top and sew it around; have pieces of the same to hang it by; finish it with bows at the corners and where it hangs on the nail.

## A TOILET SET.

A very nice toilet set can be made of marbled oil-cloth. Cut out a piece large enough for the wash-bowl, and a piece for soap-tray and other articles; pink all around or bind with ribbon or braid stitched on; then with water colors, or oil paints, paint a vine with flowers around; it makes a nicer set for a wash-stand than crochet ones, as it saves washing; when soiled it can be wiped off.

A great many things can be made of marbled oil cloth that are useful as well as ornamental. I covered a wash-stand which was very much soiled, the varnish was rubbed off, and it was scratched badly. I cut the oil-cloth large enough to tack under the edge, and it looks much better than before. It is nice cut and fitted on pantry shelves; also to spread on the table for children. Take four pieces, ten inches long by three inches wide, cut one end of each to a point; bind around with bright ribbon, and paint some pretty autumn leaves, vines, or flowers in each one; then sew all together; the pointed ends for the bottom, and you have an elegant scrap-bag. It also makes an elegant portfolio cover, painted in delicate colors, either a head or flowers, vines and leaves, lined with silk and bound all around; or if preferred, black can be used instead of white oil-cloth, and painted the same.

## MATCH RECEIVERS, ETC.

Tin spice boxes make very pretty hanging receptacles for burnt matches; crochet covers for them, with crochet cord and tassels to hang by. Another pretty way is to take a piece of perforated cardboard, enough to cover the tin box, and work a pretty pattern on and crochet a bottom to the cardboard and slip the box in; they are very pretty indeed and so little work; the bright tin shines through and gives it a pretty effect. They make pretty hair-pin boxes made just the same, except they are covered on the top; fill with curled hair or combings; crochet a ruffle around the top and bottom. Hair receivers can be made of the large sized baking powder cans, with crochet covers, or covered with cardboard worked with border and initials, or "Hair Receiver" worked on it. Take a square piece of perforated cardboard, work a neat border around and fasten a piece of sand paper a little smaller on the back to scratch matches on; then on the cardboard work the sentence, "Scratch My Back," or work the figure of an old man with the same words; crochet of the color used a cord to hang it up; hang it under your lamp. Photo-holders to hang on the wall made of perforated cardboard, and picture frames also, are very nice. A nice photo-frame is made by cutting four strips of cardboard to fit the photo and an inch longer; then cut eight pieces three times as long as the strips are wide, and cross the pieces on with a long stitch, in any colored zephyr; cross the corners just the same, with a long stitch; it makes a very pretty frame.

## Household Elegancies.

## WALL-POCKET—NETTING, AND BRAIDING.

Materials: stout gray twisted cotton; black, green, and gray leather; lining; green worsted braid an inch in width; narrow green braid. This wall-pocket is netted of gray yarn and thickly intertwined with strips of colored leather. It requires a piece twenty-three inches long and eleven and a half inches wide, and two small side parts. The network is done of stout gray twisted cotton over a flat stick two-fifths of an inch wide. Begin with two loops and increase one in each row by knotting two into the last loop of each preceding row until a width of thirty loops is attained. Continue then to increase one loop in each row, but only on one side of the work, at the same time dropping one loop on the opposite side—by knotting two together—so that the width of thirty loops is uniformly retained. When fifty rows have been netted in this manner, the missing corner is finally added by dropping the stitches on the requisite side. The two side parts consist of strips each five loops in width and sixteen in length, worked in like manner.

The netted foundation is now ready, and is intertwined by strips of gray, black, and green leather, one-third of an inch wide. The strips are first drawn through lengthwise, a gray and green alternately, and then across, a gray and black alternately. As shown in the illustration, the cross-strips lie on top. After the parts have been provided with a thin black lining they are placed together in the manner indicated by the illustration. The upper part is turned over to the right side far enough to reach the pocket, and fastened to the lining at the back by means of narrow green braid. The pocket is decorated by ruchings of green worsted braid an inch wide, and tassels of gray yarn. It is hung up by means of narrow green braid.

## WALL-POCKET FOR DOLL-HOUSE, OF PERFORATED CARDBOARD.

For the construction of this pocket cut a piece of perforated cardboard three and three-fifths inches long

WALL-POCKET FOR DOLL-HOUSE.

and two inches wide, taper to a point at one end, and break over the opposite end to a depth of one and one-fifth of an inch, thus shaping the pocket out of one piece. Now cut out on both parts, front and back, with a sharp penknife, the neat little pattern indicated in the illustration, to which a fine effect is given by colored silk lining. As plainly shown in the illustration, front and back parts are connected by means of loose stitches of floss silk, tassels of which serve to finish off the lower ends.

## NEEDLE-BOOK OF PERFORATED CARDBOARD.

The covers of this book consist of two equal strips of cardboard, each three and one-fifth inches long and two and two-fifths inches wide. These are decorated in the centre with a bouquet of violets painted or em-

WALL-POCKET; NETTING AND BRAIDING.

broidered in the requisite colors with silk. A cretonne flower or decalcomanie may be used instead. A neat little border of purple sewing silk decorates the edge, and the parts are lined with purple silk. The book to be inserted, and which serves for the reception of needles, and is provided with leaves of white flannel, consists of two parts of perforated cardboard, each two and two-fifths inches long and two inches wide, lined with white flannel, finished off at the edges with button-hole stitches of purple silk, and joined together by overhand stitches. Bows of narrow purple satin ribbon complete the book.

## FISH-SCALE JEWELRY AND ORNAMENTS.

It was my good fortune to spend a part of last winter in Jacksonville, Florida. Going into one of the large jewelry establishments one day, my attention was attracted to a show-case, lined with blue satin, which contained what I supposed to be a fine collection of white wax flowers.

I asked permission to examine some of them, and was surprised to learn that they were not wax, but were made of fish scales.

They were made up into sets of jewelry, wreaths, and sprays for the hair. Wishing to carry some little "curiosity" home to some of my lady friends, and knowing how abundantly we were supplied with fish, I thought now here is something that cannot be expensive, and yet they are very beautiful. I decided to make some purchases. I selected a set of jewelry composed of rose leaves and buds, and asked the price. Seven dollars was the price named. I told the obliging clerk he might put them back, I thought I would not take them.

After reaching my boarding-place, I kept thinking how much they resembled wax flowers, and understanding the art of making them, I decided to try the fish scales. Going in search of Edmund, the colored

man, whose duty I knew it was each morning to prepare the fish for breakfast. I explained my errand and got the promise of the scales, which I found just outside my door the next morning. I washed them two or three times in warm water; then wiped each scale dry on a clean cloth. This removed all the sticky substance adhering to them.

While they were drying, I went back to the jewelry store and purchased a spool of No. 16 silver wire, and the mountings for a set of jewelry, which consisted of a silver pin, resembling somewhat a common safety pin, and the wires for the ear-rings. Paid fifty cents for the set. I will now tell the readers of the CABINET how to make a few of the flowers. Gather natural flowers and pick them to pieces to get patterns, and cut the scales as near like them as possible. For a rose, after cutting the leaves, bend them over the finger to shape them. With a sharp-pointed awl or needle make a hole in each leaf near its base. Cut some of the silver wire in pieces an inch or two long, and wire each one. A little notch cut in the leaf where the wire is twisted together will keep it from slipping back and forth.

After preparing enough for a rose, commence putting it together. Taking three or four leaves, place them properly and wind them tightly with fine white thread or silk; add more leaves and continue to fasten in the same way. Use wire long enough for a stem in three or four of the outside leaves. Twist all the wires together and wind them smoothly with white embroidery silk, which can be split and untwisted for the purpose.

For a bud use leaves same as for rose, cut the calyx, wire, and bend over the finger to shape; put four of these on each bud. To make rose leaves, cut out the leaf, then nicely notch the edges. Make a hole near the base and another near the point. Take a piece of wire three or four inches long, put it through the hole at the base and bring the end up the back of the leaf and put it through the hole near the point; bring it down the front and put it back through the first hole. The wire forms a vein for the centre of the leaf. Take the same wire and again bring it up the back of the leaf; when half way up the leaf, bring it over to the front between two of the notches on the edge, and then put it back through the same hole. This gives you a side vein. Wire the other side of the leaf to match. Twist the two wires together for a stem.

NEEDLE-BOOK OF PERFORATED CARDBOARD.

A pansy is easily made, and is one of the prettiest of the collection. In each leaf make three holes; the centre one about two-thirds of the way up the leaf, and one each side a little lower down. Put a wire through each of these holes, and twist all together at the base. This forms a veining. If you can get small rice shells, wire one for the centre of the flower. If they cannot be had, a glass bead wired will answer the purpose. Place the leaves around this in their proper order; hold firmly and wind tightly. K.

## Fireside Reading.

**Whittier Telling at School.**—A correspondent of the Cincinnati *Enquirer* tells this anecdote of the poet Whittier's success in aiding a little girl at a school examination :

You know Whittier's love for children. The aged poet this winter has renewed his youth, like the eagle's, in a handsome overcoat of the purest Ulster pattern, clad upon with which he attended last week's school examination up among the Berkshire hills, so dear to him. He was standing beside the teacher, who was catechising a dimpled little dot in geography.

"What are the provinces of Ireland?" asked the teacher.

"Potatoes, whiskey, aldermen, patriotism, and—" began the child.

"No, no," interrupted the teacher; "I didn't mean products; I said provinces."

"Oh," said the girl, "Connaught, Leinster, Munster, and—and—" Here she stuck, put her chubby finger in her rosebud mouth, and sought inspiration successively in her toes, the corner of her apron, the ceiling and the poet. All children love the dear old Quaker poet's kindly face. He smiled; her face brightened sympathetically. The *entente cordiale* had been established between them. He patted his coat significantly; she looked at him inquiringly; he nodded, and she burst out—

"Oh, Miss Simmons, I know now. They are Connaught, Leinster, Munster, and Overcoat!"

The first time that General Custer set his handsome eyes upon his future wife was when he was fifteen years old, and going to school in Monroe, Mich. Going along the street one day, the rough, flaxen-headed, freckled-faced boy passed a little black-eyed, eight-year-old girl swinging on a gate. She was a pretty little creature, her father's pet, an only child, and naturally spoiled. She said archly, her little face dimpling with smiles :

"Hello! you Custer boy!"

Then, frightened at her own temerity, turned and fled into the house. It was love at first sight with the wild young savage of fifteen, and he then and there vowed that some day that small girl should be his wife. And so she was, but only after many lovers' woes; for Judge Bacon, pretty Lizzie's father, was for a long time obdurate toward the young man who he feared was fickle and unstable, and his daughter and her suitor submitted most patiently to his will until at last he relented.

A friar, when preaching in a nunnery, observed to his females auditors: "Be not too proud that our blessed Lord paid your sex the distinguished honor of

appearing first to a female after the resurrection, for it was done that the glad tidings might spread the sooner."

There was a young lady from the city, and he asked her if she would partake of an ice-cream. She gently answered: "If it's good, square confectioner's cream, I'm there; but if it's picnic or strawberry-festival slush, count me out!"

A clerical candidate for a lectureship somewhere in England was called upon to deliver a discourse before the trustees of the endowment, and in order to show his cleverness he took for his text the single word "but." He thereupon proceeded to show that no po-

that pass for cherubs in painting and sculpture. Going out a-gunning together, one of them shot a bird, and the other ran to secure the trophy. Coming near where it had fallen, he found a white owl so sprawled in the grass, as to present to his view only a head with staring eyes and a pair of wings attached. Instantly he shouted in dismay: "Ye're in for it now, Jock, ye've shot a cherubim!"

A gentleman had occasion to correct his daughter, aged four, recently. After it was over, and she had sat awhile, she went to her mother and inquired:—"Don't you think it would do papa good to go out-doors?"

"You politicians are queer people," said an old business man to an impecunious partisan. "How so?" asked the politician. "Why, because you trouble yourselves more about the payment of the debts of the State than you do about your own!"

An Irishman to whom some wonderful story was told on the authority of a penny paper, declined to believe it, saying he distrusted all he saw in the "cheap prints." "Why shouldn't you believe the cheap papers," he was asked, "as soon as any other?" "Because," was his ready answer, "I don't think they can afford to speak the truth for the money."

A stout German in the beer industry to an unprofitable customer: "Here, now, you took dose doors und walk owet mid your ears, eh?" (He doesn't.) "Heim, you don't got out? Vell, you waits a minute und I gets a man dot vill!"

"Oh, heavens, save my wife!" shouted a man whose wife had fallen overboard in the Hudson river, recently. They succeeded in rescuing her. And her husband tenderly embraced her, saying, "My dear, if you'd been drowned, what should I have done? I ain't going to let you carry the pocketbook again."

A Chinese laundry man died of starvation at Louisville, the other day, with these pathetic and expressive words on his lips: "Bes' thing Chinaman do in

Kentuckee he die—flee weekee—only washee lun shirtee—him get no payee—heap stlarve on nothling."

Junior, translating the passage from the modern German comedy: "*Als ich meine eleganteste Shawl aus der Wasche ziehe*—" looks at the notes, and finding "*shawl*:" anglicism," renders: "When I took my most elegant anglicism out of the wardrobe."

A young gentleman who moves in the best society of San Antonio, said the other evening to a young lady, "The foliage is much more exuberant this year than usual." "Yes," she answered, thoughtfully, "All them imported fruits is cheaper than they used to be."

"WHEN THE SWALLOWS HOMEWARD FLY."

sition in life is without corresponding cross or opposite trial, and illustrated his text by many passages of Scripture. Naaman was a mighty man of valor, but he was a leper. The five cities of the plain were fruitful, but the men of Sodom were awful sinners. I called, but you answered not, and etc. When the candidate came down from the pulpit and entered the vestry, the senior trustee politely remarked, "Sir, you gave us a most ingenious discourse, and we are much obliged to you; but we don't think you are the preacher for us."

There is a story told of two Scotch lads who knew little of gunnery and natural history, but were familiar with King James's Bible and with the winged heads

## Housekeeping.

## RECEIPTS FROM CHLOE'S COOK-BOOK.

*Tomato Soup.*—Two quarts of sweet milk and two quarts of water; when boiling add one quart of cooked tomatoes, into which has first been well stirred one-half teaspoonful soda. Add pulverized crackers and butter; salt and pepper to taste.

*Veal Loaf.*—Three pounds of veal off the ham; three slices salt pork, chopped fine, add three eggs well beaten, one-half cup sweet cream, one tablespoonful each of sage, salt, and pepper. Stir well together, and bake one and a half hours. Best when cold.

*Bouilli Beef.*—Put a part of a brisket of beef, weighing six pounds, into a sauce-pan, and cold water enough to cover it. Let it boil until the scum rises, and skim it nicely; add two carrots, two turnips and one onion, cut in dice form; one-half can tomatoes; stick an onion full of cloves. Let all simmer three hours. Add one tumbler full of red wine, two teaspoonfuls mixed mustard, one tablespoonful of salt. Let it simmer one hour. When done sprinkle over it some pickled cucumber cut very fine. Stir a little flour into the gravy; give one boil; turn it into the dish with the meat and send to table very hot.

*Fried Chicken.*—Cut up young chickens; put them in a pan with a very little water; cover closely and put them in a hot oven; let them cook until tender; then remove; roll them well in flour, and brown nicely in butter in frying pan on top of stove.

*Fried Oysters.*—Take large oysters drained well. Roll some crackers fine, season them with pepper and salt. Have ready some boiling lard and some beaten eggs. Dip the oysters first in the cracker then in the egg, and then into the cracker again; drop them in the hot lard; let them brown, and skim out in a colander to drain. Should be served hot.

*Chicken Salad.*—Take the meat of a boiled chicken, mince and add an equal quantity of chopped celery. Prepare the following dressing and pour over it. Yolks of two hard boiled eggs, two teaspoonfuls of mustard, two of salt, a little pepper; yolk of a raw egg and a little sugar, one pint of cream, and vinegar to the taste.

*Potatoe Puff.*—Two cupfuls cold mashed potatoe, two tablespoonfuls melted butter beaten together till light; beat in two eggs, one cupful of milk and a little salt; turn into a buttered dish and bake in a quick oven till well browned.

*Escaloped Tomatoes.*—Skin some tomatoes; take a baking dish and put in the bottom a layer of rolled cracker and small pieces of butter; then a layer of tomatoes sliced; add another layer of cracker and butter, with pepper and salt to the taste; then a layer of green corn cut from the cob. Repeat until the dish is filled. Bake three-quarters of an hour.

*Mince Meat.*—Four pounds round of beef, boiled tender and chopped fine, twice the quantity of chopped apple, three pints of boiled cider, one quart of the water the meat was boiled in, three cups of molasses; stir well together and boil half an hour; let cool and add two pounds chopped raisins, one pound of currants, one pint brandy, four cups of sugar, half a pound of melted butter, four tablespoonfuls of cinnamon, two of cloves, two grated nutmegs, and a little pepper.

*Pie Plant Custard Pie.*—To one cup stewed pie-plant use one cup of sugar, one tablespoonful of flour, yolks of three eggs and a small piece of butter, bake with only an under crust, and when done put on the top the three whites beaten to a foam with three tablespoonfuls powdered sugar; place in an oven for a few minutes to stiffen.

*Plum Pudding.*—Soak over night ten crackers in three pints of milk. In the morning add five eggs, one cup of sugar, two cups of raisins, one pint of milk, a little salt and nutmeg; bake four or five hours; stir twice while baking.

*Amherst Pudding.*—Three cups of flour, one cup of suet chopped fine, one cup of milk, one cup of molasses, one cup of raisins chopped, one egg, half a teaspoonful soda, one teaspoonful of salt, two teaspoonfuls of cinnamon, one teaspoonful of cloves; boil or steam three hours.

*Orange Custard.*—Pare and slice six oranges and lay in a deep dish. Take one pint of milk, two tablespoonfuls corn starch, yolks of three eggs, a little piece of butter and half a cup of sugar, and make a boiled custard; put one cup pulverized sugar over the sliced oranges and then pour over them the custard. Make a meringue of the whites and place over the custard; place in the oven for a few moments.

*Lemon Cream.*—Into one and a half cups of boiling water stir two tablespoonfuls of corn starch wet with water and the juice of one large lemon, beaten yolks of three eggs and one cup of sugar; boil five minutes, then stir in the whites beaten stiff; pour in small glasses and serve cold, with whipped cream on top of each glass.

*Fried Cakes.*—Three eggs, one coffee cup sugar, one cup of milk, three tablespoonfuls melted butter, five teaspoonfuls baking powder. Flour enough to roll out soft.

*Molasses Cookies.*—One cup of molasses, one cup of sugar, one cup of butter, two eggs, one tablespoonful of soda, one teaspoonful of salt, one teaspoonful of ginger, one teaspoonful of cinnamon, one teaspoonful of grated alum. Dissolve both soda and alum in half a cup of boiling water and pour into the molasses. Use flour enough to mix very stiff, and knead well.

*Sugar Cookies.*—One cup of butter, two cups of sugar, four eggs, flavor to taste; soften the butter and pour it on two cups of flour; beat the eggs up light and then beat the sugar into them and pour that in with the butter. Dissolve one teaspoonful of soda in two tablespoonfuls of milk, and pour that over the rest; mix up lightly with the hand and then mix in a little flour with two teaspoonfuls cream tartar stirred in it; roll out very soft and bake very quick.

*Boston Brown Bread.*—One quart sour milk, one cup molasses, two cups rye flour, four cups Indian meal, two even teaspoonfuls soda. Steam three hours and then bake half an hour in a hot oven.

*Yeast Biscuit.*—At noon boil three medium sized potatoes; wash them, add three tablespoonfuls flour, and one each of salt and sugar; over the whole pour one pint of boiling water; when cool add half a cup yeast; home-made preferred. At night stir in about half a cup of lard, a little salt and flour to make a stiff batter. In the morning knead well and put in all the flour needed; let it rise again, and knead lightly, using as little flour as possible; make into biscuits; let them rise well, and bake in a very hot, quick oven.

*Baking Powder Muffins.*—One-half cup sugar, half a cup butter, one cup milk, three cups flour, three teaspoonfuls baking powder, and three eggs. Put the materials together the same as for cake; bake quick and well, and place them on the table hot.

*Hickory Nut Cake.*—One cup of butter, two cups sugar, half a cup milk, three cups flour, four eggs, one teaspoonful cream tartar, half a teaspoonful soda, one cup dried currants, and one and a half cups hickory nut meats.

*Almond Cake.*—Two and a half cups of sugar, one and one-eighth cups butter, one cup milk, four cups flour, whites of ten eggs, four teaspoonfuls baking powder, one pound blanched almonds.

*Sweet Tomato Pickles.*—Slice six or eight onions, and one peck of green tomatoes and scatter over them one cup of salt; let stand twelve hours, then boil them fifteen minutes in two quarts water and one quart vinegar. Skin out the pickles and put them with four quarts fresh vinegar, two pounds sugar, two large spoonfuls each of allspice, cloves, and cinnamon, and half a pound of white mustard seed. Simmer all together for fifteen minutes.

*Yeast that Will Keep a Month.*—One quart water in porcelain kettle, six good sized potatoes grated raw and stirred in the boiling water, then add half a cup each of salt and sugar and the water in which a handful of hops has been steeped. Remove from the fire and when cool add half a cup of yeast. Use a large spoonful to a loaf.

*Canned Corn.*—Dissolve one and one-quarter ounces of tartaric acid in half a pint of water. Cut the corn from the cob and boil half an hour in plenty water; add to each quart of corn, as cut from the cob, two tablespoonfuls of the acid solution; boil a few minutes and can in glass cans. When used put half a teaspoonful of soda to one quart of corn; let it stand for three hours before using, and cook well. I have tried canning in this way for three years and guarantee it.

*Tomato Catsup.*—One gallon of tomatoes cooked and strained, two large tablespoonfuls of salt, one teaspoonful of cayenne pepper, two of mace, two of cloves, one tablespoonful of allspice, one quart of vinegar; put the tomatoes and ground spices together; let them boil one hour; add the vinegar; let it cool, and bottle; cork well.

Mrs. B. N. W.

*Chicken Croquets.*—Take an ordinary sized chicken; let it be tender; boil in as little water as possible until done; reduce the broth to about a cup full, after you have taken up the fowl. Mince the meat of the fowl very fine, rejecting all the skin. Chop very fine one very small onion and fry in two ounces of butter and a tablespoonful of flour; stir three minutes, add the meat, broth, one teaspoonful fine chopped parsley, half a chopped sweet bread, or as much calf's brains, previously boiled, salt, pepper, twenty drops of extract of nutmeg; stir all together three minutes over the fire. Take up and stir in the yolks of three raw eggs until it is a gelatinous mass. Spread out in a dish and when entirely cold mold into forms, using one tablespoonful for each. You may form them like a sausage, a small biscuit, or a tiny sugar loaf. Dip them into beaten egg and roll into very fine bread crumbs. Drop carefully into boiling lard. Be very sure the lard is at the very boiling point, and be cautious not to let them stay in only until they are a light brown; then they will be crisp outside and soft inside. Serve on a white napkin garnished with sprigs of parsley.

# The Ladies' Floral Cabinet and Pictorial Home Companion.

## Madame FOY'S CORSET SKIRT SUPPORTER

Increases in Popularity every year,  
And for HEALTH, COMFORT and STYLE, is acknowledged the BEST ARTICLE of the kind ever made. For sale by all leading jobbers and retailers. Beware of imitations and infringements.  
MANUFACTURED SOLELY BY  
FOY & HARMON, New Haven, Ct.

**50** VISITING CARDS handsomely printed, 10 cents and 3 cent stamp by return mail. No nicer ones in the world at any price. One agent writes: "I know about fifty places to get cards, and like yours the best." "Neatest and best we ever saw." "Never so well suited before"—or similar expressions, come by nearly every mail. My list of 2,267 kinds of cards, 103 samples of type, agents' list, etc., with each order. Write names plainly, and if you are not more than suited, I will refill your order or refund your money.

## Window Gardening.

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

**RICHLY ILLUSTRATED WITH EXQUISITE ENGRAVINGS.**

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who wish to adorn their houses in the easiest and most successful manner with plants or vines, or flowers. Instructions are given as to the best selection of plants for Baskets or Ferneries and Warden Cases. Several chapters are devoted to Hanging Baskets, Climbing Vines, Smilax, and the Ivy, for decorative purposes. Bulbs for House Culture are fully described; also ornamental Plants for Dinner Table Decoration. Other topics are well considered, such as Balcony Gardens, House Top Gardening, Watering Plants, Home Conservatories, Fountains, Vases, Flower Stands, Soil, Air, Temperature, Propagation, Floral Boxes, the Aquarium, Rustic Conveniences for Household Ornament, and directions in detail for the general management of in-door plants for the entire year throughout the winter, spring, summer and fall. The volume is profusely illustrated with choice engravings, and pains have been taken to make it one of the most attractive books ever issued from the American Press. For sale or supplied by Bookstores everywhere, or sent postpaid by mail on receipt of price.

Price **\$1.50.**

## Every Woman Her Own Flower Gardener.

By Daisy Eyebright (Mrs. S. O. Johnson.)

A delightful little volume, written by a lady fond of flowers, as a special help and assistance to others interested in out-door flower gardening. Simple directions are given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants. Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Everlasting Flowers, Ornamental Grasses, Coleus, Paeonies, Shade Trees, Garden Vegetables, Old Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures, Watering Soils, When and How to Plant, Dahlias, Lilies, Gladiolus, Verbenas, Cannas, Balsams, Portulacas, and nearly all the popular varieties of flowers and shrubs. The book contains 148 pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or supplied by Bookstores everywhere.

Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

## WINDOW, FIRE-PLACE AND MIRROR DECORATIONS.

Upon this page we illustrate several very charming devices for ornamenting windows and rooms. The flower stand and hanging baskets are made of an article called virgin cork, which any one can take and construct into a hundred beautiful forms. By the use of the knife, and cementing the pieces together, floral ornaments of an inconceivable variety can be made, which are elegant in appearance and of great durability. This article, virgin cork, is hardly known yet in the United States, and yet has been very popular for years in England.

During the summer time, when our fire-places are not in use, it is the taste of many ladies to decorate them with floral and woodland treasures. The wicker basket seen in this illustration is filled with moss, having at bottom a large pan with abundance of earth, and in it are placed a great variety of plants, which do well in the shade.

FLORAL STAND.

HANGING-BASKET.

Another long basket or tray is put on the mantle, wherein are growing flowering plants, with vines at either end, and ferns at the back next to the glass. A beautiful way to finish the decorations of such a mantle is to take the tips of fern leaves, and, sticking their stems into the wicker basket, let them point outward and hang down. It gives a finish far beyond anything of artificial manufacture.

## FLOWERS IN WINTER IN THE SIERRAS.

I will tell you a little about the winter of the Sierras. It is very dull here in consequence of the deep snows that fall during the wet season. It snowed fourteen days at one time in January; the snow was twelve feet deep when the storm was over; but it has settled down to ten feet. The sun is so hot, that the snow is soon packed down solid. When we want to go out, we have to go on snow-shoes; they are from four to fourteen feet long, arranged to suit the size of the person. Boys and girls from five to seven, wear them from four to five feet long; twelve and fourteen years old, from seven to nine feet, etc. They are made of very light wood, and painted; nice leather slippers in the centre to place your foot, and a pole with a wooden button on the lower end to support or help your progress up hill. Every afternoon the boys and girls have a splendid time snow-shoeing. We sometimes

go head over heels; but we do not hurt ourselves as the snow is soft. My shoes are seven feet and a half long.

Well, away up here, in this isolated region, we try to have flowers. At the east window we have a table filled with beauties. The Oleander is just bursting, a delicate pink flower and very double. Black-eyed Susie is full of flowers, orange color. A daily Rose, with eight roses of very delicate shade of pink; after white we expect the Red Rose. Fuchsia has grown eight feet and a half high, scarlet, and is very beautiful when drooping with flowers. A Mauranda vine runs over a trellis frame, then up a cord ten feet. We train it up to the ceiling, then around a picture called Faith and Hope, which hangs over the organ. We have three varieties of Pinks; some are in bud. Geraniums are doing well. Petunia is just putting out buds. Pepper-tree five feet high; leaves are handsome. Two hanging baskets, one of Wandering Jew, the other of Ivy Geranium, and the grass found on the hill-sides. ARABELLA M. STORER.

FIRE-PLACE AND MIRROR DECORATION.

## Floral Contributions.

### A PRETTY PLANT STAND.

Among the many tables and stands for plants described in the CABINET, I find my own is decidedly unique. It was designed by our house architect for a bay window eight feet in width, and as plants and stands can be more easily attended by leaving space to walk around them, I resolved, like those people in cities who are compelled to build upward in order to obtain room, to have an addition to its height; so I have a two-story stand.

Its depth at the bottom, from front to back, is two feet, and the width of the whole about five. The lower part consists of four steps or shelves reaching by graduated distances from the front to the back of the stand, and occupying nearly two-thirds of its height. Then oblique braces from the upper shelf of the lower tier support the lower shelf of the upper tier very nearly in a line above the second shelf from the floor, thus giving room to the plants on the shelf forming the upper part of the lower story, to grow between this last shelf and the window. Above this are two more shelves, the upper one six inches wide, placed on the vertical supports at the back, and forming the top of the stand, which reaches within one foot of the upper casing to the window. The whole is painted a stone gray, and though made of wood, has a light, airy look, the sides being open consisting of two parts each, the front oblique, the back vertical, and the shelves kept in place by cleats fastened to the centre and outside supports. Reaching the upper shelves necessitates the use of a step ladder, which is the only inconvenience.

In the centre of the lower shelf, which is wider and stronger than the others, I keep my Calla, and on either side the plants requiring the largest pots. The shelves of the upper tier being designed for smaller pots and those plants which luxuriate in a warm atmosphere. The top shelf being specially devoted to Cacti, bottles of water containing cuttings, and the Hoya Carnosa, which roots sparingly and thrives with tropical vitality in the heated space, sending its ivy-like tendrils in every direction.

When preparing autumn leaves for room decoration, I am careful to leave them on the twigs or boughs as Nature placed them, where each leaf is ironed separately, and a thin coating of gum arabic spread over those naturally glossy. These, mingled with others, form bright hanging bouquets for walls and ceilings. Lambrequins of richly tinted leaves are tastefully made by taking glue prepared with whiskey for ready use, and lightly glueing the stem of each leaf, point downward, to the lower edge of thick paper cut any desired shape. Above this place successive rows, and finish with a border of pressed gray, brown or green moss. When the colors are arranged artistically, the effect is very pleasing.

Some autumn leaves, especially the Woodbine and Sumac, must be gathered after the first frost or as soon as their tints have deepened, as they drop early. The oak and maple will be found much later in perfection. The delicate creeping mosses with fern-like fronds, when separated carefully and picked free from tiny sticks, roots, and lumps of earth, and pressed, make wreaths more exquisite even than ferns.

June is usually considered the fern-gathering month, because then they press easily and retain their colors; but some of the loveliest I ever saw were gathered in Eastern woods in October. Going one day to get some

blossoms of the Hamamelis or Witch Hazel, I came upon a bed of maiden-hair Ferns bleached by the frost to the softest Naples yellow. When pressed they were formed into a wreath on black paper such as artists use for panel painting, and are the admiration of all who see them. Black velvet makes a rich background for a wreath of this description, and a nice frame can be made by cutting strips of stiff pasteboard about an inch wide the desired length, clipping the ends to a point, and covering with black broadcloth or fine cashmere; then lap the ends at the corners of the frame and fasten with a white or gilt button, or with a convenient carpet tack, covering the head of the tack with a small sea shell.

Bind the wreath and glass together with strips of gummed paper and glue to the frame. Hang against a white wall. Similar strips of pasteboard can be covered with gilt or bronze paper, and are sometimes preferable to black frames. Another way is to take thin strips of smooth pine wood of any desired length and width, and after joining the corners neatly, spread a coating of putty over the whole upper side, on which designs in leaves, vines, tendrils, or geometrical figures can be stamped to imitate carving. When dry, paint the whole any shade of wood color desired.

The same frame is more effective when the wood alone is stained black or dark walnut, and the putty then moulded into graceful forms to please the taste, placed on the frame, dried, and covered with bronze. This is fine for engravings.

As all true lovers of the CABINET like to have it a floral and art journal, I will say a few words in regard to pictures. When making purchases do not select immediately one that is conspicuous with bright color, but wait until the eye becomes accustomed to the glare and is able to take in details without excitement. You may then discover it becomes tiresome after a few minutes' scrutiny, and turn with relief to one you had overlooked, where the subdued neutral tints of blending grays and browns combined with lively bits of color, produce a quieting, resting effect. We need something for our homes that can be seen often and studied without weariness. Something full of the charm of repose. When placed in position on the wall, let colored pictures hang by themselves, while engravings, photographs, and all black and white drawings can be hung separately or in groups.

AVIS FAY.

### CULTURE OF THE VERBENA.

The Verbena is a very popular bedding plant, and is of numberless colors and shades, among which is to be found the brightest colors, the most intense scarlet and deepest blue, with striped, variegated, etc. Auriculiflora is a most desirable variety, comprising various shades, with a large distinct eye of white or yellow. Lovers of this fine plant will be pleased to learn that it can be raised from seed with very little trouble; in fact, it requires very little more care to raise it from seed than it does from cuttings. Seedlings are more robust and healthy than cuttings, and are not as liable to rust.

A pleasing feature about seedlings is that they are for the most part fragrant, whereas old plants are not. Seed should be soaked in tepid water for twenty-four hours before planting. Sow in a hot-bed the first of March in drills four inches apart, and cover with a scant quarter of an inch of rich soil pulverized fine. (I use an old sifter to sift the soil through.) Keep the soil damp, but never wet, and never allow it to become dry; either case would result disastrously to the seeds. In about ten days they will begin to appear.

When the young plants have formed their third or fourth leaves, transplant to the garden. In removing the plants from the seed-bed, disturb the soil as little as possible, as the seed is very uneven in germinating, some not having sprouted when the first are large enough to transplant. In transplanting be sure to select a spot fully exposed to the sun; if anyways shaded they will produce an abundance of foliage, but not a single flower.

Set plants about a foot apart; if too close they will be apt to mildew. Make the soil as rich as possible, using well rotted cow manure. A light porous soil is best suited for Verbena culture. A good bed of Verbena is a sight that will dazzle the eye with its brilliancy, it being "a brilliant carpet of unnumbered dyes."

Some writers contend that a bed of Verbenas grown two or three years in the same place will be diseased with rust, but I have no trouble with it. In a bed of Verbenas from seed you will find new colors every spring. I have noticed in a bed of dark varieties only the first year, white and other new colors the succeeding spring, among which was a white one with a light green centre, a very novel color, and also very pretty.

The inexperienced are in the habit of thinking that this plant is more easily grown than it really is; no plant will sooner show neglect than this. It will succeed very poorly in a stiff soil that bakes. The plant is a half hardy perennial, blooming soon after sown. There is a variety called Montana that is perfectly hardy, surviving the coldest winters without harm and literally covers itself with its rose-colored flowers from the middle of April until winter sets in. It is altogether a most desirable variety, and one that I would advise all to have. If you have any doubts as to your ability to grow it from seed, I would say buy plants from the florists, some of whom sell as many as twenty plants for one dollar. If you possess not a hot-bed, seed may be sown in shallow boxes the latter part of March and placed in a sunny window on the south side of the house, and kept covered with a pane of glass or a board; the glass is best.

Seed do not require light to germinate, but it is absolutely necessary after germination takes place or the seedlings will be spindling and never will produce good flowers. Do not fall in the common error of sowing seed too thick, as besides drawing them up spindling, it interferes with transplanting. To all who have not tried this plant, I would say give it a trial. You will not be disappointed. Always buy mixed papers of seed, unless you wish a particular variety.

Hampton, Va.

W. G. JOY.

**Othonna.**—Has anybody tried Othonna as a water plant? I experimented a little last winter with it, and am much pleased with the result. The foliage is more graceful than our old standby, Tradescantia. Last December I put some short sprays in a hanging-basket made of a broken goblet covered with scarlet worsted and silver cardboard; filled it with soft water, and put in a little charcoal. It soon put out roots and grew and blossomed, and in April it hung down a foot, and the roots filled the goblet. I was so pleased with this, I filled a tall white vase with wet sand and put some in that on the mantle. This soon reached the mantle and lay on the mat on which the vase stood. Then I put some in a glass stand for cut flowers, in wet sand. It looks well all the time, and makes a pretty draping when the stand is filled with cut flowers.

M. J. P.

## Answers to Correspondents.

**Cyclamen from Seed.**—Will you tell me how to treat Cyclamen raised from seed, and how old they must be before they blossom?

Cornwall, Vt. MRS. E. A. WARREN.

*Answer.*—The little seedling bulbs as soon as large enough to handle, should be potted off and grown rapidly without drying off. If well tended they will soon form bulbs which will flower in from nine to eighteen months from the time the seed was sown. Under the old treatment of drying off and resting, it usually took three years to bring the bulb to a blooming state.

**Wax Plant Seeding.**—Can Hoya Carnosa (Wax Plant) be raised from seed? I have a large plant which has seeded several times. Do they often seed?

Guilford. MRS. H. N. DAVIS.

*Answer.*—The Wax Plant does not often seed with us. If planted in bottom heat the seed would vegetate, but it is not worth planting when increase is so easily effected by cuttings.

**Calla Lily leaves turning yellow.**—I have a Calla Lily which I keep well watered, but the leaves turn yellow as soon as half grown. What is the cause?

MRS. SALLIE J. HUNT.

Mayfield, Ky.

*Answer.*—Perhaps poor, sodden, sour soil; perhaps want of light, or both. Repot your plant in good light soil, and give it all the sun you can.

**Roses Sickly, etc.**—My Roses in pots grew well for two months then began to look sickly, and the leaves dropped off. How shall I treat Tritoma? Let me suggest the culture of the wild Collinsia; it makes a beautiful bed of blue. Can you name the enclosed Geranium?

MRS. M. F. BOOTH.

Bardolph, Ill.

*Answer.*—Your Roses were probably badly potted, the soil became sour and the roots died. Roses need a rich soil, but it should be open and well drained.

The Tritomas are bulbs from the Cape of Good Hope. Pot them in October in sandy loam, grow them in a sunny window and they will bloom about February; then diminish the supply of water, and when the foliage dies put the bulbs in the pots away to rest until the season for repotting.

The pretty blue flower you enclose as a Collinsia is Polemonium reptans. You probably have Collinsia verna, a very handsome plant with blue and white flowers, in the woods, and have confounded the names.

Your "Geranium" is Arbutum, the best of the low-growing varieties for bedding.

**Akebia quinata, etc.**—Please let me know when Akebia quinata blooms. What is the cause of Oleander buds falling off?

HATTIE SHERMAN.

Ohio.

*Answer.*—Akebia quinata blooms about the twentieth of May. The flowers are very curious, the male and female looking very unlike. Your Oleander has been kept too dry, or you have changed the temperature too rapidly. Either of these causes would make it drop the buds.

**Fernery doing Badly.**—Can you tell me what to do with my Fern case? I have bought Ferns and got them from the woods; they do well for a time and then rot.

Audulasia, Ill.

*Answer.*—You have kept them too wet, or if under a glass shade, given too little air. When ferneries are moist they need no water, and they should always be well drained.

**Variegated Ivy Geranium turning green.**—Passion Flowers.—I have a beautiful Ivy-leaved Geranium. When it was small the green leaves were bordered with white, tinged with pink. How shall I restore the color? Where can I obtain a plant of Passion Flower?

F. E. HUSELTON.

Westford, Vt.

*Answer.*—You have grown your Geranium too well and in the shade. Variegated plants often revert to the green state. Let the plant become a little pot-bound and expose to full sun, and the colors will return.

You can procure plants of Passion Flowers from any greenhouse, but they are rather large for house plants. P. Empress Eugenie is the best purple.

**Names of Plants.**—Ipomeas.—How should Ipomeas be planted?

MRS. JENNIE MCKEE.

Chevanse, Ill.

*Answer.*—Sow Ipomeas in the garden, and treat like the common Morning Glory. Your Fuchsia is F. speciosa. The tall ever-blooming shrubby plant with bright red upright flowers is Achania Malva-viscus, one of the best house plants.

**Ivy and Oak Leaved Geraniums not blooming.**—Can you tell me how to make my Ivy Geranium bloom? Does the Oak-leaved Geraniums ever bloom?

MRS. L. L. PHILLIPS.

Seranton, Pa.

*Answer.*—Both the Ivy and Oak-leaved Geraniums usually flower when stunted in growth. Let your plants become pot-bound and you will get bloom, but the foliage is far better than the flowers.

**Double Zinnias coming single.**—How can my Zinnias be made to produce double bloom when seed is gathered from double flowers? The tendency is to come single and we lose many beautiful ones.

Accotank, Va.

JAMES HUNTER, JR.

*Answer.*—Your question would puzzle anyone to answer. The rules of the production of double flowers are yet a mystery, and we all take chances in trying. Save only the seeds on the outer rows of the flowers, and you may get better flowers.

**Cape Jasmine Culture.**—I have a Cape Jasmine two years old which I long to see bloom. Will you tell me how to treat it?

New London, Ct.

MRS. J. T. WILLIAMS.

*Answer.*—The Cape Jasmine is botanically a Gardenia. Grow it in a warm room. Give it plenty of sun and it should bloom from May into the summer. In summer set it on a piazza or plunge the pot in the garden. It grows in summer setting buds which open from February onward according to heat given.

**Roses in the Parlor.**—Heavy Dew on Ivy.—My Ivy grows well and looks thrifty, but there is a sticky substance on the leaves. I wash them but it comes again. What will make Roses bloom in the window in winter?

L. P.

Chicago, Ill.

*Answer.*—The sticky substance on your Ivy is "heavy dew;" its cause is yet a disputed question; it does no injury, and your treatment is correct.

Very few Roses do well as window plants. The old-fashioned Monthly Roses are the best for house culture. None of the newer varieties will give half

the satisfaction that one may get from a plant of the old. Sanguinea agrippina (red) usually does well. Adam (pink) and safrana (buff) will usually bloom, but the large double Roses are useless for house culture.

**Name of Plant.**—Can you tell me the name of the enclosed? It was given me as a wild flower from Massachusetts.

MYRA A. PRICE.

Mendota, Ill.

*Answer.*—The plant is Epigaea repens, called also New England May Flower, Ground Laurel, and Trailing Arbutus. It is found from Maine to Virginia, and is the first flower of spring. Its delicate beauty and delicious fragrance make it a universal favorite.

**Spots upon Foliage of House Plants.**—I am much troubled by a disease upon my plants. I enclose two leaves, an Ivy and Abutilon. It shows itself in large discolored spots upon the leaves, appearing in a few hours.

E. B. F.

Beloit, Wis.

*Answer.*—The leaves sent are evidently sun-burned, and you must look to the glass under which your plants are kept for the cause. You say it did not appear in winter nor until the sun grew strong. It is very common in greenhouses, and care has to be used in selecting glass. A minute dot in the glass may form a burning glass, and if the focus falls on a leaf it is burned. Your treatment of your plants is right in every respect. Your only remedy for burning is to find the lights of glass which do the mischief and replace them with others.

**Names of Clematis.**—Shape of Flower-bed.—Please give names and colors of four of the choice varieties of Clematis. Please give me an idea for shape of a flower-bed.

MRS. DAVIS.

Upper Alton, Ill.

*Answer.*—Supposing you want hardy Clematis, we reply Azurea grandiflora, large, blue; Juchmani, deep purple; Sophia, light-blue; Standishii, whitish. The last is a little tender.

An oval flower-bed shows off plants to great advantage.

**Name of Plant.**—Enclosed I send root of a plant purchased of a Frenchman in Richmond five years ago. It comes up in the spring and every year there is added about ten new roots like the one sent. How can I make it bloom? What is it?

Wilson, N. C.

JAS. S. WIGGINS.

*Answer.*—It is very difficult to name a plant from a root, and the plants sold by Freuchmen in our cities every spring are generally not worth either planting or naming. The root appears to be a Dahlia or perhaps a Dioscorea if the plant is a vine? In either case it should have bloomed. Send us leaves and we will try to assist you further. It may also possibly be Erythrina herbacea.

**Lemon Geranium.**—Please tell me what Lemon Geranium needs. I have given mine all attention and have been unsuccessful.

L. P. H.

Austin.

*Answer.*—Do you mean Lemon Geranium or Lemon Verbena? If the former, pot in common garden soil and grow in a sunny window. Be careful not to over water. If the latter, plant out during the summer in any common garden soil, and store in a cellar free from frost in winter.

## A LITTLE WINDOW GARDEN.

A few years ago I had quite a pretty window garden, not many flowers, but green and growing all winter, under many disadvantages. The window I used faced nearly north; it had a little sunshine, however; no shutters to the window and only an ordinary white blind. It was a very cold winter, and we kept a fire in the room day and night.

We were living in a small town, and wire baskets were scarce and dear, so I went to a tinner's, bought some wire and borrowed a pair of pliers, and made a basket for myself at very trifling cost; I lined it with moss from the woods; filled it with ground from the same place; planted in it a German or parlor Ivy, a Kenilworth Ivy, and a Wandering Jew. They all grew very well; the parlor Ivy was inclined to be rather delicate, but by pinching it back, and only letting it grow up the handles, kept it in good condition, having to give it close attention, however, for it was much troubled with green bugs, which I had to pick off nearly every day.

The Kenilworth Ivy grew and bloomed nearly all the time without any trouble, except pinching off the ends when they grew too long, to keep it full on top. The Wandering Jew had such very fine leaves on it, threw out a great many of its pretty red threads and clusters of leaves, and in the spring, much to my surprise, a tall flower stalk, which remained in bloom for some weeks. But I must tell you how my window was arranged. It looked so pretty that I made a little sketch of it.

In the middle hung my canary bird on one side the basket I have just mentioned; on the other, a common cigar box, suspended with twine, completely filled with *Tradescantia zebrina*, so that no box was seen. It grew so fast and bloomed so freely its beautiful wee purple flowers were a delight the whole winter. As the ends grew too long, I pinched them off and put them in the box to keep it full, or any place where there was room for them.

In the fall I put a piece of *Nasturtium* into a jar of water; it sent out plenty of roots, and bloomed until nearly Christmas, when it looked so delicate I threw it away. I had also a white *Petunia* in a cigar box; it bloomed very late, then looked so green and pretty all winter and began to bloom again in April.

I found cigar boxes very good for planting in; they stand well close together, and do not dry out like crocks. On cold nights I put a newspaper between the plants and the glass, and if very cold pinned up my bird cage and each of my hanging-baskets in a separate paper, and they were never touched by the cold the whole winter. I had a *Rose Geranium* and a box of *Ground Ivy*, which delighted me by blooming early in February, and some *Ferns* which are always interesting, the different shaped leaves, and their curious way of coming up, like hairy caterpillars more than anything else.

In the fall I took in some pretty *Chrysanthemums*; after they were done blooming, cut them down and kept them on account of the pretty fresh shoots that came up. I had also a little *Cactus*, a thick, flat oval, leaf with clusters of prickles on it. The buds all came out of the edges; some were leaf-buds, and two or three were bright yellow flowers, lemon-scented. Through some carelessness it died, and I have never been able to get another, not knowing its name; had also a little orange tree, which I bought in bloom; about a dozen oranges formed, but they fell off one after another. I could not keep it warm enough; the rest by care in watering and turning them round, kept very pretty all winter.

## Winnifred's Will.

BY AUGUSTA LARNED.

## CHAPTER XII.

"When Pandora allowed unnumbered evils to escape into the world she left hope at the bottom of the casket."

It was a sunny May-day at Halcourt Hall—a warm, bright, genial day for the season. The noble trees in the oak avenue were budding, and the waters of Glenmere shone blue and benignant under a soft spring haze. The gray stone of the old Hall was softened by a curtain of vines, and the whole place had been transformed as if by magic, since we first saw it five years ago. The borders were trimmed and neat, and glowing with blossomed shrubs and clusters of rich flowers. The turf was like three-ply velvet, and beautifully kept drives and gravel paths stretched in all directions where new vistas had been cut to afford glimpses of the mountains and lake. Two noble century plants in carved stone pots fronted the entrance, and there a fountain was tossing up its crystal jet in the sunshine.

A hound of noble size, but very old, and almost blind and toothless, lay stretched on a rug where the sun streaked across the threshold, and now and then he lifted his head to snap at an imaginary insect. The gardener was setting his green-house plants outside in the sun, while his assistant cut the thick sweet grass with a lawn-mower. The delicate scent of lilacs was in the air, mingled with odors of new-mown hay, and the garden and orchard were one broad sheet of blossoms. It was the same old orchard where five years before two young girls, one dark, the other sunny-haired, had sat together in loving confidence. Now the blue birds and robins were singing with distracting sweetness in among the fragrant branches, and the old place had renewed itself, and put on an air of stately, dignified age.

As the lawn-mower clicked over the greensward, laying down little swathes of odorous grass, a tall, erect young woman in a broad-brimmed black hat that shaded her face, and a close clinging black gown just relieved by a bit of white linen at the throat, came through the door. Old Hector gave a feeble whine of pleasure as he got upon his tottering feet to receive a pat from the hand of his mistress. For a moment she paused on the broad stone step looking out on the glorious blossomed earth, and drinking in the sweets of this incomparable morning.

From the first glance it was plain that Winnifred Braithwaite had grown older, had matured and ripened since we last saw her. Her form had lost the meagreness and angularity of girlhood, and was beautifully rounded. The noble head sat easily on fine shapely shoulders. The complexion, dark and warm, had a rich glow of health, and abundant glossy hair rippled over the low broad forehead. Her expression was no longer fitful and capricious, but the clear gray eyes looked out with calm, steady, decisive glances. She was a woman self-poised and complete.

As Winnie stood there, in graceful posture, looking out over her domain, a bath-chair was wheeled around an angle of the house by a colored lad who had his mouth made up to whistle, but refrained out of respect to the inmate. Though his slender legs and arms had elongated since we last saw him, the crisp locks under the velvet cap, the jaunty figure, the expression of light-hearted carelessness unmistakably belonged to the Steenie of old. The chair contained a large, inert woman with but a feeble gleam of intelligence in the dull face, but still with a look which seemed to indicate that the motion of the vehicle gave her a degree of pleasure.

"Are you going away again, Winnifred?" she asked in a dissatisfied tone. "I have scarcely seen anything of you for two whole days."

"No, mamma, I am not going away," and Winnie

stooped down and took the nerveless hand in hers and patted it. "I have been a bad girl to neglect you so long; but you must try and pardon me, because I have been overrun with business and company."

"You never tell me anything," said Mrs. Braithwaite, unwilling to show that she was appeased, though it did please her to let her hand rest in Winnie's, and be gently patted, "but I have a way of finding out things for myself, and I know who has been here."

"I am willing to tell you all that will interest you, mamma, except those little trifles that are of no consequence, and might fret your mind."

"There's a deal goes on," returned Mrs. Braithwaite in the tone of a peevish child, "that never comes to my knowledge, but I happened to spy Charles Fortescue going away from the house after he had been here a good three hours."

"He ought to have known better than to come," said Winnifred, with an amused smile, and the air of being used to her mother's little scenes, and bearing them with the utmost patience and good humor. "Wheel mamma down into the oak avenue, Steenie, and bring me a camp-chair from the house, and then you may leave us."

When they were seated under the great spreading boughs with patches of soft blue sky interspersed, Mrs. Braithwaite began again on her grievance.

"You are not frank with me, Winnifred, though for a long time you have tried to be good and considerate. But you are not frank. I don't suppose it belongs to the Braithwaites to be frank, but I know what Charles Fortescue's errand was, and all about the doings of his mother, and those nasty, sly, designing girls."

Winnifred leaned forward and smoothed her mother's gray hair with a light soothing touch.

"He has gone away, mamma, on a long leave of absence. He has had his walking papers; now don't worry about him."

"But you are not frank, Winnifred, you know you are not," and the pathetic wrinkles deepened in Mrs. Braithwaite's forehead. "Some day, I suppose, I shall suddenly have it told me you are going to be married, and I don't know how in my feeble state, with this weakness in my knees, I shall bear the shock."

The amusement broke out more brightly than ever in Winnie's face and dimpled it all over.

"No," said she, printing a light kiss on the corrugated brow. "It is quite needless for you to borrow trouble about anything so very unlikely. I haven't the remotest idea of taking unto myself a husband, and if such an idea should ever seriously enter my head, I will tell you at once, as I am in duty bound. You shall not have a son-in-law sprung upon you, mamma."

Mrs. Braithwaite looked at her for a moment with a puzzled face, for nothing ever threw her into such mazes of perplexity as Winnie's light, bantering tone.

"Do you mean to say that you have made up your mind not to marry at all, that you are going to live and die single?"

"I couldn't positively affirm it if I were put upon oath," looking at her with a half roguish, half perverse expression. "We never know what folly we may be blindly led into, but at present I look upon myself as doomed to the awful fate of a spinster."

Mrs. Braithwaite heaved a great sigh and shook her head dismally. She was as little pleased with this alternative as the other.

"It's unnatural that a great heiress and a beauty like you, with dozens and dozens of offers, should dry away into an old maid. You don't confide in me, Winnifred, but I know who comes here. There's Colonel Peasley, and Judge Barber, and that young lawyer from New York, and Charles Fortescue."

"Don't take the trouble to name them over," cried Winnie, gaily, "they are all on the condemned list, and no hope of a reprieve."

Mrs. Braithwaite looked at her with a bewildered and disapproving face.

"I don't understand you," she said mournfully. "Per-

haps I haven't the wit to understand things. Your father often said so. But if you had married your Cousin Bradley—

"Don't," returned Winnie, in a low voice, while her whole manner changed. She rose to her feet, and half averted her face.

"I know you always try to turn me away from that subject," the mother resumed with the dull persistency which belongs to such a nature.

"Yes, I do, mamma, because it pains me, and I am sure you cannot wish to make me suffer needlessly."

"But if it pains you, Winnifred, how can you pardon that sly, bad girl, and say you love her still? I always predicted that she would bring harm as soon as she was let into the house, and she did do mischief of the worst kind. She got Bradley away from you with her underhand maneuvering, and bewitched the poor boy nobody knows how. She contrived it so slyly that she carried him right off from under your very eyes, and though I'm naturally easy going, it does put me out to have you say you forgive her."

Winnie grew rigid, and her face showed that patience was taxed to its extreme limits, while her mother went mauling along with her head put back on the pillow of the Bath chair, and her eyes closed in remonstrance against her daughter's course.

"I know you can't understand it," returned Winnie, with a desperate sense of her own helplessness, in view of the opacity of her mother's mental perceptions, "but I am a very obstinate and self-willed girl, mamma. My feelings will never change, and if you love me, you will let this subject drop."

"Well, I shall always call that girl a sly trollop," sighed Mrs. Braithwaite, who took a certain pleasure in standing out against her daughter. "You have always been called high-strung, and how you could bear to have that pale-faced, hypocritical thing carry off your lover, and then persist in doting on her, is a mystery; and, to cap all, the impudent creature has gone and called her first baby after you, Winnifred Braithwaite Halcourt."

Winnie drew in her breath hard to prevent an impatient, perhaps violent outburst. For a long time she had tried to discipline herself in forbearance toward this mother, who was shut out from most of the interests and feelings of her life.

"Mamma," she said at last, with deliberate calmness, "Bradley never was my lover."

"But you were engaged to be married."

"I have explained that over and over."

"Yes, about the property. And then you would go and divide the estate, and settle half on that woman."

Winnie felt the tension slacken round her heart now that Mrs. Braithwaite had begun harping on the other string of her grievance.

"I did it, mamma, because it was just and right. My Uncle Harold was defrauded of his share of the property, and I only gave back what belonged to his family; but you know very well that Bradley has never touched one penny. He refused it absolutely, and it has been settled on Aunt Edith for life, and is then to go to Bradley's children."

"And they say she is living like a queen on the other side of the water. I wouldn't have minded if she had come down a good many pegs in the world. But she hasn't forgiven Bradley for marrying that chit, and I can't blame her. I never liked Edith Halcourt, for she did not appear to know when I was in the room; and the old Judge hated her like poison. But where did you say Bradley was living? In some dirty back street in the city?"

"Yes, mamma. They live, I am told, in a little, plain cheap house in not a very nice neighborhood, and Bradley works hard in his profession."

"And what do they call him?"

"A journalist. He has done himself great credit, and his name will one day be spoken with honor."

"Well, Winnifred," heaving a deep, disapproving sigh, "I never had much opinion of them writers for newspapers. They say it ain't a respectable business, and no Halcourt has ever gone quite so low before."

"Note on poor Uncle Edwin," returned Winnie, sarcastically, "who broke his wife's heart, and ended his days in a gambling house. You are mistaken, mamma. Bradley has ennobled himself by marrying the woman he loved, and doing honest work. He has lifted himself infinitely above all the idle, spendthrift Halcourts that ever lived. If he had married me he would probably have gone to the bad like my great uncle, Edwin."

"Because you have such strange, independent notions, and such a strong will of your own. They say the husband ought always to be first, but you must rule wherever you are. Now, I suppose that poor little weak thing Bradley has married, would put her hand in the fire if he told her to. She ought to be ashamed to let him slave his life out to support her."

Winnie's impatience could not be restrained.

"Oh, mamma, how cruel, how unjust you are to her! Virginia is a perfect wife. All these years she has lived

with only one servant, and her house is a gem of neatness. She has trained her little children beautifully, and, oh, mamma" (the tears sprang into Winnie's eyes), "she has taught them to love me, and to lip a little prayer for Aunt Winnie, as they call me, night and morning. My heart often yearns for those children. I must have them here when they are old enough to come in the care of a nurse."

"Well, now, that caps the climax!" exclaimed Mrs. Braithwaite, lifting her hands. "I'll warrant the boy is as artful as his mother, and he will worm himself into your good graces, and the next news will be that you are going to make him your heir. You are a strange girl, Winnifred; anybody else would have got married long ago to spite Bradley after his shameful treatment."

The amused look came back into Winnie's face.

"I suppose I am a strange creature. You tell me so often, mamma, and I am bound to believe you. But now you have put it into my head about making little Bradley my heir, who knows but I may adopt the idea? There would then be Halcourts of Halcourt."

Mrs. Braithwaite gave her a really frightened glance.

"Oh, you couldn't be in earnest about that," she said, rousing herself with unusual energy. "It would just kill me, and if I could see your own children about you, I should die happy. Why don't you take that nice Colonel Peasley. I know I should always like him. He is so kind and attentive, and seems to enjoy my conversation."

Winnie laughed merrily, and again stooped down to pat her mother's hand.

"Have you never heard, mamma, of the mother being courted for the daughter's sake? I am sorry I cannot regard Colonel Peasley as warmly as you do, but I happen to know that he is a tyrannical, despotic man who hides a cruel, cold nature under a set smile, and who would find the addition of my fortune to his own small property a comfortable arrangement."

Mrs. Braithwaite sat still a moment with a hopelessly blank expression.

"You never like the people I like; you are always seeing something in them I can't make out. And now for three nights running I have had a bad dream, and I suppose you will be vexed if I tell you how it has worried me. I dreamed that you were married to Edgar Swayne, and I would rather be laid out cold in my coffin than have that happen."

A shade of annoyance passed quickly over Winnie's face.

"Why will you torment yourself, mamma, about things never likely to happen? It would be cruel to me if you were to drive away Mr. Swayne, who is my friend and helper, and who has worked nobly among our poor people for small reward."

"But he means to get his reward," broke forth Mrs. Braithwaite, for the spirit of prophecy was now upon her. "He is slow and sure and is doing it all for pay. He would wait twenty years and never give up the hope of winning you in the end. It makes me feel just ready to fly when I see him come and coax you off to the school, and to nurse those dirty miners and their children. I see what his aim is, if I am a poor, old, lame creature glued into my chair, and never to take a step again as long as I live. When that catching fever broke out on the mountain, wasn't you away for days tending the sick people; and I expected nothing but what you would bring it home in your clothes, and we should all come down. I lay awake nights and fretted the flesh off my bones for fear you would get sick yourself."

"Poor mamma," returned Winnie in a softened voice. "did you fret like that about your troublesome girl? You ought to have been thankful that I was able to help Mr. Swayne and poor old Father Dooley, who were real heroes. When I saw how self-sacrificing and tender and devoted that old priest could be to the sick, in spite of his dirty hands and disagreeable habits, I was ashamed of having disliked him all my life. Then he took the fever and died, and everybody was loud in his praises. I think if poor papa had lived until now he would have been sorry for his harshness toward the old priest. Now that the young priest from Clovernook comes to see you as often as you wish, I am sure you ought not to begrudge me the help and friendship of Mr. Swayne, who takes so many burdens off my shoulders. His advice is invaluable to me, and when I follow it I am pretty sure to go right, and when I stand out against it I find I have made a sad blunder. He is such a true friend, so utterly unselfish and good, I wish I could teach you to think kindly of him, and drop all foolish suspicions. I will never do anything, mamma, to make you unhappy. I have been hard, and unloving, and cruel, in times past, but now I will always think of you first, and if I am impatient sometimes you will try and forgive your girl, who is so imperfect, and so self-willed by nature that she can attain but slowly and painfully to the virtues that belong to gentle woman."

The tears came into the mother's faded eyes, and she took Winnie's hand that was resting on the chair, and pulled her down to kiss her face.

"Don't talk like that, Winnie. You are as good as ever you can be, and I know I fret you, being so bright and quick, because I am dull. Your father always was fretted by my dullness, but how could I help it, if it wasn't given me to understand quick? I won't fret any more about anything if it troubles you, dear. There, I am tired now. Let Steenie come and take me in."

Winnie still lingered in the avenue after her mother had been wheeled away. The invitations of the blue weather, the sweet scents, and bird songs of spring-time were irresistible. And yet she was not thinking of these, that May-day as she stood there under the budding boughs of her ancestral trees, but of the past, and of how deeply old memories and old loves were rooted within her. The breeze seemed to whisper the names of Virginia and Bradley, but the bitterness, the fever, the anguish were gone from her heart forever. Her eyes had cleared their vision, and were now steady and calm. She could dimly discern the meaning of her life discipline, and her great sorrow. As she stood there erect, and tall, and self-sustaining, with a certain majesty of form revealed by the clinging folds of her black dress, with her hat off, and the sunshine playing over her hair, she did not know that interested and curious eyes were watching her from the porch of Finster's cottage. Now there was a porch to the fisherman's abode very prettily embowered in vines and trees. A few gay flowers peeped out from the garden borders, and the whole place had put on an unwonted air of neatness and comfort. Mrs. Finster's children were "out of the way." The family prospects had brightened, and she was a better housewife, although her gown still showed an inclination to slip off her helpless form. At that moment the humpish baby, a flaxen-headed boy of six, was calmly fishing in the lake for gudgeons, with a pin hook, while his mother sat on the porch gossiping with black Nanna, who, old and unwieldy now, and long exempt from service, and a privileged member of the family at the Hall, would toddle down in sunny weather to wear away an hour with the "pore white trash," not bating, however, one jot of the grand air of condescension with which she conferred her favors. Her teeth were gone; the "rheumatiz" had racked her joints, but she was always "tanking de Lord" because she could "sense" things as good as she ever could. The high colored turban still kept its perch on top of her crown, and she was wagging it now impressively as she turned up the whites of her eyes, and said with great fervor:

"Dunno but ole Nanna's hars would had gone down in sorrier to de grave, ef dat dar chile had been sent to lock-up. But ef you b'leve it was little Missy as save him from dat. She talk and talk so solemn and awful, like de day of judgments, dat dar chile went down on his knees and cried fit to break his heart, and she forgave him den, and has nebber flung it up agin him, and dat dar chile would be cut up into little pieces, ef his missus ordered, widout ever so much as winkin'. Some folks can only be kep' straight, in dis world, by lovin'. It's the same wid brack folks as wid white folks; and ef it hadn't been for little Missy holdin' on, and beleevin', and forgivin' wid all her might, dat boy would be a son of perdition, a by-word, and a hissin', as de Bible says."

The old creature stopped to wipe the grateful tears from her eyes.

"I used to think she was mighty high feelin' and stuck up," remarked Mrs. Finster, "and would as soon step on poor folks as not. But something come along to change her. I 'spose it was her disappointment. Some folks a disappointment kills, and some it cures. She never carried her head a bit lower, but her voice had a different ring, and she got ho'd of Finster, and showed him she was willing to help him if he would help himself; and she sent Malviny to school, and fixed up the place; and the two oldest boys has got good situations on a farm, and Jake is learning the printer's trade down in York. Finster is a changed man. He gives the rum-shop a wide berth, and we get along a sight better than we used to. He's that tender-hearted, Finster is, misfortune keels him right over, but there never was a better man when things go straight, and there's clear sailin'."

Mrs. Finster shut her eyes and rocked pensively to and fro in the sunshine.

"Bress her heart!" returned Nanna, "ef dese blin' ole cyes could see her married to a good husband, wid children growin' up like plants in de Lord's vineyard, den would she say 'now let d'y servant part in peace.' But shore, honey, dar's plenty ob gemmens dat come a-ridin' and a-prancin' to de door; an', bress your heart, she's gran' and high as do Queen ob Sheby wid dem all. 'Twould do your eyes good to see her a-setting at de table in her brack velvets, a-helpin' out of do silver dishes to kuunel dis, and jedge dat. But she wou'd take none of 'em, and dey knows it, shore's you're alive, honey."

"Folks do say she was dreadfully cut up about her cousin," remarked Mrs. Finster. "Who'd a thought all the time he had his heart sot on Miss Jinny? And that day he came and took her out in the boat, I never mistrusted there was anything underhand going on; and I

can't think no harm of Miss Jinny now, she was so good to my Jake, and most saved his life. He sees her every week in the city, and is always writing home about the baby and little Winnie, and is just ready to break his neck for them all. I can't think no harm of Miss Jinny; but folks did talk hard of him; and mebbe if she had married him, they'd have said he took her for her money, for it ain't easy suitin' all round."

"Folks had better hole deir tongues," responded Nanna, with withering scorn. "De Halcourts wouldn't wipe deir ole shoes on dem gabblers. I've nussed Halcourts, and brung up Halcourts, an' I can speak and tell folks dat my missis didn't marry Mass'r Bradley cause why she didn't want him; an' she was willin' he should have Miss Jinny, willin' as water."

This was a theory of the case which had that moment popped into the old woman's head, but having once propounded it she was ready to swear to its truth on the lids of the Bible.

"Well," responded Mrs. Finster, shutting her eyes with a misunderstood air, "mebbe I had no call to speak, but folks will talk unless you cut their tongues out, and I guess the Halcourts couldn't go that length. It was all in the papers at the time, and now folks do say she's going to marry Mr. Swayne."

"Ef de debble keeps dem tongues runnin', old Nanna won't hearken. She'll stuff her ears wid cotton. Marry Mass'r Edgar! De Lord hab massy on us!" and the old creature arose in a high state of indignation and hobbled away homeward.

Winnie, meantime, had strayed down the avenue in meditative mood, and almost before she was aware had struck into the mossy wood path along the border of the lake, where shining glimpses of water were framed in the arching boughs of aromatic hemlocks and larches. The ground was starred with pale anemones, and the fragile wood sorrel, and clusters of the little smiling spring beauty. She stooped to gather a handful of the blossoms, and a footfall came behind her, so softly that she was unaware of its approach until by accident she turned and discovered Edgar Swayne, who had been watching her for a moment in silence. Winnie went forward and shook hands with frank friendliness.

Five years spent mainly in the open air, in that healthy hill country, had strengthened the slight, nervous, student form. He had left his books to deal with men and things, and his frame had expanded, his delicate forehead had browned, and the slightly consumptive bend of the shoulders had almost disappeared.

"You dropped down upon my path like a brownie," said Winnie, laughing. "and just at the moment, too, when I was thinking of you."

The young man, for Edgar Swayne was still young, looked at her with an air of pleased surprise.

"Were you, indeed, wasting any thoughts on me, Miss Braithwaite?"

"I will tell you my thoughts," she answered, looking down to fasten the cluster of wild geranium she held, in the front of her dress, "and I think you will say they were not idle or unprofitable, such as a woman's thoughts are usually supposed to be. I was reflecting upon the fact that I have been very selfish to wish you to remain in this place, where your work among the poor people has been noble but obscure; where, indeed, your fine talents have been hidden in a napkin. You now have it in your power to secure a congenial position where your ability and scholarship will at once be recognized. I feel that it is my duty to urge you to accept the professorship in the new college at Hillsdale, which I know has been offered you within the past week. Your success is assured, and no one will rejoice in it more heartily than I shall."

The glow died out of Edgar's face, and when he spoke his voice was constrained and unnatural.

"Miss Braithwaite, I will go away immediately if you wish it. Your will shall be my law. But I had come here to tell you that I have declined the professorship at Hillsdale, that I have no earthly ambition higher than to be called schoolmaster at the mines, and teacher and preacher at large among these scattered mountain villages. But if you have other views, Miss Braithwaite, of course I will retire at once."

There was some difficulty to be overcome in his speech, and he paused abruptly as if from inability to go on.

A generous flush overspread Winnie's face, and she spoke out with her usual impulsiveness.

"Mr. Swayne, you do me injustice, and it is not kind. My motives ought to be as clear to you as the noonday. You have no right to misunderstand me. For the sake of the poor people who love and honor you so religiously, I could wish you to remain here always. Without cant, or a show of superior virtue, you have by the weight of personal character gained an influence over these rude folk that is simply astonishing. I should not know where to turn for helper or friend," she added, her voice giving way a little, "if you were to leave us; but it has seemed too costly a sacrifice to ask you to remain."

"It is no sacrifice, Miss Braithwaite." Edgar had half

averted his face and was trying to maintain a cool, even tone of voice, but knowing nothing, seeing nothing but the beautiful woman before him. "You think better of me than I deserve, for my motives have not been lofty, my aims have not been noble. I am no hero and no saint, but a poor enough creature; and all the inspiration has come from you. You planned the new cottages, and built the school, and gathered the library. You instructed yourself in the rudiments of medical science that you might teach the women how to nurse their sick babies. I am willing to confess to you, Miss Braithwaite, that I have not had an eye single to God's glory. There has been much of human weakness and infirmity mingled with my work."

Winnie would have been glad to raise her eyes clearly and steadily to his, but somehow she could not.

"Mr. Swayne," said she, rather brusquely, "it is always your aim to underrate yourself and your doings, and that I consider almost as great a fault as an excess of egotism. I know how you have spent yourself to save the weak and help the needy—how nobly you have worked to reclaim the drunkard, how you have watched by sick beds night after night, and made your presence a joy and blessing in those poor cabins. Oh, Mr. Swayne, I have no thanks, for they are poor, meaningless phrases. Such a life as yours must be its own reward. I never loved philanthropy for its own sake. I can work by fits and starts, but am destitute of a steady aim. I am not disciplined to continued effort, for there are wild, untamed impulses within me, and at times a passionate spirit of rebellion against my lot in life, though it seems a favored one to the world. When the fever broke out in the cottages I desperately needed something to do, and if I hadn't worked hard in those days, tiring myself prodigiously, to put the past behind me, I should surely have done some evil. But unconsciously, almost to myself, you have led me to higher ground. I know now if I had gone unchecked through life, with full sway for my imperious will, I should have turned out a kind of monster, something abhorrent to nature. Though I curvet and rebel, and prance in the harness often enough, as it is, in my better moments I am willing to bend my neck to the yoke. If to any one, I shall owe it to you if those better impulses ever gain complete ascendancy."

A thousand emotions swept over Edgar, as he listened to this naive, frank confession, so characteristic of Winnie. He felt instinctively that he must put himself behind a barrier of reserve or his defences would be swept away.

"Miss Braithwaite," he said, coldly, "you honor me by your confidence, but you will excuse me from implicitly accepting your self-estimate. And, by the way, I had almost forgotten to tell you that the great event, the school festival, takes place to-morrow. Know then, as a profound secret, that you are to be crowned as lady patroness and presiding genius of the occasion. Polly Duff is to perform the ceremony of coronation, and little Lane Charley, Long Bill's boy, is to make a speech in your honor. Since Charley has turned out such a prodigy of learning, his father has grown ashamed of his ignorance, and now he comes sneaking into the night-school to learn to read. You would be amused to see the great giant, who could fell me with a blow of his fist, sitting with a primer before him puzzling over words of one syllable. Sharp Ben Harding, who is my right hand now in the night-school, is dressing the walls with greens, and Nancy Duff is so mollified by Polly's promotion that she has offered to scrub the school-room out gratis. Mary Smithers is to bake the tea cakes, and prepare the collation, for we are to have a little feast after the exercises, at which it is expected the lady patroness will preside; and I am sure it will do her heart good to see the many, many people she has made happier, and to be greeted on all sides with the good will and admiration and gratitude of those poor people, her faithful subjects and devoted friends."

"Oh, Mr. Swayne!" Winnie's voice choked and her eyes were full of tears, "how much I owe you that I can never repay! It is needless to try and tell you how grateful I am, but I know I have wounded you often, and I can ask you to forgive me."

Edgar Swayne was still young, and the blood had not grown sluggish or old in his veins. It was spring-time, and the birds were singing to their mates, and the wild flowers blooming at his feet. Suddenly he found himself whirled along by an irresistible tide. Something of whose power he was unconscious had gained control, and before he knew what he was doing he had seized Winnie's hand and was covering it with impassioned kisses. So tumultuous was the feeling that had mastered him the words came forth broken and disjointed.

"Oh, you must know how I love you, Miss Braithwaite. I love you now as years ago, only more fervently and irrationally. I loved you the first moment I heard the tones of your voice, and I shall carry that deep, undying love to the grave."

Winnie drew her hand away not abruptly, but gently, with an air of mild remonstrance and surprise.

"I hoped," she said, half sobbing, "that the wild, impracticable dream of those early years had vanished and been forgotten. I had relied on your generosity and great-

ness of soul, and had trusted that a deeper acquaintance with my defects of character would break the fatal spell. If I had it in my power to love any man I am not worthy to be loved by you, who are the noblest and the best of men."

"Do not drive me to despair with those sad, hopeless words," he cried, as if he were pleading for his life. "You do not know me or the abysses that have at times opened within my nature. There have been moments when I would have committed a crime to win your love. I shudder at my own self-abandonment when I think how conscience and duty might have shrivelled in the flame of an earthly passion. What acceptance can my acts have with God when I have thought first of serving and pleasing you? When I would willingly have toiled as a menial in your house for the one glance a day which was to keep me from perishing?"

"These are wild words," said Winnie, plaintively. "You are excited and know not what you say."

"No, I am not excited," and his face was almost stern in its white misery. "I have lived this over too many times; too long I have been slowly eating my heart, and striving to break the very spring of my life. Adoring you day by day with a stronger and more irrational love, I have said to myself no hope, no hope; but at the bottom of my heart some faint gleam has lingered. Oh, Winnie!" he cried, lifting his eyes to her face with an imploring prayer in them, "I could wait years and years, and make no sign. I can be obedient and docile as a dog that comes when you call, and goes at your bidding. I can live on the smallest crumb of comfort and consolation, but do not tell me that your heart still fatally clings to its love for that man, who has wronged you so cruelly. Do not command me not to hope," and his voice fell to a low thrilling whisper, "for if you do it will kill me."

Winnie turned away silently with a deep shade of thought on her face. The romance of her life had seemed so long past, that she was startled and awed by this passionate outbreak from one whose daily walk had been calm and tranquil during long years of constant intercourse with the family at the Hall. She stood so long quite silent, communing with herself, that Edgar's impatience could not be controlled.

"Do you bid me not to hope, Winnie? Do you quench the last gleam and bid me go away and hide my grief in the grave?"

Slowly she turned around and put out her hand.

"No, I do not tell you not to hope, but the task I am obliged to impose is perhaps too great for your strength. That which you wish can never take place while my mother lives, but if you are infinitely patient, and infinitely self-sacrificing, I will not command you not to hope."

Edgar sank upon his knees at her feet and his eyes were blinded by grateful tears.

THE END.

### KEEP ON CHURNING.

After the battle of Long Island, which was fought Aug. 27, one hundred years ago, and after the capture of New York city by the British, Gen. Howe made his headquarters in New York, leaving Staten Island in command of Col. Dalrymple. The wounded from the bloody Brooklyn field were taken to the island and billeted upon the farm-houses. It was Howe's custom to visit the temporary hospitals regularly, in order to satisfy himself that his men were receiving proper care. On one occasion, during a heavy storm, he and his staff took shelter under a farm-house shed. Farmer Cole, seeing the party outside, approached them with a hearty invitation to enter the house and rest till the storm should subside. Mrs. Cole was churning in the kitchen, and the guests occupied the sitting-room. "We are very hungry," said a member of the staff; "can you give us something to eat?"

"I can't leave my churn," said the practical housewife.

"I'll churn for you," said a splendidly-uniformed officer. Forthwith he was set to work, Mrs. Cole having taught him how to use the dasher.

As she proceeded with the culinary work, ever and anon she glanced at the tolling officer. "Well," said she to his brother officers, "if he can't use the sword better than the churn dasher, he must be a mighty poor soldier."

This sally raised a hearty laugh, in which the volunteer churner joined heartily. He kept on gallantly, the perspiration streaming from every pore. It was the hardest work he had ever done in his life.

"That's right," said Mrs. Cole, encouragingly; "keep on long enough and you'll fetch butter."

When the storm had ceased the military gentlemen took their leave, first offering to pay for their entertainment. "We don't keep tavern," said Mrs. Cole, with the short and decisive snap of the independent farmer's wife; and the officers rode away.

"Keep on long enough and you'll fetch butter," became a household expression in the British army, and was taken to the other side of the water, where it was uttered many a time to encourage those who were striving to accomplish results under difficulties.

## THE LANGUAGE OF FLOWERS.

BY UNCLE CHARLIE.

This elegant book, during the past year, has found many admirers, and is now sent out in its second edition, enlarged and improved. The Poetical Selections are from the best authors, and the section devoted to Floral Conversation, among other good things, contains a most fascinating story.

There is also a section devoted to the Sentiments of Flowers, which gives a list of all known Flowers and their meaning, and another to Floral Decorations, in which the subject is treated in reference to special occasions, such as Thanksgiving Day, Christmas, Easter, Decoration Day, Birthday celebrations, Weddings, Funeral ceremonies, the Church, etc.; there is also a chapter on Cemetery Decorations, and others on preparing skeleton leaves, drying flowers with their natural colors, autumn leaves, sea mosses, etc.

It is issued in two different styles to suit purchasers—in neat, enameled paper, at 25 cents per copy; for those wishing a handsome gift-book or table ornament, it is beautifully bound in extra cloth, and sold at 50 cents. Will be sent by mail, postpaid, on receipt of price. Address,

HENRY T. WILLIAMS,  
46 Beekman St., New York City.

## VARIOUS HOUSEHOLD SUBJECTS.

Flowers are always appropriate for house decoration. Within the reach of all, they never "go out of style," and are always beautiful. I say within the reach of all, because to make a pretty bouquet does not require a great variety of flowers, or the petted darlings of the green-house. A few violets and leaves in a tiny vase are lovely, and many other wild flowers not so well known as the violets, are as delicate and pretty as some of the rare exotics. A little search in the woods, or on the cliffs, will reveal hundreds of them. The children, if once shown how to find them, will keep the vase always full. Nature's great flower-garden is free to all.

I differ with many persons as to what is a "pretty bouquet;" not the stiff bunches of flowers of all colors we so often see, surely. Two kinds of flowers, one of them white, with plenty of delicate green leaves, will always make a pretty dish bouquet; and in every bouquet a good deal of white and green is necessary; they soften and harmonize the whole. White and variegated Balsams make a pretty saucer bouquet, using short moss or curled parsley for green. Geranium leaves are not a necessity either; small Rose leaves, Myrtle, any delicate leaf will do, and the mosses of the Lycopodium family are most beautiful of all. Small glass vases with a rosebud, a spray of Heliotrope and two or three Fern leaves in it, is "a thing of beauty," which, they tell us, "is a joy forever." A pretty jelly glass will answer equally as well. Scarlet Sage and Wild Parsley make an exquisite bunch. Wild Parsley is a treasure. Once planted, it "volunteers" to an amazing extent, and blooms from June to September. The flowers are white and lace-like in appearance, and give a refined look to any bouquet.

Flat shells, filled with sand, are pretty bouquet-holders; fringe the edge with green, fill with purple and pink Verbenas, with Wild Parsley between them. Don't laugh at the combination of purple, pink and white, till you try it.

The broken goblets, with scarlet covers, are pretty filled entirely with green; twine Geranium Ivy round the handle, fill up with Ferns, Dusty Miller and Coleus. If hung by a long cord in a window, twine long sprays of Madeira vine up the cord, putting in short ones to droop. German and English Ivy and Madeira vine keep fresh in water a long time. Fill a vase with them; put it on a bracket under a picture, and train them up the long cords. English Ivy in pots grows wonderfully if the top of the earth is sprinkled with bone-dust, and the cold coffee poured on it once a week.

When the vines are all gone, the ferns, leaves, and grasses are a pretty substitute. Ferns will grow in shady, damp corners where nothing else will. They should be cut when well matured; the young, tender ones are too juicy, if I may use the expression, to press well. They should be kept in a warm room; a sudden change of temperature will make them curl. Arrange them in graceful bunches on the wall in the space where something is needed to "fill up" over or under a picture; wire them like autumn leaves, and put them round the picture frames. A few grasses improve these Fern bunches. Fasten them up with small pins. Fasten Ivies to the wall with double-pointed stick.

My experience is in favor of waxed leaves; they retain their colors better, and are less apt to curl. Put a piece of wax the size of a pea on each leaf, and iron with a warm iron till the coating of wax is smooth and very thin. Common beeswax will do. The Lycopodium pressed retain their color better than Ferns and never curl.

Grasses should be gathered before they get dry; and, if possible, arranged as they are to remain; if not, hang them in their natural position, not heads downwards; they never recover their drooping spirits after such treatment. To crystallize them, dissolve alum in boiling water, a pound to a pint; take it off the fire and put the grasses in, a few at a time; the solution is so strong it begins to deposit the instant it stops boiling; leave the grasses in a few seconds. In this way the most delicate grasses will take a fine frosting of crystals that will not weigh them down. Leave coarse grass in longer. Another way is to wet them and dip them in flour.

Don't make grass bouquets too large and stiff; make the effect as airy as possible. Put in a few bright berries and leaves. Asparagus berries are pretty and stay fresh all winter. A few grasses dyed scarlet may be put in, but not many. Heads of wheat and other grains are pretty.

By exercising a little forethought all these things may be secured in their season, and the pleasure they give more than repays the trouble, if trouble it is considered. Let me conclude with an account of my Centennial bouquet. I bought a handsome bunch of grasses in the Florida department of Agricultural Hall. The tall plumes attracted much attention, and, before I left the grounds, eighteen ladies asked me where I got "those beautiful grasses." WILD PARSLEY.

## MOSESSES, LICHENS, AND FUNGI.

In this article I shall mainly treat of mosses, lichens and fungi, for the reason that, if prepared as they should be, in them lies a mine of floral wealth. They answer a purpose that flowers cannot reach, except everlastings. With them I shall combine some kind of grasses. They will make ornaments suitable to adorn a palace, or make the humblest cottage glad with beauty.

When at the Centennial, in the Horticultural Hall, I saw in some of the departments bouquets and bouquet-holders made up so pretty that you would almost imagine that you were in Paradise. The bouquets were of immortelles, that is, everlasting flowers, and grasses.

In the season of flowers I have a great variety, and make many bouquets for home, friends, church, and fairs. It is often remarked, "Your flower-stand is as pretty as your flowers." I will tell you first of the stand, then its making up. It was first made to hold water for flowers. I trimmed and filled it with flowers, and carried it to fairs. It was much admired, but it took so many, and they lasted so short a time, that I concluded to change the programme. I trimmed with moss not colored and running pine; it was quite pretty, but faded before the year was out.

In coloring fancy dyes, I experimented with mosses, fungi, and lichens. I brought out as nice colors as could be made on wool or silk; blue, black, green, orange, purple, scarlet, pink, all colors and shades of all colors that can be colored.

The stand is three or four inches higher than a common stand. The top is a good sized cheese-box cover. The standard is round; to the bottom is a square box about two inches high. If to hold water they should be puttied. It stands on four legs. I tacked on flour-sack paper to sew the moss on. From the top of the standard to the bottom of the legs I sewed on green twirl moss. I tied up the moss in bunches before sewing on. Then I made small bouquets, roses; the roses I made from the fungus; took yellow everlastings for the yellow in the centre of the rose; the colored mosses and lichens make beautiful bouquets. The paper from the rim of the top of the stand is nearly three-quarters of a yard long, cut at the bottom pointed, the points four inches. The first row is green; that is placed so it will stand up around the rim; then fill in as fancy dictates, but have the main body green.

I have five varieties of moss, besides a large leaf moss that grows on trees. I could hardly do without it for trimming. Have the top rounding. I first fill it with dry moss, the shape as I wish; make it quite high. At the end of each point make flowers that will hang from the point. I use grasses in the bouquets. The variety I use the most is Briza maxima. Don't forget the white. I use white everlasting; some fungi are white underside; those I turn the white side out; one kind of lichen is white, also one kind of moss.

If you wish to make your floral designs cheap, you can color annatto for orange, set with saleratus; also use soft soap; also aniline; then purchase a few of the fifteen cent fancy packages of dyes. I make crosses, wreaths, baskets, anything that fancy dictates. I have a fancy article I took to the fair and got a premium. I called it an ottoman. I have had it two years. It has not faded.

I will say here, next fall, if any one wishes samples of those fungi, mosses, and lichens, send a two cent stamp, and I will send them. While writing this, a lady came here. When she saw the stand she exclaimed, "Oh, how beautiful, how did you make it so pretty?"

One word for the moss stand. I am too choice of it to put it on exhibition. To make nice fall bouquets of flowers, get a good variety of Gladiolus. You will not want much more. I have three autumns got the first premium on them over other bouquets of flowers.

MRS. C. MYERS.

## Household Topics.

## KITCHENS.

Out of the large number of housekeepers—I mean those who really do their own housekeeping, and not those who have an upper servant for that purpose—but few are the delighted possessors of a kitchen that realizes their wishes; a kitchen that is so large that extra work does not make it inconveniently small, and so small that cleaning it is not the bugbear of the whole week.

City houses, from those of moderate expense up, generally have excellent kitchens, finished with hard woods, all conveniences of faucets, sinks, ranges, and other desiderata.

Farmhouse kitchens are always supposed to be vast rooms that will permit an unlimited number of "hands" to dine therein, and still room for the necessary work of preparing the meals, cleaning the "milk dishes," and all the hard work that is incumbent on the occupier of a farmhouse and farm kitchen.

But it is to neither of these varieties that this sketch is addressed. No; it is to the large number of wives and mothers who live in villages and small cities that have not outgrown and outworn the houses that were built when the places were in their youth. A large proportion of these housekeepers live in ten to twenty year old houses that the head of the family has had a chance to buy much cheaper than they could possibly hope to build as good a one, and though the hall be narrow, the upper rooms with a sloping ceiling that barely permits one to stand erect, the spare bedroom opening from the parlor, the dining-room small and dingy, and last, though first to the door of her own housework, the kitchen, an abominably inconvenient little hole, the family move in and are thankful that, come what will, at least they have a home.

The whole family help to settle the house. Kate brightens up her own chamber with all sorts of crocheted and embroidered fancy things, because her particular girl friends will run up there to talk over the last dance or discuss dresses for the next one. She and the others feel an interest in parlor and dining-room, and while brother John is making brackets or a box for a window-garden, Kate is collecting slips from her floral friends, from which her imagination pictures untold wealth of clambering vines and fragrant flowers.

But at the kitchen door they all stop. Ah, did I say? There is one who feels that even that room might be brightened and still be in harmony with its purpose, so that the six to ten hours daily that she passes there—a large share of her lifetime—might not be spent in discomfort and vexation. Perhaps she has a husband who is handy with hammer and saw, and who is willing to try his skill at whatever will cheer and lighten the household labors. It is of this busy housekeeper and her impromptu carpenter that I will tell the story of the kitchen that I once saw—first, as the family were moving in, and then after they had tried to make it both pleasant and convenient. The room was small, with one window—the wood-work had been painted a very dark shade, which was badly worn; the whitewashed walls were dark with smoke, and badly bruised and crumbling; the floor was of soft wood, in which were sink-grease and stains, never to be eradicated, and in a jog, at one side of the room, stood a rough wooden sink with pumps for well and soft water.

This was the room from which the quick eye and

willing hand finally evolved a kitchen that was of necessity small, but bright, convenient and thoroughly homelike.

Of all the little improvements I could not find room to describe even in the whole of our prized CABINET, but I will try to give a few hints from which any one can work out their own ideas, for who wishes even a kitchen an exact copy of some other one. The rough sink was replaced with a neat frame of narrow matched boards, enclosing a handy closet for iron ware, and on this was put an iron sink, which has no crevices for grease and dirt to hide in, and back of which was fastened to the wall a wide one-inch board with the upper edge beveled.

This closet only partially filled the jog before alluded to, and as there was no convenient place for a wood-box elsewhere, the closet was apparently continued to the end of it, and formed a capital corner in which to store one or two days' stock of fire wood. From the baseboard up to the height of the closet, the wall was covered with thick boards to protect the plastering, and the wide board previously alluded to as back of the sink, was also carried around the back and side of the wood-box, so that the two formed a continuous whole. At the back of the box two thick cleats were nailed, one on each side, and a board sawed to just the right length for a shelf (which was only laid on, so it could be easily removed whenever one wished the whole of the top open), and so furnished a nice place for the two water-pails, where they would not be rotted by the water constantly in the sink from the dripping of the pumps or emptying of the hand-basin.

Back of the stove and above the sink, at convenient height, were put up nicely planed strips on which, after painting, were screwed japanned hooks for the numberless cloths and towels that are in constant requisition in a kitchen. A neat little shelf was put up, in a conspicuous place, on which to stand the clock, and to my mind there is no more necessary piece of kitchen furniture. After these preliminaries all the wood-work was painted a light tint of ochre, which is a much stronger color than the drabs and browns of common use, and unlike them looks clean when it is clean. The ceiling was then whitened, and after carefully washing the side walls with glue-water, the innumerable breaks were smoothly pasted over with old cotton cloth, and a neat cheap paper of a medium shade of brown put on. The floor was treated to three coats of a dark paint, each coat being mixed entirely with oil, put on thin, and allowed time to thoroughly dry.

Back of the kitchen table were tacked up two large sheets of manilla paper that could be easily replaced when soiled, and a couple of braided rag-mats were on the floor where wintry weather would make them very acceptable to cold feet.

The room, as metamorphosed, looked really inviting, and the patient Marthas of that household need never fear to take a morning caller in the kitchen while they finish kneading bread or watching the baking of a cake.

It is pleasant, and it is capable of standing hard usage, and best of all, carpentering, painting, papering and all were the handiwork of the dwellers therein, and, being well done, will last for many years.

Let us, my sisters, take an example from this, and in the settling of a house save enough from the furnishing of the front room that the kitchen may be made cheerful, and the work that we do therein be raised above the level of drudgery.

CHLOE.

## HOME CONVENIENCES.

A contributor to the CABINET would be informed how to furnish the "spare chamber," with only white-washed walls, a black walnut bedstead, two chairs, a basin, a pitcher, no washstand, no carpet, and only a few dimes in our pockets. For years the washstand in my own room has been a sewing machine crate, curtained and covered with old white muslin, which serves every purpose of a washstand, and a peep behind the curtain reveals a most cosy boot closet, with shelf above for rubbers, etc. I could not recommend an elaborate ornamental washstand, the materials for which would cost as much as the price of a plain stand at the furniture dealers.

Next, I would make a dressing-table by taking a barrel, preparing it with waste papers on the inside, so as to exclude insects, as this is to be a receptacle in summer for winter bedding and clothing, and *visa versa*. Then have a board cover, either semicircular or straight, extending two or three inches over the barrel. Perhaps you may find among your treasures some old thin white muslin which will be pretty over colored cambric, for curtains and cover.

Then, if the room is large, a box also covered and curtained with something bright, may serve to contain necessary articles in place of a bureau. A shoe-bag inside the closet or bedroom door, with several pockets for shoes and stockings, is also a convenience.

Next, the bed should be neat and inviting. If you have a feather bed, be sure the tick is clean. It may be washed by emptying out the feathers. The feathers also, if old, can be washed and much improved if you have a vacant room for drying them. If you have no feather bed, corn husks make a very good mattress. The pillows should be large, and in the event of your not having feathers, finely shred corn husks or chaff make a passable pillow. In summer I cannot do without my chaff pillow, as feathers cause the head to perspire. Make a comforter or two of the best parts of old sheets; make them a pure white and tie with scarlet or blue worsted. The skirts of worn light colored dresses make good comforters for those who are a little dainty about their bedding, and will wear for many years if carefully used, without looking soiled. A white spread is indispensable, though it be only plain cotton cloth, knotted with candlewicking in simple designs.

Then with regard to the "home-made sofa." I will describe a couch made entirely by a delicate woman with only a saw, hatchet and hammer. It was made and proportioned exactly like those at the furniture dealers. Slats running across, forming an elevation for the head; over these a tick was nailed, which, when stuffed with prairie hay, gave the desired form. The whole covered with some nice rep goods and finished with furniture gimp and fancy-headed nails.

The crown of an old straw hat can be made to form a basket, with a braid or two of straw for the handle, and another turned outward for the bottom. This, filled with sprigs of evergreen, autumn leaves and dry flowers, will be very pretty tacked against your white-washed walls. I make box frames for anything I wish to frame in a deep frame. For a small frame take a letter paper box that is lined with white paper. Cut the bottom of the box diagonally, from corner to corner, and turn the points outward. Place a picture mat over this, then a pane of glass the size of the mat, and bind with a strip of black cambric, using good glue. Then arrange your flowers, or whatever you wish to frame, in the corner of the box, put on the cover, and your picture is framed. AUNT MARY.

## Household Art.

### HOUSEHOLD ART.

Something very beautiful in this line are silk flowers. Procure various shades of silk, as nearly the color of the natural flowers you wish to imitate as possible, and some silver wire, about as fine as horse hair, and a very fine knitting needle.

Coil a piece of the wire by winding it around the needle, evenly and closely. Take it out and take hold of both ends and draw it out a little to separate the coils somewhat.

Take any flower you wish to imitate and bend the wire in the shape of the petals. Take silk the color of the flower and wind the end around the wire you have left on the petal for a stem. Then put it over the centre of the leaf, letting it fall in the coil at the end of the leaf, then back to the stem again and over, winding first on one side then on the other. When the petals are all made, proceed to put the flowers together, after the pattern furnished by the natural flowers, and wind the stem with silk the color of the natural stem. Make a spray of leaves as near the shape and color of the leaves of the plant that the flower has been taken from as possible, and twine it with the flower. Roses and Pansies, Eschscholtzias, and Dahlias, are all nice to imitate.

When it is necessary to have the color go only half way over the petal, work the inner color in with a needle. Pansies and many others have to be treated in this manner.

When the flowers are all made they may be formed in a wreath and framed, or a bouquet, and put in a vase under a bell glass.

Use saddler's silk, and split it, using only a strand at a time. They are very dainty and beautiful. The usual price for teaching this work is six dollars, but one can make it just as successfully by following these directions as if they had a teacher.

#### MAKING HAIR WATCHGUARDS.

Many a lady desires to present her husband or some friend with a keepsake, which shall awake sentiments of love and recall her devotion whenever seen. Many of us have tresses of the hair of some dear departed friend, which we would be glad to preserve in some nice way, but the great expense of having hair watchguards made, have deterred many from procuring them.

The price of learning the secret of their manufacture has also been very high—\$15. But like many other things after we once know how, it seems very easy; indeed, only needing a little patience and perseverance for its accomplishment.

The first thing is to construct the apparatus which is needed. Procure a smooth circular board, eight or ten inches in diameter. Divide this by pencil marks into sixteen equal parts. Begin at any one of these divisions, and near the edge mark 1, in the next division 4, then 7—2—5—8—3—6—1, and repeat to 6, when all the spaces will be filled. Place this board on a support which is of less diameter than it is. If nothing better presents, a tall can or jar.

Procure seventeen equal weights; the little screws which can be found at any hardware store will do very well, and you can pass a coarse thread through them. Perhaps a large wooden needle, such as ladies sometimes use for worsted knitting, is as good as anything to use for weaving the hair around. Attach one of the

weights to the end of this needle, after first covering the needle with cloth.

Then take the hair and hold it tightly in one hand, while with the other you draw out a strand the size you need for weaving. You can count the hairs in the first strand, and guess at the rest. Put twelve in the first.

Tie a knot at each end of each strand, being careful to tie every hair in. Prepare sixteen of these strands, and tie the string attached to each weight to one of them, one for each. Then sew the other end of these strands to the cloth, near the weight, which has been attached to the needle, placing the ends towards the end of the needle.

The circular board must have a hole in the centre, and the end of the needle, and the weight must be put through that at this stage of the work, and the strands of hair, with the weights, are arranged to drop over the outside of the board. The weights should keep it so that the needle stands erect; perhaps it will have to be held, and the place where the strands of hair are sewed on, is just at the opening in the board.

Place the strands so that each one of them will come directly over one of the numbers on the board and the weights will swing clear of all obstructions. The strings attached to the weights should be five or six inches long.

When we have finished these preparations we are prepared to begin the chain. Take up the strands at each place marked No 1, and carefully raising them so the attached weights shall swing clear of all the others, exchange the two, dropping each in the other's place. Then take those at 2 and exchange in the same manner; then at 3 and so on, until you reach 8, after which you begin at 1 again. Keep on in this way until the hair is all used up; then tie the ends carefully while you clip the ends off; remove the weight and rip the sewing from the other part of the work.

Braid together three strands of rubber cord or tie them together with a thread of silk. Draw these in as you remove the needle.

The work must first be boiled in water for twenty minutes and thoroughly dried.

Fasten the ends of the hair and the elastic cord with a drop of wax. It is then ready to send to the jeweler's for the gold settings.

The pattern in this chain is spiral. Another kind has the appearance of links, and is made in the following way:

When the board is divided into sixteen divisions mark only every other one, beginning with first, then third, then second, then fourth, then first, third, second, and fourth. Arrange the strands so that one comes at each side of each number. Begin with the opposite strands at number one and exchange them; then take those on the other side of the same number, then proceed with figure two in the same manner, and so on.

#### SPATTER WORK.

Almost all the directions for making spatter work say take a tooth-brush and comb, but a larger brush, such as are used for blacking brushes, and a fine sieve are much better. But very little ink should be put on the brush at a time, so the spatters will be smooth and uniform. The fern work is much nicer when fine ferns, arranged in a tasteful manner, are used than large ones.

A quite large picture can be made in this way in an hour. Common good black ink is as good as anything for it.

#### A HANDKERCHIEF CASE.

Take a piece of velvet, black or dark brown or navy blue is very pretty, and ornament each corner with a pretty little bouquet in silk embroidery. Embroider an edge in small scallops; button-hole stitch around it. Cut a piece of enameled cloth eleven inches square, and a pale blue silk lining of the same size. This lining should be quilted with white silk upon wadding in some handsome pattern, then laid upon the enameled cloth, and the edges bound with blue ribbon.

The embroidered velvet should be just large enough so the edge will come beyond this binding. Fasten it on with blind stitches. Turn each corner down to the middle. Fasten two of them and sew white ribbon on the other two to tie them together. White ribbon less than an inch in width may be quilted and sewed around the edge instead of the button-hole embroidery. This makes a very pretty present for a friend, and is nice to hang up in a room. A loop of ribbon should be sewed on one corner for this purpose.

#### DIRECTIONS FOR STAMPING.

Very pretty patterns, already perforated, come for using in this way, but if you happen to have a pretty pattern which you wish to use, perforate it with a pin, following the design. Place the cloth which is to be stamped beneath the pattern, and rub a mixture of powdered borax, starch, and Prussian blue, well mixed, over the pattern. It will penetrate the perforations and produce the pattern upon the cloth. The pattern must be carefully removed, and the cloth pressed with a hot iron. If the stamping seems to be wearing off at any time, iron it again and it will set it. This process has been kept secret, or sold at a great price, and probably has never been publicly published.

A beautiful table or piano spread may be made of the fashionable brown velvet embroidered with silk or a contrasting color or colors. A wreath of leaves, in shaded green and autumn colors, is about as lovely as anything. A large group or wreath in the centre, and a spray in each corner are required. Two wreaths united and each containing an initial of the owner's name, is very handsome.

The work can be done quite expeditiously, and they are so beautiful that it is very satisfactory to make them, and it is an excellent way of displaying one's artistic skill.

#### WHAT-NOTS.

Very beautiful what-nots may be made, with hanging shelves and embroidered lambrequins. The shelves can be ordered of any carpenter, and are simply plain black walnut cut in the right shape and highly varnished.

The lambrequins may be made on a velvet foundation, or filled in on canvas. Beads in different colors make the handsomest embroidery.

A pattern should be chosen, such as can be obtained at any fancy store, and the work done after it. When beads of the right colors cannot be got, zephyr may be used with very good effect, and the two are often combined in the same work. The lower edge of the lambrequin should be cut in large scallops, say three or five, and a twisted fringe of beads put around it. Perhaps black beads are the most suitable for this part of the work. When the embroidery is finished the upper part of the lambrequin must be tacked to the board shelf, and a band heavily embroidered with beads put on the edge to cover it.

## Household Elegancies.

## WALL-BASKET.

This is a pretty wall-basket of cane-work, ornamented with drapes, which we illustrate herewith:

Drape No. 1 has a foundation of scarlet cloth, pinked at the edges and ornamented with blue silk braid, and an embroidered design in gold, green and blue purse silk.

Drape No. 2 may have its foundation of pale blue cloth or silk. The edge is straight, and is button-holed round with silk. The design may be worked in chain-stitch, or with braid in gold colors. A few gold or steel beads are needed, and the long stitches are in two shades of crimson silk. The edge is of fine lacet work. The basket is lined with bright-colored silk. When the drapes are worked and fixed in their places, a leaf-trimming of satin ribbon is put on. A silk tassel is placed between each drape, and bows of ribbon are put on as in the design.

Straw makes beautiful little frames for small pictures. When well made, they look very much like gilt frames. Five straws is a pretty width; fasten the corners together carefully with fine thread. Make several and suspend them in clusters with blue cord. Nothing is prettier for photographs. To make a pretty card-basket, take a piece of cardboard and cut in a circle about seven inches in diameter; cover with blue silk; take a strip of the cardboard three inches wide, and long enough to go around the circle; cut long points in the strip and cover with silk and bind

and loop back. Tie them together about middle way with a colored ribbon. Suspend it by three long raveled strips in the centre of your room, and fill with grasses, ferns, and bright leaves. In the absence of these, artificial flowers make it look beautiful.

One of the prettiest ornaments I ever saw, was a feather cross. The foundation was cardboard; length of cross twelve inches, by three wide—arms in proportion. The feathers were of the pure white, downy kind, and sewed on in rows so that they lap over each preceding row, and these hide the stitches and bony part of the feathers. Fasten it in a gilt frame. To make a hanging-basket for leaves and dry flowers, gather a quantity of warhoo berries and string them; interlace them the same as you would beads; it closely resembles coral, and is very attractive. These berries can be used many ways; they look pretty strung and looped about pictures. They make beautiful crosses, anchors, etc.

Kind Nature furnishes us abundant means to decorate our rooms, if we will only gather the gifts that are lavished upon us.

VICKIE BLUE.

WALL-BASKET.

## FANCY ARTICLES.

The little articles I am going to describe, are all inexpensive, and all who make use of their leisure moments can have them. Very pretty ornaments are made of straw, such as frames, baskets, brackets, etc. To make a bracket, take a piece of cardboard a foot square and cut it in half from one corner to the other. Cut large scallops on the bias edge of both pieces. Make small holes with an awl, about a half inch apart, around the edge of all the scallops. Select nice straws that are not broken and put them through the holes of both pieces; hold the two pieces about three inches apart; cut the ends of the straws in scallops size of those in the cardboard. Take narrow blue ribbon—skirt-braid can be substituted—and wind alternately between the straws until the space between the pieces of cardboard is filled. Three long pieces of the ribbon is required for sus-

the edges with silk or narrow ribbon a shade darker. Join this piece to the circle and bend the points downward. This gives it a pretty drooping look.

A very pretty lamp-mat is made by crocheting a centre with tidy cotton No. 10, then a round of blue zephyr, another of cotton, and so on until you get it the size you wish; finish it with a heavy blue fringe. Crochet a tidy for your rocking-chair to match. Of course, any other color can be used in making these ornaments that is preferred.

Now, I am going to tell of a nice and easy way to make mats for floors. Take small worsted pieces—the smaller the better—and cut them about two inches in length, and as narrow as you can cut them without pulling apart. Take a circular piece of old good-for-nothing-cloth, and begin tacking them on in the centre; arrange them in alternate rows of light and dark colors, each row about three inches wide; when done, it presents a motley, fuzzy appearance which is very pleasing to the eye. Save all the little scraps that cannot be used for anything else, and make these mats. They are both useful and ornamental.

Pretty toilet sets are made of netting and zephyr. Take a piece of netting ten inches long by eight wide; commence with blue zephyr and run a "fence row" through the piece lengthwise; then five rows of brown zephyr; then blue, until the piece of netting is filled. A mixed

fringe of brown and blue finishes them. You can vary the colors according to taste. Tidies made on this order look well.

The phantom-basket has been described before, but there are various ways of making them, and my way, I think, is the prettiest of all. Tear the cotton in strips an inch wide; ravel all out but three or four threads. Make the foundation of the basket to slope toward the bottom. Fasten the ends of the raveled strips all around the top of the basket, twist them,

Take coarse tidy cotton No. 8, and crochet a round mat, thick, that is, not to put over the thread; have the mat the size of a two-quart dish, or if you wish for a small basket, take a pint dish, which is a pretty size; then crochet six times round without widening, then crochet round three times the shell pattern, with which every one is familiar; one ball of cotton will make one basket over the pint dish, one over a two-quart dish; then make a handle of two shell rows long enough to go over it to look as you please; then make a stiff starch of flour, put in a lot of glue, say half a pound to a pint and a half of starch; put in the crochet basket while boiling hot; have it thoroughly wet; take and wring out a little; stretch it over the dish intended, and let them dry; the quicker the better; serve the handle in

NO. 1.—DRAPE: EMBROIDERY.

pending it. Fasten one on the lower piece of the bracket, next to the wall, and draw through a hole, which should previously be made in the upper piece. The other two ribbons are fastened on the corners of the upper piece and all brought together and tied in a bow. Suspend in a corner and fill with grasses and scarlet berries from the woods. You will be surprised at the beauty of this, and all the work of your own hands.

NO. 2.—DRAPE: EMBROIDERY WITH LACET EDGE.

the same way. When dry, take a paint brush and varnish over with brown shellac, which you will find at any paint shop. Let it dry; when thoroughly dry they will be stiff like a board; then take and line them, and thread in bright colored ribbon in through the meshes of the shell-work, tying a bow now and then on the basket, and you will have a pretty basket at a trifling expense.

Fasten the handle to the basket with a bow of ribbon.

## Hireside Reading.

Olive Logan revives a pleasant little domestic story of Queen Victoria when she was at once one of the best sovereigns and devoted wives that ever graced the English throne: Long years ago—but this is a bit of exclusive reminiscence known only to a few—the Queen, in the early days of her wedded life, had one of those squabbles with her husband of the sort which will come about between the most loving married couples. Chagrined and vexed, the Prince retired to his room and locked the door. The Queen took the matter quietly for awhile, but after the lapse of an hour she went to the door and rapped. "Albert," said she, "come out." "No, I will not!" answered the Prince within. "Come, go away; leave me alone." The royal temper waxed hot at this. "Sir," she cried, "come out at once; the Queen, whose subject you are, commands you!" He obeyed immediately. Entering the room she designated, he sat down in silence. For a long time nothing was said. The Queen was first to break the silence. "Albert," she said, "speak to me." "Does the Queen command it?" he asked. "No," she answered, throwing her arms about his neck, "your wife begs it."

"Where's the refrigerator?" asked an old lady, after vainly trying to find the elevator to a store with all the modern improvements. "We've no refrigerator, but there's an ice cooler over in that corner," said one of the girls in attendance. "None of your imperience, young woman, or I'll report you to your employer and have you discharged," retorted the old lady in great wrath.

James Russell Lowell tells a good story about his butcher. One morning the man expatiated upon the loveliness of the moonlight of the night before, and just as the poet was thinking that he had done him an injustice in never having given him credit for refinement of soul, the butcher said, "Last night was so fine I jest couldn't sleep, and had to get up and go to killin'."

A Pennsylvania Dutelman, who married his second wife soon after the funeral of the first, was visited with a two hours' serenade in token of disapproval. He expostulated pathetically thus: "I say, poys, you ought to be ashamed of yourselfs to be making all dis nois ven dar vas a funeral here so soon."

An old hunter in Michigan, when the country was new, got lost in the woods several times. He was told to buy a pocket compass, which he did, and a friend explained its use. He soon got lost, and laid out as usual. When found he was asked why he did not travel by the compass. He stated that he did not dare to. He wished to go north, and he "tried hard

to make the thing go north, but 'twas no use; 'twould diddle, diddle, diddle right round, and point southeast every time."

While the English excursionists were on the Capitol Square in Richmond, Va., the other day, a fine-looking Englishman pointed to a squirrel some distance off, and inquired of a citizen, "Can you tell me, sir, what 'hinseet' that is hover there?" Citizen: "That's a squirrel, sir." John Bull: "Oh! ah! Thanks."

An old pioneer, who believed that "what was to be would be," lived in a region infested by Indians. He always took his gun with him, and once, finding

weep?" was asked. "Alas, things are not as they used to be!" answered the devoted son. "The poor woman's arm grows feebler every day."

A gentleman had a board put up on a part of his land, on which was written, "I will give this field to any one who is really contented;" and when an applicant came, he asked, "Are you contented?" The general answer was, "I am;" and his reply invariably was, "Then what do you want with my field?"

A young clergyman seems to have compressed the whole body of his sermon on "deceit" into the following: "Oh! my brethren, the snowiest shirt-front may conceal an aching bosom and the stiffest of all-rounders encircle a throat that has many a bitter pill to swallow."

A fast youth asked at a San Francisco restaurant: "What have you got?" "Almost everything," was the reply. "Almost everything? Well, give me a plate of that." "Certainly. One plate of hash!" yelled the waiter.

The laziest man is on a Western paper. He spells photograph "4-tograph." There has only been three worse than he. One lived out in Kansas, and dated his letters "11worth," another spelled Tennessee, "10aC," and the other wrote Wyandotte, "Y&."

An old Scotchwoman, whose favorite son was in the habit of swearing occasionally, was censured by her minister for not correcting him. "It's very wrong, minister," she admitted, "but ye maun aloo that it sets aff conversation mightily."

The Middletown (Conn.) cemetery contains this epitaph: Beautiful flowers of Middletown, How art thou cutted down! cutted down!

Charles Mathews, the comedian, was served by a greengrocer named Berry, and generally settled his bill once a quarter. At one time the account was sent in before it was due, and Mathews, laboring under an idea that his credit was doubted, said: "Here's a pretty mull, Berry. You have sent in your bill, Berry, before it was due, Berry. Your father, the elder Berry, would not have been such a goose, Berry. But you need not look so black, Berry, for I don't care a straw, Berry, and shan't pay you till Christmas, Berry."

An English clergyman was "turned down" at a fashionable spelling-bee for spelling drunkenness with one "n." Shortly afterward he returned to his parish, and found himself very coldly received by his parishioners. He sent for the parish clerk and asked him what was the cause. "Well, sir," replied the man, "a report has come down here that you was turned out of a great lady's house in London for drunkenness."

A member of a country choir had his hair cut very closely, and when he had to sing on the following Sunday, "Cover my defenseless head," there was a general titter and a smiling from behind the fans.

THE TRUANT'S RETURN.

that some one of his family had borrowed it, he would not go without it. His friends rallied him, saying that there was no danger of the Indians, as, anyhow, he would not die till his time came. "Yes," said old Leather-stocking, "but suppose I was to meet an Indian, and his time was come, it wouldn't do not to have my gun."

The extensive authority of parents under the Chinese laws is well known. A Chinaman of forty years, whose aged mother flogged him every day, shed tears in the company of one of his friends. "Why do you

## Housekeeping.

## PRIZE RECEIPTS FOR COOKING.

*Virginia Mode of Curing Hams.*—Rub the fleshy side of each ham, long and well, with salt. To every ham allow an even tablespoonful of powdered saltpetre, which must next be rubbed on the meat; then add sugar and red pepper beaten small; lastly, rub on more salt mixed with a small quantity of molasses. Let the hams remain packed for about five or six weeks; then hang them up and smoke with hickory chips for a month. Take them down and rub with hickory ashes; sun them, after which hang them up in a dry place, occasionally smoking them on dry days. Never smoke bacon on rainy days.

*To Boil a Ham.*—Wash the ham, wipe dry, and put it to sun from ten to twelve hours. Soak it all night in cold water; next morning put it on the stove, in a pot of cold water, to simmer for four or five hours. Take it off the fire and let it remain in the same water in which it was boiled until the ham is perfectly cold. Take it out of the water, let it dry off and skin it. Sprinkle with black pepper and grated cracker, browned; garnish the dish with curled parsley.

*Waffles.*—Boil a cup of rice to consistency of soup; when properly boiled, especially for waffles, it should fill a quart cup. Add two teaspoonfuls salt and one large spoonful butter or lard. Fill a quart measure with flour, add to it two teaspoonfuls cream of tartar, two-thirds of a teaspoon of carbonate of soda. Beat up two eggs light; stir in the rice, then the flour, with sweet milk enough to make a tolerably stiff batter. Have the fire very bright and the waffle irons hot and well greased with lard. Bake to a tolerably dark brown.

*Yeast.*—Boil twelve large Irish potatoes, together with a small quantity of hops, tied up in a bag, in a gallon of water; when the potatoes are perfectly done, peel and mash them, and add to them one cup of sugar and one cup of salt; pour over the mixture the boiling water in which the potatoes were cooked. Let stand till it gets cool, when add one cup of good yeast. After keeping it open one night, bottle and cork lightly.

*Italian Soup, (Never Printed in America).*—Put into three pints of boiling water the remains of a cold fowl, or a piece of cold roast beef, or a ham bone; add one handful of Lima beans; half a gallon of tomatoes with the skins taken off; one teacup of rice; and two onions sliced and then fried a good brown; one large spoonful of butter; pepper and salt to the taste. Let the soup boil about twenty minutes, and then cut off corn from three ears and add to the soup. This soup requires about three-fourths of an hour to make, and is very nice. The fried onion is absolutely necessary. A few sliced Irish potatoes can be added to the other vegetables.

*Rich Beef Soup.*—Put in a beef shank before breakfast, so that the meat will have time to cook to pieces, in a kettle of water, with salt to taste. Add one-half gallon ripe tomatoes, peeled and chopped up, or, if in winter, one quart canned tomatoes. About twelve o'clock put into the soup half a small head of cabbage, one onion, one turnip, four or five large potatoes, one carrot, two pods oehra, all chopped fine, half a pint butter beans, cut off corn from two ears. Keep all boiling till dinner is ready to serve; make a thin paste of a small quantity of flour mixed with cold water, which must be put in half an hour before serving.

*Batter Bread, Virginia Mode.*—Beat up four eggs light, add meal to the proper consistency, about one and a half pints after it is sifted, one large teaspoonful salt, one tablespoonful melted butter, and sweet milk to make a tolerably thin batter. Bake in a batter bread skillet, or very small oval iron moulds well greased with lard so that a rich crust may be formed.

*Green Grape Jelly.*—Gather the grapes before they have turned, choosing only good sound ones; pick them from the stem, wash and put them into a stone jar. Set the jar in a kettle of cold water over a brisk fire; when the juice rises to the top, take them off the fire and squeeze through a coarse towel or jelly-bag, and to each pint of juice allow one pound best loaf sugar; put on the fire and boil twenty minutes. When a little cool pour into jelly-glasses or moulds and cover tightly.

*Crab Apple Jelly.*—Wait until after frost has touched the apples; pick, wash, and cut in half; put in a kettle, filling it with water if it is half full of fruit, using warm water. Boil until the apples are perfectly soft; then take off the fire and squeeze, and add one pound of loaf sugar to every pint of juice. The juice looks very cloudy when first squeezed, but clears beautifully after boiling ten minutes. Cook twenty minutes. Cover tightly after putting in glass.

*Sweet Meats of Watermelon Rind.*—Cut the rind in any shape fancied, grape and grape leaves and fish, also bunches of roses. Put it in brine to keep; when you wish to make the sweet meats, soak out the brine by putting it in fresh water and changing it every day. Put three or four tablespoonfuls pulverized alum in one gallon water; as soon as dissolved, lay in the rind and cover closely with cabbage leaves; simmer until the rind becomes a bright green. Soak out the alum water; while it is soaking pour boiling water to half a pound white ginger and let it stand long enough to soften sufficiently to slice easily in thin pieces (retaining the shape of the races as much as possible), then boil it in water an hour to extract the strength; add two or three dozen blades of mace and more water and two pounds of best white sugar; make a thin syrup and boil the rind gently for half an hour; then set it away for a day or two, when boil again as before, adding more water and sugar at each boiling till the syrup is thick and rich and sufficient to cover the rind. Repeat these boilings six or seven times at intervals of three or four days. The quantity of seasoning given is for three gallons rind, two pounds sugar for one pound rind. This sweet meats keeps indefinitely and never ferments.

*Blackberry Cordial.*—Let the fruit simmer awhile and then press out juice; to each pint of the same, put nearly equal quantities of white sugar; boil and skim and when a thick jelly, put in bottles, filling half way; when cold, fill up with good whiskey or French brandy. It tastes as if highly spiced, and is splendid for medicinal purposes.

*Lemon Sherbet.*—Dissolve one and a half pounds sugar (loaf is best) in one quart of water; add the juice of ten lemons, pressing the lemons so as to extract not only the juice, but the oil of the rind. Let the peel remain awhile in the oil and sugar. Strain through a sieve and freeze like ice cream.

*Hyden Salad.*—To one gallon cabbage finely chopped, add one and a half gallons green tomatoes; half a pint green peppers; one pint of onions, all chopped fine. Sprinkle salt on them to extract the

juice; next morning pour boiling water over it, then squeeze it dry. Put four tablespoonfuls ginger, one of cloves, two of turmeric, one of celery seed, two pounds sugar, and two spoonfuls salt. Mix all with half a gallon vinegar and boil a few minutes.

*Chicken Salad.*—One large chicken boiled; when cold, remove the skin and chop the flesh into a dish, over which throw a towel slightly dipped in cold water; one pint celery, chopped, put between cloths to dry; one tablespoonful best mustard; one yolk of raw egg, dropped into a dish large enough to hold all of the dressing, beat it well for ten minutes; slowly add the mustard and one teaspoonful vinegar; when this is well mixed add three-eighths of a bottle of oil, a drop at a time, always stirring the same way. Rub the yolks of six hard boiled eggs very smooth and stir in half a cup of vinegar. Pour this mixture slowly into the first, stirring them together as lightly as possible. Take the chopped chicken, half a loaf of stale bread crumbs, the celery, a little celery seed, yellow pickle, also chopped, pepper and salt to taste, also the oil from the chicken, skimmed from top of water in which it is boiled. Set this aside and pour on the dressing just before serving. It will curdle if kept too cool.

*Cabbage Pudding.*—Chop up a head of cabbage, scald in salt water until tender; drain off, add half a cup butter, four eggs, one pint bread crumbs, pepper, salt and mustard to taste; milk enough to make a stiff batter. Bake in a deep dish.

*Sultana Pudding.*—One pint bread crumbs, one quart milk, one cup sugar, the yolks of four eggs beaten; the grated rind of a lemon, a piece of butter the size of an egg. Mix up and bake till done, but not watery. Whip the whites of the eggs stiff, beat in one teacup white sugar, in which has been strained the juice of a lemon; spread over the pudding a layer of jelly; pour over this the whites and replace in the oven and bake a light brown. To be eaten cold with cream.

*Ginger Bread.*—Six cups flour; half a pound lard rubbed into two cups molasses, one cup buttermilk, two heaping spoonfuls pearl ash dissolved in the milk; six tablespoonfuls ginger, one teaspoonful alum dissolved in one teacup of boiling water and poured over hot.

*Icing for Cake.*—One pound sugar; whites of eight eggs; put the sugar into a bowl and pour the whites over it. Take half an ounce gum arabic, beat and sift it in; mix all together and beat it up.

*Cocoanut Drops.*—One pound grated cocoanut; one pound sifted white sugar, whites of six eggs. Drop them in buttered plates and bake at once.

*Mince Meat.*—Boil a beef heart very tender; take out the veins and gristle; shred it fine. Add three pounds suet cut very fine, one teaspoonful salt, three pounds currants, after they are washed; three pounds raisins shred and cut fine, three pounds brown sugar, twelve ounces citron, one tablespoonful mace, one of cloves, two of allspice, one nutmeg. Beat all fine and mix together, adding half a tumblerful lemon juice or vinegar, two tumblers French brandy and three of wine.

*Oil Mangoes.*—One quart mustard seed; one ounce mace, one ounce cloves, four ounces grated horse-radish, four ounces ground ginger, four ounces garlic, and a little turmeric. Beat them together in a mortar and make into a paste with oil, fill the mangoes and scald once in strong vinegar.

## PIANO MUSIC ! Five Fine Collections !!!

### PARLOR MUSIC

is in two large volumes, pages sheet music size. Vol. I has 242, and Vol. II has 222 pages, filled with the best and most popular Piano pieces, every one of medium difficulty.

### PEARLS OF MELODY

has 224 pages (sheet music size) with choice pieces by Wilson, Tonel, La Hache, Allard, Ole Bull, Spindler, &c., &c.; a large number, and all of the best.

### LA CRÈME DE LA CRÈME,

first issued in numbers, is here presented in two volumes of about 240 pages (sheet music size) each. Music is for advanced players, and carefully chosen.

### FOUNTAIN OF GEMS

(224 pages, sheet music size) is a general collection of easy, popular pieces, that every one can play.

### WELCOME HOME

(224 pages, sheet music size) will receive a welcome in every Home where it is used, having well chosen bright music, and nothing harder than the medium degree of difficulty.

Price of each Book—\$2.50 Bds.;  
\$3 Cloth; \$4 Gilt.

# Window Gardening.

By HENRY T. WILLIAMS,

Editor Ladies' Floral Cabinet, N. Y.

**RICHLy ILLUSTRATED WITH EXQUISITE ENGRAVINGS.**

An Elegant Book, with 250 Fine Engravings and 300 Pages,

Containing a Descriptive List of all Plants Suitable for Window Culture.

A ready and invaluable aid to all who wish to adorn their houses in the easiest and most successful manner with plants or vines, or flowers. Instructions are given as to the best selection of plants for Baskets or Ferneries and Warden Cases. Several chapters are devoted to Hanging Baskets, Climbing Vines, Smilax, and the Ivy, for decorative purposes. Bulbs for House Culture are fully described; also ornamental Plants for Dinner Table Decoration. Other topics are well considered, such as Balcony Gardens, House Top Gardening, Watering Plants, Home Conservatories, Fountains, Vases, Flower Stands, Soil, Air, Temperature, Propagation, Floral Boxes, the Aquarium, Rustic Conveniences for Household Ornament, and directions in detail for the general management of in-door plants for the entire year throughout the winter, spring, summer and fall. The volume is profusely illustrated with choice engravings, and pains have been taken to make it one of the most attractive books ever issued from the American Press. For sale or supplied by Bookstores everywhere, or sent postpaid by mail on receipt of price.

Price \$1.50.

Every Woman Her Own Flower Gardener.

By Daisy Eyebright (Mrs. S. O. Johnson.)

A delightful little volume, written by a lady fond of flowers, as a special help and assistance to others interested in out-door flower gardening. Simple directions are given, how to lay out and plant Flower Borders, Ribbon Beds, and arrange ornamental plants. Among the topics treated are Geraniums, Fuchsias, Bulbs, Ornamental Flowering Shrubs, Everlasting Flowers, Ornamental Grasses, Coleus, Paeonies, Shade Trees, Garden Vegetables, Old Fashioned Flowers, Annual Flowers, Perennials, Ornamental Vines, Lawns, Insects, Manures, Watering Soils, When and How to Plant, Dahlias, Lilies, Gladiolus, Verbenas, Cannas, Balsams, Portulacas, and nearly all the popular varieties of flowers and shrubs. The book contains 148 pages, is charmingly written by one deeply in love with the subject, who appreciates the tastes of ladies and aims to do good with agreeable, kindly advice on home gardening. For sale or supplied by Bookstores everywhere.

Price, in handsome Pamphlet Covers, 50 cents; bound in Cloth, \$1; postpaid by mail.

PRICE 12 CENTS.

## HINTS ON WINDOW GARDENING.

If we who are healthy and strong rejoice in these winter pets, how much more delightful must they be to the invalid who is deprived of the fresh, invigorating air of out-door exercise, whose amusements are limited within four walls, whose days drag, whose hours are all too long. To these afflicted ones we cannot bestow more cheerful pleasures than by giving them a window shelf or box filled with Chinese Primroses, Oxalis, Sweet Alyssum, Mignonette, Dicentra, Ten weeks stock, Abutilon, Adjuratum, Carnations, Bouvardia, Salvias, Vincas, etc.; also some vines, Smilax, Maurandya, Cobœa scandens, the ivies, and Morning glories.

You thus give diversified, gentle occupation to the hands, consequently varied entertainment to the mind. Each day brings out new attractions, an unfolding leaf here, an incipient bud there—the sign of a yellow tinge telling of wrong somewhere. Calla leaves must be freed from dust, Rose bushes cleansed from those little pests, green flies. This pot must have a bath to free it from rising green mold, that adventurous vine needs training. Where are the dull homes, the lonely moments that were spent in sad thoughts, in painful retrospective, unprofitable repinings—all, all absorbed by the beautiful flowers which give back only exhilarations and smiles.

But to bring about these happy results we must be thoughtful and far-seeing; like the proverbial ant and provident bee, use our summer hours in preparation for winter days. When wandering through our gardens, admiring and drinking in beauty and sweetness, gathering bouquets for vases or friends, for the hospital patient, or the sick, unprovided-for poor, take off any

fine slips you may see, prepare your dish of sand, just covered with water, in which place your slips, and give all the sunshine possible. When the water has evaporated, or generally in five days, you can raise one slip, and I think you will be rewarded by finding white fibrous roots all ready for transplanting to a good soil. In this way you can raise quantities of

In taking slips keep those only that break off the parent stem crisp, and short; they will be almost sure to live; but those that are stringy and soft, reject. As the summer advances, and your beds are getting crowded, pot any plants that you wish to take in for winter blooming. This will give them the required rest they must have, and they will be in fresh leaf and

bud for your windows. Bring in the house all plants at least two weeks before your fires are lighted, so that the change will not be so great for them. When your house is heated leave your room doors open at night so that the temperature will be lowered considerably. When the weather grows colder place every evening newspapers between your plants and the windows. This will protect them from serious injury from a sudden falling of the thermometer. Do not let the cold frosty air blow directly on them, but manage some other way to have the air pure. Use very warm water for moistening them and keep them damp. Sprinkle your boxes with your hand. Give all a watering just before the sun comes on them during very cold weather.

In potting, be sure to scald your soil with boiling water after you have sifted it through a coal-sieve. Powder with white hellebore, Scotch snuff, or flower of sulphur, to destroy insects; also use a soft old tooth brush, and wash off these little troublesome creatures into a pan of water, and beg your

gentlemen friends to puff their tobacco smoke freely among your plants. Be sure to keep the soil well pressed down about the roots, leaving the edges loose. When the earth cakes in the pots, turn it up with an old knife.

I have tested the value of these directions and know they will insure success to every amateur window gardener who will follow them. AUNT ADDIE.

HOME, SWEET HOME.

## Floral Contributions.

## MY SHADY WINDOWS.

The windows of my sitting-room, one north and two west ones, used to be a great trial to me. I tried to keep house plants, but they would not grow and flourish they only dragged out a lingering, miserable existence, making the gloomy winter days yet more gloomy by their forlorn presenee.

At length, however, I have succeeded in obtaining a few that will thrive without the direct rays of the sun, and will write a description of my three shady windows for the benefit of those who have no sunny south nor cheerful east ones.

I will begin with the north one, which is more shaded than the others, for there is a wide verandah outside. First, I had a shelf made, about eight inches wide, and long enough to reach across the window and a few inches further each side. This was placed close to the bottom of the sash and supported by iron brackets. On each end of this shelf I put a large flower-pot containing English Ivy. I find that this accommodating plant does equally well in sun or shade, only care must be taken not to give it too much water when it is not in the sunshine.

The soil was composed of two parts leaf mould, one part thoroughly decomposed manure from an old hotbed, and one part coarse sand; and though the English Ivy has the name of being a plant of slow growth, it was not long before it reached the top of the window and crossed it. Since then it has rambled around pictures and cornice at will.

There are no curtains to my window, only common roller-shades that are drawn up to the top every morning, and lowered at night to protect the plants from the cool air around the glass.

Then I had a box made just long enough to fill the space between the flower-pots, and nearly as wide as the shelf. This box was filled with soil from the woods, mixed with a little sand, and then I planted pretty Ferns therein, and between the Ferns numerous slips of Tradescantia Zebrina, then carefully covered the surface of the box (also the pots each side), with green moss.

By a course of judicious pinching-back treatment, the Tradescantia soon covered the sides of the box and the shelf with a thick mat of beautiful green and brown. The only attention this plant requires is plenty of water. I had a unique hanging-basket in the centre of this window—the bark off an immense hemlock knot. The tree from which it was taken had been cut in the summer time, so the bark came off the old knot in one entire piece, and when suspended by scarlet cords looked very pretty. I filled it with common garden soil and planted German Ivy therein. A cocoon-shell hung on each side of the central basket: one filled with Partridge Vine, and the other with Moneywort. That completed the north window, and though there were no flowers, the different shades of green among the Ferns and Ivies were very pretty.

For my west windows I had shelves made similar to the one in the north window. On one of these were seven six-inch flower-pots, placed side by side in a box that extended the length of the shelf. After being careful to provide good drainage in the bottom of these flower-pots, I filled them with the richest soil I could find, and in each one planted a cutting of Pansy previously rooted in wet sand. These cuttings were taken from the most beautiful plants in my Pansy bed the first week in September, and in the middle of Decem-

ber they began to blossom, lifting up their bright faces and peerless colors, as much at home as if in their own shady bed under the apple-trees.

Once a week I gave them a liberal supply of liquid manure, and, at the same time, turned each pot half way around to keep the little plants in good shape. The spaces between the pots I filled with common garden soil, and planted in it numerous tiny slips of German Ivy and the green and white striped variety of Tradescantia.

I had only one hanging-basket in this window, made thus: eight little beech sticks, about six inches long, and less than half an inch in diameter, were cut (each of them had tiny projecting branches) and holes burned in them an inch and a half from each end. Then pieces of strong wire were passed through these holes and drawn into circles and securely fastened, the upper circle being a little larger than the under one. The sticks were then arranged at equal distances apart on the wires, and the whole lined with a sheet of the long green moss found in low, swampy grounds. A flower-pot was placed inside, filled with soil from the woods, and a Maiden Hair Fern planted therein. I was very much pleased with this window, and during our long winter picked handful after handful of the beautiful Pansies, for the more we picked the better they blossomed.

On the shelf in front of the other west window, I had three winter-blooming varieties of Fuchsias. So much has been written about the culture of these beautiful plants, that it is needless for me to add anything, so I will describe the covers I made for the flower-pots containing them.

These were made of strong pasteboard, and were large enough to slip over the pots easily. I covered the pasteboard with dark brown silesia (such as is used for lining dresses), and around the top and bottom placed a little vine of bright-hued autumn leaves, principally blackberry and strawberry; and in the centre, a pretty cluster of brilliant maple and glossy beech. These were fastened on with thin glue and the covers afterwards received two coats of varnish.

At the end of this window I had a pot of Madeira Vine. I took the tubers up from the open ground early in the fall, planted them in good-sized pots, put them in the shade, and gave scarcely any water for about six weeks. Then I gave them a liberal supply, placed them in the window, and by the end of January, the beautiful glossy leaves had covered the cords up each side of the window and across the top. Before winter was over, they had crossed and recrossed the window several times.

The hanging-basket in this window was made like the one I have already described, filled with good rich earth, and then oats were sowed therein. Don't laugh: oats are very pretty in a hanging-basket. They grew healthy and strong; some of the stalks stood nearly upright, and others drooped over the side, their light green leaves contrasting well with the dark rich moss. They need to be sowed rather deep or they turn yellow soon after coming up.

In front of this window my Fernery stood. The foundation of this Fernery was an old cheese-box; the outside covered with gray lichen, pasted on with thick flour paste. This box was placed on an old light-stand, and in the bottom of it, I put a large soup plate. Then an old tin pan, with a good-sized hole in the bottom, was set in the box, resting on the plate.

The pan was filled with leaf-mould, and in it were planted Ferns, Wild Mignonette, Wood Sorrel, Partridge Vines, and moss. It was like a little bit of the woods transplanted to the house, and was fresh and

beautiful all winter long. Of course, there was no glass over it, but regularly twice a week, I sprinkled it, as well as the rest of the plants in the room, with warm water.

I ought to have said that this is for a winter garden only; but the preparations must be made in summer, or, at least, in early fall. Of course, fresh cuttings of the Pansies have to be taken every year, and fresh slips of German Ivy and Tradescantia. The English Ivies and Fuchsias I place on the verandah, and the Madeira Vines in the open ground. The Tradescantias and German Ivy are carefully removed to the rock-work in the garden, where they grow with renewed vigor.

So, in the hot July days, I have only the memory of the cool green leaves and Ferns, the glowing Pansies, and brilliant drooping Fuchsia bells, that made so many exclaim, "How beautiful!" when, in the depth of winter, they looked upon my shady windows.

MARGARET SUTHERLAND.

## FLORAL NOTES.

While visiting a large floral establishment in the vicinity of New York city, I was much pleased with the large collection of variegated Caladiums. I think these are the most gorgeous and beautiful colored leaved plants I ever saw. Some are elegantly traced, veined and tinted with delicate colors, others are richly mottled, spotted and marked.

On questioning the polite attendant, we learned that they were easily grown, but should be kept out of the direct rays of the sun, which causes their colors to fade.

They are easily propagated by cutting the bulbs up into small pieces, leaving an eye in each; these are then placed in sand and kept rather dry until they have well started, when they are potted in rich, light soil, and plentifully supplied with water while growing. In the fall they are gradually dried off and put in sand and kept in a warm room, like Tuberoses.

If they can be started late, so as to be kept in the window garden or conservatory during the winter, they would give it a charming effect. And I do not see why they cannot. I noticed that many of the varieties resembled each other very closely, so I selected the following as the most distinct, and, in my humble opinion, the most beautiful: Meyerbeer, Keteleeri, Wrightii, Chantenii, Splendidum, Argyrites Refulgens, Max Kalb, Phorphyrophyllum.

While viewing a lot of Poinsettias, I was reminded of one I had last winter, the leaves of which although it was treated according to the most approved method, which had previously been very successful, turned yellow and dropped off. It bloomed, however, but the flower-bracts were inferior in size and of a dull color. I wondered what was the matter, so I asked our wonderfully patient attendant (who still survived our flood of questions), and he told us to use manure water moderately, which would induce them to hold their leaves, and make them more healthy and large, which is necessary to bring the flowers to perfection, as they will be in proportion to the leaf-power the plants possess.

We saw an operator syringing a bed of Tuberoses, in full bud, with pure water, and were told that the flowers did not open well, but turned yellow and dropped off, on account of the hot dry weather, and that this would cause them to open freely. I was very happy to learn this, as I—and perhaps others—have often experienced this difficulty, and never knew of a remedy.

AMATEUR.

## Answers to Correspondents.

**Blue Glass, etc.**—I have painted every other pane of my sash blue; my seeds come up in about one-fourth of the usual time, and my plants seemed immediately infused with new life. Do Lantanas and Chinese Primroses bloom the first season from seed, and does it take two or three years to produce flowering bulbs from Gladiolus seed? How late do Cannas and Centaurea Candidissima (Dusty Miller) grow the first season from seed? What sort of a flower does the Cinnamon Vine have? Is it of rapid growth, and does it require to be taken up in the winter? I hope Mr. Drew will not forget that he has promised to tell us more about the treatment of Lilies.

VIOLET VORIES.

**Answer.**—Your seeds may have come up more quickly under blue glass, as darkness promotes germination, but it is probably more of our imagination when we say our plants grow better. Plants need light to grow, and the whole blue glass theory of Gen. Pleasanton is an absurdity unsustained by facts or experiment. Lantana and Chinese Primroses will bloom within a year from sowing the seed if well grown. Flowering bulbs of Gladiolus may by growing the plants continuously be obtained in about a year, but the leaf must never be allowed to die down. The size of your seedling Cannas and Centaureas will depend wholly upon how you grow them; in rich soil they grow large in one season. The Cinnamon Vine is of very rapid growth. The root need not be taken up in winter. The flower is white and small, little larger than a pea.

**Hyacinths.**—I write to ask how I can improve Hyacinths. I have a great many, but they are all single. How can I make them double?

Campbella, S. C. MRS. C. M. LANDRUM.

**Answer.**—Single varieties cannot be changed to double. Your only way is to buy some double varieties; they are quite as cheap as the single. Any seedman can furnish them from October to January.

**Golden Banded Lily.**—Should *Lilium auratum* and *excelsum* be treated as Gladiolus, or are they perfectly hardy if left in the ground during our northern winters?

F. A. W.

Bowdoinham, Me.

**Answer.**—They are both hardy, the latter very hardy; but we should advise covering the bed of *L. auratum* with stable litter during the winter to keep the ground from freezing very deep.

**Cactus Seed.**—Please tell me when to plant Cactus seed, in what kind of soil, and how soon it will come up.

HANNAH OWEN.

Mickleton, N. J.

**Answer.**—Sow at any season in a pot in fine sand; it comes up very easily. When the young plants are large enough to handle pot them off in sandy loam.

**Difference between Clematis and Madeira Vine.**—Please tell me the difference between Clematis and Madeira vine.

M. A. WILKES.

San Saba, Texas.

**Answer.**—They are as different as a live oak and a palmetto. The Clematis is a woody vine, usually native of temperate regions, belonging to natural order, Ranunculaceæ. The Madeira vine is an herba-

ceous South American plant, botanically, *Boussingaultia vaselloides*.

**Crown Imperial not Blooming.**—How shall I treat my Crown Imperial? It grows fast until a foot high, then turns yellow and dies away. The soil is sandy.

MRS. H. SURTON.

North Bend, Neb.

**Answer.**—You cannot make the soil too rich for Crown Imperials, and they must be kept moist. Manure heavily, plant deeper, and water, if dry.

**Hyacinths.**—Would Hyacinths do well in an outdoor window garden, with a southern exposure, planted in the fall for early spring blooming? What varieties would be best? Hyacinths bloom here in February and March.

MRS. ANNIE C. GALLAGHER.

Meridian, Lauderdale Co., Miss.

**Answer.**—They would do perfectly well. The selection of varieties is a matter of taste. We prefer single to double varieties. Get in October any seedman's catalogue, which will describe varieties. Charles Dickens, Norma, Grand Lilas, Harriett Beecher Stowe, Argus, Miss Kitty, Grand Vidette, La Tour d'Auvergne, Bouquet Tendre, Grootvorst, Blohsberg, Goethe, Homerus, L'Ami du Color, Tubiflora, Elfrida, Vesta Emicus, Orondates, Heroine, and La Plecis d'Or, are very good free-blooming varieties.

**Acacia.**—Please tell me about the Acacia. Is it hardy? Will it bloom, and what is the flower? I have one from seed last spring; it is about three feet high, straight stem with leaves like a Sensitive Plant.

AMIE.

**Answer.**—There are many species of Acacia, mostly natives of New Holland, and none are hardy in the Northern States. The one you have is doubtless *A. lophantha*; the flower is greenish-yellow, not handsome or sweet-smelling. For its graceful foliage the plant is worth growing, but not otherwise.

**Spotted Leaved Calla.**—Please tell me how to take care of my Spotted Leaved Calla (*Richardia albo maculata*) after removing from the border in the fall.

Marlboro, Mass. MRS. GEO. A. BRIGHAM.

**Answer.**—This species is deciduous. The leaves die away after the plant has bloomed. Keep it dry as you would a Dahlia or Gladiolus; that is, free from frost, but do not allow it to shrivel. If it starts into growth before spring, pot it.

**Roses not Doing Well.—Pruning.**—What shall I do with a Rose which has not been doing well for some years? Some one says pour soot tea around the roots. There is a bug that destroys the bloom every year. How can I destroy him? When is the best time to prune Rose bushes?

Cave City, Ky.

LUTITIA WATERS.

**Answer.**—Dig around your Rose some well rotted stable manure, and keep the surface soil loose during the summer. "Soot tea" would probably kill the plant. Soot is a very powerful manure and should be used with caution and well diluted. The bug can only be destroyed by hand picking. Roses should be pruned in early spring.

**Night-Blooming Cereus not Blooming.**—What shall I do with a Night-blooming Cereus, four years old, to make it bloom? Please tell me the soil and treatment required.

M. A. H

Ereildoun, Pa.

**Answer.**—The Night-blooming Cereus does not

bloom until large and old. Your plant is probably too young. Give it a sandy loam in summer; give plenty of sun and heat, watering moderately to induce growth; in winter keep the plant almost dry. The blooming season is from May to October

**Ever-blooming Geranium.**—Do you know of an ever-blooming Geranium? MARY J. HORTON.

Silver Creek, Ky.

**Answer.**—We know of none which will flower all the year. Some of the Rollinson's unique class bloom more continuously than any others. The Scarlet Geraniums are very free blooming, and if grown in pots flower most of the time.

**Slugs Eating Jessamine.—Fuchsias.**—I have a beautiful Jessamine which is being entirely destroyed by slugs. Can you tell me how to get rid of them? Do Fuchsias need sun or shade?

E. T. COE.

Brooklyn, N. Y.

**Answer.**—Lay cabbage leaves around the plant; the slugs will go under them and can be easily caught and destroyed. Raw potatoes hollowed out serve the same purpose. Fuchsias need moderate shade in summer, they rest in winter; unless winter-blooming varieties, which need full sunlight all winter.

**To Make and Plant a Ribbon Bed.**—What class of flowers are best for a ribbon bed? Please give me diameter of bed, colors and arrangement.

Niles, Mich.

W. M. G.

**Answer.**—You can make a ribbon bed any size to suit the ground and the number of plants you have. A good showy bed of fifteen feet diameter would be, centre, Castor Oil Bean, surrounded by *Salvia splendens*, then *Abutilon Thompsoni*, edged with *Coleus Verschaffeltii*. One of ten feet diameter, Canna Marechal Vaillant, or discolor, then *Coleus Verschaffeltii*, edged with *Cineraria maritima*.

**Plants for North Window.**—What plants will live and grow in a north window in winter? I have but one window and that is north.

Wellington, Me.

MRS. A. S. MARGNE.

**Answer.**—No flowering plants will bloom in winter without sun. You might make a pretty effect by having some small evergreens in pots. The variegated *Retinosporas* would be pretty. Some of the small succulents, such as Sedums, small Cactus, Echeverias, Haworthias, etc., are very interesting and would do well.

**Begonia Glaucophylla.**—Will Begonia Glaucophylla scandens bear manure-water or guano as a stimulant? I have a beautiful one in a wire basket, but it keeps dropping its leaves as soon as one-fourth grown. I cannot give fresh soil without injuring the plant.

ESTHER W. HUDELSON FAIRMOUNT.

Cincinnati, Ohio.

**Answer.**—Your plant probably suffers from not being kept warm enough or from too dry heat. The plant needs a moist bed. All liquid fertilizers should be used on pot plants with great caution, guano especially. If used make them very weak.

**Sealing Wax Paint.**—How can I prepare sealing wax paint? What are the proportions of sealing wax and alcohol used in making brackets?

North Branch.

M. AUGUSTA FIELD.

**Answer.**—Dissolve enough to make the required consistency. Will any of our readers be kind enough to answer this? We suppose a thick coating is used on the required article; if so, dissolve as above.

## Flower Gardening.

### TREATMENT OF PLANTS.

Of course, plants in different localities, and under different circumstances, require treatment according to their several situations; but, as every lover of flowers has probably experimented until they have made some discovery, the following may not be amiss.

One cannot expect tropical growth in a dwelling-house in Massachusetts, where the mercury skips from 40 deg. to zero in one night; still, by care and midnight saunterings up and down stairs, they may be induced to blossom and thrive. For the winter accommodation of my plants, I have a bay-window with direct southern exposure, so that one side light has the benefit of the morning, the other of the afternoon sun. It is arranged with two sets of shelves, one resting on the window-stool, the other about the middle of the window; on these shelves are placed the smaller plants, also those requiring the fullest amount of the sun's rays, such as the Heliotrope, Sun Pink, and Petunias; then I have a table made to fit exactly into the window recess, said table on castors. On it are placed all of the larger plants. In summer it is removed out on a north piazza, where those plants not intended for the open border stand; these have the sun's rays for an hour or two in the morning and a good shower-bath at night.

For soil, I generally appropriate anything that I think they will luxuriate in, such as decayed leaf-mold beside stone-walls—we have a few of them here—at the edge of woods, the rich black mold under the surface of an old chip-yard, good garden soil, some well decayed manure (if I can find any), hen manure, old and well pulverized, and last, but always, some of the fine road dust that can be scraped up from country roads after a long dry time. I consider this most excellent, and vary these ingredients according to the nature of the plant.

By the way, in winter my plants are in my kitchen, where they have an abundance of steam and the benefit of a wood fire. I have not much faith in gas-heated rooms for plants; then on Mondays I just roll out the table, and give them first a shower-bath of suds, then of clear water. For bottom heat, nothing easier; just turn those shelves, which most housewives have on their stoves for bread-raising, etc., so

there will not be too strong a heat, and you have it; or if the aforesaid shelves are otherwise occupied, and all at once you are inspired with the idea that some of their toes are cold, just set them in a saucer of hot water. I generally take it when boiling, and have never killed any yet, and let them suck up all they want, then after a while throw out what is left. Never let them stand in water for a long time.

Whenever bottom heat is mentioned in this article, just imagine them either on the shelves or standing ankle deep in hot water. If any one is skeptical about the hot water, just try it first on some poor specimen that wouldn't be a great loss, and see how it works.

Some eight years ago, I had a present of a Calla then some five or six years of age, with which the owner was disgusted, declaring it would never blossom, because, forsooth, it never had; sound reasoning, but I was skeptical. Years before I had seen the magical effect of hot water on a Calla; so I raised the dirt around the stems of the plant and began pouring

hurries" hunting for some special object. But to return to the Heliotrope. I had always started a slip in summer for the winter, but that book said, "the older the plant the more profuse are its flowers." It never had deceived me, so I just cut around an old one I had stored in the cellar for several winters, and one damp day, about a week afterward, I lifted and potted it for the house, using considerable of my precious road dust. For a wonder, not a leaf fell, nor bud blasted, and for the last two winters it had from eight to twelve open clusters all the time, besides all the buds.

In summer I set the pot into the ground, turning it once a week to break off any straggling roots, then lift it the last of August, pick out most of the old dirt, and put in fresh. If the season is dry, it must be kept watered, else the leaves will blast.

An Azalea is a plant that should never be allowed to get dry, neither must it be water-soaked; if it does get dry, especially when budded, you must wait another whole year before any blossoms will reward your care. "Eternal vigilance," etc., is for plants as

well as liberty. I have a white Azalea that has blossomed very early—last winter in January. This September it was well budded, but, alas! the wonders of the Exposition could not be studied, and the Azalea at home kept watched at the same time. I felt suspicious how it would act, from its looks; so I never moved the pot, nor even touched leaf, but poured the water into the saucer. How the poor, thirst-famished treasure drank? But it was too late; one by one

the leaves fell, then the buds followed. I have discovered a few signs of new growth, but no blossoms this year; and any one owing a marked Azalea can appreciate its beauty.

Another of my treasures is a Pineapple. Just take one of the leaf cones you twist out of the crown of the pineapple, and insert it in mellow soil, and it will grow. I have one two years old this last August, with its narrow leaves, some of them measuring eighteen and twenty inches in length; and I see no reason why it will not fruit. Just try one; only when it is growing, don't exhibit it at any fair. Some one of an inquiring or incredulous turn of mind, twisted mine so violently as to sever the roots in two. It is recovering by careful nursing, but in future will only be exhibited at home.

Once more I would advise plant-growers to try the hot-water baths. I am no Thomsouian when sick, but my plants are.

MRS. A. K.

FOUNTAINS IN GROUNDS OF CHATEAU DE PETERHOF, RUSSIA.

on boiling water—never let it stand around the stems, or touch them, only on the dirt—and lo! soon a bud appeared, and since then it has scarcely been without bud or blossom.

I allow from four to six stalks to grow in a butter firkin eleven inches in height by some twelve inches diameter. As to resting it in summer, I rest mine by setting it in a sink-drain—unpoetical, but true—and it enjoys it, and has not dried yet from overwork; when it does, I shall get another and force it the same way. Mondays I set it in a tub part full of hot suds. I believe in watering all plants with very warm water, always remembering never to let it touch the stalk or stem of the plant.

Now for the Heliotrope; and here let me advise every one to obtain a copy of "Window Gardening," edited by Henry T. Williams. There is only one grand fault to it, and that is the index, or rather want of it. Only think of a woman in one of her "awful

## The Home Circle.

### ANSWERS TO QUESTIONS, AND GOSSIP ABOUT HOME AFFAIRS.

A month or two since we commenced a department which all our subscribers welcomed warmly, especially a poor young housekeeper who needed a great deal of good advice, and again comes to ask some questions about things of which she is anxious to learn. We shall now continue this department of answers to household questions permanently.

1. What is the very best way to can tomatoes, fruit, and berries?

2. Will some one give me a receipt for a nice fruit-cake, plainer than "black cake?"

3. Please inform me how many pieces of china constitute a set, and the price of the fine American chinaware.

#### DIRECTIONS FOR CANNING.

Fruit for canning should be fresh and perfect, and berries require careful examination to discover any that are decayed, dried or green.

To each pound of fruit allow a half pound of sugar, unless barberries, gooseberries, or other unusually acid fruit is used, when three-quarters, or even pound for pound, will not be too much, as it is much better to allow the fruit to become completely impregnated with sweetness, than to be obliged to add it at time of using the preserves, as a far richer syrup is thus made.

Having pared or culled over the fruit, put a teacupful of water in the bottom of the kettle (unless you can drain off juice enough to substitute for it), then put in a layer of fruit, on it sugar, and so alternately using fruit and sugar, use all the materials; place the kettle on the stove and bring slowly to a boil; allow to boil one minute, to insure every piece or berry being heated through. Have all the glass, jars or cans perfectly clean, and, (if self-sealing) the rubber rings adjusted so that they rest firmly down on the glass; have the lids arranged beside each can, and sure that each one will screw down snugly, and that no crack or nick will allow the air to enter, or if cement of any kind is used, have it prepared in a vessel of sufficient size, with an old spoon or little tin cup, with spout and handle, with which to dip up and pour the hot liquid into the groove, or if plaster is preferred, mix sufficient at once for all the cans, and pour it quickly round.

If tin cans are used, place them conveniently near; if glass jars, wet a long towel or thick strip of old table-cloth, and, placing it on the table, set each jar on it, so that they do not touch each other; turn the edges, (well saturated) up around the bottoms of the jars, as they stand in line; then, having a wide-mouthed "canning funnel;" and a dipper or pitcher for dipping up the fruit, fill each jar or can as rapidly as possible, and up to the very edge; clap on the cover and screw down the lid as closely as you can, and as the cooling goes on continue to screw down to fit the contraction of jar and lid.

If tin cans or glass jars, for cement, are used, put the lid in place, and hold it down with some instrument, such as a spoon, and quickly pour round the cement; place a lath or other long strip of wood on

the top of the row of cans, or jars, and lay flat-irons or any heavy weight upon it, which will keep all the lids in place. Watch closely, and if any air-holes or bubbles appear, at once add more cement and work it into the hole by pressing with a match or pointed stick. For these cans, however, I greatly prefer calcined-plaster (plaster of Paris), which should be of the consistency of syrup, and of the best quality. This is clean, safe, and not only obviates the necessity of heating the sticky, disagreeable cement, but precludes the possibility of scalding the fingers. (I prefer tin cans for tomatoes.)

As I never break a single glass jar, and always find the fruit and vegetables I put up quite sweet, I feel safe in recommending this course to all who do their own canning. The wet cloth beneath the glass cools the boiling liquor so rapidly that there is not the slightest fear of breaking, and jelly tumblers, pots of

Coarser varieties should be parboiled in clear water until tender, then dropped into boiling syrup, boiled fifteen minutes and canned. Ginger, cinnamon, mace, and lemon are added at pleasure.

There is no difficulty in canning corn: Cut the grains from the cob, scraping the same to extract the juice; pack each can until solid, using a little wooden mallet; pack above the rim, place on the lid, and, holding it firmly down, run solder over so as to seal hermetically; place the cans in a boiler of cold water with a little straw or piece of wood between each can to prevent their touching each other; heat slowly, and continue to boil for one and a half hours, then puncture each lid to allow the gases to escape; then seal immediately; continue to boil for two hours and a half, and the work is effectually done. This is Mr. Winslow's receipt, taken from the decision in the Supreme Court.

I have packed the cans tightly, as described, then put into cold water, boil for three hours and seal. Some sprinkle a pinch of soda on the top of each can; others fill the cans tightly and pour acid water, made by dissolving one ounce of tartaric acid in one pint of water, until all the interstices are filled, then boiling for three hours and sealing. When used the acid water is poured off, the corn well washed, and a little soda added while cooking. I like this plan least of any, but the corn is very white, plump, and quite sweet.

#### FRUIT AND FEATHER CAKE.

Six eggs, two scant cupfuls of sugar, butter twice the size of an egg, two cupfuls of flour, two teaspoonfuls of cream of tartar, one teaspoonful of soda. Mix as usual, and take out one half, or rather less; into this stir half a pound currants, half a pound raisins, seeded and chopped, two tablespoonfuls of sliced citron, and half as much candied orange or lemon; one teaspoonful powdered nutmeg, one of cinnamon, half a glass of brandy, one teacupful of molasses, and two teacupfuls of flour; bake in jelly cake pans, first the plain, then the fruit cakes. Cover each with jelly, then pile one on another alternately and ice the outside. A beautiful and delicious cake.

A china tea set consists of tea and water pots, sugar bowl, cream-pitcher, slop-bowl, one dozen plates, two bread do., and one dozen cups and saucers. Cost in white American china about \$10.

#### PRETTY ROOMS.

"The editor of THE LADIES' FLORAL CABINET in a back number promised that "Aunt Carrie," or some one else, would answer questions on household matters, and as I am a young housekeeper, I should be very glad to learn some things, for instance:

"How shall I go about making my six rooms look pretty at a small expense? I have a small hall. What shall I put in it? I like curtains, but they are so expensive. I have heard of various kinds made of common materials, even muslin; but I cannot conceive them looking pretty, and I do not know how to make them, if they are. Could I do well by going to auction sales? We shall move into our little home in the fall, and I can spend five, or perhaps, six hundred dollars in furnishing, but when I think that here at home we spent that sum on the parlors alone, I am dismayed.

DESIGN FOR RUSTIC STAND AND AQUARIUM.

marmalade, etc., treated in the same manner, will be equally safe. Thus all trouble of heating gradually, by placing in boilers of cold water, is obviated, and the process is carried entirely through without undue labor or inconvenience.

Peaches, apples, pears, etc., should be dropped into cold water as soon as pared, to prevent discoloration. Plums, tomatoes, and other thin-skinned fruit, must be first pricked with a needle, to prevent the skin from cracking open.

Grapes must be pulped, the pulp scalded and poured through a sieve, (which will leave all the seed behind), then added to the skins, and sugar, and all cooked together until sufficiently thick. Bartlett, Seckel, and other delicate pears, should be dropped into a syrup made of one-quarter of a pound of sugar to each pound of fruit, and one gill of water to each pound of sugar, boiling until a syrup is formed.

"You may think it strange that my own mother cannot tell me what I ask you, but she has never known what it was to economize, and, though we have lived up to all my father made, it has all been spent to live handsomely, and I am much censured for marrying a poor young architect. I have my piano (given me by an aunt for whom I was named), and two fine but not large oil paintings. I bought a CABINET one day in a village store, and at once subscribed for it. I feel as if it took me into a new atmosphere and among a new set of friends who would help me to make my new life a happy one."

"BUNNY."

*Answer.*—To help such an earnest and anxious young beginner, is the most pleasant of tasks. For her little nest of which she is to make a home, we can at this time only give a few general hints and suggestions, promising to add particulars from time to time, because so many others, like her, are, and have been, waiting for answers to questions. In the first place it is always best to begin by first considering those parts of the furnishing which offer the least room for choice, and upon which, after all, the most depends, viz.: the color of walls and wood-work and the carpets.

White paint is very trying, especially where the walls also are one dazzling glow of light. It is always the best economy to use wall paper, either tinted and with a very small figure, or entirely plain, and here we have a vast variety from which to select; but when time is not an object, the most artistic walls are secured by means of paint; hand-work and true artist's coloring, if practicable; if not, by means of the "transfers" or decalomanie art. And here we have a means of embellishing at once so exquisite and inexpensive that the poor-and-artistic soul may well cry "Eureka," as they behold the work accomplished by its agency. For instance, we send for a few dozen sheets of any design preferred—say apple-blossoms, or sprays of Convolvuli, or Wild Roses, with a wall quite smooth with "hard finish," or even papered with shilling paper turned "wrong side out"—these may be arranged and transferred with the most charming effect.

Always bear in mind, however, that unless a wall contains a number of pictures in conspicuous frames, it should never be divided into a sort of panel-work, and should have a frieze and dado. Where a striped pattern of paper can be procured, which corresponds with or prettily contrasts with that of the wall, it may be made to do service as a dado by using it horizontally, putting the entire width just above the base-board. A narrower strip of the same, or one of the usual "bordering" paper hangings, will make the frieze, running below the cornice, or ceiling, as may be. By such means you may decorate your walls at small cost, and if you learn to be as good a hand with paint and paste-brush as circumstances once made me, you will be as proud as you will thankful. It will not injure any woman to either paint or paper a room, if she works judiciously. "Make haste slowly" is a good maxim here.

For your "little hall": Paint the floor in two colors, imitating oak and walnut, or you may lay it off in blocks like encaustic tiles. In winter, a few rugs will impart an air of comfort.

As regards furniture, do not use the stereotyped hat and umbrella stand, but fasten up a pair of the simple "adjustable racks" sold on the streets or in stores for fifty cents to one dollar, and below these place a plain table for hats or wraps, screwing a pair of curved iron clothes-hooks against the back legs to hold umbrellas, canes, etc. One of the most sensible of all hall-tables is made with a back, six feet high, the one-half arranged with outstretched hooks or arms, the other containing a mirror three feet long; below these a horizontal slab forming the table, supported by two side pieces, sawed out notches, thus forming supports for canes, umbrellas, etc., the whole resting on a bottom slab furnished with casters. Here is a hall-stand that would amply satisfy even Sir Charles Eastlake's æsthetic simplicity of design; yet it is pretty beyond measure, even though it only cost five dollars. I have a great fancy, too, for quaint little cupboards against the walls, supported on brackets; such a one in a hall is useful for holding gloves, veils, etc.

In selecting your carpets, be careful not to use too striking contrasts in colors, or conspicuous or unnatural designs. Avoid all picture-work here, whether of floral or animal subjects, and better, incline to warm, dark-toned shades of color. In choosing furniture, bear in mind the tints of wood-work and walls, and,

as a usual thing, use no wood lighter than oak; in a pretty chamber or light morning room, delicate furniture is admissible, but never in parlors, dining-room, or library.

The hall gives the first impressions of a dwelling, and it is good sense, as well as good taste, to make all things speak for themselves here. One class of adornment is always in place, that is, the natural; boxes of some pretty wood, arranged as wall-pockets, stocked with Ivy, which is trained around the walls, forming a natural frieze, and arched over the doors, or across the staircase. One or more sets of antlers, or any hunting or gunning accoutrements, suggesting the storied halls of "ye olden day." A clock—the more ancient in form the better—is always in place in the corner, or on the landing of the staircase. Stair-rod are a useless and ugly superfluity. Here a picture or two, such as the engravings of Landseer's animals, hunting scenes, or similar works of art; while a statuette, upon a pedestal or corner bracket, will always appear elegant, even though it only be a good cast from some fine work of art.

As regards the parlor, or drawing room, after a neat carpet and delicate walls, with the two "fine oil paintings," accompanied by a few really good engravings, let the furniture be simple, but really good, even though a part of it may be home-made; for instance, one or two divans—the simple frames for which your "young architect," or any carpenter, will make—should be only one foot and a half high, with a raised and rounded cushion at one end, and two or three against the back, for nothing imparts a greater air of cosy comfort than cushions. I make such divans of four one-foot boards, with slats laid on cleats nailed across each end board; these are furnished with a dozen or more spiral springs, on which I first place a common straw mattress, then a moss one, covered with any material convenient. A very pretty effect is given by using furniture gimp and brass-headed tacks, putting a deep woollen fringe along the lower edge. The trouble with most parlors is this, there is too much wood and too little cushion; too great an exhibition of light and glass and none of the soft glamour which is so appreciated by the artistic eye; too extensive an attempt to make this a "company room," and too great a fear that family comforts will give an air of confusion.

Now, instead of this, a parlor should present an aspect of cosy comfort, that is enjoyed by the family at large, and without making it either a sitting-room, dining-saloon, or nursery, it may testify slightly to being used indirectly for any of the purposes to which these apartments themselves are devoted. Thus, a child's chair, a few books, not new, but with the appearance of being under present examination or reading, a recent newspaper or periodical, a china plate or basket with fruit, or a basket of needle work, instead of detracting from, add greatly to the tasteful appearance of a parlor, and, being suggestive of occupation by the family, imply that they are of the class who enjoy all the prettiness and extra care supposed to belong to this special apartment.

Of tables, I would say, a really sensible one is a hard thing to find. As much as possible use a number of small stands or "tete-a-tete" tables, now so popular in England at the "five o'clock tea." These are simply made of pine wood, cost but fifty cents each, and when tastefully painted in imitation of papier-mache, or Japanese lacquer-work, or inlaid ivory, would appear to have cost twenty dollars a-piece, and yet easily made thus:

For a larger table for sitting-room or back-parlor use a square, with four simply turned legs and a broad shelf across the bottom only, six inches or a foot from the floor, with horizontal and perpendicular rods or "rounds" bracing the legs above it, then handsomely painted and adorned with fine "transfers," a "costly" jar on the shelf and a handsome lamp on the slab, and you have a table that any connoisseur would pronounce "good." As for the jar the new James, gutta percha enamel, or even the imitations of china, will afford elegant specimens, and for the lamp, a glass shade with Diaphenie plates, or other transparencies, and a little bronze powder in crimson or green, and gold for the stem and base, and there we have a chaste and pretty thing, despite Mr. Eastlake "on imitations."

In the dining-room use great care, for there is no surer criterion of refined taste than the relation this apartment bears to the rest of the house. The side-

board or buffet is the chief piece of furniture here, and here too, a very inexpensive affair may be made quite imposing. No marble! no carving! yet appropriate and elegant. The back rising in one plain slab of pine above a high cupboard table, furnished with two drawers on one side, a single cupboard door on the other, equally divided, the drawers furnished with plain round knobs, and the door with heavy hinges, which varnish and bronze. Below this four long legs finished with a bottom forming a shelf. Against the top of the back fasten two large brass brackets and on them place a slab, thus making a quaint hood over the lower part and furnishing a shelf for some tasteful ornament, as a basket of wax fruit, etc. Cover the shelf with an embroidered and fringed linen spread, and it is ready for the furniture of china or silver. Ornament all the wood-work in two shades of umber, and you have a quaint and striking piece of furniture.

Let your table napery be of the best you can afford, and here is where you may safely spend a good portion of your hundreds, for no one thing tells as does the table furniture. Fine white or tinted linen, sparkling glass, clean bright plate, and above all, flowers, cut ones, if you may; in any case the tasteful stand with living Ivy and Ferns, the Japanese Climbing Fern and Smilax, with many other gems, cheap as pretty, and only requiring a daily sprinkle and a little good-natured watching. The case for them will be always ready, and these add so wonderfully to the table beauty. No matter how luxuriant they become, never remove them to the parlor for show-specimens, but keep them sacred for the "cheerful household ceremony," which each meal should be in a true home. Make dining-room chairs comfortable, but let them be plain, and in one corner a "dinner wagon" will be found of vast comfort. This is nothing more than a set of plain shelves, from four to ten in number, arranged from twelve to twenty inches apart, and more useful than a side table for various dishes and removed plates, etc. The table is but little seen, and should be plain.

The tasteful sets of bedroom furniture reader it almost superfluous for me to speak of these apartments, but I would use in a simple home the pretty and inexpensive cottage sets. In cities you can obtain these from the manufacturers, in unpainted pine and ornament them to suit your own taste, for it is this decoration which is so costly. I have procured a full set of such for ten dollars, consisting of bedstead, dressing-bureau, with mirror, washstand, towel-rack, candle-stand, commode, rocker, and three chairs.

Here a bolt of pretty chintz will form the chief feature, for by making a simple frame for canopy over the head of the bedstead and covering it with tester and drapes, arranging a dressing table, hour-glass stands, lambrequins for windows and mantel, brackets and shelves, covering chairs, ottomans, and cushions, a charming effect and distinctive character may be given to each room; and here I would say a word in high recommendation of the popular spray or spatter-work for this class of hangings. Its beauty can scarcely be conceived, unless seen. By obtaining Leamon's aniline dyes, every color and shade may be secured; then large designs are cut from paper and fastened in place, one set answering for all; a few ferns and sprays for fine tracery outside, and as the work is voluminous, purchase a low-priced Atomizer for casting the spray.

As regards your purchasing auction furniture, it is a matter requiring a vast deal of sound judgment and discretion, for if not very careful the fact of articles apparently good "going cheap," leads to a wider expenditure than was contemplated. Beds, bedding, carpets and upholstered furniture might better always be purchased new and from reliable dealers.

Glass, cutlery, and china may also be procured very low at sales, but for all kitchen ware go to a regular house-furnishing establishment and purchase new beauties, the delight of every ambitious (and may I say it?) conscientious housekeeper's heart. Examine all auction goods before the sale commences, and mark your outside price on the catalogue, then never go beyond it, for in the excitement of bidding you are apt to forget the "dummies" nearly every auctioneer has among his audience, and who are quick to notice if you set your heart on a certain piece of goods.

These are only hints and suggestions which "Aunt Carrie" trusts every reader of the CABINET will feel bound to enlarge upon, yet which are offered with a hope of doing good.

NEW YORK, OCTOBER, 1877.

## FLORAL ROCKERY.

One lovely afternoon in October, while riding out, I saw a beautiful rockery, which I feel bound to describe. The design was a circle about three feet in diameter, with an open space left in the centre about eighteen or twenty inches in diameter; height about two feet. The stones were neatly laid together, and in all the orifices was growing a small running vine. In the centre was a tall, growing plant with bright blossoms. It makes a striking ornament for the lawn, and all who think it worthy of a trial, I am sure will feel rewarded for their trouble.

Now, I am going to tell about an ornamental stump that I saw while visiting a friend last summer. Being in the front yard, it would have been an ugly feature had it not been converted into "a thing of beauty" by the fair hand of a real lover of nature. The interstices in this rough specimen were all filled with rich soil, and vines of easy culture were running over the sides, with a Dusty Miller here and there peeping through the green foliage. Around the bottom of the stump were crocks of Geraniums, their bright scarlet blossoms making a brilliant contrast with the dark green above them. The top of the stump was crowned with tall, feathery ferns nodding with graceful ease in every direction.

The beauty of this can better be imagined than described. This design could be varied according to the taste of the individual, as there are no two alike; but the above arrangement suits my taste exactly; but we all do not fall heir to convenient stumps to decorate, so we must be content with what we have, unless we can prevail upon our handy "big brother" to import one from that mine of wealth, the woods.

A pretty little ornament for the yard is made this way: Take a stake about four feet long and drive it firmly in the ground—opposite a window is the best place—then fasten on a square piece of board and place a round box on it a foot deep. Fill it with rich soil from the woods, and start a Smilax vine in it, and you will soon have a circular mass of living green, with its long arms reaching downward for support. It will gladden you through the summer months, and when the weather grows cold, you can bring the box, as it is portable, in your sitting-room, and it will brighten a corner all the winter long. I have seen small boxes of Smilax hung by a strong cord on door-knobs; the vine would cover the cords so as none of it could be seen, and it puzzles the beholder to know by what power the box is held in its place. It is an odd but pretty way to suspend floral ornaments, while the more careless you arrange them, the better the effect.

Smilax, of all vines, is my favorite; and anywhere, and in any form, I think it is pretty. One window, at least, in every sitting-room, should be decorated with it. Take a shallow box the width of your window and paint it white; place it on a level with the window-sill and fill it with leaf mould from the woods. In September start slips of Smilax. When old enough to commence running, guide them upward by means of strong twine attached to the box and fastened to the top of the window. In a surprisingly short time they will run up where you have secured the strings and turn back as if surveying the distance they have come. Is it not strange? Train them in any direction you wish; but if not watched carefully and cut back, will just take possession of the room. There is no vine

DESIGN FOR SUMMER HOUSE.

more suitable than this for ornamentation; a party-dress, decorated with it, looks superb, but for the dining-room and our parlors, during the holidays, there is nothing to equal it. Dried grasses of different kinds assist in making beautiful winter bouquets. I always tie them in loose bunches, and put them in a dark closet.

VICKIE BLUE.

## PUBLISHER'S ANNOUNCEMENTS.

**Price Reduced**—The subscription price of THE FLORAL CABINET for the year 1878 will be reduced to only

**\$1.20 Per Year.**

This is without any premium whatever. But we shall issue a handsome chromo frontispiece of flowers, etc., and the subscription price, including the frontispiece, will be 10 cents additional, or \$1.30 per year, the same as in the past.

**Get up a Club, Price Reduced.**—Where any person will raise a club of 5 subscribers at \$1.20 each, with \$6.00, a 6th copy extra will be sent free to club agent, or a club of 6 may join together and the 6 copies sent to one address for \$6.00. Members of clubs desiring the Floral frontispiece, will each remit 10 cents additional.

To any one raising a club of 4 at \$1.20 or \$1.30, will be given one of the following: Pocket-Book, with your name engraved in gold; "The Ladies' Guide to Needle Work, Embroidery, Knitting," etc.; "Every Woman Her Own Flower Gardener;" "Household Hints and Recipes;" "The Home of Washington," steel plate engraving; "Fret Sawing for Pleasure and Profit."

A club of 10 will entitle club agent to both extra copy of paper free, and one of the above books, or engraving.

A club of 15 will entitle club agent to both extra copy of paper free, and one of the following books: "Beautiful Homes, or Hints in House-Furnishing;" "Household Elegancies;" "Ladies' Fancy Work;" "Window Gardening," or a Pocket-book, with your name in gold, worth \$1.50; The Cabinet Collection of Balsams, worth \$2.00; The Cabinet Collection of Gladiolus, worth \$15.00.

**Treasures of Garden and Woodland.**—This is the title of our illuminated Floral Chromo and Frontispiece for 1878. It is the most perfect specimen of floral illustration ever produced in the United States. It is of the same size as "Gems of the Flower Garden," but while that contained flowers in profusion, this is more artistic in its collection of brilliant Autumn Leaves, Ferns, Roses, etc. Subscribers will find it well worthy of appreciation. Club agents will find it a decided help in obtaining subscribers for THE FLORAL CABINET, and an advance proof will be sent for agents purposes for 25 cents, which can be deducted when club is made up.

**New Books.**—Our lovers of beautiful household books will be delighted with the announcements we make on our last page of some splendid additions to our series of household books. They are really charming, and full of multitudes of hints how to improve your homes.

**Beautiful Homes** is the most practical and complete volume on Housefurnishing which this country has ever seen. It is written by our favorite country editor and contributor, Mrs. C. S. Jones, who is the author of "Ladies' Fancy Work," and associated with us in "Household Elegancies." Being a companion volume to this it should be warmly welcomed and perused by all lady housekeepers.

**The Ladies' Guide to Needle Work, Embroidery, etc.,** is written by S. Annie Frost, the editress of Godey's Magazine. This is a guarantee of its excellence, and as it covers all the field of Crochet Work, Canvas Work, Embroidery of all kinds, Knitting, and innumerable ways in which the needle of our ladies is daily put to use, it is a book which should be found on every table.

**Household Hints and Recipes** is written by "Daisy Eyebright," and is a model collection of the most practical and invaluable recipes which ever were tried. They surpass any collection we know. They relate to all parts of the house except cooking, and the pages are full of hints no housekeeper can do without, each one of which will save her many hours of time and dollars in money. Just as we were writing this, a lady who had written to all the best sources with no avail, wrote to us that her linen, and elegant table-cloth, was ruined from mould, and would be utterly lost unless she could find a recipe for it, and she was willing to pay any price. We turned to "Household Hints and Recipes," found a capital one, and sent it to her. The little book is so full of these items of useful experience, no housekeeper should be without it.

**Fret Sawing for Pleasure and Profit.**—This is a beautiful little book, which describes in its beauty and in practice the new and favorite art of Fret Sawing. It contains many beautiful illustrations and practical directions how to become successful in the art.

**Designs.—Fret Sawing.**—We have just published two new and beautiful books of designs, containing Easels, Picture Frames, Brackets, Match Boxes, etc., in profusion. Part 6, price 30 cents. Part 7, price 60 cents.

**The Home of Washington.**—Our description in the advertisement is not more enthusiastic than its honest worth. It is far beyond all the steel plate engravings ever offered by any journal, and it is a treasure to any family. Our offer is again renewed to all our subscribers to obtain it, and no one should lose the opportunity.

## NEW AND NOVEL PRIZES.

Desirous of encouraging the beautiful in household art and home life, we offer this fall a series of Prizes which have never been offered before in this country.

**1. The Prettiest Flower Garden.**—To any one forwarding us best sketch, or view, or photograph of their flower garden, or garden decorations, we will give, 1st prize, \$15; 2d prize, \$10; 3d prize, \$5. The sketch to be accompanied with description.

**2. Prettiest Window Garden.**—For prettiest sketch or view of the interior of a house, with window garden, will be given 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

**3. Prettiest Floral Decorations.**—To any one sending prettiest sketch of floral design, decoration, or ornaments, will be given, 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

**4. Prettiest View of House and Grounds, exterior.**—To any one sending best sketches of pretty house, its exterior, and surrounding lawn, vines, arbors, etc. 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

**5. Prettiest Home, interior.**—We desire pretty sketches or views of the interiors of charming houses, parlors, sitting-rooms, bedrooms, halls, and the various ways to ornament and decorate them. 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

These sketches, views, or photographs, to be sent to us before December 25th, when the prizes will be awarded in January, and the Prize Illustrations will be published in THE CABINET for the coming year, making, we believe, the most attractive volume ever published.

Ladies who cannot draw, can find some friend who can, or they can get photographer to visit the house, and photograph it freely. The sketch should be accompanied with description, and we will welcome all sketches of any kind which relate to the decoration of the home in any way, out-doors or in-doors.

**Prizes for Household and Floral Articles.**—These will be renewed again very soon, as we have not space at present for full mention.

### HINTS FOR HOME ADORNMENT.

Although it would seem that the subject of home adornment must be almost exhausted, yet I have several original devices which have been greatly admired.

#### A CORNER BRACKET.

Procure the pattern of any carved black walnut design you choose. Mine is the grape leaf, and a simple design is best for the first trial. Cut the entire pattern out of stiff brown pasteboard, one for each side, as though it were the walnut. Make of pine, or some other soft wood, two strips about an inch wide and as long as the pattern. Bevel two edges of these together to fit the corner, and fasten two other strips at right angles to these, by which the shelf must be supported. Carve the edges of these in simple curves to imitate grapevines, and paint brown. Tack the pasteboard to the back of these and you are ready for the artistic part of the job. Take thick pieces of pine bark (if just cut from the tree it will be easier worked), and with a case-knife split them to a regular thickness, similar to that of the walnut you are to imitate. Mark a portion of your pasteboard foundation on the bark and with a pen-knife or fret saw, carve the bark as near like the walnut as possible. Of course the piece will be small, but continue this process, making each piece to fit the preceding, taking care to make the joints

where the shading comes in the walnut. Have ready a needle and brown or black thread, and as you complete the pieces, sew them to the pasteboard where they belong. Press slow and steadily

and you will find the needle will go through half an inch of bark very readily.

You will soon discover that the complete affair will be almost equal to a genuine walnut bracket. When finished, varnish with copal, and place in a rather shaded corner, and no one will ever discover the trick.

and used for various decorative purposes. I have a diamond-shaped frame with a circular flower at each corner, with a long notched leaf on each side of the flower. The points of the leaves almost meet on the sides of the frames, which are about two inches wide, and are filled in with the scales of pine cones, or the folded paper points, so often alluded to, may be used with similar effect. The scales are first sewed around the edges of the pasteboard foundation, and filled in towards the centre, leaving space for the carved leaves and flowers, which are also sewed on, and the whole varnished with copal, or if you desire a black frame, with Japan varnish.

Oval frames are made with a continuous row of leaves and flowers through the centre, or clustered groups, just as fancy dictates.

A small oval photograph frame has a foundation of pasteboard wrapped with pale green moss, with overlapping row of the beautifully shaded, shell-like lichens, through the centre, leaving an edge of the moss on each side. Another pretty photograph frame is made by taking some of the upper joints of broom-corn, uniform size, cut in suitable lengths, and split in halves so they will lie flat. Lay three side by side for the width of the frame, and cross at the corners as directed for straw frames. Fasten a carved leaf or flower of bark on the corners, and varnish with Japan. When it is dry, arrange a border of two bright yellow straws around the inner edge to imitate a gilt band.

Mrs. M. C. McCurdy.

LOVE IN SPANISH.

Edging and background for spool whatnots, and various other devices may be executed in the same way.

#### PICTURE FRAMES.

Leaves and flowers can also be carved of the bark

## Household Topics.

## CHEAP CARPETS.

In a late number of the FLORAL CABINET I noticed an inquiry for a cheap carpet for a chamber floor. I will describe one I made a few years ago. I took cheap unbleached muslin, printing cloth I think it was; measured breadths the size of the room, sewed them together, and tacked them firmly along the edges to the floor. I procured a pattern of wall-paper similar to oil-cloth, cut in lengths and papered the cloth as you would the walls of a room, being careful to press out every wrinkle with a clean cloth. When thoroughly dry I gave the whole a coat of varnish, and it made a beautiful covering for the floor and lasted a number of years.

I tried another room, putting the paper directly on the floor, but the result was not satisfactory. A pattern of paper in diamonds or small figures, well covering the paper, is most suitable. This same correspondent, I think, asks some directions for making a home-made lounge. We took a packing box, three feet wide by six in length and eighteen inches in depth, covered the ends and one side with striped goods—making the stripes run from top to bottom. On the lid, which we hung with hinges, we laid old barrel staves, the rounding side uppermost, which gives a spring to the seat, tacking them firmly to the edges of the lid, crosswise. Then made a mattress of straw, with a layer of cotton on top, covered with the striped material, the stripes running from back to front, which with two square pillows, the width of the lounge, made of the same covering, completed a most comfortable lounge by day, and, when necessary, a very comfortable bed by night, keeping the covers to be used in making up the bed, in the box, which proved a most convenient receptacle in a small house poorly furnished with closets.

My old-fashioned bureau I cut off at the bottom, almost even with the lowest drawer, and with a chisel, screw-driver, and a determined will, I took off the little square drawers on the top which had always been such an eye-sore to me, because they left no room for anything on the bureau. After smoothing off the old nail-holes and any roughness my amateur carpentering had left, I covered the whole top with white marbled oil-cloth drawn tightly to the under edge and held by upholsterers' tacks.

An old oval table, and a rickety washstand I covered in the same way, and with a coat of varnish over the wood work of all. I had a very pretty marble top chamber set. Any furniture of common wood, or such as has been badly defaced by hard usage, is very easily converted into black walnut furniture by using black walnut stain, which costs but a trifle, is easily put on with a common varnish brush, and after burnishing can scarcely be told from the real wood. If you wish to match rosewood furniture, even pine articles, rubbed first with Venetian red, moistened with vinegar, and when dry, coated with the stain, will deceive critical eyes.

My lambrequin for the one low window of this room, I feel quite proud of. I got at the carpenter shop a piece of pine O. G. moulding for a cornice, about three inches wide. The strip was forty inches long and three inches at the ends, the top projecting outwards. After staining and varnishing it, I cut a narrow strip of gold paper and pasted along the bottom of the strip, and my black walnut and gilt cor-

nice was complete. I nailed it to pieces of lath that I nailed to the window casing near the top, making my window on the inside to appear at least fourteen inches higher. I bought some red and white striped cotton goods, folded it in the middle and cut a scallop, which was eighteen inches deep in the centre and twelve inches at the selvages; then twenty-two inches along the selvedge; cut the goods straight across; sewed the short sides together which gave me a piece of cloth, forty-six inches wide, with one scallop in the middle and a half one on each side. One and one-quarter yards of cloth will cut it for an ordinary window. I lined it with a worn-out sheet, trimmed the lower edge with cotton cord fringe, and tacked it on the inside of my walnut (?) cornice, and it was a handsome ornament to the room. I took six yards of coarse dotted muslin, cut it in two pieces three yards long, put a ruffle of plain book muslin three inches wide on one selvedge and bottom of each, gathered the top, and also tacked that inside the cornice, and my window was finished.

I covered my entire sitting-room furniture with green terry, which is quite inexpensive, as it is a yard and a half wide, and can be procured in good quality for two dollars a yard. I found very little difficulty in doing it, as I did not attempt to tie it down, and a few yards of upholstery gimp and a paper of fine tacks, will cover a great many discrepancies. I cut paper patterns of the old covers after removing them, and so was able to cut my goods more economically. When these covers got shabby, I made brown linen ones to slip over the old ones, bound with scarlet braid, and with window curtains to match, with scarlet covers and tassels, the room looked quite fresh again, and I felt really repaid for my labor when visitors would exclaim, "How cosy you look!"

I have just been making a lot of bureau mats for Christmas, that are simple and pretty. I took white Java canvas, eight inches square, and worked a border of daisies with red split zephyr, filling in the centre with yellow stitches. Cut strips of Victoria muslin two and a half inches wide, rolled a hem on one side, and overcast with red split zephyr; gathered the other edge and sewed to the edge of the canvas, fulling slightly. Cut another strip, rolled hem and overcast both edges; gathered one-half an inch from one edge, sewed around the canvas so the first ruffle showed three-fourths of an inch; twisted a cord of the zephyr, and laid on the gathers with loops of the cord at the corners.

I also made two smaller mats in the same way for the toilet bottles. For tidies for the room just described, I took red Java canvas, and worked a border of daisies in white split zephyr with yellow centres, and fringed the canvas. I made wall-pockets of white pasteboard, ornamented them with spatter work, enlivened with bright embossed pictures, and tied with scarlet ribbon bows.

I have just made some mats, suitable for the piano, of gold perforated cardboard. Took the kind with round holes, cut a circle, six inches in diameter, cut out pieces of the card, an inch and a half long in shape of leaves, worked vines with black split zephyr, basted them around the edge of the circle, so their points projected a little, and put a row of cross stitches where the leaves joined the cardboard. They are quite elegant, and I think by far the prettiest way to use gold cardboard.

Last Christmas I made pretty little court plaster cases for my gentlemen friends. I cut a piece of pasteboard an inch and a half wide by six long, doubled it in the middle, across, basted brown silk on

one side, and orange kid on the other, bound the edges with very narrow brown ribbon, stitched on the machine with gold colored silk, sewed up the sides neatly with brown silk; cut a piece of pasteboard one inch wide and five inches long, covered smoothly on both sides with brown silk, folded in middle, across, and laid inside pieces of court-plaster, tied in with narrow brown ribbon with bow on top, and slipped open ends into the open ends of the first case. They are neat and durable, and I hope my friends will try them. They are also lovely for a lady's work basket made of silver cardboard, lined and trimmed with blue or scarlet, or gold paper, with brown trimmings.

I will also describe a lovely note-case for the wall. A piece of tinted cardboard (not perforated) cut in some handsome shape, with pocket piece for front, select some little sprays—such as are used for embroidery—transfer them to tissue paper, and place in position in the corners, and on the pocket a wreath perhaps, or a handsome initial; fasten the tissue paper with just a touch of flour paste, or fold it over the corners. Cover a piece of pasteboard with canton flannel, on which lay the cardboard, with the prepared designs, and with a No. 7 needle fasten in a piece of wood for a handle; carefully prick the outlines, making the holes as evenly as possible. When finished, remove the tissue paper, turn the paper over and perforate thickly the leaves and flowers, using a No. 9 needle. The effect is very beautiful, the right side presenting an embossed surface that is lovely. Patterns of tidies and cap crowns in application work, embossed on dark brown or gray cardboard with the edge pinked, make lovely vase mats, and are a pleasant change from the worsted ones now in use.

MRS. H. M. CLYDE.

**Match Scraper.**—Materials: white perforated cardboard, sand paper, a yard of pink ribbon, pink zephyr. Cut your cardboard four by five inches, your sand paper the same; work with pink zephyr on the cardboard these words, "Scratch My Back;" fasten the sand paper and cardboard together and bind the edge with pink ribbon; place a small bow on each corner; complete with a loop to hang it up by; place it up lengthwise, hanging it between the catchalls, with "Scratch My Back" facing you; hang these on one side of the looking-glass; on the other side hang a comb-case made of pasteboard, cutting it diamond shape; make a pocket in the centre for combs, and one at the bottom for combings; cover the whole front with fish scales colored pink.

**A Beautiful Hanging Basket.**—First take a round board nine inches across; paint it dark brown, tie some netting of red yarn, two inches wide and long enough to extend around the board; tie a tassel in every other loop of the netting on the last edge of the work. Fasten netting on with small tacks; find a strawberry box, paint it brown, tie a piece of netting wide enough to go around it, tack it on top edge of box, draw a string in the lower edge, and draw it under the box and tie; fasten the box in the centre of the board by placing two nails through the bottom of the box into the board (this will not make it very strong as the box generally splits a little), then tack a brad on each side of the box on the outside; you can pull the netting over the brads so they will not show much. Make some cord out of red yarn; with a gimlet bore three holes near the edge of the board; in these suspend cord to hang it up by. Fill it with earth, put your plants in, letting some droop over the box, and some run up the cord.

P. C. W.

## Household Art.

## WORK-BOXES, PINCUSHIONS, ETC.

Of course, I, with every other neat housekeeper, have a work-basket large enough to hold any article of work that I have on hand, and I have also a treasure in the shape of a work-box, in which I keep scissors, buttons, needles, pins, tape-measure, and any and every other small article that I have occasion to use about my work. These boxes—there are a pair of them—were made from two cedar cigar boxes, carefully selected, so as to have them smooth and perfect. If not entirely smooth, they were rubbed with sand-paper and then varnished on the outside with furniture varnish. I think I only gave them one coat, but any one could judge for themselves if more was needed. Then a strip of new muslin was pasted along on the inside, as a hinge for the lid. The inside of both was papered with light glazed paper, and in one, the corners, edges, and the edge of the lid was trimmed with narrow strips of brown paper, and the other was trimmed with blue. A picture was pasted on the inside of both lids.

A small cushion, about an inch smaller each way than the lid, was made and stuffed with wool and glued to the top of the lid. A piece of black cloth a little larger than the cushion was braided and bound with narrow ribbon and fastened over the cushion. It would be better to fasten the cloth to the cushion before gluing it to the lid; but if this is done, great care must be taken not to touch or stain the cloth or ribbon with the glue. These boxes are easily made, and are both ornamental and useful, as we have found from several years' constant use.

When a pincushion is intended to stand on a large bureau or dressing-case, the most suitable ones are large, plain, substantial-looking ones. I have two in mind that I saw several years ago, and have ever since intended to imitate. They were the same size, about eight inches by twelve, made just like a small pillow, and stuffed with bran. One was covered, top and bottom, with scarlet merino and trimmed around the seam with a quilling that may be either scarlet skirt-braid or a satin ribbon.

The other was covered with blue silk, and the trimming around it was thick blue chenille, with loops at the corners. Of course, such cushions must never be used for needles. If a cushion is used for needles at all, it should be one small enough that if needles get drawn into it, they can be worked out again.

A pagoda-like pincushion, that I made some years ago, has been very much admired. It is curious, and not difficult to make. Cut twenty pieces of pasteboard in the shape of a triangle, with concave sides. The pasteboard must be stiff and strong, but not too thick, so as to be clumsy. Then cover one side of every piece carefully with a piece of silk, which must be cut half an inch larger all round than the pasteboard. Draw the threads across the wrong side tight enough to make the silk smooth, and secure the ends neatly and carefully. In mine every piece of silk is different.

After the pieces are all covered so that they can be arranged with the proper colors together, begin joining them by sewing five pieces together, with an over and over seam, so as to have a point in the middle, somewhat the shape of a raised umbrella. Then join another five in the same way, taking care to contrast the colors well. The ten remaining pieces are sewed one to another, so as to make a straight strip, and the ends joined; then the two fives are sewed one to each

side. When ready to close the last seams, fill the cushion with bran. There will be twelve points, and to finish these off, you must get twelve large jet headed pins, and put one into each point. Then fill every seam with common pins. It will hold three or four papers, and unless you are very lavish with them, you will probably have pins at hand for the toilet table all the rest of your life.

We have a small bottle of black varnish that is a household treasure, though we have only lately learned its value. We have had it for several years, and it was originally bought and used for painting on glass, but having occasion last winter to varnish some articles that we wanted darker, we mixed a little of the black varnish in with the common furniture varnish, using less than a teaspoonful to a saucerful of the other, stirred it well and applied it, and found we had made a discovery. We could change any light plain wood into varnished walnut, and we have applied our discovery to the beautifying of stools, boxes, brackets, picture frames, work-boxes, bedsteads, the shelves of a library, and defaced spots on furniture.

As it takes so little black varnish to darken the other sufficiently, our bottle will last for some time yet. When it fails we will try the suggestion of some writer in the CABINET, and use lampblack for the same purpose. It may answer equally as well, but we have never had need to try it yet. Since the advent of a bracket saw into the family, we have use for the varnish quite frequently. One of the first things I asked to have made was a card-basket, as there was a beautiful pattern for one on the sheet of designs. I think, when made, this will be something unique. It is in seven pieces, one six-sided piece for the bottom, and six pieces for the sides. I will select the thinnest and best pieces of cigar boxes to make it of, and will varnish it nicely.

When dry, the sections will be joined with narrow scarlet ribbon. I think it would be prettier if I could get perfectly white wood to make it of, and join the pieces with blue ribbon, but I do not suppose I could get any wood that would be as white as I should want it. And I want, if possible, to have a standing corner what-not made this winter. It will be made of half-inch stuff, sawed in some fanciful shape on the front edge, and extending back into a right-angled triangle. It will have six shelves, and each shelf will be a little smaller than the one below it. The supports for the shelves will be made of spools, fastened in place with iron rods that have a large flat head at one end, and a burr screwed on at the other, and cut so as to be just the right length. The top of the rods, where they come through on top of the shelves, will be ornamented with a pine cone on each, unless I find something I like better to use instead; but I think they would make a very nice finish, and be very durable, after they were securely glued on. The feet will be three of the largest spools, fastened with rods the same as the rest. I will want a fancifully sawed piece on each side of the top shelf, as a finish, and if the maker's patience holds out to that extent, I will have them at the back of every shelf. When completed, it will all be varnished and will look like walnut. Then I will have to tax my ingenuity, or pocket, for enough pretty fancy articles to fill it, in addition to what I already have.

I have a handsome little box in my bedroom that serves the double purpose of holding all my shoes, rubbers, etc., and for a footstool. It was made of a plain box, sixteen inches long, nine inches wide and eight high, such as could be got at any grocery store. The lid was put on with good hinges, and any rough places on the box were rubbed with sand-paper. Then

it was varnished with the mixed varnish. I gave it two coats, letting it stand a day or two to dry. It was varnished outside and in, excepting the top and bottom. Then I took part of an old bed-quilt, and cut six pieces from it, each piece just the size of the top of the lid, and laid them carefully in place, tacking them in one or two places. Then having in readiness a piece of black cloth, that had once been part of a coat, but was now cut to fit the top of the lid, and an inch allowed all around, and braided with a pretty pattern with crimson braid, I tacked it carefully over the top, fitting the corners neatly, and then tacked a bright colored fringe around the edge with small furniture tacks.

I think the box would have been prettier to have been covered all over the outside with cloth, but I had nothing suitable for it, and did not care to buy; but it is pretty as it is. Such a box, I think, is much neater than a shoe-bag, unless one has a closet to hang it in, as I have not. Then, as I said, the box serves a double purpose.

I have been thinking, this dull, dreary autumn evening, of the long winter evenings to come, and wondering if other families enjoyed them as we do. They afford an excellent opportunity for doing fancy-work, patchwork, crocheting, etc., or for those whose school-days are not yet past, to work with books and pencil. But this is the smallest part of the enjoyment. The real pleasure is our evening readings, which are kept up all through the winter, whenever practicable. We have a good fire, good light, and a table set out so that all can gather round it. One of the family does the reading, and the rest listen, while their hands are busy with their work; and the stormier the weather is outside, the pleasanter will the evening pass in doors. The only danger is that it may be too prolonged for early rising in the morning.

We have had read in this way biographies, histories, poems, novels, stories from newspapers and magazines—nothing ever comes amiss that ought to have a place in a family library. Of course, your reader must be a good reader, and it is better that they should be of the male persuasion, because women always have work that they can be busy at, and men or boys would be sitting idle. I fancy that I can both hear and work better when I do both at once. So far from dreading the long evenings as tedious, they are looked forward to with eagerness and pleasant anticipations. Not the smallest good that may result from this course is the interest that the younger members of the family will be led to take in histories and other good books.

If any of these few suggestions that I have made, should be of service to other girls who have been led, as I have, to study the science of housekeeping and homekeeping, while they are yet in their fathers' house, it will not be altogether in vain. AMARANTH.

What-not.—I wish to tell my friends how I made a what-not for the parlor. I procured three thin pieces of board; these I sawed to fit the corners of a room, and after deciding how large to make the bottom shelf, I cut the front rounding, and then tacked on a scalloped piece of pasteboard. No two of the shelves are the same size. I fastened cones, shells, fruit-stones, etc., on the pasteboard with putty. After all became dry I varnished it, then strung the shelves, one above the other, on picture cord, the largest shelf at the bottom, the smallest at the top.

## Household Elegancies.

## BEAUTIFUL HOMES.

Since the publication of "Household Elegancies," there have been suggested so many attractive ways of adding to the comforts and pleasantness of home interiors, that thousands of families have gained in taste and refinement.

Our American ladies are deeply interested in these household topics, and keenly alert to every little device suggested to them to work with their own fingers.

But besides all the little features of elegancies which can be stowed here and there on the wall, or chair or carpet, still there is that broader field of house-furnishing, which includes all things from front door and kitchen to hall room and garret, telling how to furnish them all nicely and tastefully at little expense, a subject which the ladies now more than at any other time are urgently interested in. No volume hitherto in American or English print has practically touched this topic, and it is our pleasant privilege to say that from the office of the FLORAL CABINET is to appear a work, now almost ready, entitled "Beautiful Homes, or, Hints in House-Furnishing," edited by C. S. Jones, which in most delightful manner, with over three hundred illustrations, describes to every young house-keeper the hundred or more ways in which all the rooms of the house can be nicely furnished. From its pages are given the following illustrations:

## A RUG.

This is made of lamb-skin, carpeting, or heavy cloth in the centre, around which is fastened a border of dark cloth, ornamented with application embroidery.

A BABY COT.

Beautiful designs may be found in cretonne, and all that need be done is to cut the separate parts carefully out, and after arranging and basting down the various figures, to fasten them to the foundation and cover the edges with chain-stitching, using a shade of the color found in the designs. For instance, in the leaves, several shades of green or brown; in the deer's heads, various shades of dun, and so through

all the parts. In some cases the design is cut out of self-colored cloth and applied to the foundation by means of embroidery, introducing various stitches, such as half-polka, point Russe, chain and coral stitches. This requires not only skill in embroidery, but considerable knowledge of colors, as the whole formation of birds, and other prominent objects, depends altogether upon the arrangement of colors.

In certain kinds of woolen goods, very appropriate designs are found, as also in silk, the only objection

A CARPET RUG.

being the tendency in this class of goods to fray on the cut edge, and we have found it an excellent plan when we used such, to touch the edges with a little nice clean gum-arabic, and work over closely (after it dries) in button-hole stitches.

## CHILD'S CRADLE.

In houses where the apartments are small, it is frequently a matter of great importance to have certain articles of furniture in a portable shape, so that they may be put out of the way occasionally. The cradle, or cot, especially is frequently a subject of great annoyance, and the neat mother, when expecting company, and "baby" is not occupying its crib, would gladly put it out of sight; for such situations as these, the elegant folding cot shown in this illustration would prove a boon.

This simple little affair is made only of four rods, slender but strong, fastened together with screws, that allow of its being turned up in compact form. The bed itself is made like a hammock of merino, reps, damask, etc., with a strong interlining of canvas with quilting to hold the parts together.

This small elegant model of blue quilted silk, is trimmed with a Swiss muslin frill trimmed with lace and a puffing lined with blue, and medallions of lace edged with fine Valenciennes or tatting; this is caught up around the sides with bows of the silk or ribbon. Around the entire edge of the hammock a strong piece of rope is fastened, which not only strengthens the part, but gives the long boat-shape to the cot when opened out. A mattress, pillow, etc., will fold inside the hammock.

At the head of the cot a strong rod is screwed which bends over the top and sustains a drapery of light muslin matching the other hangings. This slips in a notch prepared for it, and is easily removed and hung away.

## A BRUSH-CASE.

As the nail and tooth brushes used on the wash-stand necessarily become damp, and in order to preserve them it is necessary to dry them as quickly as possible, it becomes a point worthy of attention to provide some means of doing this effectually, yet neatly and perhaps tastefully.

The china stands, with perforated bottoms, are objected to by many persons, and sometimes occupy too much space, but in this illustration is seen a handy article which can hang against the wall above the stand, and is a beautiful addition to a toilet stand.

This model was made of fine wood, eight inches square, sawed off to form a perfect hexagon; on this was screwed a half circle, fitting the centre, in which was cut openings to admit the brushes, and adorned with a lambrequin, cut from green oil-cloth, cut out in design figures, as shown, and lined beneath with black velvet, which, showing through the openings, had a beautiful effect. The pine back—for which heavy pasteboard may be substituted—was covered in like manner, and the back part lined with muslin glued neatly over. The shelf was covered with the oil-cloth tacked neatly down beneath the lambrequin, and, when finished, is beautiful, though a simple and easily made case was the result.

## HOME-MADE LAMBREQUINS.

Cut from any pattern desired, of blue, pink, or red cambric; then cut a piece of lace, book-muslin or dotted muslin the same size of cambric, edged with a ruffle, or pleating, of cambric and lace together, or white twisted fringe.

Another way is to take a piece of muslin or bleached cotton, and cut in three points, the longest at the sides; ruffle around the sides and lower edge, starch, iron, and flute nicely. It is better to cut full enough for three box-pleats.

A cover for foot-stool, or ottoman, is made of black

A BRUSH-CASE.

or gray cloth. Embroider some nice pattern by first taking a piece of canvas the size of pattern to be worked, baste on the centre of the cloth, then work with different colors, flowers, leaves, or a deer's head. After it is all worked, the canvas can be pulled out, a few threads at a time. In the same way I have embroidered slippers on cloth. It is much less work than filling canvas for slippers, and much prettier.

## Hireside Reading.

### AN INJURED TRAVELLER.

A man dressed in good clothes, an eye-glass and a gold-mounted cane, and possessing altogether a rather clerical appearance, hailed a passing street-car. There was nothing unusual or particularly noticeable in this, except the air of lofty dignity with which he commanded a halt, and the desperate effort which he made to maintain his centre of gravity as he passed to the car, and revealed the fact that he was slightly inebriated. Arriving at the door he solemnly raised his right foot to enter, but not raising it quite high enough, he fell headlong on the floor of the car. Raising himself up with some difficulty, he cast a severely reproving look at the old gentleman sitting near the door, and said:

"Sir, what d'you lift this car for just as I was goin' to get in?"

A Chinaman went into a California dry-goods store, and looked all around with those sloping eyes cut the wrong way of the leather.

"What do you want, John?" said an affable gentleman with his hair parted in the middle.

"Me no see him," replied John.

"Well, what is it like, John?"

For a moment the celestial transported himself in a brown study. He thought very hard, and then that saddle-colored countenance lit up like the business end of a lightning-bug, and he replied:

"Puttee up in windley. Fly come in he no come in, catchee on outside alle same."

And shortly John went away as happy as a basket of chips, with two yards of green gauze.

**Household Words.**—Stop your noise! Shut up this minute! I'll box your ears! Hold your tongue! Let me be! Get out! Behave yourself! I won't! You shall! Never mind! You'll catch it! Put away those things! You'll kill yourself! I don't care! They're mine! Mind your own business! I'll tell ma! You mean thing! There, I told you so! You didn't! I did! I will have it! Oh, look what you have done! 'Twas you! Won't you catch it, though! It's my house! Who's afraid of you! Get out of this room directly! Do you hear me? Dear me! I never did see such a thing in all my born days!

"We are going home," said a tramp who wanted to talk. "Astor, Stewart, Garner, Lick, and Vander-

bilt, have all dropped out of the busy world within a short time. I have myself a cough that worries me a good deal after banking hours, and to-day I forgot to take fifteen cents with me when I closed the vault."

An Irish glazier was putting a pane of glass into a window, when a groom who was standing by began joking him, telling him to mind and put in plenty of putty. The Irishman bore the banter for some time, but at last silenced his tormenter with, "Arrah, now, be off wid ye, or I'll put a pain in yer head without any putty."

A man noted for his close-fisted propensities was showing an old coin to a neighbor, when the latter asked, "Where did you get it?" "I dug it out of my

his thumb out of the top man's mouth, and vainly struggling to disentangle the top man's hand from his hair, and glancing with considerable apprehension at the top man's other hand, which was doubled up into a formidable fist, and coming down towards his face a thousand miles a minute, "Hold up a bit! Let's refer the rest of this fight to an arbitration committee and have a compromise count, and agree beforehand to submit to the committee's decision who licked."

Old Mr. Bledsoe, although he is a very profane, wicked man, looks very youthful for his years. One of his neighbors remarked to Mrs. Bledsoe the other day, "The old man is wearing well, isn't he?" "Oh, yes," replied the good woman, "he's swearing well enough as it goes, but considering the opportunities and practice he's had, he might put a little more polish into it."

**How beautiful!**—Music, we are told by the poet, hath charms to soothe the savage heart, to soften rocks, or bend a knotted oak. But there are some things it can't do, and one of them is suggested by this incident:

A sweet little creature sat next me at the first recital of Chopin's music, given by Madame Essipoff. During the pathetic Marche Funebre from the Sonata, Opus 35, her attention was fixed, as if the music had entranced her very soul. Her eyes glistened with emotion, and her whole face was expressive of admiration and excitement. When the pianist had finished, the gentleman who was with this sweet little creature turned to her and said:

"How beautiful!"

To which she replied:

"Yes, indeed; doesn't it fit her exquisitely in the back? How much do you suppose it cost a yard?"

An old gentleman went out to shoot partridges, accompanied by his son. The gun was charged half-way up the muzzle, and when at last the old gentleman started some birds he took a rest and blazed away, expecting to see some

fall, of course; but not so did it happen, for the gun recoiled with so much force as to "kick" him over. The old man got up, and while rubbing the sparks out of his eyes inquired of his son, "Dick, did I point the right end of the gun to the birds?"

A party of belated gentlemen, about a certain hour, began to think of home and their wives' displeasure, and urge a departure. "Never mind," said one of the guests, "fifteen minutes will make no difference; my wife is as mad now as she can be."

The Alabama Planter complains that its little garden patch was unprofitable last season: The snails ate up the cucumbers, the chickens ate up the snails, the neighbors' cats ate up all the chickens, and we are now in search of something that will eat up the cats."

THE EVENING HOUR.

gardeu," was the reply. "It is a pity you didn't find it in the cemetery," said the neighbor. "Why so?" asked the coin-owner. "Because you could have saved the hole to be buried in," was the somewhat unexpected reply.

A gentleman traveling in Ohio some years ago turned in at a country tavern for dinner. The bar-room was garnished with a dirty wash-basin, a piece of soap the size of a lozenge, and a square yard of crash dimly visible through epidermic deposits. Having slightly washed, the traveler eyed the rag doubtfully, and then asked the proprietor, "Haven't you, sir, about the premises, a this year's towel?"

"Hold up a bit," exclaimed the under man in a Front street fight yesterday afternoon, trying to pull

## Housekeeping.

## PRIZE RECIPES FOR COOKING.

*Medium Stock (for Soup).*—Take a shank of beef weighing four pounds, or the same of veal, or any other fresh meat, any trimmings of poultry, or bones of cooked meats; crack the bones in inch pieces and put all into a closely covered iron pot; cover with four and a half or five quarts of cold water; set over a slow fire where it will come to a boil; skim carefully, season with salt and pepper, then remove the pot to the back part of the stove and let it simmer gently all day. Strain through a sieve into a stone or earthen pot and set in a cool place. The next day remove all the fat that has risen to the top and the stock will be ready for use.

*Economical Stock.*—The liquor in which a joint of meat has been boiled, trimmings of fresh meat, poultry, shank bones, roast beef bones, any pieces the larder may furnish; crack the bones, put all into the soup pot, cover with cold water, and simmer gently six hours; skim carefully and strain; when cold remove the fat from the top.

*Turtle-Bean Soup.*—Soak over night in warm water one and a half pints of turtle or French beans; in the morning pour off this water and rinse in clear cold water; drain and put into a soup pot with four quarts of medium stock, and set where it will boil slowly five or six hours. Add to the stock four stalks of celery, one small onion and one earrot, all sliced thin; stir occasionally to prevent its scorching. Two hours before serving add eight sliced tomatoes, or if not in season, part of a quart can will answer. Strain through a coarse sieve and rub enough of the pulp of the bean through to make it of the right consistency; season to taste.

*Ox-Tail Soup (Splendid).*—Take two ox-tails, cut and separate them at the joints, and fry them a nice brown in one ounce of butter. Slice four carrots and three onions; take out the pieces of tail and fry the vegetables brown in the butter. Put the ox-tails in the soup pot with three pounds of lean beef cut small, the onions and carrots, one head of celery chopped fine, one bunch of savory herbs, four cloves, twelve whole pepper corns; cover with four quarts cold water; set where it will come to a boil slowly; add one teaspoonful of salt, skin thoroughly, and let it simmer gently four hours. Then take out the tails, strain the soup, return it to the pot and thicken with two tablespoonfuls of browned flour; put back the tails; add two tablespoonfuls mushroom catsup, and half a glass of port wine; simmer five minutes and serve.

*Baked Salmon Trout, with Cream Gravy. (Delicious.)*—Wash the fish, wipe dry and lay in a baking-pan with a very little water. If very large, score the back bone, but not the sides. Bake slowly, basting with butter and water from three-fourths to one hour, according to size. Take a cup of rich sweet cream, into which stir half a cup of boiling water, else the cream will clot when heated. Make this sauce in a milk-boiler, or in any tin vessel set into another half filled with boiling water to prevent the sauce from burning. Add to the cream two tablespoonfuls of melted butter, one of chopped parsley, and the gravy from the pan in which the fish was baked. Lay the trout on the hot platter; let the gravy boil up once, and pour over the fish. Use no other sauce and very little salt.

*Fish Chowder.*—Cut five or six slices of good salt pork and fry a nice crisp brown. Take out the pork and pour the fat into an iron pot; cut the fish into small pieces; haddock and striped bass are the best; put in a layer of fish, a layer of split crackers, a little of the chopped pork. Chop fine one large or two small onions, add a little of that, season with pepper and a little salt, then another layer of fish and so on until the fish is all used; just cover the fish with water, and stew slowly until tender; about twenty minutes will be long enough. Take up the fish, thicken the gravy with a little powdered cracker; add a little catsup, if you like. Let it boil up once. Add the

juice of one lemon; pour it over the fish and serve.

*Fillet of Beef. (Good.)*—Take a lean piece of beef the size desired; lay in the bottom of the kettle some beef bones if you have them; then the meat; slice and put in three onions and two carrots; cover with cold water and boil slowly three or four hours until the meat is tender. Then take the meat out, thicken the gravy with one or two tablespoonfuls of browned flour, season with salt and pepper, and two tablespoonfuls of walnut catsup. Pour over the meat and serve.

*Spanish Beef Steak. (Good.)*—Take onions, chop fine, and fry them in a little butter or nice dripping; when nicely browned add some fresh tomatoes previously stewed; season with salt and a little Chili pepper chopped fine; let it simmer ten minutes; have your steak nicely broiled. Put it into the frying-pan, cover with the sauce and let it simmer five minutes. If you have no pepper pods, a little cayenne will answer.

*Lamb a la Poulette.*—Take a piece of butter the size of an egg, one tablespoonful of flour, and mix until smooth, then add by degrees, stirring constantly, one pint of boiling water. When the sauce is clear put in one-fourth young lamb, pepper and salt, and a few young onions; stew gently one hour or longer if the meat is not tender. Take out the meat, skim the fat from the gravy; stir in the beaten yolk of one egg, pour over the meat and serve. A few chopped mushrooms added five minutes before taking from the fire is an improvement. In adding the egg, beat into it a spoonful or two of the sauce before putting it into the sauce, otherwise it will cook in lumps, and do not let it boil after the egg is put in.

*Roast Chicken. (Excellent.)*—Dress and stuff the chicken; lay it in a tin steamer, set it over a pot of boiling water and steam (covered closely) from one and a half to two hours according to size; then roast a nice brown, basting frequently with hot water and butter. One half hour in a good oven is sufficient. Boil the gizzard, liver, and heart in a saucepan; when done chop them fine, and add them with the water in which they were boiled to the gravy in the baking-pan; thicken with a little corn starch, and season to taste. I have cooked chickens in this way for years, and they are delicious. The toughest old fowl has to succumb to this kind of treatment. An old turkey served in the same way is just as tender as a young one. In steaming a turkey take a tin wash boiler, cover the bottom with water, invert a large tin basin and lay the turkey on that, taking care that the water does not reach the fowl. Steam two hours and roast one hour.

*Roast Wild Duck.*—Slice an onion or earrot, put inside of the duck and parboil ten minutes; this takes away the disagreeable strong taste. Throw away this water and lay the duck in fresh cold water half an hour; wipe dry, stuff and roast until a nice brown, basting with butter and water. Thicken the gravy with browned flour, and just before taking up stir in a tablespoonful of currant jelly.

*Cottage Cheese.*—Take a chicken, cut it in small pieces, lay in a saucepan and just cover with cold water. Cook slowly until very tender, taking off the scum as it rises. Take up the chicken and boil the liquor down to a cupful; remove all the bones, and pick, not chop, the meat in small pieces. Season with salt, pepper, sweet herbs, and, if the chicken is not fat, add a tablespoonful of butter. Mix with the gravy and put into a mould, well buttered; set in a cool place for twelve hours or until perfectly firm. Cut in slices for the table. It is better to make it the day before it is wanted for use.

*Plain Omelette. (Nice.)*—Beat six eggs light, the whites to a stiff froth, and the yolks to a thick smooth batter. Add to the yolks a small cup of milk, pepper and salt, lastly stir in lightly the whites. Have ready in a frying-pan a good lump of butter; when hissing hot pour in the mixture and set over a clear fire. Do not stir it, but slip a broad-bladed knife under the omelette to prevent its burning. When done, turn on a hot platter and serve at once.

*Good Plain Pie Crust.*—Take one pound of sifted flour, sift and mix into it two teaspoonfuls of cream tartar. Have weighed half a pound of good sweet lard; mix into all of the flour two-thirds of the lard, mixing it quickly and lightly into the flour, one teaspoonful of salt; dissolve one teaspoonful of soda in a small cup of ice-cold water, and stir into the flour with a spoon, using only just enough water to stick the flour together. Flour your board and take out just enough of the dough for the undercrust of one pie; roll out without kneading. Do not touch it with the hand more than you can avoid; roll the undercrust thin; cover all your tins first; fill them, then take one-fourth of the remaining dough, spread over a little of the reserve shortening, hedge it over with flour, lap it over like a turn-over twice, roll again same way; twice rolling in this way is sufficient. As soon as your pies are all covered, set them at once into the oven; this amount will make four common-sized pies. If properly made, and the crust is hard and not heated by handling, it is excellent, and much better than if more shortening is used. I never use more, and I am noted for nice pastry.

*Lemon Pie. (Splendid.)*—One cup of sugar, half a cup sweet cream, two small lemons, two eggs; if you have no cream use milk; in that case add one tablespoonful of melted butter. Beat the yolks of the eggs very light, add sugar and beat again, then the juice of both the lemons and the grated yellow rind of one. Line your pie tin with crust, add the cream to the mixture just before putting in the oven. Bake until the custard is firm; draw to the front of the oven and spread evenly over the top a meringue of the whites of the two eggs beaten stiff with two tablespoonfuls of pulverized sugar; return to the oven until it sets. To be eaten cold. Use no corn starch, and no more milk than directed. Try it once, and you will never make lemon pie any other way.

*Strawberry, Raspberry, and Blackberry Pie.*—Cover pie tins with paste for the undercrust and for the upper one; cut just the size required for pie, and bake it on a flat jelly-cake tin; prick to prevent blistering and bake. Fill the shell (undercrust) when cool with berries half mashed and sweetened, and cover with the flat crust. The delicate flavor of berries are very much injured by cooking. If the berries are not perfectly ripe, you can set the pie in the oven a few minutes after filling. I have made very nice pies by filling the shell after it is cold with mashed berries well sweetened, and covered with a meringue of the whites of two eggs beaten to a stiff froth with two tablespoonfuls pulverized sugar, and spread evenly over the top, and placed in the oven to set.

*Huckleberry Pudding. (Nice.)*—One pint of milk, two eggs, one gill of yeast, one teaspoonful of soda, a little salt, one and a half pints of berries. Make of the milk, soda, salt, and yeast, the eggs well beaten. Stir in flour for a thick batter and set to rise in a warm place. When light stir in the berries well hedged with flour, lightly and quickly, pour into a well buttered mould, and boil two hours. Serve hot with liquid sauce.

*Rice Flour Pudding.*—Half a pound of rice flour, six eggs, one cup of sugar, one tablespoonful of butter, two tablespoonfuls of vanilla, the juice of one large lemon, and half the grated yellow rind, two quarts of milk. Wet the rice flour to a smooth paste and stir it into the milk when it is scalding hot, and let it boil until thick, stirring it constantly, to prevent scorching. Remove from the fire, stir in the butter, the yolks of the eggs well beaten, the lemon, the whites of three eggs beaten stiff. Mix thoroughly and bake in a buttered pudding-dish three-fourths of an hour; just before taking from the oven, spread over the top a meringue of the remaining whites of the eggs beaten stiff, and sweetened with two tablespoonfuls fine sugar and flavored with a very little vanilla; return to the oven to set. Eat cold.

*Foaming Pudding Sauce.*—Beat the whites of three eggs to a stiff froth, melt a teaspoonful of sugar in one gill of boiling water, stir in a tablespoonful of butter, and let it boil; flavor with a glass of wine, then beat in the whites. Serve at once.

MRS. J. H. SMYTH.

# THE LADIES' *Domestic Cabinet*

By HENRY T. WILLIAMS.

NEW YORK, NOVEMBER, 1877.

No. 71.

PRICE 12 CENTS.

## STAND FOR WINTER PLANTS.

This stand was placed near our South window, where its occupants could drink in the sunshine from eight o'clock till one each day, and shine in verdure, or bloom to grace our merry days.

It was a pretty, light stand of wire, painted dark green, spanned by a trellis of the same. At each end a pot containing German Ivy, as many call it, but it is not an Ivy, only its leaf has a resemblance to that. It is a climbing Senecio (*Scandens*). The vines threw up branches of rich, bright-green foliage, in great haste; both together running over the curving trellis, crossing each other's path, then tumbling about the stand, and peering around its supports.

Under the arbor so quickly over-spread, *Daphne Odorata* lifted her stout, healthy boughs, from whose tufts of shining leaves the pearl-like florets looked out, with the beauty that haunts us in some soulful face, filling the air with exquisite fragrance. Her companions were a Mrs. Pollock Geranium, spreading out her flaunting colors for admiration, a blithe little *Bouvardia*, ambitiously building up her spire for a Christmas display of scarlet and gold, and a Rose Geranium whose spicy leaves and modest blossoms, like true worth, made slow progress, and unwittingly received the homage of all hearts.

An English Ivy, seated within an ornamental cover, had a post of honor upon the mantel. Long ago it had walked deliberately up to the moulding at the edge of the ceiling, then come down, to embrace with its unfolding verdure a large medallion of Greenough's Castor and Pollux. Truly the ancient legend of "Leda's lovely twins," so finely portrayed, was worthy of such reverent tendance. ANNIE G. HALE.

## MISTLETOE, PASSIFLORA, Etc.

In answer to Anna H. Storey, in July number of the *CABINET*, I would say that the American Mistletoe (*Phoradendron*) is plentiful here, and I can send her a

supply, if she will address me in regard to it. Also, to Abbie French: *Passiflora Cœrulea* is a pest with me, and grows and blooms profusely, without the least care, in poor, clay soil, shooting up everywhere and receiving only the rains. It dies to the ground in late autumn, and shoots, from the old roots a foot under ground, appear towards the last of May, and as

with deeper centre, very fragrant, and double; a few petals unfold every day, leaving the centre ones folded up like a rosy ball, and consequently it remains in perfection several days. Victor Verdier and Conqueth des Alps, are both fine H. P's., and constant bloomers. But my pets among Roses are the Teas, all of which are perfectly hardy here.

STAND FOR WINTER PLANTS.

the growth is very rapid, are in bloom by the 1st of July.

I would like to recommend a few good Roses to our readers, and first among them is the hybrid perpetual *La France*. It is thought to be the beginning of a new class, or an ever-blooming H. P. I have had mine three summers, and so far it has been a constant and free bloomer. It is an exquisite peach-bloom color,

as beautiful.

While speaking of the hybrid perpetuals, I intended to mention the new one, said to rival our queenly *La France*, Antoine Verdier, a free-blooming, bright, silvery rose, shaded with carmine, said to possess the vigor of the Perpetual, the persistent blooming of the Bourbons, and the fragrance of the Teas.

MRS. R. S. TRUSLOW.

I became very fond, last summer, of the large, globular buds of the *Queen of Portugal* and *Mme. Margotten*. The former is a handsome copper-color, shaded with rose and salmon, with petals of great substance, and the latter is canary, shaded with pink and salmon. *La Pactoli* is a shapely little thing for a "bontonniere," and is always in bloom. All are familiar with the earmine, purple, and salmon tints in *Bon Silene*, which forces finely in winter. *La Duchesse de Brabant* is a rosy, cup-shaped pink tea, always loaded with fragrant buds and blossoms. *Belle Lyonnaise* bloomed a pure white for me, and looked almost unearthly in its pearly beauty. *Aline Sisley* is very handsome, both in bud and flower, as it is quite double, and displays a rich marbling of crimson-purple tints. *Marie Duchire* and *La Sylphide*, are both a beautiful bronzy flesh, handsome in bud and flower, and free bloomers. *La Gloria de Dijon*, and *Marechal Niel*, are too well known to mention here, but I could go on *ad finitum* with *Mad. Triflo*, *Mad. Damaizin*, *Mont Blanc*, *Perle de Lyon*; the old stand-bys, *Isabella Sprunt* and *Bella*, the magnificent *Bongon*, the dainty *Woodland Marguerite*, and a host of others just

## Floral Contributions.

## FLORAL ELEGANCIES.

I have just finished a rustic stand which I think some one may like to hear about. In the first place, I had a standard two feet high—a piece of scantling will answer—with a round board one foot square fastened on the bottom. If you have a big brother get him to make it for you. I don't happen to have one, so I have to do it myself. Next I got a dry-goods box a little over two feet long, one foot wide, and one foot deep, which I nailed on the upright. Then I had a quantity of laurel roots, which grow in great abundance here, soaked in warm water, and a part of the rough bark scraped off, which left them spotted and striped, and when varnished they are a very rich color. I then nailed them on with small nails all over the box and standard, according to my fancy, until the whole was completely covered; then I gave it a good coat of varnish, and after drying, it was ready for use.

Now for contents: after boring half a dozen holes in the box for drainage, I put a layer of gravel in and filled up with rich earth. I sunk my pots with the flowers in them and filled up the spaces with Ferns, Ivies, and other vines. I need not mention the plants put in, as anyone can choose for themselves. I think a bright red Coleus and a few variegated leaved plants look handsome, especially if you do not have many blossoms. I neglected to say that the box should be stained with some dark stain, which you can get at any furnisher's store.

I wish you could see my stand. I think it a beauty, and my friends all admire it very much, which quite repays me for the time spent on it. In fact, I do not think the time spent on such things lost by any means, though there are some people always throwing cold water on every little attempt of the kind, but I think we should feel sorry for them that their minds and hearts cannot or will not see the beautiful things which if it were not good for us to have would not be given to us.

In one of my rambles this fall, I found a great many lichens, some kinds of which I had never seen before. They were almost all colors, some a most beautiful brown, others stone-color, some almost white, and some a lovely red or maroon, all of them in a great variety of shades. I made quite a pretty cross of them in this way:

I first cut a cross out of stiff cardboard, then arranged the lichens on it and sewed them fast; care should be taken to have the colors blend and the effect will be something quite pretty. I also gathered a quantity of autumn leaves and ferns to decorate the house with for winter. In my judgment there is nothing makes a room have a cheery home-look so much as to see bright-colored leaves and flowers here and there. I would not have too many of the leaves; the common English Ivy, which is hardy, and which you can easily root in water and keep there all winter, looks very handsome mixed in with the leaves, and makes a fine contrast.

Beside several smaller ones, I had quite a large one in a pot which stands at the corner of a window and reaches up on one side to the top. I have trained another branch of it over on a picture, and still another below the picture around a bracket, the whole vine being about twelve feet long, with five branches.

I wonder if any of the readers of the CABINET know how to make rugs of old rags. If you have

woolen rags, which are the best, select pieces of the same thickness and cut them one-fourth of an inch wide, sew so as to have them as smooth as possible; take large wooden knitting needles and knit it garter stitch a foot wide and two feet long, then knit another strip, of a different color, four inches wide and long enough to reach all around the other; you can put any kind of fringe you choose around the whole, and you will have, if not a very handsome, a good rug without any expense, which is quite an item.

I read in the CABINET some time ago about making pictures by taking bright-colored autumn leaves and ferns and fastening them on drawing paper. I thought I would make some, and set about studying out a way to frame them so as not to cost much. I went to a cigar shop and asked for cigar-lighters—you can get a bunch with several hundred in for a dime; they are made of white wood and very thin. I selected even ones and notched the ends; mine were about five inches long, so I had to fasten two together for the length of the frame and the same way for the width, only I cut a little off from each end, as I wanted the frame longer than it was wide. Take three for each side and the same for the ends, weave them in at the corners; then take some more lighters, cut them a little shorter, and make a star by crossing them; notch their ends, put a star over each side and end where they are pieced; you can substitute a small bow of ribbon for the star if you choose; the frame is very delicate and suits the picture nicely. A picture made and framed in this way would be pretty gift for a sick friend. GERTRUDE D.

## FLORAL NOTES.

A large proportion of our lady readers can scarcely imagine the delicate beauty of the newer kinds of Lilacs. The day of old-fashioned Lilacs is gone, and now so many splendid new sorts have been originated that everyone who has a garden should get one or more of them. We have seen some of the blossoms, especially the Rothomagensis Rubra, which were over eighteen inches long. Think of that! a single bunch a bouquet of itself, and graceful in the most exquisite degree. Mr. Geo. Ellwanger, of Rochester, N. Y., has recently written a short and valuable report of the value of these new sorts, which we publish entire:

In all large continental cities, and particularly in Paris, the Lilac is in great request for winter flowering. The common purple is generally used for forcing, and when kept in houses, darkened by mats or otherwise, produces pure white flowers. In order to produce the best results, the plants should be carefully selected in the spring, and planted in pots; then plunged in the ground during the summer, and kept well watered. In September they should be repotted into rich compost, and, in succession according as required, be placed in an atmosphere of sixty to seventy degrees Fahrenheit, which should gradually be increased to eighty degrees, and even as high as one hundred degrees. The roots should be well supplied with water, and the plants should receive frequent syringings with tepid water. They may also be taken up carefully with balls in the fall, to be forced the following winter, but we recommend the former method. When no forcing house is accessible, a warm room answers very well in its stead.

In winter, with the Rose-bud and Violet, it is the most fashionable flower in Europe, especially in France. For a winter plant, it keeps in bloom a long time, and has no superior. As a florist's flower in winter, it is in great demand. The Persian varie-

ties are also used for forcing, the flowers of which are more delicate than the common purple. Through hybridization many valuable varieties have been added to the Lilac group, of late years, both in this country and in Europe.

In the following list we desire to introduce and make known some of the best and most striking varieties, consisting of all colors and shades from the darkest red to the purest white:

Persica, a native of Persia, of dwarf growth, four feet to six feet high, with small foliage and bright purple flowers.

Persica Alba, of somewhat less vigorous growth than the above, with delicate white flowers shaded with purple.

Flore Pleno, double purple, resembling in color the common purple, but has a double row of petals. It is much admired, being the only double variety.

Grandiflora, a very vigorous growing variety, with panicles of bright purple flowers of unusual size.

Virginalis, a most charming variety with large panicles of pure white flowers, and dark green foliage.

Emodi, a native of the Himalayas, very large and fine, delicate purplish Lilac flowers in erect, dense panicles; a very free bloomer.

Sinensis, a species resembling the Persian, but of more vigorous growth. Flowers of reddish purple, a most prolific bloomer, in fact the whole bush is a mass of flowers.

Josikoea, a very distinct species with shining leaves, and purple flowers blossoming from two to three weeks after all the other varieties of Lilacs, and when very few other shrubs or trees are in bloom.

Duchesse de Nemours, flowers light purple, distinct and fine.

Nana, a very distinct dwarf variety, with large and compact spikes of dark reddish purple flowers.

Speciosa, one of the most flourishing new varieties, with very strong spikes of bright reddish flowers.

Gloire de Moulins, panicles very large, of very fine rosy Lilac color—a superb variety.

Rothomagensis Rubra, this is one of the most showy varieties, flowers reddish, panicles of great size, often measuring eighteen inches in length and very abundant—planted in clumps on lawns no shrub will give such grand effect when in flower, even the Rhododendron cannot vie with it.

The last is much the finest of the entire collection, and is sold at \$1 to \$2.

## THE NIGHT-BLOOMING CEREUS.

In a late number of the FLORAL CABINET, I read a communication from "Beulah," in which she applauds the beauty and fairy-like appearance of the flowers of this mysterious plant. Her description is extremely good, yet I think could she see mine, there would be still something more for her to admire.

My Cereus stands in a case two and a half feet square by two feet high; there is a frame attached to the case six feet high, making in all eight feet; within the square of the frame at the top, there are now fifteen buds, and I shall be compelled to build an amphitheatre around it, so that my friends can see the flowers. Previous to the past two years, my Cereus bloomed in June; one year the first bloom was the seventh, and the last the fifteenth; last year the first flower opened on the fourth of July evening, and the last on the twenty-fifth. As the plant grows older, the time seems to extend for its blooming. From what I can learn, my Cereus is about twenty years old.

Mrs. R. A.

## Answers to Correspondents.

**Name of Plant, etc.**—Can you give me information how to grow Kennedias? Can Ferns be divided, and how are they propagated? What is the cure for mildew on Roses? C. LEWERS.  
Kashoe Valley, Nevada.

**Answer.**—The plant is a coarse seedling variety of Abutilon; it will grow in the garden in summer, and in a greenhouse or window in winter.

All Kennedias are greenhouse climbers; they are of easy growth in good soil, but need plenty of water; they are easily raised from seed. K. monophylla is a good window plant.

Some species of Ferns are propagated by division, but others are only increased from seed, or, properly speaking, spores.

Dust the plants with flower of sulphur.

**Camellias, etc.**—The buds of my Camellias and Oleanders mould and drop. I think the pot is too close and warm. What kind of a stock can you graft Camellias on? MOLLIE.

**Answer.**—You think rightly. Give your plants plenty of air and keep them cool and you will have no trouble.

Camellias are grafted on Camellia stock; usually the single red variety, but any will do.

**Cannas Hardy—Destroying Moles, etc.**—Will the Canna survive the winter out of doors in Virginia? What will prevent moles from destroying bulbs and roots in the garden? Will Florida Magnolias resist the severity of a Virginia winter unprotected? Will the banana fruit in a greenhouse? Is the Century Plant hardy? Can the bulbs of Canna, Calla and tender Lilies be kept dry like onions until spring and then be planted in time to bloom during the summer? M. L. SAYERS, Va.

**Answer.**—None of the Cannas are hardy; possibly the roots might survive the winter with you if covered so as to keep out the frost, but they are better taken up. The moles must be caught in traps, or they may be destroyed by placing pieces of raw meat rubbed with stick phosphorous in their runs. The large Magnolia is hardy in Virginia. Bananas will fruit in a greenhouse, and the fruit is very good. It is best, however, to plant a dwarf-growing species, of which Musa Cavendishii is the best. None of the tenderer plants are hardy. You may keep the Callas and Cannas dry during the winter, but all Lilies would prove hardy with you and are best left in the ground. Lilies do not like drying off.

**Cutting Back India Rubber Tree, etc.**—What shall I do with an India rubber tree twelve feet high? When is the best time to cut it back. How are Begonias kept during the summer, in the shade with little water, or watered like other plants? Can I keep Cactus in a conservatory all summer, or are they better out of doors? How is the paint for fountains mixed so that water will not affect it? Bucyrus, Ohio. MRS. D. W. SWIGART.

**Answer.**—An India rubber tree may be cut back in the spring without injury, but it would have been better to have pruned it before it became so tall. Your Begonias should be watered and treated like your other plants, if they are of the evergreen varieties. Your Cactus can be kept in a conservatory. Will some of our readers kindly answer the last question?

**Lilium Fulgens.**—Please tell me if Lilium ful-

gens is tender or hardy? If tender, how shall I treat it? J. P. J.

**Answer.**—It is perfectly hardy; plant it in rich light garden soil and it will come up and bloom every year.

**Verbenas Sickly.**—What is the matter with my Verbenas? I set out fifteen plants in May, which grew vigorously under good soil and treatment. A few weeks ago I discovered that one of them began to wilt, commencing with one shoot, and finally spreading to the whole plant. I have lost nearly half my plants, and no treatment seems to help them in the least. There are no worms at the root and no lice on the plants. What is the matter, and what shall be done? A. SHULEHOT.

Keene, N. H.

**Answer.**—It may be cut-worms; examine at the root and see if you can find a brownish gray malicious-looking worm. Possibly you have them in too wet a soil, which would produce the effect you describe.

**Rooting Madeira Vine.**—Has any one ever rooted a Madeira Vine? I have one which was cut off when taking up the tubes in the fall. I put it in a glass on a mantel, in water, and it rooted in a few weeks. I potted it, and it is growing while the tubes are resting in the cellar. Mrs. A. S. Butter Valley, N. Y.

**Answer.**—We have never heard of this being done, but there is nothing strange in it. Cuttings of the tops of many tubers root firmly. Choice varieties of potatoes are sometimes so increased. Your plant will form tubers in the ground.

**Gardenia Dropping Buds, etc.**—I have a Gardenia which was full of buds when bought of a florist three years ago; the buds all fell off, and have done so ever since. How shall I treat Clerodendron Balfouri? How should Azalias be managed after blooming, and what soil do they require? Do Camellias never bloom unless grafted? If they do, at what age? MRS. ELLEN C. HARRIS.

Vincennes, Ind.

**Answer.**—Your Gardenia dropped its buds from the sudden change of temperature at first, and has done so each year from either being kept too cold or in too dry an atmosphere. Gardenias like a moist warm temperature. Clerodendron Balfouri should be kept warm when growing, less heat when at rest; soil, coarse, peaty loam with fine sand; it is deciduous; root should not dry up when at rest. Pot your Azalias in rich, sandy loam, with a little peat, as soon as they have done blooming. Seedling Camellias do not bloom until large, unless grafted; your Camellia, if from a cutting, ought to bloom; get as much growth on it as you can, and it will soon flower.

**Plants for Baby's Grave.**—Please tell me what plants would be pretty on a baby's grave. I should like something which will flower most of the time. South Ballston. T. S.

**Answer.**—It is difficult to find any hardy plant which will always be in bloom. Plant in autumn some clumps of Snowdrops and White Crocus (Caroline Chisholm is the best), then some single white Violets and some Lily of the Valley, some white Japan Lilies and some white Colchicum. All these are hardy and will live from year to year. Then every spring set out some white Verbenas, or any low-growing white bedding plant.

**Evergreens for Centre of Circular Beds.**—

In my front yard I have seven circular beds, nine feet in diameter, on the edges of which are planted ever-blooming Roses. I want three evergreens of different varieties for the centre of each circle, taller for the centre, and graduated to the sides. I like the Box and Rhododendron—would they do?

Daneyville, Tenn.

JULIA A. POWELL.

**Answer.**—For the centre bed, Cupressus Lawsoniana, next on the right, successively, Retinispora plumosa, Green Tree Box and Rhododendron everestianum, on the left, Retinispora pisifera aurea, Silver Tree Box and Rhododendron album elegans. These would be always beautiful.

**Geraniums, etc.**—How can I have my Lady Washington Geranium bloom a second time? I have one with eight large clusters of blossoms; but my former experience is after they have dropped, a good growth of foliage but no blossoms. I put some Water Lilies in a tub in my yard; the stalks make rapid growth, but when they get out of the water they turn black and die. MRS. H. C. CARPENTER.

Oconomowoc, Wis.

**Answer.**—Your Geranium will not bloom continuously; grow the foliage well in full sunlight and in time you will have more bloom. Place the tub in full sunlight, let the earth in it cover the tubers of the Lilies, and if the growth is weak, make the soil rich; the leaves should not come out of the water, but should rest on the surface. The tubers must be large to bloom.

**White Worms in Pot Plants.**—Please tell me how to destroy the small white worms in pot plants. J. C. MOORE.

**Answer.**—We have repeatedly answered this question in the CABINET. Shake out your plants and repot in fresh soil. Lime water is of no use for these worms, but it will rid pots of common earth worms.

**Roses Unhealthy, etc.**—The leaves dropped off my Roses early in the winter; then the leaves started afresh, but wilted and died. Where can I get a book on Rose culture? LUCY A. MOREHOUSE.

White Lake, Mich.

**Answer.**—The Roses were killed by gas of some kind, or by smoke in the air. Parkman on the Rose, or Parson's Rose Culture, can be obtained for you by any bookseller.

**Roses in Conservatory dying.**—I have a conservatory warmed by the sitting-room and by a small stove. My Roses put out fresh leaves and look thrifty, and in a couple of days wither away without any visible cause. They have no insects, the soil is good, and I give them plenty of water. There is good ventilation, and I have examined the soil and find no trace of worms. I am at my wit's end to know what to do. Ottumwa, Iowa. MRS. J. T. DOUGLASS.

**Answer.**—The trouble is not in earth or water, nor yet in the plants themselves, but in the air. Your coal stove allows the escape of gas and the plants are poisoned. Roses are very sensitive to the poison of coal gas. Delicate plants will not thrive in a vitiated atmosphere.

**Agapanthus not Blooming.** Can you tell me how to make the Agapanthus bloom? Beaver Dam, Wis. MRS. LEWIS.

**Answer.**—It usually blooms very freely every summer if the plant is strong. It needs a good, rich soil, not much water in winter, but plenty in summer.

## Flowers.

## A SMILAX HARP.

At one of our windows, upon a pretty stand, sat a deep dish; within this two pots containing *Myrsophyllum Asparagoides*, the Smilax.

Raised from seed planted in the spring, out of doors, its bulbs had been transplanted in October to the sandy soil here given them. Between the pots we introduced a wire harp, or, rather, the lyre of Erato, the Greek muse. Hitherto the vines had cast themselves about in a listless, undetermined manner. Now they had something on which to expend their energies—an object worthy of their abilities—and ere long they had nearly covered the form with their shining green foliage.

One of the most lovely of Christmas decorations is this Smilax harp. With a little care in guiding its sprays, the lyre will always present a symmetrical appearance.

After it is well covered the vines may be turned downward, and allowed to stray over the stand upon which the dish is set.

ANNE G. HALE.

## BEGONIAS AND OTHER FLOWERS.

I sit down with the hope of saying something novel and amusing in floriculture, not that the ladies need the instruction, but to prove some of the floral books deceivers and snares for our beautiful flowers.

To begin at the beginning, I saw a phrase about a year ago, saying, "Begonias will not amount to anything out doors," that is, planted out. Now I deny in toto the truth of that statement, and my reason is plain, and which same I now rise to explain. I have always religiously kept my Begonias in pots until last summer.

One day I was walking down town and saw a great bush growing in the centre of a flower-bed, and in full flower. I went in to make a further investigation, and lo! it was a Begonia Oilifolia; there it stood three feet high and about as large round as a barrel, and was covered with blossoms. I had thought mine were very luxuriant, but they dwindled down most alarmingly. I went home and immediately planted mine out, and one of them stayed out until after heavy frosts, and wasn't hurt in the least, which proves beyond a doubt that they can be planted out to advantage, and are remarkably ornamental, especially on the north side of the house, where scarcely any other large plant will bloom.

Of course, I do not mean that they will succeed like a Zinnia, anywhere, but by planting them where they get the sun only part of the time, and giving an abundance of water, you will have no reason to complain of its not repaying you for your trouble. They will stand considerable heat, as any one must know to have seen them flourishing last summer, when even I

was almost wilted. I have tried several of the flowering kind out of doors, and the experiment is in every way satisfactory.

And now about those lovely creations of Nature, the Calla. I have had the most gratifying success in my experiments with them, and never again will I consent to dry them off in the summer. I separate the roots early in the summer, and that naturally retards the growth some, and then stand them under a tree out doors, and keep them wet, and let them grow in early September. I pot them into larger pots and bring them into the house, and the consequence is I have them in bloom before Christmas; I have them in bud now, so there is another slight misunderstanding on the part of the florists. I suppose they think because the Calla on the banks of the Nile dries off

planted my Calla in the crock with nice rich earth, and stuck ever so many bits of Tradescantia all round the edge; then I took a hand-basin and put the Calla in, filling the basin with water, and stood it on a little round bouquet table in the window, where it constantly attracts notice, the Tradescantia falling all round the table, almost concealing the pot. The basin and crock should both be painted alike; mine is brown and is very pretty.

I saw a lady's article on propagating plants by rooting them in sand. I have no doubt it is a very nice way, if you can make the slips stay there; but mine are always getting wrong end uppermost, and as they refuse to root in air, I gave that up, and now I just plant them in little pots of light rich soil, and they seldom disappoint me.

For Heliotropes, I have a way "peculiarly my own," as the novels say. I break a number of slips from the parent plant in the spring, and stick them in a shallow box of earth and cover each with a flower pot, taking care that the earth is kept moist; after they are rooted I take the pots off at night at first, and gradually expose to light and sun. I have found this an admirable method, and thought it worth communicating.

My Roses seem to be especially obliging this season, for I never had the cuttings root so readily, and my Roses out doors are blossoming yet. I have a box of earth and sand mixed for Rose slips, and keep it in a shady place, and they generally root if kept damp.

I am a great admirer of handsome foliage, and Caladiums in particular. I have an elegant large one to grace the centre of my Portulaca bed, and it forms a lovely contrast to their bright colors; when I took the bulb in this fall it had a tiny little Caladium just leaving out. A brilliant idea of having it in the house at once struck me so forcibly, that I went and potted it immediately, and to be sure, it has gone on growing as if it had never been disturbed, and is such a lovely green, that I am quite charmed.

I had a nice cigar box last summer, and thought it would make such a nice hanging basket, but what to cover it with was the question. I bored holes through the corners and put wire through to form rings to fasten the cords to; then I covered the outside with cone work and coffee beans and acorns, beginning at the

edge and ending in a cluster in the centre. I made acorns answer for feet; I lined the box with tin and filled it with striped Tradescantia and a Begonia for the centre. I hung it in the window with scarlet cords, and it is an object of beauty that would do credit to a professional instead of an amateur.

I have a Salvia that I think is worth mentioning. I had not much faith in its blooming late, but nevertheless I purchased two, and planted two; one grew so large that I fastened it to the fence, and it nearly covers it, and notwithstanding that we have had several hard frosts and one severe snow storm, it still tosses its scarlet flowers to the wind. A. F. P.

A SMILAX HARP.

part of the year, it must do so here, but we don't live in Egypt, and neither does our Lily; it is a great wrong to the poor flower, for undoubtedly "it would if it could, but it couldn't" grow when it had no water.

That reminds me of a very beautiful way I have fixed my Calla, and one that might be copied to advantage: I took a large stone crock of my mother's, that was the shape of a flower pot, only glazed nicely, and would not evaporate water so rapidly, and drilled a hole in the bottom. Yes, I really did it myself, with a large iron nail and heavy hammer. I hammered very easily, and pretty soon it was done. I

## In-Door Gardening.

### WINTERING PLANTS IN CELLARS.

We frequently see it recommended to winter certain half-hardy plants, Geraniums, etc., in cold pits or frames, and the possessors of these conveniences have reason for rejoicing, but at least a large majority of flower-lovers have to depend on the cellars, as a substitute. In fact, for delicate people, or invalids, a cellar is more easily managed than pits or frames, as access can be had without exposure to the weather. Frames and pits need much care in the way of opening, airing and protecting from sudden or extreme changes of temperature, although the plants are more forward in the spring, when thus wintered. Most woody plants, such as Orange, Lemon, Oleander, Pomegranate, etc., will do perfectly well in an ordinary cellar, as they remain dormant till late in spring, while Roses, Pinks, Hydrangeas, and Jessamines, will start so much as to require removal to the upper regions at an earlier date. If one has a convenient room, at a temperature of about sixty or sixty-five, this is an advantage, as it admits of Roses blooming in mid-winter and until spring, but I have always found them liable to red spiders, in a room sufficiently heated for my own comfort. In that case, I take one crop of buds, and then return them to the cellar again. Of late winters, I have been able to keep them back until about March, by giving the smallest possible quantity of water, and placing them in the coolest part of the cellar. I think more failures result from erroneous management, as regards watering, than from any other cause. If your plant is in a large pot or box, with a good deal of earth, never water just before placing in the cellar, but have the soil just a little moist, and only give from time to time just enough to keep the stems from shriveling, although with shrubs which retain their leaves, such as Oleander, Orange, etc., a little more may be allowed. In fact, Oranges and Lemons should not be allowed to drop their foliage at all, if it can be prevented. Their leaves are more liable to drop the first few weeks than afterwards. It is a curious fact, that the green fruit on them will turn yellow, as if ripe, and when again removed to the open air, become green again, and go on growing. I have known fruit to remain in this manner over two winters. Towards planting time, water them well several times.

Pomegranates need only the least possible quantity of water until near March. The time will vary a little, according to the warmth of the cellar.

If the storage of vegetables, etc., demands a daily opening of outside doors, for a few minutes, it will be very beneficial to the plants, unless for a few days of the very severest weather.

Some plants will winter perfectly well simply placed on the cellar bottom, without boxes or pots, and a little earth piled about their roots. The possessor of the most thriving Pomegranate I ever knew of, told me that she wintered it in this way. Abutilons and Oleanders can be thus treated, and then bedded out in spring. If rats or cats have access to the cellar, a little vigilance will be needful.

Carnations, not needed for winter blooming, will do

well in a cellar; all Zonales, and sometimes sweet-scented Geraniums, also. Of course, we should be glad to have them in the windows to enjoy, but if we are short of room, it is something to have a good stock forthcoming at gardening-time, even if leafless. I have found plants in this state liable to sunburn the stalks, when first bedded, which about ruins them. If possible, they should be placed in a shaded situation, as early as the weather will allow, and hardened a little, before bedded out. It is better to risk a few pretty cool nights, than to wait until the sun gets too hot, I think. I usually shade, for a few days, with something on the side most exposed to the sun. Smile not, dear reader, but a few old shingles are invaluable.

The pink Salvia, Fuchsias, and Feverfews, succeed admirably. I take cuttings of the latter, about the middle of September, when there are usually a good supply of unbudded branches, and, removing part of the leaves, place eight or ten in a small cigar-box, and set them in a shady place, and by cold weather they are well rooted, and make nice plants for bedding

required. Beware, however, of applying too much at once even then. Little and often should be the rule. I take it for granted that citizens with sub-cellars have no place out-of-doors for plants, but if it were not for the gas, some might be kept even in those. I have wintered plants, many years since, in cellars wholly without windows.

Tradescantias, Lophospermum, Sedums, Deutzias, Lilies of the Valley, Dicentras, Astilbe, Jasminum Nudicaule, and many other hardy plants, may be potted and kept in the cellar until the buds begin to swell, and then brought into a warm room, when they will soon blossom nicely.

I should here except the Tradescantia and Lophospermum. Jasminum Nudicaule will be a sheet of bloom within a week or ten days. Lilies of the Valley may be forced at any time in winter, in this manner: Bring them up about three weeks before the flowers are needed, and put in as warm a spot as you have got. For the others, exercise a little care about too much heat, at first. Bulbs, when kept in a cellar, should be examined occasionally, to guard against both too much and too little moisture. Dahlia roots, if shriveling too much, may be sprinkled very lightly with lukewarm water, but with Gladioli, Cannas, Tigridia, and Oxalis, the danger is apt to be from the other extreme. Paper bags, hung near the top of the cellar, and beneath the floor of a room where a fire is kept, afford admirable quarters for all these, except Dahlias. Jockey Club (*Mirabilis nyctag in flora*) will bear the most drying of any bulb I know of and come out all right. Vallota is better placed in a cellar than kept growing all winter. So, also, Caladium Esculentum. Here let me caution my readers not to trust Tuberose or Achimenes in an underground room. A dry, warm place is indispensable to them, especially the Achimenes.

If a cellar affords a sunny South window, Verbenas may be wintered in it very fairly. It is best to have a shelf placed so that the tops of the pots may come just below the lower edge of the window-ledge. This may be easily effected by means of a hanging shelf, suspended by loops of strong cord or rope. I prefer boxes to pots for cellar use for

Verbenas and many other small plants.

Mice are sometimes troublesome, eating plants even when apples and vegetables are plenty. They are particularly fond of Tigridia bulbs and Carnations. Cats will also eat Carnations, apparently in lieu of grass and catnip. A HOME BODY.

### PASSION FLOWERS.

The Passion Flower, or Flower of Passion, received its name from the early Roman Catholic missionaries, in South America, who found in them symbols of the crucifixion. They discovered a resemblance to the crown of thorns in the fringes of the flower. They compared the styles, with their capitate stigmas, to nails, the stamens to hammers with which to drive them, and the tendrils of the plant to cords. We have had a plant for three years, and last summer it bloomed for the first time. We noticed the first bud two weeks and a half before it blossomed. The flowers come out between 12 and 1 o'clock, begin to fade about 10 the next day, and close early in the afternoon. M. R. T.

PICTURE FRAMES DECORATED WITH FERNS.

## The Home Circle.

## ANSWERS TO QUESTIONS, AND GOSSIP ABOUT HOME AFFAIRS.

## CROCHET.

Miss A. M. A., New Orleans.—A new book on Crochet, etc., by S. Annie Frost, one of the new editors of "Lady's Book" (Godey's), and just published by Mr. Williams contains all you seek to know; the fancy work in Godey's is the same as the German "Modenwelt," in which those terms you named were used. You will find the advertisement in the CABINET for October.

## "RING-WORK,"

consists only of covering brass or wire rings with silk, or zephyr, in buttonhole stitch, then uniting them, using beads, spangles, and buttons, (as taste suggests) on the points of union. Besides personal articles such as satchels, purses, etc., elegant wall-pockets, hanging-baskets, lamp-shades, card-stands, etc., are thus made.

## TO PRESERVE WHITE FLOWERS.

Mrs. G. A. T., Liberty, Texas, Miss L. S., Rochester, N. Y., Mrs. M. D., Madison, N. J., have been greatly discouraged in their endeavors to preserve white flowers, by means of the paraffine coating. It is done successfully, however, as we know from experience; and in cases where there is failure, we fear the material is not of the finest character, which is absolutely essential; or is used too hot, or the opposite, or perhaps the flowers may have been too succulent, or not coated thoroughly. It is well worth persevering in. The handsomest pieces we have seen, were a cross, two feet long, and a wreath, sixteen inches in diameter, very heavy, and composed of many varieties of flowers. They were done seven years ago, and are still perfect, we understand. After the funeral of a loved wife and mother, they were enclosed in frames, protected by glass, and hermetically sealed.

## SPLINT WORK.

Mrs. G. T. H., Madison, Ill.—Next month we hope to describe the Wood-Splint Work fully. It is well adapted to all kinds of household elegancies, such as hanging-baskets, standing and card frames, easels, fern-cases, wall-pockets, crosses for ferns and autumn leaves (either as rural ornaments or for mantels and brackets), hanging-odorators, brackets, etc. Such dainty, exquisitely lovely knick-knacks, you cannot imagine.

## BRAID.

"Anemone," Colorado Territory.—I scarcely know whether I understand the "braided rope, made of worsted (alpaca) braid square on the sides, yet slightly elastic."

Some years ago an ornamental braid of the kind you appear to describe, was greatly admired and used by ladies for the hair, which was then dressed with braids of hair, velvet, etc. Such braids would indeed form beautiful suspension ropes for heavy hanging-baskets, and to loop about curtains, lambrequins, etc., or as embellishment for cushions, rugs, and other household articles of the kind, would be really elegant.

## FRET SAWING.

"Mary."—We know of no one kind of art work, so well adapted to the articles you require, as that of "Fret Sawing," and carving; on front of wrapper of the CABINET you will find a list of books containing designs for every article (in wood) that can be conceived. You named a card-basket. You should obtain some white wood. By cutting out a set of panels, then lining with velvet or silk of some bright pattern,

and (if necessary) binding the edges with velvet ribbon, or running chenille, in holes made on the edges, you have an article as elegant as the costly beauties imported from Europe.

Those fond of fret-sawing, should certainly obtain a set of carving tools as well as saws, for there is no comparison between a piece of work, merely sawed out, and another, exactly similar, finished up with these carving tools. By the way, have you seen the charming little Swiss clock, made with the fret-saw and carving tools? You can carve the clock yourself, and obtain the works—excellent ones—to fasten within. These books on fret-sawing are invaluable to every tasteful housekeeper; and such a ready and delightful means of keeping active boys busy, is immeasurably valuable to us, these long winter evenings. We would certainly advise you to obtain one of the books of designs, a set of saws, etc. You will be charmed.

## ADORNING TABLES.

To Anxious Housekeeper: There can be no ornament so beautiful, so simple, and altogether available as flowers. It is now near winter, and blossoms will be scarce, but you can form a charming centre piece that will continue a "thing of beauty" for months, by covering a bowl or round box with scarlet flannel, and any broken goblet with cotton-batting (raw cotton). Sew on smoothly and make quite wet; soak flax, or water-cress seeds, until sticky, then cover the whole surface with them; place in a dark, warm place for a few days, when it will be found that the seed have sprouted, and you may then bring out to the warm sunlight, when, in a day or so, the whole surface will be covered with a mass of soft, lovely green, while gleaming through the whole, the scarlet and white groundwork imparts a charming effect. Place the bowl upside down, with the goblet on it, like a little dome, and you have one of the loveliest table ornaments imaginable, and which is greatly admired even in our cities.

Or you may use a vase or whole goblet for the top part, covering as described, then place a piece of cotton on the top, and nearly fill the vessel with water, scatter some rice, canary, and other seeds on the top of the cotton, making it just touch the water, or suspend an acorn by a thread until it approaches the surface, or put a sweet potato in the water. In either case you will soon enjoy the rare sight of growing rice or grasses, a tiny oak tree, or an exquisitely-graceful vine.

These water-ornaments may be multiplied in various ways, for even a bunch of wheat ears, kept in water, presents a lovely sight, during the winter, when greenness is at par.

An excellent method of utilizing old poultry, was given in last month's CABINET; you doubtless observed it.

## SALADS.

To your last question we would say, salads, sauces, and made-dishes of various kinds, are the greatest helps to getting up nice meals; and we do not use them nearly enough.

## JARDINIÈRE CANVAS.

We would explain to several ladies who have written to ask concerning it, that Jardinière canvas is here called gold and silver perforated card.

Ladies have no idea of the exquisite beauty of the white perforated card work. It appears, when well done, like chiselled marble. We have just been making what is called, in our German magazine, a goblet, but we would term a vase, inasmuch as it is shaped like a graceful vase with a lid. This stands about ten to twelve inches high, and is so made that it

appears richly carved, the pure white of the card imparting a marble-like appearance. Indeed, beneath the glass shade provided for it, it appears like, and is invariably taken for marble. Lovely toilet sets, consisting of glove, handkerchief, powder, jewel and sash boxes, bottle-stands, etc., mural ornaments of various kinds, such as plaques, brackets, etc., are, when carefully made, of the most artistic character. But we should recommend it most particularly for the more delicate kinds of elegancies, as pure white will, of course, become soiled, in time, and might better be protected. The cross shown in "Household Elegancies" is, when framed in a recess, a lovely ornament, though several articles we have made more recently excel it in artistic design.

## WINDOW TRANSPARENCIES.

"Claude Melnot" asks a few questions concerning window transparencies, for hall windows, etc. This class of embellishment is *ad infinitum*. We would recommend, however, the Vitromania or Diaphenie plates as being the most superb of anything yet tried; excelling even stained glass in its exquisite softness and perfection of shading; and to such a high degree is this art carried in England, that artisans are employed to apply the plates to the windows of chapels and other public buildings.

We have recently been ornamenting a large lantern over a hall-door. It consists of two large plates of glass, sixteen by twenty inches. In the centre of each plate is a lovely scene—of Oriental character—palm trees, a sheet of water, with goudolas, and one or two figures in richly-tinted garbs. On the other a part of tropical forest—camels and turbaned Turks reclining beneath luxuriant trees, with lovely background, etc. Surrounding these are a dozen scarlet medallions, each one bordered with blue, gold, and scarlet, and containing a different scene, or group, the whole finished with a rich diapered-grounding and border in vivid colors. Every one exclaims over our extravagance in having a stained-glass window, whereas the entire thing cost less than \$5, though you might imagine it at \$50, \$75, or even \$100, perhaps, according to the cost of stained glass. We wonder that ladies do not attempt this work, to a greater extent than we imagine they have, for it would certainly give great satisfaction. Several lanterns we got up for a village fair, last season, sold for high prices, and others were at once ordered. For lamp-shades and hall lanterns, the smaller plates are eminently adapted.

## VERMIN.

I am glad to avail myself of the opportunity offered in the FLORAL CABINET, to ask some questions of older and more experienced housekeepers than myself. My great trouble at present is—vermin! I have, since May 1st, moved into a dwelling literally infested with bed-bugs, roaches, and red ants. What must I do to rid the place of them? MRS. G. B. MANLOVE.

Answer.—During all my long married life, I have followed the established rule of my ancestors. That is, each March all bedsteads, closets, drawers, etc., are well painted with alum solution—one pound to one gallon—and if new bedsteads are purchased, they are well saturated with a poison composed of half a pint of alcohol, quarter pint of turpentine (benzine will answer as well), crude sal. ammonia, one ounce, corrosive sublimate, one ounce, camphor gum, one drachm. Dissolve, and with a small sash-brush paint each crack and crevice; or, better still, inject it into all the parts. I have found this entirely effective, if persevered in.

AUNT CARRY.

NEW YORK, NOVEMBER, 1877.

**MY WINDOW GARDEN.**

No novelty in this subject, surely; for your readers are often treated to descriptions of window gardens. But they almost all tell of spacious bay-windows, filled with costly plants and expensive wardian cases, very beautiful and very interesting to read about, but offering few suggestions to us poorer people. Indeed, I think them rather discouraging, as they tend to make the inexperienced think such things necessary to success, and that there is little or no use trying, as not one woman in twenty possesses such luxuries. A few more look forward to having a bay-window when the farm is paid for, or the new house built, while a great many more, like myself, feel that they must be content to get the house with ordinary windows; and to such, perhaps, my window garden may furnish some hints that will be of value. My sitting-room has one window facing south, five feet long, coming within two feet of the floor. In front of this, on a level with the window-sill, I had a shelf put up, twelve inches wide, and extending eight inches beyond the window on either side, making it three and a half feet long, supported by wooden brackets at each end, and by a small iron bar fastened to edge of shelf in centre, and extending backward to base-board. This I had inclosed by a board six inches wide, finished around the top with molding, and painted like the rest of the room. This shelf was furnished with a tin bottom, doubling up about an inch. When it was ready for the plants, I also placed, a little above the middle of the window, small iron brackets that can be bought at any hardware store for about forty cents. These hold a shelf eight inches wide, and about eight inches shorter than the lower one; and in the ceiling, eighteen inches out from centre of window, is a small hook to hold hanging basket. Now come the plants. In each end I put a pot containing Madeira vine, which is trained up each side to top of window, thence to hook, forming many festoons on its way, and making a beautiful frame for the whole. In the centre is a large Calla; on either side stands a lustre and a speciosa Fuchsia, my favorite flower, and well do they

deserve the name; with good soil and ordinary care they will blossom ten months of the twelve. Then follow Geraniums, single and double Roses and Calceolarias. With judicious packing, I can make the shelf hold twenty-four pots, from four to six inches in diameter, too close for symmetrical specimens; but it gives a mass of leaves and blossoms more effective for the whole than if they were not so close. On each corner of the box is a little board, fastened securely, as a foundation for the prettiest specimen I possess. A low-growing Fuchsia or dwarf Veronica make nice plants for this position; and in all the pots I put slips of Tradescantia, or Wandering Jew, as it is commonly called here, which nearly carpets them, and trails over the edges, forming a lovely finish. In center of upper shelf I have a small orange-tree, which reaches to the ceiling; on either side is grouped miscellaneous plants, according to size and contrast of foliage. Then comes my basket. This has a white Begonia in the centre, and the indispensable Wandering Jew around the edge, which has grown at least six feet long. I have looped these up around the basket until it is one ball of green. I forgot to say the pots in the upper tier were also covered with Wandering Jew, which I kept short, so it grows thick, and nearly hides the pots, and helps the general appearance very much. I think I can safely say mine is the prettiest window of its size I ever saw, and the expense is very small. I have used this arrangement for two years, and the only change I would make would be to hang the basket farther from the window, as the vines tangle among the leaves of the plants, and render it difficult to move them without breaking the foliage. With regard to winter treatment when arranged so close to glass, at night I close the blinds, and slip a newspaper behind the plants. As the blinds are calculated to open from the inside, which would necessitate moving the plants each morning to open the window, I fastened a string to the catch, which I passed up through the slats to the outside; so, by pulling this, I can open quickly from the outside. Where there are no blinds, I find paper flour-sacks, pasted together and furnished with loops to fasten to casing with, are an excellent protection. Now, a word about pots. As they are hidden from view, it does not matter so much about looks, and I find the two pound tin fruit-cases excellent for Fuchsias and Roses, as the rust does not injure these plants. Indeed, I think it a benefit to roses, and I think a very good fertilizer is furnished them by sprinkling a few iron filings from the blacksmith shop on top of soil, or by placing one or two rusty nails in the dirt. Just a little of it, as too much would be injurious, as it is of any fertilizer. I think it brightens the hue of the flowers considerably, and gives a darker tint to the foliage.

**COMPLIMENTS TO THE FLORAL CABINET.**

The following are but a few out of thousands of letters received where the writers express their admiration for the FLORAL CABINET. Our new readers will judge from these opinions what the old readers, who have taken it for years, think:

"It is as welcome as spring flowers, as reviving as a quiet shower, as pleasant as a friend's visit; in short, is essential to my happiness."

"We are taking a great number of papers, but would gladly give them all up to retain the CABINET."

"Dear Editor of FLORAL CABINET: You wish to know how the CABINET is liked. I can speak for myself and several of my friends that I have heard express their opinions. I can but say, with your English friend, it is the purest and best of all the periodicals that I subscribe for, and if I could have but one, it surely would be the CABINET; and as to enlarging it, and in regard to increasing the price, I shall continue to take it if it is increased in price to double its present low price it is published for. I feel that I cannot say enough in praise for the CABINET for myself and friends. It always has been and always will be a welcome visitor to me, and I hope to many others."

"I am much pleased with the CABINET, it is a welcome visitor, and I do not see how I could do without it. It is the sweetest home-paper I ever saw, and I trust the time shall soon come when it will be found in every household. I only add these few lines in honest praise of our dear CABINET."

"M. L. FISHER."

"MINNIE E. BERRY."

"The CABINET is so admirable in every respect I scarcely know where to imagine any improvement. It is a perfect sunbeam to me, and I only wish it came every week, so eagerly do I devour and digest it."

"Mrs. R. S. TRUSLOW, Kanawha C. H., Va."

"My house would not be complete without our treasure, THE FLORAL CABINET. Indeed we should all think the new year not commenced aright were we to be robbed of so much sunshine as your beautiful paper brings to the entire household."

"Mrs. H. N. S., Deerfield, Mass."

**PUBLISHER'S ANNOUNCEMENTS.**

**Treasures of Garden and Woodland.**—This is the title of our illuminated Floral Frontispiece for 1878. It is the most perfect specimen of floral illustration ever produced in the United States. It is of the same size as "Gems of the Flower Garden," but while that contained flowers in profusion, this is more artistic in its collection of brilliant Autumn Leaves, Ferns, Roses, etc. Subscribers will find it well worthy of appreciation. Club agents will find it a decided help in obtaining subscribers for THE FLORAL CABINET, and an advance proof will be sent for agents' purposes for 25 cents, which can be deducted when club is made up; but the Frontispiece itself cannot be sent to subscribers until the January No. of CABINET is issued. The rules of the post office department limit it to the January No. If sent with any other number there would be extra postage.

**New Books.**—Lovers of beautiful household books should not forget the announcements we made last month of some splendid additions to our series of household books. They are really charming, and full of multitudes of hints how to improve your homes. "Beautiful Homes" will be ready about Nov. 20; "Evening Amusements," Dec. 1. All the others are now ready.

**Get up a Club, Price Reduced.**—Where any person will raise a club of 5 subscribers at \$1.20 each, with \$6.00, a 4th copy extra will be sent free to club agent, or a club of 6 may join together and the 6 copies sent to one address for \$6.00. Members of clubs desiring the Floral frontispiece, will each remit 10 cents additional.

To any one raising a club of 3 at \$1.20 or \$1.30, will be given one of the following: The Ladies' Guide to Needle Work, Embroidery, Knitting, etc.; "Every Woman Her Own Flower Gardener;" "Household Hints and Recipes;" "The Home of Washington," steel plate engraving; "Fret-Sawing for Pleasure and Profit."

A club of 4—to a Pocket-Book, with your name engraved in gold. A club of 10 will entitle club agent to both extra copy of paper free, and one of the above books, or engraving.

A club of 15 will entitle club agent to both extra copy of paper free, and one of the following books: "Beautiful Homes, or Hints in House-Furnishing;" "Household Elegancies;" "Ladies' Fancy Work;" "Window Gardening;" or a Pocket-book, with your name in gold, worth \$1.50; The Cabinet Collection of Balsams, worth \$2.00; The Cabinet Collection of Gladiolus, worth \$15.00.

**Beautiful Music.**—Back numbers of THE FLORAL CABINET contain dozens of splendid pieces of music, charming home songs and melodies. Not one of them is poor. Not one could be bought in a music store for less than 40 cents. Buy the back numbers, they are rich in merit, music, pictures, and reading.

**Back Volumes.**—New subscribers, who are pleased with THE FLORAL CABINET, will find in back volumes an immense fund of delightful reading, pictures, and the choicest of family music; there are single pieces of music so sweet and charming as to be alone worth the price for a volume. We will club these together with subscription for 1878, as follows:

\$2.00 will pay for subscription 1878, the steel plate engraving, and all the back numbers of 1877, January to September.

3.00 will include the above and volume for 1878.

4.00 " " " " 1875.

5.00 " " " " 1874.

6.00 " " " " 1873.

Bound volumes for each year will cost 65 cents for each volume in addition to above prices.

**Gardening.**—All interested in gardening, floriculture, plants, trees, shrubs, fruits, greenhouses, etc., will find the GARDENERS' MONTHLY and HORTICULTURIST very desirable. Only 30 cents on trial three months. \$2.10 per year.

**"Floral Cabinet" for Half Price.**—Any one sending a club of 5 subscribers to CABINET for one year will be entitled to a 4th copy of CABINET one year for half price.

**NEW AND NOVEL PRIZES.**

Desirous of encouraging the beautiful in household art and home life, we offer this fall a series of Prizes which have never been offered before in this country.

**1. The Prettiest Flower Garden.**—To any one forwarding us best sketch, or view, or photograph of their flower garden, or garden decorations, we will give, 1st prize, \$15; 2d prize, \$10; 3d prize, \$5. The sketch to be accompanied with description.

**2. Prettiest Window Garden.**—For prettiest sketch or view of the interior of a house, with window garden, will be given 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

**3. Prettiest Floral Decorations.**—To any one sending prettiest sketch of floral design, decoration, or ornaments, will be given, 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

**4. Prettiest View of House and Grounds, exterior.**—To any one sending best sketches of pretty house, its exterior, and surrounding lawn, vines, arbors, etc. 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

**5. Prettiest Home, interior.**—We desire pretty sketches or views of the interiors of charming houses, parlors, sitting-rooms, bedrooms, halls, and the various ways to ornament and decorate them. 1st prize, \$15; 2d prize, \$10; 3d prize, \$5.

These sketches, views, or photographs of interior scenes, to be sent to us before December 25th, when the prizes will be awarded in January, and the Prize Illustrations will be published in THE CABINET for the coming year, making, we believe, the most attractive volume ever published. The views of outdoor scenes may be sent before July next.

Ladies who cannot draw, can find some friend who can, or they can get photographer to visit the house, and photograph it freely. The sketch should be accompanied with description, and we will welcome all sketches of any kind which relate to the decoration of the home in any way, out-doors or in-doors.

**Special Offer. Seeds. Balbs.**—The special offer in October CABINET of \$3.00 worth of seeds and bulbs, and one of our \$1.50 books, or the CABINET one year, as a premium, is the finest offer ever made. You should improve the opportunity. You can remit the money now, obtain our certificate, and then procure the seeds, etc., at any time before June 1st next, 1878. You are not obliged to select them now.

# WINDOW-SILL COVER AND BLINDS.

This cover is made of maroon plush, and provided with a lambrequin of Java canvas, embroidered with maroon worsted, edged with like-colored cord, and decorated with rosettes and tassels of the same worsted. To make the cover, cut of the plush a piece wide enough to fit your window, and so long as to reach the floor. For living, cut a piece the same size of any kind of woolen cloth. The cover is provided with three pockets—a large one in the centre, and the small ones on either side—which are concealed by the lambrequin. For the small pockets cut out of the stuff that serves for lining, two double pieces, each eight inches wide, and seven inches long. Round off at the bottom, sew together, and insert into slits cut in the plush, at a distance of thirteen inches from the top, and four inches from either side. In like manner, make and insert the central large pocket, which is placed on a line with the others, and which is twelve inches wide

DESIGNS FOR LAMBREQUINS AND WINDOW OR DOOR CURTAINS.

WINDOW POCKET.

and sixteen long. The seams where the pockets are inserted must be neatly finished off with woolen cord. Now attach the lining; trim at the bottom with wide maroon worsted fringe, and bind the sides and top with worsted braid, after affixing the lambrequin which covers the pockets. This lambrequin is made of Java canvas, cut into three points at the bottom, a large one in the centre, and a small one on each side. Embroider in any appropriate design with maroon worsted, having first drawn the shape of the points with lead pencil. When finished, cut away the canvas at about the distance of half an inch from the pencil marks, hem this over on the wrong side, finish off with cord, and decorate each point with rosette and tassel. The blinds are of Indian gauze ornamented with painted flowers, birds, etc., bound with silk ribbon, and fastened top and bottom by means of steel rods to hooks, as shown in the engraving.

## DOOR CURTAINS, WITH EMBROIDERED BORDER AND DRAPED HEADING.

The illustration shows very plainly the handsome arrangement of curtains and heading. Their color should match the furniture, the border on the curtains being worked of two contrasting shades of cloth, on a light background. The fringe on the heading or lambrequin, the cord and tassels, are chosen of a color to match the border, which is finished off on each side by a neat little edging, worked of worsted somewhat darker than the color of the curtains.

# CANARIES.

Says a writer In this way I answer the question of "How I had such luck with birds?" Simply by allowing the birds to attend to their own affairs, and by letting them understand that their mistress would never harm them. Also by accustoming them to plenty of light, and air, and company, rather than, as recommended in books, keeping the cage in a dark room, for fear of frightening the birds. Make just half the fuss directed in bird-books over the matter, and you will have double the success in raising birds. Never give sugar, but all the red pepper they want. It is the best thing for them. And if your bird feels hoarse at any time put a piece of fat salt-pork in the cage, and see how the little fellow will enjoy it, and listen for the result. Give him flax seed once in a while, and if he appears dumpy occasionally, give a diet of bread and butter, with red pepper sprinkled in.

## Household Hints.

### HINTS AND AIDS FOR HOUSEKEEPING.

It is a far easier matter to write upon the subjects of housekeeping than it is to, in an easy and quiet way, perform the labors of a household. By means of the pen, however, many valuable hints and aids may be given to housekeepers, which, if properly used, will lighten their labors and lessen their cares. As good housekeeping is a matter of the utmost importance in every community and to all classes, so a good housekeeper is a person to be loved by the household and respected by all. The weather is growing cold, and soon much care will be necessary to preserve fruit and all things from freezing. As apples are not keeping well, many are canning them for use for the spring and summer months. The cans that are emptied in the latter part of the autumn and early part of winter can be filled with well-cooked apples and set away for use when needed. For this purpose the Spitzenbergens are excellent, as they are spicy and retain a beautiful color. The large pound-sweet apple is a most excellent apple to use to can, cooking it with sugar, the same as citron. The quarters will be whole if they are cooked slowly and not stirred. Put a little lemon in and it is a nice sauce.

At places where I have called, during the fall, I have found the ladies engaged in preparing rags for carpets. These carpets are warm, neat, heavy, and usually wear well.

The following is a cheap way of coloring cottons a beautiful blue, yellow, orange, and green:

To color blue, take one ounce of prussiate of potash, 2 ounces of copperas, one tablespoonful of oil of vitriol. Boil the copperas in iron; put in the cloth when it is hot. After emptying the copperas, put in the prussiate of potash and the oil of vitriol, and water enough to wet the rags well. Let it heat, and then put in the copperas rags, after rinsing them. After coloring, rinse well in clear water.

**Yellow.**—For five pounds of cotton, dissolve three-quarters of a pound of sugar of lead in a small quantity of hot water, and pour into cold water. Dissolve (after pulverizing) six ounces of bichromate of potash in cold water. Dip your rags first in the lead water, drain some, dip in the potash; dip into each several times. Color in tin or wood, and rinse well in cold water.

**Orange.**—Dip yellow rags in boiling lime-water.

**Green.**—Dip blue rags in the lead and potash, as for yellow. Color the yellow and orange first, as the blue will color the dye. If you wish the rags shaded, dip some more than others, or some a lighter blue than others. Rinse in cold water. The rags will all take a better color if they are wet in warm water before putting into either of the dyes. The oil of vitriol will burn whatever it touches before it is diluted. A few drops in a little water will take off all the stains from the dyes on the hands; then wash the hands in vinegar, and that will kill the life of the vitriol. The above recipes are all bright colors, and when made up in a carpet, make a nice, bright and cheerful-looking carpet for any room which it may be put into.

During the long winter months, when people are compelled to remain in-doors, one often gets tired of the surroundings, or weary of looking at the same arrangement of surroundings. This tiresomeness can often be relieved by changing the places or arrangement of the pictures and furniture. Beautiful vases and winter bouquets of natural flowers often cost nothing but

the time taken to gather, and all these help to relieve this weariness, especially in the rooms of aged people and invalids. Beautiful and bright-colored table and stand covers, chair cushions, etc., all help to make rooms look cheerful and pleasant. A very pretty stand cover is made in this way: Take a piece of bleached cotton and take any color of worsted braid you may prefer, baste it on in stripes; also, if you may wish, take strips of bright-colored flannel and cross-stitch it on, or feather-stitch it on with any color of worsted to harmonize, say scarlet with green or black, or blue with orange. The one I saw had several different colors of flannel and braid, the edge fringed with the different colors to match the centre.

Very beautiful and serviceable rugs may be made in the following way: An old sack of some grocer, then gather up all the scraps and bits of worsted and flannel and tear or cut into desirable lengths, thread them into a large darning-needle, and draw them through the cloth, taking only a few threads of the coarse cloth, in such a way as to leave both ends of the scraps on one side of it. The scraps should be drawn so closely together as to stand straight up, and also to cover the canvas, which must first be bound or hemmed. These can be drawn in so as to form diamonds, squares, or flowers. These being made of bright colors, the spaces about them are filled with more sombre colors.

As I have told how to make rugs, carpets, and stand cloths, I will now tell you how to make a very pretty lamp-mat. On a ground ten inches square, work any pretty pattern which will go round a space large enough to let a lamp stand, then take two strips of the canvas one and a half inches wide, and work in the centre a very narrow vine. Fringe out each side to the embroidery, then sew on to the mat in a loose twist; then work on each side of this twist a very small edge, and fringe out the edge of the mat. The mat is then lined with cardboard and silk, or anything you may prefer, and finish off each edge with bows of satin ribbon in each corner.

**Recipe to Preserve White Flowers.**—Let the flowers be freshly plucked, and of those kinds which have firm texture, of pure white, or at least very delicate tints. If the collection is to be preserved without separating the parts, the green leaves must be removed, as they require different treatment. This done, take fine paraffine, that is of the very best quality, melt in a clean new tin vessel placed in a pan of boiling water, which must be kept constantly hot around it, so as to keep the paraffine in a liquid state. In this thin and transparent liquid mass, dip the blossoms, or, if found more convenient, brush each one quickly with a soft camel's-hair brush, of small size, so as to give them a smooth, thin coat that will cover each part of every petal, and this will form a casing round them that will entirely exclude the air and prevent their withering. The perfect transparency of this material renders this coating entirely invisible, so the flowers present that natural appearance which constitutes the charm of this work.

Green leaves must be colored with green paint, in powder, tied in a muslin bag and melted in it. Other flowers may be done in the same way, by coloring the paraffine with paints, in powder agreeing in color to the flowers. Great care is necessary in having the paraffine perfectly liquified yet not so hot that it will cook the flowers, for in this case they will turn brown and decay.

**How to Water Hanging-Baskets.**—Set in the middle of the basket, or suspend over it, a deep vase or broken goblet, which should be kept full of water. In the water place one end of cotton worsted cords, drop the other end of them on different parts of the top of the

basket. The cords will cause a constant flow of water, the number of which may be increased or diminished according as more or less water is needed. The vase must, of course, be fastened so it will not tip and spill the water. It may also be filled with Wandering Jew, or anything that will grow in water.

**To Revive Faded Black Clothes.**—Boil three ounces of logwood in a quart of vinegar, and when the color is extracted, drop in a piece of carbonate of iron the size of a large chestnut. Let it boil five minutes. Have the article to be dyed sponged with soap and hot water, laying them on the table and sponge them all over with it, taking care to keep them smooth, and brush downward. When completely wet with the dye, dissolve a teaspoonful of salaratus in a teacup of warm water, and sponge over with this, which sets the color so nothing rubs off. They must not be wrung or wrinkled, but carefully hung up to drain. The brownest cloth may be made a perfect black in this simple manner. So many people have faded garments that this recipe may be of service in restoring them to a lively color.

**Excellent Whitewash.**—As housecleaning approaches so often to the busy housekeeper, it may not be amiss to say a few words in regard to whitewashing. There are many recipes published, and many no doubt are good, but I believe the following to be the best: Take sixteen pounds of the best Paris white, half a pound of white transparent glue; prepare as follows: The glue is covered at night with cold water, and in the morning is carefully heated, without scorching, until dissolved. The Paris white is stirred in with hot water, to give the proper consistency for applying to walls. Except on very dark and smoky walls, a single coat is sufficient.

**An Excellent Spruce Yellow Flour Paint.**—One quart of water, four ounces of glue, three pounds of spruce yellow; dissolve the glue by putting the water cold upon the glue the night before, then heat in the morning, being careful not to scorch it; paint while hot; add more water if too thick; dry three hours, then oil; use in twenty-four hours.

**To Make Furniture of Spruce Boughs.**—Take spruce boughs that are fresh and new grown, cut them the desired length, lay them upon the warm stove for a few minutes, when the green will all drop off; then form them into any shape you wish, fastening them in place with pins; whole chamber sets (toy of course), can be made of these; also picture frames, brackets, etc.

**Toilet Stand.**—A handsome combination stand for toilet table or bureau, is made of four cornucopias of white glazed cardboard. Ornament each with spatter work, cut two lids of cardboard to fit the top of two of these, spatter, bind with narrow scarlet ribbon, and fasten on with a tiny scarlet bow at the top. Make a pincushion to fit one, and cover the top with scarlet silk, embroidered with a tiny spray in white silk. Make a hairpin cushion of the remaining one, and cover with white net, darned with scarlet silk or worsted. Make a pocket of white silk, and fasten in one with a lid for jewelry, and a movable lining of white paper in the other for combings. Make a base of wood of suitable size and shape, polished, and given two coats of white paint. Fasten an upright in the centre an inch taller than the length of your cornucopias. Paint it also, and fasten the four cornucopias around this, letting the points rest on the base. Quill narrow ribbon around the tops of each, and finish with a tiny bow at each top and bottom point. A larger bow must be fastened with a silver tack on top of the upright.

## Household Art.

## HOW I IMPROVED OUR HOME.

"Where there's a will, there's a way," says the old adage, and in nothing is this more clearly exemplified than by the ingenuity which will develop in a woman of refined tastes and limited means in the effort to surround herself with such things as shall add to her own comfort and happiness, and to the attractions of her home. Money is might in supplying the needs of a family, yet if money be not plentiful, resolution and ingenuity can cover many bare places.

Spending money is one of the easiest things in the world, and any woman who is plentifully supplied with funds can surround herself with beautiful things. Yet, all honor to her, who, without money, by her own devices and handiwork, makes her home beautiful and comfortable. As I have had some experience in thus devising economical "ways and means," I propose to tell something of what I have accomplished.

Several years ago John invested our savings in a comfortable house, containing six rooms, into which we moved at once. No more moving days! No more house rents! No more crusty, unaccommodating landlords! Truly, my "day of jubilee" had come, and I was fully prepared to enjoy it. John had the house repainted, after which I found myself in possession of some paints—white, two shades of brown, some light stone color, a few paint brushes, *et cetera*, with which I resolved to do much, as John declared he could do no more until business brightened up.

I need hardly state that we live in a country town where there are few facilities for anything except gossip. Still, there are many among us who love the beautiful, and the CABINET is a welcome visitor in our midst, and our appreciation of it ought to insure us the favor of its other loving readers; but I am digressing.

We could not afford then to cover the front hall floor, so I determined to paint it. With a lead pencil, a long ruler, and a string, I laid it off into medium sized diamonds; these I painted alternately with the two shades of brown, and when dry, added a small white figure, like a shamrock leaf, in the centre of each diamond. It was tedious, I confess, as I had to mark the outline of each figure, but it greatly improved the appearance of the hall and saved much scouring, so I felt fully repaid for my trouble. Next I attacked the side-lights to the front door. I had a quantity of beautiful pressed ferns, delicate as frost-work. I selected a quantity of uniform sizes, and after brushing them over with weak mucilage, I arranged a border of small ferns around each glass, and a cluster of larger ones in each centre.

Of course the glasses were nicely cleaned before I began, and as the mucilage dried rapidly, I was soon ready to paint. I did not remove the ferns, but painted the glasses all over with white paint. They were beautiful, for the ferns had retained their green tint, and the paint being dabbed on, looked like real ground glass.

To those inclined to similar experiments, a word here about painting glass may not be amiss. Use nothing but pure lead and linseed oil. The paint will easily peel off if mixed with turpentine. The brush should be short, the hair—not the handle—new and small; take very little paint on the brush at a time, and have an extra piece of glass convenient upon which always to try the brush, else the paint will be thicker in some places than in others. Do not brush

up and down the glass as every streak will show, but handle your brush lightly, with a "dab, dab, dab," which, if carefully done, will produce a good imitation of ground glass.

I painted another set of side-lights once in this way: I had a quantity of beautiful leaves, ornamented with various designs, all cut from satin paper. These leaves, long years ago, were used by my mother to ornament silver candlesticks on party and ball suppers, before the days of kerosene and gas. These leaves I put on the glasses with thin mucilage, using four leaves to each pane of glass, the stems joining in the centre, and the tip of a leaf toward each corner. Then I put on the paint, but did not cover the leaves with it, only dabbing over the designs cut on them. Then when dry, I removed the paper leaves by moistening them with a wet sponge, and sometimes using my penknife to remove obstinate pieces. The designs were perfect in clear glass, which I washed carefully. Painted glass can be washed with water without soap. But I must return to my work on the aforementioned house.

The front door and hall being completed, so far as my ability went, I repaired to the parlor, so-called. We had curtains and some furniture, which I arranged to the best advantage. A few choice chromos were hung and festooned with long gray moss and autumn leaves, all from our own home woods. On the table I placed a stand of worsted flowers, the work of a tasty sister. At each end of the mantel I suspended hanging baskets made of the bowls of broken goblets encased in crocheted covers and filled with worsted flowers, among which many dried butterflies nestled, some poised in the act of sipping (supposed) sweets, others on the wing, being held in that position by a tiny wire inserted through the body. Not resting on anything, they really looked as if actually flying toward the flowers.

My vases of grasses also enticed a few butterflies to rest there. In fact, Bulwer's heroine, who believed butterflies to be the wandering, unpunished, yet unredeemed souls of unbaptised dead infants, would have thought me pitiless, for I murder the poor butterflies remorselessly. They are so natural and beautiful when dried and arranged in a room, that that same heroine's room, filled with living butterflies, could hardly present a greater variety of sizes, colors and styles than nestle amid the flowers and ornaments of my parlor.

But to return to my work. A powder keg sawed in two, stuffed and covered with some old green empress cloth, made two nice ottomans, and after arranging a few mats and other ornaments, I "rested from my labors" for awhile.

To render the sitting-room cosy, I had a sewing machine, some chairs, a carpet, and a cradle for baby to nestle in while I sewed. The old window shades, which had done duty many years, were too shabby to use, but while ruefully contemplating them, I noticed that they were painted cloth. At once my inaction ceased. I got a lambrequin pattern, without folds, and cut my shades into plain lambrequins, and painted them on both sides with the light stone color. When dry, I added a border of scallops made out of scraps of red flannel. The contemptuous shrug of a moneyed woman's shoulders could not have ruffled my calm content at the result. The sunlight danced so brightly through my lambrequined south window, that I decided to put my plants there, but alas! no stand had I. With John's permission, I ransacked his lumber-room at the store, where men throw aside many things which women afterward utilize.

Here I enriched myself with an old dummy with disheveled dress, an old spool-cotton stand, which had resigned its position in the store to a handsomer article, and an old bracket lamp, with the lamp gone, and bracket entire. The bracket was put up on one side of the window, the glass reflector suspended beneath, to catch any drippings which might fall from the pot of flowers which I fitted into the bracket. Then I went to work to manufacture a plant stand out of the old dummy. I cast aside everything except the triangular cast-iron bottom, already on casters, and the upright centre piece, which was five inches in circumference. Then I had made (first expense) three pieces of plank three-fourths of an inch thick, twelve inches wide, thirty-six inches long, with the sharp ends rounded off, and a hole in each centre large enough to slip over this upright piece. These I put on, one above the other, and on the top nailed a small round shelf, large enough to hold a flower jar. The height of stand was only twenty-nine inches, which I increased by putting on top a plant of tall habit. This was duly painted and placed at the window by my bracket.

Thus I had a portable, folding stand whose original structure attracted much attention. When the leaves were open, it formed a circle, and when not in use they could be placed parallel, and rolled aside. I must confess I was a little proud of my success.

Then the spool-cotton stand was taken into custody to be transformed into a workstand. The superfluous divisions were taken out and put away for future constructions into frames for my flowers. The glasses in front, marked with the name of the manufacturer, were taken out, soaked in lye, and when clean, replaced over the plain pine, which really contrasted beautifully with the walnut case. Then I took a half barrel, which had held sugar, inverted it, and screwed the stand to it. Then I covered the half barrel with part of an old brown skirt, and stitched on pockets, the entire length, but narrow, which in due time became receptacles for patterns, empty spools, and innumerable odds and ends which accumulate in every family.

I hung a group of family photographs over the mantel, set out an Ivy to train over them, and then sat down to my long-neglected sewing, in the midst of my home-made comforts. Since then many nice pieces of furniture have been added to my sitting-room, but none have ever afforded me more satisfaction than my dummy plant-stand, and spool-cotton workstand.

BERTIE SWEPSON.

## CURTAINS.

In a late number of the CABINET, a young housekeeper remarks that she has heard of pretty curtains being made of very common materials, even muslin. Really charming bedroom curtains can be made of unbleached muslin sheeting with a simple hem upon the edge. All the trimming required is a strip of bright chintz or cretonne, a foot in width, stitched horizontally across the top about two feet from the cornice.

The light falling through the unbleached muslin gives the fine ecru tone so much in vogue at present, and it is impossible to detect the nature of the fabric without close examination. The effect is precisely that of the fine twilled India material so much admired when combined with stripes of oriental embroidery. Really beautiful curtains for a parlor can be made of cotton flannel in the same way, and the effect produced is that of a rich cream-colored plush or velvet. It is impossible to judge of the beauty of these cheap and novel hangings without having seen them.

AUGUSTA LARNED.

## Household Elegancies.

## TOILET SET.

## PINCUSHION, GLOVE, AND HANDKERCHIEF CASES.

These are made of satin or velvet to correspond with each other, and with the bed-furniture and curtains. They are worked in silk braid of four different colors, one corner of each pattern being worked in a different color. The little centre pattern is worked in the same way, reversing the colors, and the whole braiding bordered with gold thread.

The pincushion is a cardboard box, lined inside with wadded silk. The top is stuffed to form a pincushion, and the sides are braided, each in a different color.

The glove and handkerchief cases are also lined with wadded silk, and scented, and the whole are trimmed with cord or fringe to correspond, and are alike pretty and useful for a lady's dressing-room.

## TOILET MAT.

The next pattern is designed for a toilet mat to match the set, and can be worked the full pattern for centre mat, and the centre pattern only for small cologne-bottle mats at each side. They should be worked on fine white Marseilles, in colored cotton braid, to match the pincushion.

TOILET MAT.

A fringe can be added by buttonhole stitching cotton to match the braid, in long loop stitches. They are pretty worked in white star braid.

## COLOGNE STAND.

Worked in Berlin wool and chenille upon perforated card-board, and trimmed with satin ribbon, put on the edge in box-plaits.

## ONE MORE USE FOR AUTUMN LEAVES.

A very pretty way to ornament any plain article of furniture, a cabinet or paneled cupboard, boxes, jars, trays, etc., is by the following simple process. Having collected the ferns and leaves in all their endless variety, prepare them thus: Lay the leaves one by one on a piece of soft paper, wrong side up, and with a sharp penknife pare off the projecting veins,

TOILET SET.

so that there will be as little roughness as possible; then place them in books, with a heavy weight, and press them smoothly, leaving them there until you are ready to use them. Prepare the article by painting it black, using a fine brush for the purpose,

because it will leave fewer traces. When this is perfectly dry and hard, give it a coat of fine transparent varnish (déma is the best), and before it has become entirely dry, lay on the leaves and fern sprays in graceful groups, according to fancy, pressing them smoothly down, so that every part will adhere. When they are entirely dry, give it another coat of the same transparent varnish, going over the whole surface, leaves and all.

If you wish to bronze the black ground in imitation of the Japanese lacquer-ware, it can be done by sprinkling a little bronze-powder over the sticky varnish, after putting on the leaves, then rubbing it lightly with a soft rag, to burnish it. These ornamentations are very beautiful, and are both permanent and effective.

## TRANSPARENCIES.

One of the loveliest transparencies I ever saw was produced with very fine ferns and some common but exceedingly dainty grasses. The ferns and grasses were treated to a bath of chloride of lime, dissolved in water, until they were bleached perfectly white, then soaked several days, having the water changed frequently, to remove the lime, or they would soon be turned yellow. They were then placed between two panes of glass, which were first fastened together with a strip of cloth, pasted over the edges; then a narrow blue ribbon pasted over that, and a loop at one end, to hang it up by.

I have an ottoman cover, embroidered with silk and velvet applique on black velvet, which probably has called forth as many expressions of admiration as any piece of fancy work I ever executed.

I made the design myself, which is simply a wreath of flowers and leaves and light feathery tendrils. The flowers are many of them cut from velvet of proper colors, and worked buttonhole stitch around the edge with gold-colored silk.

The leaves are made in the same way, and veined with silk. They are then blind-stitched on the velvet foundation, and the rest of the work done in ordinary

COLOGNE STAND.

silk embroidery. It is very fine work, and bright, contrasting colors, though almost every hue is used, and is generally very much admired.

## Beside Reading.

### JAPANESE ANECDOTES.

A very economical old fellow, named Kisaburo, once took lodgings near a shop to which the epicureans of Yeddo resorted daily for eels fried in soy, a kind of sauce used in Japan. The odor was wafted into his quarters, and being a man of strong imagination, he daily enjoyed his frugal meal of boiled rice and the savory smoke of fried eels, and thus saved the usual expense of fish and vegetables.

The eel-frier discovering this, made up his mind to charge his stingy neighbor for the *smell* of his eels, and paid him a visit, carrying with him his bill. Kis, taking it in good humor, called to his wife to bring him out the cash-bag. After jingling the bag of money, he touched it on the bill, and again locking it in the box, told his wife to return it.

The eel-man, in amazement, cried out, "Well, are you not going to pay me?" "Oh, no!" said he; "you charged me for the *smell* of your eels. I have paid you with the *sound* of my money!"

A favorite method of mischief among small and big boys in Japan, is to double a stiff straw, and insert it into the nostril of a sleeping person, who wakes to find his nostril distended like that of an ox. Once there was a lazy old fellow upon whom children were fond of playing this trick. Falling asleep, the children played this snap-game upon him. Waking, and finding his nose tickling, he passed his hand over his face, and found a string tied to something like a loop in his nose. The old fellow, believing himself to be in another world, condemned to another state of existence, exclaimed, "Well, well, have I become an ox, condemned to wear a ring in my nose, as a punishment for my sins?"

A poor young mother gave up her child to another woman to take care of, while she herself went out to service. After she became able, and the child was older, she went to claim her back. The woman having become fond of her, refused to give her up, claiming her as her child. In her trouble, she appealed to a judge for help. The judge ordered each of them to take hold of an arm of the child and pull! The true mother took gentle hold, the other pulled hard; the child cried out with pain, when the real mother gave up. The judge then angrily addressed the false mother, and restored the child to her own mother. E. L. R.

A young man in Jersey City was urged to marry, but replied: "I don't see it. My father was a single man, and he always got along well enough."

"I suppose our minister preaches well," remarked a Michigan lady, "but I'm so busy looking at the fashions that I really never hear anything he says."

A Scotch professor in the University of Edinburgh was experimenting before his pupils with some combustible substances, when, as he was mixing them, they exploded, shattering the vial which he held into fragments. He held up a small piece of glass, and said, very gravely, "Gentlemen, I have made this experiment often with this very same vial, and never knew it to break in my hands before."

He was an applicant for the position of writing-teacher in one of the public schools. They gave him a copy-book, and asked him for a specimen of what he could do. He took up a pen, and in a handwriting that looked like a flash of lightning that had mistaken the direct road, wrote as follows: "Sorrer doesn't kill folkes as fast as green gooseburys."

A man borrows 800 francs of a friend, for which he signs eight notes of 100 francs each, payable monthly. The first falls due, and is protested. "This is rather promising for the others," remarks the lender. "Oh, they will be protested likewise," calmly replies the debtor. "Then why on earth did you sign the notes?" "So that the shock would not be so great to you. You will only lose 100 francs at a time this way."

Jones says that the white flannel suit he bought a year ago proved a very economical investment, and has been of much use in his family. Jones weighs two hundred and fifty pounds, and when he bought it, it fitted him remarkably well. After the first washing, his eldest son, who weighs one hundred pounds less than Jones Senior, found it an excellent fit. Two washings more made the garment delightful for a youth of nine, and at the end of the season the baby was adorned with the habiliments, which had shrunk just enough to make a fit for a child out of creeping-clothes.

During Dr. Payson's last illness, a friend, coming into his room, remarked familiarly, "Well, I am sorry to see you lying here on your back." "Do you know what God puts us on our backs for?" asked Dr. Payson, smiling. "No," was the answer. "In order that we may look upward."

The following "estray" notice was sent to one of the Denver Sheriff's officers: "Rund away—I red and vite caf. His tu behint leg vas black. he vas a she caf. Enipotti vot bring him pack pais 5 tollar. JACOB ZUDERING,

Clear Creek,  
tree miles behind te bridge."

"Things is getting slouchways in dis country, I declar' to grashus ef dey ain't," said an old negro, the other day. "Fust cum de catty-pillar, den de chicken kollery, an' now here cum de grasshoppers; an' I hear talk de udder day, dat a nigger was pisened with a mushroom. Looks like hard times."

### MEMORIES OF BY-GONE DAYS.

A facetious person went into a village shop, and was observed to be looking about, when the proprietor remarked to him that they didn't keep whiskey. "It would save you a good many steps if you did," was the visitor's reply.

A colored minister, wishing to notify his congregation that the Sunday afternoon services would be discontinued, said: "Hereafter in the afternoon there will be no preaching in the afternoon hereafter."

Sophocles' tragedy of "Antigone" was recently produced at the Theater Royal Gallery, Dublin, with Mendelssohn's music, and the gods were so well pleased that, according to their habits, they demanded a sight of the author. "Bring out Sapherelaze," they yelled. The manager explained that Sophocles had been dead 2,000 years or more, and couldn't well come. Thereat a gamin shouted, "Then chuck us out his mummy."

## Housekeeping.

## PRIZE RECIPES FOR COOKING.

*Sweet Potato Beer.*—Pick your potatoes carefully, wash them, and cut off all bad parts and strings. Measure one bushel of them, and bake without peeling. Have a half-barrel, or large stone water jar, in which to make the beer. Mash the potatoes well, without peeling; put them in the jar or barrel, add one pint of yeast, one handful of bruised ginger, and ten gallons of water. Cover the vessel carefully, and let it stand till the beer ferments. When ready for use, the potatoes will sink to the bottom of the vessel. When drawn off for use, add brown sugar to the taste, and some toasted bread, broken up. It is best to keep two vessels of it, one in preparation, while the other is being used. In moderate weather, this beer is fit for use in four or five days. In very cold weather, a week or ten days.

*Liquid Yeast.*—Take eight or ten fresh peach leaves (or dried ones for winter use), two good-sized potatoes—either sweet or Irish—and one quart of water. Peel the potatoes and boil till thoroughly done; then mash them through a sieve, and add four heaping tablespoonfuls of white sugar, and four even tablespoonfuls of salt. Stir these ingredients well, and strain into them the water in which the potatoes and leaves were boiled. When lukewarm, add one-half cup of old yeast, and cover the vessel with a cloth till it ferments. This yeast never spoils during the summer; it does not foam, but simply bubbles, and when the latter are apparent, is fit for use. If peach leaves are not to be had, a pinch of pressed hops will answer the purpose equally. In the South, this yeast can be used in a few hours after it is made.

*Hard Ginger Cakes.*—Two quarts of flour, yolks of two eggs, one teaspoonful of soda or baking-powder, three-quarters of a pound of lard, one cup of brown sugar, half a teacup of ground Jamaica or rose ginger, and the whole mixed with molasses. Roll thin, and cut out with fancy tins.

*Orange Cake.*—Make a sponge cake—twelve eggs, weight of half of the eggs in flour, and full weight in white sugar. Season with lemon, and bake in thin molds, as for jelly cake. For fifteen eggs made into cake, make up the following: two and a half pounds of sugar, juice of four oranges, grated rind of two oranges, and juice of three lemons. Stir these well, and spread on the cake when cold. Two layers are enough for each cake.

*Queen of Puddings.*—The yolks of six eggs, one and a half teacups of white sugar, the same quantity of bread crumbs, rubbed very fine, and a tablespoonful of butter—well mixed. Then add the grated peel of one lemon, and three pints of sweet milk. Put in a baking-dish, and bake like custard. When done, and cool, cover with some acid preserve, and on top of that put a meringue, made of the whites of the eggs, and six tablespoonfuls of sugar, powdered very fine, and seasoned with the juice of the lemon; whip very light, cover the pudding with it, and set it in the oven until it gets brown. To be eaten cold; with cream, if preferred.

*Sweetmeat Pudding.*—Five eggs—whites and yolks beaten separately—one cup of sugar, one cup of preserves, one-half cup of melted butter, a little nutmeg, mix. Butter a baking-dish, pour in, and bake quickly.

*Cherry Bounce.*—To one gallon of beaten cherries, add a half gallon of rum. Let it stand three or four weeks, shake it every day, and strain and sweeten to your taste.

*Fairfax Muffins.*—One quart flour, one teaspoonful soda, two teaspoonfuls cream-tartar—sifted together three times—two eggs, one quart of milk, one tablespoonful of butter, and rather more salt than usual for that quantity of flour.

*Virginia Biscuit.*—One quart flour, one teaspoonful salt, two tablespoonfuls (or nearly a quarter pound) of lard. Rub the lard well into the flour, and mix into a stiff dough with equal parts of sweet milk and water—if no milk convenient, water alone will answer. Work the dough till smooth, then pound it for ten or fifteen minutes with the rolling-pin, or work with a patent bread-worker. Roll out till less than a quarter inch thick, cut with a biscuit-cutter, and bake quickly. These biscuits are unsurpassed, when properly made, and particularly good for invalids.

*Virginia Wafer Biscuit.*—One quart flour, one teaspoonful salt, rather more than a quarter pound of lard rubbed into the flour, and mixed with milk and water; the dough must not be stiff, as for the above. Work till smooth, but do not beat. Then flour your bread, board, and roller well, and cutting off a small piece of dough—as for pie-crust—roll as thin as possible—almost to transparency—and cut into shapes; bake quickly. This receipt is excellent for tea. To make a more ornamental dish they may be baked in wafer-irons. Let the dough be soft as pie-crust, and be sure to roll very thin.

*Cinnamon Cakes.*—Two pounds flour, one pound sugar, one pound butter, yolks of six eggs. Knead them well, and roll in very thin cakes. When done, ice them with an icing of the whites of four eggs, powdered sugar, and powdered cinnamon, beaten to a froth. Before the icing is hard, you may sift a little powdered sugar over them. But the prettiest way is to trace patterns or names, in white icing, after the cinnamon icing becomes hard.

*Blackberry Cordial.*—Take the ripest blackberries, mash, and put them in a linen bag to squeeze out the juice. To one quart of juice, allow one pound sugar. Put the sugar in your kettle, pour the juice on it, and when all is melted, boil till it becomes a jelly. When cold, to one quart of juice or jelly, allow one quart of brandy; stir well together and bottle for use.

*Peach Cordial.*—Take ripe cling-stone peaches, wipe off the down, cut them to the stone in several places, put them in a cask. When filled with peaches, pour on as much peach brandy as the cask will hold; let it stand eight weeks and then draw it off, and add water till reduced to the strength of wine. To one gallon of this, allow one pound of brown sugar. Dissolve it, and pour into a cask just large enough to hold it. When clear, it is ready for use.

*Potato Pumpkin.*—Take one of good size and color, cut a piece off the top, remove all the seed; wash and wipe the cavity; pare off the rind, and fill the cavity with good force meat. Put the top on, and set it in a pan to protect the sides; bake it in a moderate oven. Put it carefully in a dish without breaking, and it will look like a handsome mould.

*Spanish Toast.*—Beat well together one-half pound sugar, three or four eggs, and one pint sweet milk. Dip into the mixture slices of stale bread, and fry in lard or butter till a good brown.

*Green Tomato Pickle.*—One peck of green tomatoes, twelve large white onions; slice them, and lay them alternately in deep dishes, sprinkling each layer with salt. Set them aside for twenty-four hours; then drain them through a sieve, till all the water is out; put them in a jar, and cover them with cold vinegar, and let them remain twenty-four hours. Then drain the vinegar off, and put them in a brass kettle, or anything but iron, in layers, with spices sprinkled between each layer. Cover the whole with strong vinegar, and let them simmer, or boil gently, till they look clear, which will generally take an hour or so. Spices for the above: one ounce cloves, one ounce allspice, one ounce mace, one ounce black pepper, one ounce celery seed, quarter pound white mustard seed, bruised, one teacupful of grated horseradish; brown sugar to the taste. The spices must be beaten fine or ground in the spice mill, and the pickle must be frequently stirred, while on the fire, to prevent burning.

*French Way of Cooking Peas.*—Put in a pot one tablespoonful of lard; when perfectly hot, add two good sized onions, sliced very thin, at same time stir in one tablespoonful of flour, stirring occasionally to prevent burning. When the onions and flour are slightly browned, add a little parsley and thyme, pepper and salt; then three pints of water, letting the whole boil fifteen minutes before adding the peas. Have a peck of peas shelled for this quantity of ingredients. A slice of good old bacon will be an improvement. Begin this dish two hours before your dinner hour.

*Boiled Icing.*—One pound loaf sugar, half a tumbler of water, half the juice of one lemon, or half teaspoonful of cream-tartar. Let it boil until it becomes a thick syrup; then pour into an earthen bowl, and when cold enough add the whites of three eggs. Beat till white and smooth.

*White Cake.*—One pound flour, a little over half a pound butter, one pound sugar, whites of fourteen eggs well beaten, and lastly, six teaspoonfuls of Price's baking powder. Cream the butter well, then add the flour, mixing the whites and sugar alternately. After mixing the ingredients, and flavoring with almond, stir the yeast powder in lightly.

*Russian Cream.*—One quart milk, three eggs, one cup sugar, half package Cox's gelatin vanilla or lemon flavoring; if cinnamon is preferred, boil a few sticks in the milk. Dissolve the gelatin in half a pint tepid water; bring it to a warm temperature, but not scalding. Beat the yolks of the eggs and sugar together. Bring the milk to a boil; then add the dissolved gelatin, eggs and sugar, and let it just come to a boiling point, but no more, or it will be too stiff. Beat the whites, and, removing the mixture from the stove, add them to it, flavor, and pour into moulds. If wanted for dinner, prepare the day before, as it requires to stand longer than wine jelly.

*Maryland Bread.*—One quart flour, four eggs, one cup of butter, half a cup yeast, one teaspoonful sugar, four medium-sized potatoes, and salt. Mix and work well, about eleven o'clock if for supper. It will be too soft to work after it has risen; bake in muffin tins, or drop with a spoon in cakes on the biscuit pan. Let it rise the second time before baking.

*Salad Dressing for Lettuce or Cole-slaw.*—One teaspoonful salt; one and a half teaspoonfuls mustard; two teaspoonfuls sugar, three eggs well beaten, add one cup of vinegar, one tablespoonful butter, and cook like boiled custard. Remove from fire, add Worcestershire sauce or celery salt, and use either cold or hot.

*Now give new life to your Musical Exercises by introducing one of these superior books.*

# THE LADIES' FLORAL CABINET

BY HENRY T. WILLIAMS.

NEW YORK, DECEMBER, 1877.

No. 72.

PRICE 12 CENTS.

## CINNAMON VINE.

You ask for information concerning the culture of the "Cinnamon Vine," and my success therewith. I am frank to confess that though disappointed as to the "delightful" cinnamon odor and delicate white blossoms, nevertheless, on account of its rapid growth and beautiful symmetry of foliage, the vine is a perfect pet with me. Its deeply ribbed, opposite, arrow-shaped leaves; the tiny potatoes in the axil of each leaf, are both novel and attractive. Then, as fall approaches, each leaf assumes that clean, clear yellow of the autumn hickory; simultaneously they fall, and your Cinnamon Vine is extinct!

Last year I bought a yearling tuber from the FLORAL CABINET; I can now give my experience in two entirely different localities. One was experimented with in Barnesville, Ga., the other in Alachua County, Fla.

In the former place I planted the tuber in a box; kept it in a warm plastered basement room. It was a foot high in April when I moved it in the open air. In this state I put

my tuber in a box in February, and shoved it under the bed, as we were domiciled in a cabin, and badly crowded. We moved into better quarters in March,

year's stocks. The Oak Geranium was not blighted in the least. Tho Golden Dew-Drop, with its charming clusters of golden berries, and my Georgia Abutilons, white and red, and pink and scarlet Geraniums, have been a joy and beauty since early spring. L. L.

VASE OF CUT FLOWERS.

and the box was placed on the veranda; but in vain I looked for shoot or offset. At length, in June, three bold shoots were a hand high when I discovered them. They grew like Jonah's gourd, and were at the top of the veranda on one string before I could separate or arrange them; but neither blossom nor potato have yet made their appearance, though the autumn is upon us. The gale is over, and these fresh brisk winds are not our sea breezes nor soft balmy zephyrs.

I divided my tuber with Miss Belle Mitchell, of Barnesville, who, I believe, is a subscriber to the CABINET, and I would be glad to hear her experience with a portion of the same root. In Georgia I trained my vine laterally; it ran two yards, and the potatoes were odd little pets of mine. This year the lattice was upright, the soil dry alike, and I thought possibly that was why it did not seed itself.

So much on this subject. Now let me say a word of "my Floral Cabinet," surrounded by Magnolia and orange, hickory and oak, and long moss. The night-blooming and double Arabian Jessamine, Salvia Splendens, Oleanders, white and double pink, have bloomed all the year in the open ground from last

## WHALE OIL SOAP.

I have found this soap to be a most effectual destroyer of worms and insects on plants and in the earth. For slugs on rosebushes, and all the numerous enemies of the Rose, it is certain death.

The plants should be showered with a weak solution. That which falls upon the ground will be useful in enriching the soil and killing whatever worms may be there.

The soap should be prepared for use by dissolving a small bit of the same in a quart or two of boiling water, then adding as much cold soft water as necessary. If a leaf will turn brown in the liquid, it shows it to be too strong. N. S.

### HINTS ON PLANT CULTURE.

Soon the short, dark days of November and December will have passed away, and, as they begin to lengthen, we shall begin to watch eagerly for our plants to give indications that the genial rays of the sun are bringing its influence to bear upon them. Now and then we see new leaves starting, and we feel encouraged. Many of them are waiting for the still longer days; so we will be patient and let them take their own time for starting into new growth. Very nearly all of plant life must have its season of rest; and this season, in most cases, is taken in the winter.

It is supposed that there are ladies seeking for useful information, who have a genuine love for flowers, and are willing to bestow sufficient care on them to insure success in their cultivation, if possible. To such persons I propose to give a few hints on the successful culture of plants in the sitting-room window.

If your plants should be on the shady side of the house, avoid as much as possible too great artificial heat. The higher the temperature, the more the plants suffer for want of light. Plant life, as well as animal, is dependent upon sunlight and pure air, as well as heat and proper food.

Judgment as well as experience should be used in

#### WATERING PLANTS.

If they stand in a sunny window, the moisture evaporates in a great measure before it is taken up by the plants, and they should be watered often. On the other hand, those standing in a cool, shady situation may not require it oftener than once a week. Again, plants that are growing, require much more water than those that are resting. This is an important consideration, and one that should be remembered and practised with care. There is not much danger of giving too much water to a healthy plant that is growing vigorously, but when that plant, or any other, is taking its season of rest, water must be given sparingly, or you injure it. A child that is sick does not have the appetite that a well one does, and if it eats beyond its appetite, so much the worse for the child. On the same principle a plant struggles on in an unhealthy state, or dies, when its roots are not capable of taking up the water in a wet and sodden soil. In a word, water should be given to plants when the surface of the soil is dry. Then it is better to give a good quantity each time, that it may penetrate to the roots throughout the pot, than to pour on a little more often, giving nourishment only to roots near the surface.

#### TO GUARD AGAINST THE COLD

is an all-important consideration. When the wind whistles around your dwelling, seeking for an entrance through some opening, you may be sure it will gain that entrance, if possible. Plants are much more liable to freeze on a windy night than on a still one, though the temperature may be much lower on the still night. If you place a newspaper between the window and the curtain, and fit it nicely to the casing, it will check its course, and protect the plants. Paper bags, such as the grocers use, are useful to draw down over your choice plants that are not too large. Paste the two edges of a newspaper together and draw it over your large ones. Two or more papers can be pasted together at the edges, making a long strip, which may be pinned around a whole stand of plants. Then by placing another paper over the top you have

them all nicely inclosed. This method of inclosure serves a double purpose—one to keep out the cold, another to arrest the moisture as it escapes by evaporation from the soil in the pots, and giving it back to the leaves of the plants. A dish of water or a wet sponge within the inclosure will serve to create a moist atmosphere so necessary to the health of plants. Another consideration is, a more even temperature will be maintained within such an inclosure; those plants near the window are kept the warmer, and those on the opposite side are not parched by the dry and heated atmosphere of the room.

The reason why the culture of plants is usually more successful in a green house than in a sitting-room window, is not owing to any secret method of the florist, as some persons suppose. He studies them and learns their individual wants. If he desires his Begonias, Bouvardias, and Heliotropes to flower, he gives them that part of the house where the heat is greatest. He aims to maintain, as near as possible, an even temperature through the day, and at night some ten or fifteen degrees lower. There is no carpet or nice furniture to be injured by water, so he throws it about, keeping the walks and the benches wet, giving to the house a moist atmosphere. Then, there is the glass overhead, through which we obtain so much of our common friend, the sunshine. The whole may be summed up, therefore, with these three conditions: Sufficient light, proper heat, and a healthy atmosphere. The more nearly we imitate these conditions, the greater will be our success.

There are many plants, among which are Fuchsias, Geraniums, Pelargoniums, and others, that are not classed among the winter-blooming ones, and should now be prepared for another summer.

To make handsome well-formed plants of these, they should be well

#### CUT BACK.

Many of us have done so already, and those who have not, should examine their collection and draw out those with crooked and unsightly branches. These should be pruned in many cases to near the old wood. Sometimes just pinching off the end of the shoot is sufficient to make it throw out side branches. Geraniums, to make bushy plants for your flower garden another summer, should have all the branches cut off even, or nearly so. The centre ones may be left a little taller, if you choose. In a short time new branches, and many more of them than were cut away, will appear, making a well-formed plant. When one considers the greater number of flowers to be obtained from a bushy plant than from one with but a single stem, they need not spare the knife. The cast-off branches should now be rooted by being put into wet sand or soil, and kept warm, giving you a stock of Geraniums for the flower garden. One can hardly have too many of them, unless their garden is very limited for room.

The silver-leaved Geraniums should be cut down to give them a bushy form. Never fear to take a piece from the top; it will surely push out new leaves in time; but don't give it too much water, and a pot four or five inches in diameter is large enough. All Geraniums blossom more freely when the roots are pinched for room.

Some of the Fuchsias are inclined to throw long and crooked branches. The Carl Halt is one of them. The flowers of this variety are very handsome, but unless the branches are kept in subjection, the form of the plant is anything but pleasing. By pinching the end from every branch at its third or fourth joint until

the blossom-buds appear, you will have a fine bushy-formed plant and many more flowers.

The Daphne Odora is another example of the same kind. When the plant is done flowering in the spring, it should be well cut back. Last winter a friend offered me one that was so large she had no room for it. I gladly took it home, and when the flowers had all gone by, every branch was cut to within about three inches of the old wood. Instead of eight or ten branches, as there were then, there are thirty-four now, and each with a flower or bud at its termination. The circumference of the plant is much less than it was a year ago. There being so many more branches to support, they did not stretch out so far, but far enough to need another shortening at the proper time.

After pruning, the plants may be set one side and not have much water given them. But when the new leaves start, give it them freely. The growth of the plants being temporarily checked by the cutting back, the roots cannot take up so much water as when they are growing rapidly.

#### INSECTS.

The heated atmosphere of your rooms is just suited to the wants of the red spider. It delights in the heat, and the dryer it is the more it flourishes, and consequently the more the plants suffer. If you notice that the leaves on your plants are becoming a yellowish brown, and are dropping from your Roses, they are probably infested with this troublesome insect. They have their favorites among the plants, but it is well to examine them all, and separate those that are infested from the others at once. Unless you are acquainted with their habits, you will hardly mistrust that you are harboring them at all. They are found like a tiny red speck on the under side of the leaves. It is wonderful what an amount of mischief such little things can do.

To rid your plants of them, they should be taken to the sink or some place where water can be used freely. Place the plant on its side in the sink, and pour water upon it, turning it over and over, as you pour the water upon the leaves. Use the plant as roughly as you can without breaking it, and keep it wet as long as possible. At night you may lay it on its side on a wet cloth, and roll it up in it, letting it lie so all night. Water is the red spider's greatest enemy, and if you persevere, your plants may be well rid of it. Taking the plants to the sink once a week and showering them will act as a preventive.

The aphid, or green fly, is larger and more easily seen than the spider. Take some tobacco, put it in some water and let it soak until it looks like strong tea. The proportions may be about one-fourth of a pound of tobacco to three or four quarts of water. This may be applied with a syringe. A brush or a sponge may be dipped into the tobacco water and used to brush them off. Small plants can be plunged into it, the top downward. Some persons use carbolic soap successfully in washing them off.

The scale must be picked or scraped off, and the leaves, stems, and branches that have been infested with it washed in soap and water. These will be found more frequently on Ivies, Oleanders, and other hard wooded plants.

The mealy bug is not so common as the above-mentioned, but let it once get a foothold, and it is very difficult to get rid of it. It must be sought for diligently, and removed by washing and hand-picking.

There are other subjects relating to floriculture on which I may write at some future time.

FANNY MYRICK.

## Answers to Correspondents.

**Raising Mushrooms.**—Please tell me how to raise mushrooms from spawn. T. S. THORNTON.

*Answer.*—Make in a dark cellar, where the temperature does not fall below forty-five degrees, a bed of cow manure and loam: beat it well, and make it firm, letting it remain a few days. Then shake it up and mix it again well together, and if fermenting very strongly, add more soil, treading and ramming down as before. The bed should be from sixteen to eighteen inches thick. Break the spawn into pieces the size of a large nut and plant them through the bed when it has a uniform genial heat. Then cover a few inches of soil over the bed.

**Climbers for Windows.**—I have two flower-pots seven inches across and nine inches deep. I want to put one each side of a window, southern exposure, sun all day till four P. M., and connect them by an iron rod forming an arch over the window. What vines shall I plant in them?

What plants will do well in a western window and sun only in the afternoon?

Hudson, N. Y. ANABEL C. ANDREWS.

*Answer.*—English Ivy; German Ivy, (*Senecio scandens*), any of the varieties of *Tropaeolum minus*; possibly *Smilax*.

Geraniums, *Daphne*, *Camellias*, *Azaleas*, Chinese Primrose, *Cyclamen*.

**Deutzia from Seed.**—Will *Deutzia crenata* grow from seed? MRS. J. P.

Carney Springs, Mass.

*Answer.*—There is no reason why it should not; but you would find seed difficult to procure. The best way to obtain it is to order a plant.

**Fuchsias, etc.**—What makes the leaves drop off *Fuchsias*, those of *Heliotropes* curl up and fall off, and of *Begonia Rex* die and fall off?

Ada, Ohio. MRS. J. E. LOWRY.

*Answer.*—Various causes may produce the effects described. Gas in the air, a cold sodden soil, with insufficient drainage, or too low a temperature. The remedy in last case will suggest itself.

**Crape Myrtle, etc.**—Please tell me how to treat *Crape Myrtle*. I have two, a pink and a white one. When shall I plant and how treat *Rhododendrons*?

Canton, Mo. MARY BELLE WAGNER.

*Answer.*—The *Crape Myrtle* does well planted out in the garden in summer and rested in a frost-proof cellar in winter; south of Virginia it is hardy.

*Rhododendrons* may be planted at any time when not in growth, but spring is the best season; the soil should be rich vegetable mold, not likely to dry up.

**Ferns, Saxifrage, etc.**—What Fern is best for a hanging basket? How many will a basket a foot across hold? I have a *Saxifrage* that does not do well; how shall I cultivate it?

Rantoul, Ill. MRS. MARIA WALL.

*Answer.*—No Ferns do well in hanging baskets, as the air high in a room, where the basket hangs, is usually too dry. The best Fern for house culture is *Pteris tremula*. It is large-growing, and one is enough for any pot or basket.

Give your *Saxifrage* (*S. sarmentosa*, we suppose), a well-drained soil, plenty of water, and hang it in a sunny window.

**Wardian Case.**—I want to ask a few questions about my Wardian Case. My case measures fifteen

by twenty-one, and seventeen inches high, and the lid opens at the top; the zinc pan is five or six inches deep. In the fall I procured some mold from the woods, where the ferns grow very thick, and mixed with it a little earth from the garden, which was quite rich from decayed bones, etc.; after planting my ferns I filled the spaces all up with damp moss from the woods—(I should have mentioned that I covered the bottom of the pan with lumps of charcoal)—I then watered it well and closed it; it sets in a bay-window facing west.

In a few days my ferns began to grow, and looked nicely. In the course of a week or two, however, I discovered that something was eating them. My *Cissus discolor* had thrown out several new leaves; and I was quite proud of it, as I had tried many times to grow one on the window without success. One morning I found the whole top had been bitten off, and I felt discouraged enough. I also found slimy trails all over the glass; so I took my ferns all up and baked the earth in the oven. I found in the moss a great many of what I called snails or borers, and I threw it all away. Then I arranged my plants in the case once more, feeling confident that all would be well. I watered it as at first, and it did not seem too wet, as there was not a great deal of moisture gathered on the glass.

In two or three weeks I found some of my plants all moulding and dampening away. As fast as the Maiden Hair threw up new shoots, the old ones mouldered away. The *Anæctochilus* died entirely; also a plant with green and white striped leaves, which was quite expensive; the Partridge Vine, and some others. A spotted leafed *Begonia* and *Begonia Rex*, and a silver leafed fern are about the only ones not affected.

Some one told me I must leave the cover up a while every day, which I did, and my *Cissus discolor* wilted right down. I have thought that perhaps I did not have charcoal enough. I did not mix any with the earth; all I had was put in as drainage at the bottom. Now please tell me what the trouble is, and advise me what to do.

MRS. G. W. WHITING.

East Somerville, Mass.

*Answer.*—Your letter is very interesting. The first trouble was from slugs or snails. You could have caught them all by hollowing out raw potatoes or yellow turnips and placing them in the case. Baking does not improve the soil. Your second trouble was too much moisture and insufficient ventilation; the third, giving air too suddenly upon the weak growth of the *Cissus*. Are you not mistaken as to your having an *Anæctochilus*; they are rare plants. The only effect of mixing charcoal with the soil would be to make better drainage, and to keep it from becoming sour; it is not necessary.

**Roses Unhealthy, etc.**—I see on the leaves of my *Roses* what looks like a small worm, and it appears to start from the stalk. The new shoots and buds blight and fall off. Do small black flies around house plants do any harm?

MRS. D. K.

Vassalboro, Me.

*Answer.*—Your *Roses* are in sour, sodden soil; repot them and give good drainage; keep the surface of the earth loose. If there are green worms on the stems—which we doubt—kill them. The small black flies themselves do no harm, but green aphids suck the juices of the plant, and should be destroyed by smoking.

**Daphne not Growing.**—I have treated my

*Daphne* as a hot-house plant; it only puts out new leaves, but does not grow at all. Can you give me any information? MRS. L. L.

*Answer.*—The *Daphne* is a cool greenhouse plant and needs very little heat; it grows after blooming, and then matures flower-buds for the next year. You keep yours too hot and force it into premature foliage.

**Funkia or Day Lily.**—Would like to ask if the *Funkia* or *Day Lily* will live in the ground during the winter? MRS. W. H.

Pescatawica, Ill.

*Answer.*—All the *Funkias* are perfectly hardy. Give them a rich deep soil and they will bloom freely every year.

**Daphne Odorata.**—Where can *Daphne Odorata* be had? Is it a bulb? D. M. M.

Fredonia, Pa.

*Answer.*—See our answer to "L. L." above. It is a hard-wooded greenhouse plant, and very desirable for parlor culture. Seedsmen would not have it, but at any greenhouse you could probably procure it.

**Schizostylis Coccinea, etc.**—How shall I treat *Schizostylis*? How long before it flowers from seed?

How should *Eupatorium* be treated after blooming? Does it live from year to year? SUBSCRIBER.

*Answer.*—*Schizostylis* requires treatment similar to Cape bulbs; pot in sandy loam, water moderately, but do not let it dry up; when foliage fades dry it off gradually. It grows freely from seed and seedlings; blooms in about eighteen months.

Prune in your *Eupatorium* after it has bloomed. The plant will become woody, and flower from year to year.

**Phoenix Dactylifera.**—Is *Phoenix Dactylifera* a rapid or slow-growing palm? Is it suitable for house decoration? Where can I get plants and pots of the right shape to grow them? E. C. MAXWELL.

Wilkesbarre, Pa.

*Answer.*—It is slow-growing, suitable for the parlor, but there are many better. It requires no peculiar pot. You can get plants from George Such, South Amboy, N. J. It is not an expensive plant.

**Honeysuckles to Exchange.**—I have a large quantity of *Honeysuckles*, the Coral, Sweet Monthly, Yellow Trumpet, Halliana, Chinese Scarlet, flowered, Douglasii, Golden-veined, Dutch White, and Chinese Evergreen; the latter a luxuriant grower, constant bloomer, and delightfully fragrant, with white flowers. Would be glad to exchange for other plants with any readers of the CABINET. MRS. J. A. POWELL.

Danceyville, Tenn.

**How to Grow Wax Plant.**—Please tell me how to cultivate *Hoya carnosa* or Wax Plant.

Quaker Bottom.

E. J. P.

*Answer.*—The Wax Plant needs a rich soil and plenty of heat; too much water rots the roots, and the pots should always be well drained. It is a very good parlor plant, and stands well the heat, dust and gas of living rooms. When large it flowers very freely.

**Flowers for a Warm Room.**—Can you give me the names of some plants which I can cultivate in a warm room, with furnace heat, and temperature seventy degrees at times? ETHELVERTA.

*Answer.*—Your plants probably suffer more from dry heat and furnace gas than from temperature. Try *Calla Lilies*, *Cyclamen*, Chinese Primroses, *Daphne odorata*, *Cuphea hyssopifolia*, English Ivy, *Acharea malvaviscus*, *Abutilon striatum* or *Darwini*, *Hyacinths*, *Narcissus*.

## Floral Decorations.

### ARRANGEMENT OF CUT FLOWERS.

There are many persons who cultivate flowers that have not the "knack" of arranging cut flowers to make them bring out their fine colors as they should. The same knack that makes it easy for some eyes to mark the fleeting secrets of color, some ears to catch the subtle changes of harmony—the knack we call *taste*. Some of us are born without it, and even our best endeavors, assisted by patience and perseverance, which, the copy-book assures us, "conquers all things," will not conquer the difficulty.

We must go through life aggravated by sundry persons about us doing with ease the things we find hard or impossible. I believe there are no positive rules about flower arranging. The art or gift, whichever it may be, is too fine and delicate to be reduced to a system. Still there is a certain oracle in the world called experience.

Too many fly out and gather a heap of flowers, and leave them to half wilt, while they do something else which occurs as important.

Do you know that if the geranium leaves or salvias once get limp, or the pansies curl up, it will be of no use to come with your patience or watering-pot. Put them on a tray, and sprinkle them as soon as gathered, before you do any thing else.

What flowers to cultivate to have a good collection for making up into bouquets, floral devices, &c., would make a long list; but I would say you can never have too many white flowers. They are especially in demand for weddings or funerals; besides, they are the best filling-in on groundwork where bright flowers are used. In buying vases, do not insist on buying gorgeous creations in flowered China or "Etruscan," with medallions of flaring blue and red, and then wonder that the flowers do not look pretty in them. These staring colors kill the delicate tints. The vase should always be a subordinate thing. Cool greens and dark browns, pure white—such as bisque or parian—silver, or bronze, are always effective. Then the form of the vase should suit the flowers. Do not chop off all the stems of those royal lilies, in order to get them into a shallow bowl. Keep the bowl for roses, and buy a vase for the lilies and other tall flowers; and do not crowd the violet and anemones into the large bouquet where they are lost, but put them by themselves in a tiny vase, and see how sweet they will be.

Do you know that some flowers will not mix with others, and should always be arranged by themselves. Almost all the wild flowers belong to this class—laurel, a alia, columbine, gentians, and the sweet water-lily; lilies of the valley, too, which clasp and twine so charmingly in sisterhood, and struggle awkwardly when divorced from each other; and all that group of flowers whose hues seem caught from the sky or the water-color boxes, such as balsams, phlox drummondii and sweet-peas.

### BLENDING OF COLORS.

When you have a great basket to fill with mixed flowers, do not go to work blindly and lay the delicate pinks against the yellows, the crimsons against the scarlets, without plan or sequence. These colors always kill each other. Lay crimson against scarlet, and see what a brick red you have. Make a mental division of the whole into half a dozen small groups,

CONE FRAME.

and employ yourself in making each group in turn harmonious in color. Blue larkspur will make an effective tri-color with red geranium and white phlox.

This cream-colored rose will set off the purple verbenas; this pink geranium must blend with white roses; this knot of wine-red fuschias needs a tip of vivid yellow to brighten it. By-and-by your vase is full of such groups, and filled in with fresh leaves and some of the neutral-tinted flowers, such as heliotrope, verbenas or mignonette, the whole forms a de-

SCENE IN CENTRAL PARK, N. Y.

lightful study of color—soft, yet brilliant, in which the next contrast heightens, but does not conflict.

### ARRANGING DEVICES.

Beautiful crosses, harps, lyres, anchors and crowns can be made for funerals, fairs, festivals and church displays, by purchasing the wire frames and filling them with moss and flowers.

The tube-rose and double white balsams are most beautiful arranged together, and fill up so rapidly that by placing a few green leaves on each side they are quickly made. Broom-straws or sharp whittled pegs an inch or so long inserted through the flowers will keep them to their place.

If persons will begin without depending on the florist for such things, they will be surprised what a little practice and experience will produce. I once knew a lady who furnished flowers for a church every Sabbath for six months in the year, and so varied were her designs that the same one would not be repeated more than once or twice in a season, unless it was a pure white cross, which would find its way to the altar more frequently than the others. Let me describe it. It was made of wood, say an inch square and 18 inches high, with the arms 6 inches from the top, they being 10 inches across; insert this into a long square block or thick piece of plank, and nail this to another of a larger size, forming steps. Cover all with moss, which can be kept in place by wrapping with dark thread. Wet it thoroughly, set it on a tray, and it is ready for the flowers.

Almost any small white flowers will do, such as candytuft, alder, &c. After the white flowers have been put on, arrange some bright colored ones with green leaves where the arms cross; then lay on the bright ones around the base, first by putting a row of green around the edge of the tray. A vine twined around the cross and over the arms is very pretty. The Alleghany vine answers finely. A lyre made up the same way is the most beautiful of all, the strings being of narrow slats, and covered with feverfew. A beautiful ornament for the centre of a table can be made by taking an ordinary-sized tin pan, and getting a silver-plated rod 18 inches high soldered in the center of it, and a smaller-sized pan soldered on the top.

Fill each with wet sawdust, cover with moss, put an edging of asparagus to droop over the sides, and fill in with flowers.

There is no end to the number of beautiful designs that can be made if the person has only the "knack."

TINA INGHAM.

**Amaryllis.**—For the benefit of those who have spoken of the Amaryllis as blooming in summer, I have succeeded, by repotting in June, and cutting down, to make them bloom in mid-winter. Will some one please enlighten as to the Passiflora (Passion Flower)—how to propagate, when and how to trim, in preparation for the next winter's luxuriance in-doors?

L. H. W.

## In-Door Gardening.

### THE AMARYLLIS.

Of the regal beauty of the Amaryllis, it is hardly necessary to speak. Every flower-lover who has ever seen them in bloom, knows them to be the grandest of all flowering bulbs, except the Lily; and some of the splendid varieties of the family, with their large, lily-like, drooping flowers, varying in color from the purest white to the most intense scarlet, some striped and slashed in the most fantastic of ways, cause them to vie with the Lily for the regal honor which it claims, "queen of flowers."

The Amaryllis in all its varieties is of very easy culture, yet many suppose, or have an idea, that it is very delicate, and can only be grown by a practical florist in a hothouse or greenhouse.

This idea is one of the most groundless that has ever been set afloat among amateurs, and our aim in writing this article is to correct this idea, and show the amateur that the Amaryllis is of easier culture than many less beautiful plants which he tries to cultivate.

The varieties of Amaryllis are very numerous; every year new varieties from abroad and new hybrids have so swelled the list that it would be quite impossible to describe them all. As nearly all the varieties require a little difference in culture, no general rules can be laid down which will answer in all cases.

One great advantage with the Amaryllis is that they are capable of producing flowers at any season of the year, which renders them invaluable for conservatory and house decoration; nearly all the summer-blooming varieties are admirable house plants, growing as freely and easily as a Hyacinth.

Amaryllis Johnsonii—A more charming flower cannot be conceived, nor one of easier culture; it has often been known to flower twice in one season. Having procured a dry bulb, pot it in a six-inch pot, using good drainage and filling the pot with a fine rich loam, half of which may be three years-old, well-decayed manure. Fill up the pot to within one inch of the rim, press in the bulb, being careful to leave fully one-half of the bulb above the soil. Water well, and set the pot in a warm place. As soon as growth commences supply water freely, place in a warm, light place, and in about four weeks it will produce flowers. The flowers are very gorgeous; in shape they resemble the Liliun Candidum, but are larger; in color they are a brilliant scarlet, with a pure white streak through each segment. After flowering, repot at once, giving plenty of sunlight and heat; when the foliage turns yellow, gradually withdraw water, and when dry, place in a dry-air situation.

A. Vittata—This handsome variety requires the same treatment as Johnsonii. The flower-stem grows three feet in height and produces from three to six large, Lily-shaped flowers. The ground color is pure white, striped with red, giving the flowers the appearance of being dressed with ribbons, from which fact it takes its name.

A. Fornosissima—This beautiful Amaryllis is sometimes called Jacobean Lily. It succeeds well in the open border or in pots. Plant the bulb in good rich soil, leaving half the bulb above the surface of the soil. Water should be supplied liberally. When the foliage dies, remove the

bulbs, wrap in tissue paper, and place in a dry, cool place. If in pots, do not remove, but set the pot in a dry place. Plant out in May. The flowers, which are large, appear before the leaves; they are of a very brilliant, dark crimson color, and grow on a stalk a foot high, generally two flowers to a stalk.

A. Belladonna—This variety is a little more difficult to grow than any of the former. The warm season

FLOWER POT COVER.

being hardly long enough to mature the bulb, it is necessary to grow it in a pot. Plant in six-inch pots; having a bulb ready, place a couple of inches of drainage in the bottom of the pot; then hold the bulb in the pot, having the roots well spread out; with a

face of the soil; half an inch or so at the top of the pot should be left for watering. If the bulb is not well above the soil it will not flower, it being necessary for the bulb to feel the sun's heat to flower. The bulb should be potted in April. In June plunge the pot in a sunny place in the garden; in August it will produce flowers. At the approach of cold weather remove the pot to the house and supply water freely as long as there are signs of growth; when the foliage turns yellow, withdraw water until perfectly dry, then set the pot in a dark warm place until the following spring, when replant as before. A. Belladonna is one of the oldest varieties known, being introduced from

Portugal in 1712, to which country it had been taken from Brazil some years before. The upper part of the flower is white, suffused with rose, or pale carmine; the lower part is a greenish white. The flowers are quite as large and about the same shape as those of Johnsonii; each bulb generally produces from four to a dozen flowers on a single stem.

A. Belladonna Minor is a diminutive variety of the last.

A. Blanda is also a variety of the Belladonna, bearing large numbers of pure white flowers, which change to a pale rose before falling.

A. Longiflora is a very handsome variety requiring the same general treatment as Belladonna; the flowers of this variety appear before the leaves, on stalks two feet high. The color is a clear pink, which gradually changes to white with age; through the centre of each segment runs a streak of deep carmine color. Mr. E. H., of New York State, informs me this variety is perfectly hardy in his garden.

A. Gigantea, or Josephine—This is perhaps the grandest variety of the family. It takes its name from the immense size to which the flower grows. The color is a bright, dazzling scarlet. The treatment as given for Belladonna suits it exactly.

A. Regina, or Queen Amaryllis, is an extremely fine variety; the culture is the same as required for Johnsonii. Color, a rich orange and white.

Space forbids me describing Amaryllis Jupiter, Meteor, and a host of others; the beautiful little Zephyranthus, the hardiest of the Amaryllis, the Vallota Purpurea, and—well, the list might be continued indefinitely.

The great secret in growing Amaryllis is to alternately give it a season of great excitement and of rest, and to plant the bulb with from half to three-quarters above the surface of the soil.

W. C. L. DREW.

### A BEAUTIFUL PLANT.

I have a rare and beautiful plant, a magnificent specimen of the Cereus Meeh. Donaldi, measuring about eleven feet in height, and literally covered with bloom, with not less than eighty flowers on it, and each a bright crimson color, and about four inches in diameter at the mouth of the calyx.

The plant is a handsome specimen of the Cactus tribe, and well worth the admiration with which it is regarded, it being twenty-four years old, and raised or grown by the owner from a slip procured at considerable cost.

MRS. J. S. LEWIS.

GROUP OF PETUNIAS.

small shovel or trowel fill up the pot with a rich loam, settle the soil by tapping on the pot with the trowel; when filled, half of the bulb should be above the sur-

## The Home Circle.

## ANSWERS TO QUESTIONS, AND GOSSIP ABOUT HOME AFFAIRS.

**Vases for Dried Grasses.**—Will you be so kind as to explain to me the method of making vases for dried grasses and ferns, with lamp-chimnies? I saw a pair not long since, but was not able to learn how the ornaments were put on. I should also be glad to know how to color and crystalize grasses, and give dried flowers the glittering appearance as if dripping with dew.

MRS. SARAH H. L.

**Answer.**—There are several methods of embellishing lamp-chimnies, which we will describe. We will suppose, for the first, that we desire an imitation of French china; a white ground or some delicate tint, as blue, pale green, or pink, with bands of gold and gay flowers. Now, for the flowers, we like nothing so well as the decalcomania designs for this work, and here we have the widest field from which to choose. If you wish a Chinese or Japanese vase, there are scores of all the curious devices used on this ware—of ancient, antique figures used on Egyptian, Grecian, and Roman pottery—there are mythological and classical designs of rarest beauty and coloring, and so with any other "school" of pottery desired to be imitated, the embellishments are here in exact similitude.

But if not convenient, we may substitute pictures either colored or engraved, and we have made very fair vases by means of the colored pictures found in our floral and other catalogues, selecting the smallest flowers, cutting them out carefully, and grouping tastefully. This is all a matter of convenience and taste, the most important point being to fasten the designs securely, so that no ground-paint, or plaster, will run under; and to use care as regards arrangement, not putting a Chinese mandarin with a group of the muses; or a classical goddess with a French bonquet; such incongruities at once show the imitation. Supposing, though, that all the designs are carefully cut out, and the chimnies perfectly clean and well polished, then arrange your centre pieces, or any other form of adornment you see proper, upon a piece of paper of same size as the chimnies; then mix a little scraped soap and water to a thick mass; dip into it a strand of coarse thread and pass it round the centre of the chimney; remove it, and again wetting, pass it, lengthwise or longitudinally, round so that it crosses the former line in two places, then across on the other side in the same manner. This gives you four central points; next take your central designs, two or four, and, placing the centre of each one against the central spot, where the lines cross on the outside of the chimney; hold them in place, successively, and with a fine camel's hair pencil dipped in the solution of soap, mark out the outlines, so that when placed within, they may be put directly in proper position. Next, if paper pictures are used, coat them with gum arabic, mixed to the consistency of syrup, and carefully rubbed until not a particle of undissolved gum or any roughness remains; then put the design in place, either with the figures, or if the chimney is narrow, with a stiff wire bent to shape and furnished with a pad on one end, with which pat the picture all over, until not an air bubble nor a wrinkle prevents the perfect union of the paper and the glass. Upon this depends the perfection of the work in a great measure. When done, wet a camel's hair pencil in the mucilage and go round all the edges so as to fill them com-

pletely; then put on narrow lines of gold, either using gilded paper, plain, or liquid gold, and if liked, lines of flowers, or any fancy borders may be put at the upper edge and between the gold lines.

It is well to copy some fine model, and endeavor to make a perfect imitation. This all done, allow to dry; then have some liquid plaster, made by mixing fine plaster of Paris and water to the consistency of cream; pour in a cup full, and quickly turn the chimney about until every part receives a coat; then pour out any surplus, and mix another cupful, with which proceed in the same manner. This gives a pure white ground as perfect as the finest French china.

Now, if you wish to color the ground, for instance, in imitation of the fine Rose du Barry china, mix beforehand in the water a little fine pink-color powder (rose-pink); if Pelissy, use delicate turquoise blue (ultra-marine); and so on, buff, straw-color, pale green, etc. Or for Etruscan, use dull, deep reds, dark leaden-blue; for Chinese and Japanese, black, vermilion, dark blue and yellow, and if the Indian wares are desired, apply the black Silhouette pictures, and scarlet grounds.

Try one in imitation of the crystal or frost-grounds of some of the Mintontiles, thus: procure some "frosting" sold in the art-stores and by many druggists. After putting on the designs, coat the entire surface, inside, with demar-varnish, mixed with one-fifth part of balsam of fir; allow to dry until just tacky, then sprinkle on the crushed "frosting," or "diamond-powder," and allow to dry thoroughly; then put on the ground as directed, and you will find the effect fine beyond description.

Charming window-boxes, jardinières, etc., are made by these means, by applying the pictures and ground to panes of plain glass, then slipping them into grooves cut in the face of the wooden sides and ends.

Panels of cabinet and side-board doors are very elegant thus finished, a narrow gilt or wooden moulding holding them fast.

To crystalize grasses, use one pound of alum to one pint of water; suspend the grasses in the solution until the crystals form, then remove and dry them; if left too long they will become too heavy; a snow-like appearance is given by drying them rapidly, in the burning noonday sun of summer, or in a hot oven.

Use lemon dyes for grasses, diluting them to make pale shades; vivid crimsons, yellows, etc., have a most vulgar appearance.

**Kerosene Stoves.**—In answer to Mrs. Griseom's query regarding kerosene stoves, I would say, yes. I have tested them pretty fully, having had one of the very first that came out, and also the fullest opportunity of trying the "Florence" and other late patents: for ironing, picnics, getting up a little meal on short notice, and as a resort in sickness, or other emergency, they are invaluable, and I would not like to be without one, especially when the thermometer suddenly descends far below zero, and my plant-room is in danger; but to use in place of the regular old cooking-stove—never! They are not capable of accomplishing as much as a family of four persons ordinarily require, taking an entire month through; the odor is unpleasant, and there is some danger from explosion, owing to the likelihood of careless hands, or inattention to that daily care required with constant use. I believe I should prefer the "Florence" to any other.

"AUNT CARRIE."

**Omelette.**—Mrs. A. B. G.—d.—A "corn omelette" is made thus: grate six ears of well-filled corn

(sweet), scraping each cob with a knife; beat two eggs, the yolks and whites separately, perfectly light; add the yolks to the corn, with half a teaspoonful of sugar, as much soda as will rest upon the point of a spoon, pepper, salt, and four tablespoonfuls of milk; beat well, then lightly add the whites; put a teacupful of butter and lard, mixed, into a small frying-pan (cast-iron), and when boiling hot pour in the omelette; fry for ten minutes carefully, opening places through it over the surface to let the soft part descend, as in other omelettes; then put into the oven for half an hour or less, if quick, and when slightly browned, fold over and turn over on a platter, placing it over and dexterously turning the pan.

**Egg-Beater.**—Mrs. G. A. Brown.—The very best and only egg-beater I ever used with satisfaction is called "The Dover," and it may be bought for from 50 to 75 cents, according to the furnisher.

**Lambrequins.**—Miss Ada Spafford.—A "shaped lambrequin" is one that is cut out in gracefully-carved lines, and put plainly across the wooden frame, behind the cornice, without plaits or fullness of any kind. There are beautiful "splashers," "washstand guards," made of enamelled oilcloth, by taking some light shade, as buff, laying a border of ivy-leaves, cut from paper, around them, forming a centre piece in the same manner, holding all down with pins, in the usual way, then casting a spray of thin black paint, made by rubbing lamp-black in turpentine, then adding copal-varnish until just thick enough to take up on a brush and "spatter" on a piece of wire-net, or across a comb. When dry take up the papers; vein all leaves with a small camel's hair brush, and make tendrils or other lines. The effect is beautiful. Maple leaves look well, also Convolvulus vine.

**Guards.**—Another elegant "guard" is made of linen damask colored, embroidered with zephyr of appropriate colors, in chain or feather stitch, working the monogram of the owner of the room in the centre.

Again, get a piece of white Java canvas; embroider a border round the four sides, and the monogram or christian name in the centre, in large ornamental letters; fringe out the edges.

Or cut a piece of Swiss muslin of proper size; cut the monogram or name from shirting muslin; cover the one side with flour-paste, mixed with a very little gum-arabic mucilage, and, putting them in place in the centre, arrange a vine of ivy, or other leaves, around this, thus: get three sizes of any pretty leaf of a running vine, cut paper patterns from them, which place on the muslin; cut them out, and having wet them with the paste, put them on a serpentine stem made by placing a small saucer or "individual" butter-plate on the paper, marking out one-half of the circle, then reversing it, and moving it along, so that the other half circle joins the preceding one; thus a waved stem is formed, which must be about one-fourth of an inch wide; the leaves should be arranged on this, one up and one down; then run two or more three-inch or four-inch strips on the sewing machine; gather or plait, and put on in scantily-full ruffles, one above the other; flute these; line with pink, green or other bright colored cambric, and you have a dainty and beautiful finish to your washstand.

After putting on the muslin letters, spread a damp towel over, and hold warm flat-irons on until the whole is dry and smooth. This appears like embroidery, and is very beautiful.

AUNT CARRIE.

## THE YOUTH'S COMPANION A WEEKLY PAPER FOR YOUNG PEOPLE AND THE FAMILY

It aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible, and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated, and has for contributors some of the most attractive writers in the country. Among these are:

J. T. Trowbridge, Dinah Muloch Craik,  
James T. Field, Edw'd Everett Hale,  
Rebecca H. Davis, Louise C. Moulton,  
C. A. Stephens, Wm. Cullen Bryant,  
A. D. T. Whitney, Harriet P. Spofford,  
J. G. Whittier, Louisa M. Alcott.  
Mrs. A. H. Leonowens.

Its reading is adapted to the old and young; is very comprehensive in its character. It gives

Stories of Adventure, Stories of Home Letters of Travel, School Life, Editorials upon Current Topics, Tales, Poetry, Historical Articles, Selections for Declaration, Biographical Sketches, Anecdotes, Puzzles, Religious Articles, Facts and Incidents.

**Subscription Price, \$1.75.** Specimen copies sent free. Please mention in what paper you read this advertisement.

**PERRY, MASON & CO.,**  
41 Temple Place, Boston.

## LESTER SAW

The Millers Falls Co. were the first to introduce Bracket Sawing into this country, and during the last three years they have manufactured more Hand and Foot Power Saws than all other makers combined. As a final result of all their efforts they have succeeded in producing a good Machine for \$3.00 as can be found in any market. It consists of a Scroll Saw with Tilting Table for inlay work, Patent Clamps for holding the blades an Iron Bed Turning Lathe with a set of best Steel Turning Tools, Boring Attachment with six Steel Drills for Wood or Iron, Emery Wheel, Circular Saw, Screw Driver, Wrench, Six Saw Blades, Two Sheets of Designs, a Box for holding the small tools, and a Box for the entire machine. Every part is well built and will do good work. When boxed it weighs 50 pounds, and will be sent entire on receipt of \$3.00. Many dealers keep them. Circulars sent on demand, giving full size of every part.  
**MILLERS FALLS CO.,** 74 Chambers St., N. Y.

**ANY LADY** OR GENT THAT SENDS us their address will receive something of great value free by mail. Only about 200 left. **INVENTORS' UNION,** 173 Greenwich St., N. Y.

**FOR 50 CENTS, I WILL SEND BY MAIL** 50 Pressed Autumn Leaves and 15 Ferns.

Address **MRS. A. O. PIERCE, Homer, N. Y.**  
**50** LARGE MIXED CARDS, with name 13c. or 40 in case 13c. Outfit 10c. **Dowd & Co.,** Bristol, Ct.  
**\$12** a day at home. Agents wanted. Outfit and terms free. **TRUE & CO.,** Augusta, Maine.

## THE STEINAU JEWELRY CO.'S FOR ONE DOLLAR! IMPERIAL CASKET.

And New Illustrated Catalogue, with instructions how to become Agents.

Our Imperial Casket contains one pair of Lady's Bracelets, one Roman Neck Chain and Locket, one set of Studs, one pair of Sleeve Buttons, one Lady's Set (Ear-rings and Pin), one Seal Ring, one engraved "Friendship" Ring, one Plain Ring, one embossed Collar Button; all of which are the finest gold-plate, warranted to stand the test of solid gold, and exactly as represented by the engravings in this announcement. On receipt of One Dollar we will send this grand array of elegant jewelry, securely packed in a beautiful morocco casket, postpaid, to any address. Our illustrated catalogue accompanies every casket free. Having one of the Imperial Caskets in our possession, we must say, that, while the articles are not solid gold, they are beautiful imitations and very pretty, each particular piece being equally as good as are sold in the city jewelry stores.—EDITORS' HOME AND FARM.  
"An honorable house, entitled to the confidence of their patrons."—EDITOR CHRISTIAN WORLD.  
"We endorse the high order of respectability attached to the Steinau Jewelry Co."—ED. BOSTON GLOBE.  
"To assure our patrons of our responsibility, we refer to any reliable business house in Cincinnati, and by permission to the commercial agency of Tappan, McKillop and Co." Mail all orders to  
**STEINAU JEWELRY COMPANY, No. 5 Arcade, CINCINNATI, O.**

NEW YORK, DECEMBER, 1877.

## PANSIES.

I believe there are many true lovers of flowers who have never known the happiness of growing Pansies; who, like myself, have bought them of florists each spring, and long before they were ready, were grieved to see them die, no care or watching serving to keep them. To such as these I contribute my mite of information, learned from experience, which, after learning, seems so simple, I wonder how I could have failed.

First, procure good seed. I bought the mixed seed of Vick, of Rochester, N. Y. Have ready shallow boxes (I used the long, shallow cigar-boxes), nice light soil, some pieces of old thick flannel. Place the soil in boxes, about half the depth, press it even with a piece of shingle or old book-back, place each seed separate on the soil full one inch apart. This takes time, but will pay in the end. When all are placed, sift a little soil over them, enough to hide the seed; press as before. Wring out the pieces of flannel (using two or three thicknesses to each box) in hot water; lay carefully on the soil, pressing down even. Place behind the stove, or in any warm situation. Watch well; in two or three days the seed will be up. Then remove flannel; place farther from stove, using a pane of glass to cover each box. Get to the light and sun as soon as they are up; give air by tilting glass. When one week old, remove glass and do all you can to keep them stocky, and not drawn.

After covering seed with soil, water with a fine sprinkler with warm water, before placing the flannel over them. As soon as they have four leaves, have other boxes prepared same as before; transplant each plant carefully two inches apart, spreading the roots well, and continue this every two weeks till they can be planted out. I sowed mine the first week in March, and they were all ready to begin budding and blooming by the middle of April, when I planted in the beds. I had beds made directly in the lawn, cut circular, six feet in diameter, raised a little, but never

sloping, as they would not retain the proper moisture. Here, in the following lines, is where so many blunder. All books, papers, &c., tell us that Pansies require shade. Now they do not. Mine are on the east side of large cherry trees, some three feet from base of tree, and receive the full morning sun, with all the light and glintings of sunshine through branches of trees in the afternoon. It is also a mistake to plant them in such rich soil; they keep better, last longer without sloughing away, in common garden soil, with some sand in it; then use liquid cow manure once each week, well diluted in water, placing it as much as possible on the soil, avoiding the plants in doing so.

When blooming, remove each flower as soon as it wilts, or cut generously for your friends, and they will continue a mass of bloom, beautiful beyond all words, till winter, blooming even through the snow. They should be carefully watered or sprinkled each evening, and if some of the oldest shoots seem yellow and sick about August, pinch them off carefully, to give the crown of the plant the strength to send out new shoots. I have only been cultivating them the past two seasons, never before understanding the value of seedlings. If wanted for early spring bloom, sow in August or September, in deep, large boxes, on north side of house. About December, protect with dry annuals, such as Petunia, Zinnia, &c., laying heavier branches on these to prevent blowing away. Never cover with leaves or straw, as these mat too much and rot the crown of the plant. Evergreen branches, not too heavy, are just the right thing to use. Plant into beds from boxes, same as for seed sown in spring. Nemophila Insignis flourishes beyond description with same treatment as spring sowing, or indeed fall, too.

Mrs. H. C.

## ILLUSTRATIONS.

The illustrations of this number are numerous and suggestive of floral decoration and social enjoyment. Upon page 177 is a vase of "Flowers for the Parlor or Dining Table," and also "A Basket of Cut Flowers Made of Wicker-Work." These sketches are suggestive of tasteful ways of adorning our tables and stands. "The Spruce-Work Match Holder" is a cunning little article covered with the spruce bark of the woods, and is so simple any one of moderate ingenuity can construct it.

Upon page 180 is a scene in Central Park, New York, of "Lake and Bridge," with rustic seat and arbor on the shore. The "Cone Frame and Calendar" is a little hint to our ingenious ones to gather the treasures of the woods, and by fastening with glue on some stiff background, then varnishing, to make a pretty sitting-room ornament.

Upon page 181, "The Vase of Petunias" suggests to us the joys of bright floral days when the flowers are our constant companions. The "Flower Pot Cover" is very simple, made of successive layers of leather or stiff cloth lined with pasteboard, and shaped to resemble the form of petals of an opening bud.

Upon page 185 is a pretty "Castilian Scene of Spanish Romance." This is an exact reproduction of a steel-plate engraving which cost \$500. The waiting fair one plucks a rose to throw to her adorer, and is her signal that the way is clear and her heart expects him.

Upon page 189, "The Young Artful," whose "forgettery is much better than his remembrance," is trying to make up the lesson-task before him with the aid of a "pony," which manœuvre, astonishes the teacher, and provokes a laugh from the little sister.

## PUBLISHER'S ANNOUNCEMENTS.

**Last Number. Renew, Renew.**—All subscriptions to THE CABINET, for 1877, expire with this number, both yearly and trials. Renew them quickly, and bring as many new names as possible. We hope all are so well pleased that we may have the pleasure of their company again for 1878.

**Back Volumes.**—New subscribers, who are pleased with THE CABINET, will find in back volumes an immense fund of delightful reading, pictures, and the choicest of family music; there are single pieces of music so sweet and charming as to be alone worth the price for a volume. We will club these together with subscription for 1878, as follows:

\$2.00 will pay for subscription 1878, the new plate, "Treasures of Garden and Woodland," and all the back numbers of 1877, January to September.

3.00 will include all of 1878, 1877, and 1876.

4.00 " " " " " 1875.

5.00 " " " " " " and 1874.

6.00 " " " " " " " and 1873.

Bound volumes for each year will cost 65 cents for each volume in addition to above prices.

**Missing Papers.**—To any subscriber, at any time, we will always furnish a missing paper. First, ask the Postmaster if a copy came with the label off, if so, it belongs to you; if not, we will send another on notification. We wish subscribers to receive all they pay for.

**Six Months' Subscription.**—Subscribers will take notice that six months' subscriptions are received at 60 cents, without Premiums.

**Cabinet for Half Price.**—An extra copy of CABINET will be sent one year for half price to any one who brings a club of three subscribers at \$1 20 or \$1 30.

**Cabinet Free.**—An extra copy of CABINET one year free will be sent to any one who will form a club of five at \$1 20, or ten at \$1 10.

**A Special Premium.**—To any one forming a club of fifteen, the CABINET will be sent to each member of the club at \$1 10 each, and club agent will receive in addition all the following: The CABINET one year free, the new plate of flowers, "Treasures of Garden and Woodland," and also one of our Household Books, price \$1 50.

**Special Gladiolus Premium.**—To any one getting a club of ten at \$1 20 or \$1 30, we will give club agent CABINET one year free, new plate, "Treasures of Garden and Woodland," and collection of Gladiolus worth \$3 00. For club of fifteen at \$1 20, we will give the same, and to each member of club, one bulb of Gladiolus, which they could not buy elsewhere for less than \$1 00.

**Special Note. New Plate of Flowers.**—The new plate of flowers, "Treasures of Garden and Woodland," will be sent only to those subscribers who remit \$1 30. Those who join a club and wish it will remit club agent \$1 30. Those who pay less than \$1 30 do not receive it. But it will be sent to all club agents who get up clubs, whether they order it or not. So every club agent may expect to receive it soon after their clubs have been sent in.

**Claiming Premiums.**—Club agents should always claim the premium they wish. We do not know what will suit you. We always wait till club agent tells us his choice. Some club agents send us a club and say nothing about premium, and then complain because they get none. They should always claim their due, and we will always send it.

**Twenty Cents Commission.**—To any one getting up clubs, who desire our Household Books, we will allow for all clubs of three, or over, at \$1 20 or \$1 30 each, 20 cents commission for each subscriber towards getting any of our \$1 50 books. Thus a club of eight at \$1 20 or \$1 30 will secure a book worth \$1 50. If agent's club is less than eight, 20 cents is allowed toward any book for each name in his club, and he can remit balance in cash. A little effort on the part of each subscriber will enable him to get his book or paper at a reduced price.

**Holiday Presents.**—The following comprise a most desirable list of books for Holiday presents to ladies or children. Nothing can be more delightful to a housekeeper than a set of these books.

## WILLIAMS' HOUSEHOLD SERIES.

	Price.	Price.
Household Elegancies.....	cloth, \$1 50.	Gift, \$2 00

**Prizes for Household and Floral Articles.**—Our offer of prizes was so successful last year, that we now renew it again for 1878. The following prizes will be given for articles on Flower, Window Gardening, Housekeeping, Elegancies, Needle Work, and kindred subjects relating to the comforts, pleasures and advancement of Home Life and Household Taste:

For best article on Floral Subjects.....	\$10 00
For second best article on Floral Subjects.....	5 00
For best article on Household Subjects.....	10 00
For second best article on Household Subjects.....	5 00
For each of next 20 best articles of Flowers, prize of book, "Window Gardening."	
For each of next 20 best articles on Household Subjects, book, "Household Elegancies," or "Ladies' Fancy Work."	
For each of next 20 best articles (10 of each class of subjects), one Silk Book Mark.	

Contributors will notice the following rules: 1. Label all articles, "For Competition." 2. Each article to fill space equal to three to five foolscap pages long. 3. Articles all to be forwarded to this office before March 15. 4. Award of prizes will be announced in April number, and prizes forwarded to the fortunate competitors April 1. 5. Articles contributed, not specially marked for return, may be understood as having the desire of writer to be used in FLORAL CABINET, as a voluntary contribution whenever convenient.

The object in offering these prizes is not so much to induce the writing of articles for the sake of pecuniary remuneration, as it is to encourage our readers and writers to contribute really useful information, which will be a help and benefit to others.

LOVE'S SIGNAL.—FROM STEEL PLATE ENGRAVING.

## Household Topics.

## OF CARPETS.

On this subject I write for young housekeepers, and those wishing, or needing, to make the most of their means.

I shall say little about Brussels, velvet, etc., as those wishing to purchase expensive carpets, will, of course, consult their friends who are wise in these matters, if they happen to lack sufficient knowledge themselves.

Brussels has become so cheap and common of late, that it may be well to speak of the three kinds oftenest found in market. The kind called "body Brussels," I believe, stands highest. The imported article is best, the colors wearing better than any American kind I have known. The figure can be readily traced on the wrong side, as the wool in the warp is carried under, to form the pattern in weaving. The figures are generally prettier than in the kinds where the wool is all on the upper side, as is the case when printed on the warp instead of being colored in the skein. The carpets that show no color on the under side have the closest pile on the upper side, and are not so likely to be injured by moths, as those having the wool next the floor, even though it be in small quantities, a fact that prevents many from purchasing even the best imported carpets.

There is still another kind, where the printing of the pattern is done after the carpet is woven. Of course the dye goes through the carpet, and is seen in ugly patches of heavy color on the under side. These are undesirable in every way, and should be avoided as matter of taste or economy.

Three-ply carpets have their admirers, but I am not one of their number. All that can be said in their favor is, you can get prettier figures than in ingrain, that is, on one side; they are generally ugly enough on the other to make amends for that. They are heavy, and harder to shake than a Brussels, as the dust and sand gets in between the three different layers, and is very hard to beat out, although each layer is much thinner than the poorest ingrain. Of this fact you may assure yourself by lifting one layer in any of the plain places, and comparing it with the commonest ingrain at hand. Of course, you will be told by the salesman that it is so thick (that is, the whole together), that it must wear better; but if thickness is the only merit, get an ingrain at less than half the cost, and make up the difference by putting wadding paper underneath. The three-ply may last longest, but you have the annoyance of looking at rags to obtain this result, for after one lift or ply is worn off, the figure spoiled, and the untidy fringed edges sticking up, you have yet to wear two thicknesses more, before you can expect to get a new one.

Very dark colors in a carpet show dust and dirt badly, besides all dark goods are injured more or less in coloring. Three-ply and ingrain carpets should be sewed together ball stitch; Brussels and velvet should be sewed back and forth, making a seam like basting, keeping the pile neatly tucked down with the needle before taking the stitch; draw the thread strongly, but not so as to gather the carpet, and take the stitches about the eighth of an inch in length. Carpets should not be stitched on the floor tighter than is sufficient to keep them from shoving under the broom in sweeping. The nails should not be driven down closely, or the heads will cut through the bindings, and the difficulty of drawing them out will be greatly increased.

In sweeping carpets, the broom should be drawn in a mincing manner, making short reaches, and never raising it far from the floor. After the dust settles, and the furniture has been dusted, a clean mop (kept for that use only) should be wrung out of warm water in which a little salt has been dissolved and passed over the carpet under beds and large pieces of furniture, and will be found a very satisfactory finish when putting a room in order.

Very old and dirty carpets can be made to look quite fresh and tidy by beating them thoroughly, mending, if necessary, nailing down snugly on the clean floor where they are to remain, then with a pail of warm suds, and one of clean warm water, with a quart of clear solution of chloride of lime added to it, wash and rinse them thoroughly as you would a floor, changing the waters as they become soiled, and using separate cloths for washing and rinsing. Worn-out stockings are nice for this use, as they do not lint badly; sew them together until the size is convenient to handle. This operation needs to be performed thoroughly, especially the rinsing and wiping, and the result will be very satisfactory. If a carpet is to be washed in the fall, the stove and oilcloths must be arranged as they are to remain, so that a fire can be made to dry it immediately. If the room must be used before it is dry, cover the carpet with soiled sheets, bedquilts, or something of the sort, thus keeping dust, etc., from the carpet whilst it is wet.

I do not like straw spread on a floor under carpets; it makes an uneven surface, and is a nuisance when the carpet is to be taken up for cleaning. I think the better way is to make the floor as even as possible, by driving down nail heads, and planing off sharp edges where it can be done, then laying folds of newspapers over imperfections, fastening them in their places with a little boiled flour paste, to prevent them from wrinkling when the carpet is drawn over them. Cracks suspected of moths should be covered with thick paper well secured at the edges with paste.

A broom should never be used to remove the dust from a floor where a carpet has lain, as it only serves to "whirl the dirt about the room," but the operator, with "skirts well lifted," and a good mop and pail of water, will dispose of the greatest accumulation of dust in much less time than would be required to sweep and dust, and with much less inconvenience to herself and injury to the furniture by the excessive dust.

Very comfortable and tidy-looking carpets may be made for bedrooms, small halls, etc., out of pieces of old carpeting of various colors and patterns. Select the best parts around the edges, and cut them in patterns as you would for piecing bedquilts. Turn down the edges and baste them, so the stitches will not show on the upper side; then sew them overhand in a snug seam. Square blocks a quarter or half yard in size will be found convenient; it is best, however, to pay some regard to the size of the floor to be filled, and cut the blocks accordingly. Bind with strong cloth, which will save the expense of carpet binding, and strengthen the edges. Of course, your carpet was clean before you cut your patchwork, so the refuse pieces are ready for further use.

Pieces that are large enough to cover your ironing table, may be used for under ironing blankets, number of thicknesses to suit the demand, smaller pieces for shirt and bosom boards, smaller still for holders, covering them with old stocking tops, that can easily be slipped off and washed when needed. The poorest pieces make excellent cushions for chairs. Cut five or six thicknesses the shape desired, and cover

with a patchwork of remnants of broadcloth; tie and tuft once in three inches, and they will be found a great saving of dresses and chair bottoms.

Foot-mats, a yard square, more or less, made of two or three thicknesses of old carpet, will be found very pleasant on the oilcloth under one's feet by the stove in winter, and if made of one piece and doubled together and tacked slightly, can easily be taken apart and washed when needed. A mat of this description by the stove in winter, where the men usually sit to thaw the snow, that will defy the scraper, from their feet, will save the women work, and the men mortification, two important items in a well-ordered household.

CHARITY L. MABBETT.

## HOOKED RUGS.

We noticed in the June number of the CABINET an article on rugs. "Pulled rugs" sounds funny to us, "hooked rugs" being the name in this vicinity, where there are many of them made.

Perhaps a few more hints would be useful to any one about to make one for the first time. In the first place a frame of wood, two or two and a half inches by three-fourths, and as long as one would be likely to ever want; the end pieces may be a foot and a half or so shorter than the sides. Then take thick heavy cloth, two inches wide, and double it together and tack securely along the edge of the frame, leaving the folded edge just up to, if not a little over, one edge of the frame. This is to sew the burlaps on to. Then bore holes an inch or two apart, for a foot or so, on each end of the frames; bore the holes one-fourth inch in diameter, and have a pin to go through the pieces so as to hold the frame solidly together. Perhaps you may have to tie a string around the corners in addition. The holes should be bored just so far apart, so that the rug may be rolled up as fast as it is completed, and rolled up alike at each side until all is done.

The foundation cloth should be burlap, which can be had at any furniture store. Cut it the size to suit; a good proportion is like the shape of the American flag, one-half longer than its width. Then make the frame about the size, and sew the cloth in snugly, leaving, except where there is a selvage, a little of the cloth to turn under when all is done. Commence on the border by all means; then as soon as it is hooked as far as you can reach, turn the rug under as much as is needed, keeping the rug folded snug and smooth. Tie the frame to the top of some chairs, as near as you can to the height you wish it, to hook it. As for the pattern, it will give one more satisfaction to draw it than to buy it already printed. First draw a little pattern on paper, and then make a dye of logwood; set the color with copperas; then take a little marking brush, and with a straight edge and rule paint the pattern upon the cloth.

The hook should be made of iron or wire large enough to make a hole through the cloth as it is pushed through, so that the cloth can be easily pulled up through. Very thick cloth may be cut one-fourth inch or a little more in width, and thin cloth much wider and then rolled together; it should be all wool or cotton and wool, and if the colors are dingy it may be colored. Draw the loops up half an inch high, all of a height, and the nearer together the better the rug will be when done. Don't shear the loops, as the rug will not wear half as long and will not look any better, and weakens the rug, as the loops, when cut, fall out easily.

L. E. L.

## Housekeeping.

## PRIZE RECIPES FOR COOKING.

*Cherry Roly-Poly.*—As soon as the first cherries were ripe, we children used to urge our mother to make us a roly-poly pudding. We always wanted our guests treated to this pudding for dinner, for to us nothing in that line could be nicer. We liked it made with currants or other fruit, but to our ideas a cherry roly-poly was not to be surpassed. Even at the present time, the cherries which we can for winter are intended more especially for these puddings and for pies than for sauce during the snowy season. The pudding in question is boiled in a muslin bag, and is made thus: Two teaspoonfuls cream of tartar and one of soda to one quart of flour. Rub the cream of tartar into the flour and add the soda dissolved in either a little milk or water. Add water to make it of the consistency of biscuit dough, and roll out as you would for biscuit. Spread a layer of the fruit over the dough and make in a roll similar to roll jelly cake. Let the bag be large enough to allow for the pudding to swell. Place in boiling hot water and keep boiling for one hour. Our pudding sauce is made of one cup sugar, half a cup butter, boiled in one quart of water. This is thickened while boiling with four tablespoonfuls of flour which have been previously rubbed with a spoon in sufficient water to mash all the lumps. After the sauce has been taken from the stove, grate half a nutmeg into it.

*Graham Gems* are very nice made in this way: one cup cream, one egg, half a cup brown sugar, one heaping teaspoonful saleratus, two cups buttermilk, a little salt and ginger. Make a stiff batter of this with Graham flour. Drop into hot tins, and bake in a quick oven.

*Orange Cake*—One cup butter, three cups sugar, one cup sweet milk, four and a half cups flour, two teaspoonfuls baking powder, and six eggs, minus the whites of four. Save the whites of these four eggs to beat to a stiff froth and mix with one pound of pulverized sugar to put between the layers. Pare three oranges and spread them in thin slices over the frosting of all the layers except the top. This is a tempting variety. We use the same kind of cake dough for layer lemon, coccanut, and chocolate cakes.

*Cream Beer.*—This is a very plain effervescing drink. The effervescence is much slower than that of soda water. One ounce of tartaric acid, two pounds of white sugar, the juice of half a lemon, three pints of water. Boil together five minutes. When nearly cold, add the whites of three eggs well beaten with half a cup of flour, and half an ounce of essence of wintergreen. Bottle and keep in a cool place. Take two tablespoonfuls of this syrup for a tumbler of water, and add one-fourth of a teaspoonful of soda.

*Chicken Salad.*—The water in which chicken is boiled becomes a jelly when cold. To prepare chicken for sandwiches, we mince the meat of boiled chickens, and stir it in the water in which it was boiled, seasoning with butter, salt, and pepper. Make a long, narrow cloth bag, about two and a half inches in diameter. Fill the bag with this mixture. A part of the water will drain off. As the mixture cools, it will harden into shape, so that it can be sliced off like Bologna sausage.

*Canned Citron.*—The proportions are half a pound sugar to one pound of citron, and juice and rind of one

lemon to five pounds of fruit. Boil the citron in enough water to cover it. Drain off the water after boiling. Then make a syrup of the sugar and fresh water with the lemon; add the citron, and cook moderately over a slow fire for two hours. Put in cans and seal while hot. We think this is preferable to preserved citron, where the quantity of sugar is doubled.

*Sea Foam.*—One and a half cups powdered sugar, one and a half cups of flour, whites of ten eggs, one large teaspoonful cream tartar (no soda), and a little salt. Mix the sugar, flour, cream of tartar and salt together thoroughly. Add two teaspoonfuls of either almond or vanilla flavoring, and lastly the whites of the eggs, well beaten. Pour in a buttered tin and bake in a quick oven.

*Artificial Honey.*—White sugar, five pounds; one and a half pints of water; one-fourth ounce of alum. Gradually bring it to a boil, skimming well. When cool, add one pound bees' honey, and four drops essence of peppermint.

*Corn-Starch Custard.*—Two tablespoonfuls of the corn-starch to one quart of milk. Mix the corn-starch with a small quantity of the milk. Beat up two eggs with four tablespoonfuls of pulverized sugar. Heat the remainder of the milk, with a little butter and salt, to near boiling. Then add the sugared eggs and corn-starch, and boil together two minutes, stirring briskly. When done, stir in one teaspoonful lemon extract.

*Sweet Apple Pickles.*—Pare sound sweet apples. Boil them in water till tender. Take them from the water and pour over them a boiling syrup made of vinegar and sugar in the proportion of one pound of sugar to one pint of vinegar. In this syrup, boil one ounce each of whole cloves, allspice, and stick cinnamon. Scald the syrup every morning for a week, and pour over the apples.

*Chocolate Caramels.*—One cup syrup, one tablespoonful milk, half a cake of chocolate (not sweet), one cup brown sugar. Boil five minutes, stirring briskly all the time.

*Corn Oysters.*—One pint boiled sweet corn (sliced off), half a cup sweet milk, one teaspoonful salt, half a teaspoonful black pepper, two-thirds cup flour, and one egg. Beat up and fry like griddle cakes.

*Newport Cakes.*—One cup sweet milk, three cups flour, three eggs, one piece of butter, size of an egg, one tablespoonful of sugar, one teaspoonful soda, and two teaspoonfuls cream tartar. Bake in cup tins, and eat with butter while warm.

*Potato Balls.*—Take cold mashed potatoes, work with the hands into the shape of round flattened cakes about an inch in thickness, then cover them well with flour, and fry both sides in butter, until of a light brown.

*Tea Rolls.*—Two quarts of sifted flour, one pint milk, one tablespoonful lard, a little salt, one tablespoonful white sugar, and one-third cake of yeast dissolved in half a cup of water; scald the milk. After allowing it to cool, put in the sugar. Rub the lard and salt into the flour. Make a hole in the centre of the flour, and add the milk and yeast. Cover lightly with flour and set to rise. When light, mix well together, adding the white of one egg, and set to rise again. When light, roll them out, cut into form, lay them in the dripping pan, and let them rise again till

very light. Then bake for twenty minutes in a quick oven.

*Spiced Currants.*—Five pounds of currants, four pounds brown sugar, two tablespoonfuls each of ground cloves and ground cinnamon; one pint vinegar. Boil two hours or more till quite thick.

*Crab Apple Marmalade.*—Boil Siberian crab apples in a porcelain kettle, with just sufficient water to cover them. When soft, mash and strain through a colander. Use one pound of sugar to one pound of the crab apples, and ground cloves and cinnamon to taste.

*Fried Oysters.*—Drain the oysters well, roll in fine rolled cracker crumbs, and fry in hot lard and butter, two-thirds lard and one-third butter. This is our favorite "dish of oysters."

*Piccaililli.*—Slice one peck of green tomatoes; add one pint of salt to them, and cover with water. Let them stand over night. Take ten green peppers, nine onions, and one head cabbage, all chopped fine; cover with vinegar, and scald. Drain off the vinegar and throw away, and put on cold vinegar. Add one pint of molasses, half an ounce each of cloves, allspice, and horseradish. Mix and cover with brown sugar.

*Buckwheat Cakes.*—This is a recipe that we have used for years: One teacupful of good yeast, one of Indian meal, one quart of buckwheat flour, and one teaspoonful of salt. Mix with sufficient tepid water to make it of the consistency of muffin batter. Beat well for fifteen minutes, and set in a warm place to rise over night. If the batter is sour in the morning, dissolve a teaspoonful of soda in a little tepid water and stir into it. If the cakes are not sweet, add a little more soda. Bake on a well-heated griddle.

*Cracker Soup.*—This is excellent light food for invalids. Place a piece of butter as large as a good sized bean in a soup plate or small bowl. Sprinkle a little pepper and salt over this, then pour on hot water to nearly fill the dish. Break three or four crackers into this, and if necessary add more salt to make agreeable to the taste.

*Lemon Pies.*—Grate the rind from one lemon; squeeze out the juice, and chop up the balance very fine. Put all together, and add one cup water, one of sugar, and two tablespoonfuls of corn-starch, working the mass to a smooth paste. Add five beaten eggs, minus the whites of two, to this paste. Use this mixture for two pies, baking without a top crust. While these are baking, beat the whites of the two eggs, saved for that purpose, to a stiff froth, and stir in three tablespoonfuls of pulverized white sugar. When the pies are done, spread this frosting evenly over them, and set again in the oven and brown slightly.

*New Mode of Preparing Beefsteak.*—Procure a nice round steak; spread over it a dressing made of one quart of bread crumbs soaked in boiling water, and seasoned with butter, salt, pepper, and sage to taste. Then make the steak, spread with this dressing, into a roll, after the manner of roll jelly cake. Tie it round and round with cord to keep together. Place it in a dripping-pan with a little water, and bake in a moderate oven. Dip the water over the steak with a large spoon several times during the process of baking. After taking from the oven, remove the cord and slice the roll for the table. It is very nice, either warm or cold.

These recipes have all been tested and well tried.

E. S. P.

## Household Elegancies.

## INVALID'S POCKET.

Few things contribute more to the comfort of an invalid than one of these useful articles, which may be made of any materials that will harmonize with the furniture, but are most elegant if embroidered in the style of our specimen.

The materials are; half a yard of rich black satin; sarcenet, to correspond in color with the hangings; strong cardboard; wadding; pot-pourri; and nine yards of satin ribbon, the color of the lining.

Buy the satin nineteen and one-half inches wide, and divide it up the centre, having nine inches on one side, ten and one-half on the other. The narrower half forms the back, and leaves enough to make a small pincushion for one of the pockets. The other half forms the pockets. These are three in number, the lowest having no division, the second one down the centre, the upper one two; so that there are really six pockets.

One group of flowers covers the lower pocket, two the centre; the third has an ornamental initial in the middle and a light spray on each side, and the divisions of the pockets are ornamented with a light pattern in embroidery. The little pincushion should also have some device worked on it. The engraving will show the form of the whole complete article, as well as of the separate pockets.

To make it up: Cut a piece of cardboard, eight inches wide and about twelve long. Slope it, as in the pattern, and cover it with satin at the back, and wadded sarcenet on the other side. Line each pocket with wadded sarcenet, scented with pot-pourri, and trim the top of each with the ribbon, quilted into a ruche.

Each pocket must be put on plain at the bottom, and sloped a little on each side, which the greater

PURSE IN EMBROIDERY.

width will allow, so as to set rather full, and hold things conveniently. When all are put on, the divisions must be made, and the whole trimmed with quilted ribbon.

These pockets are intended to hold watch, chain, and seals in the upper pocket; pincushion and smelling-bottle in the two centre; and the handkerchief in the lowest. The embroidery to be done in fine floss. Similar watch-pockets may be done in canvas work.

## PURSE IN EMBROIDERY.

Embroidered upon steel-colored glove-kid, in high colors.

The edges are trimmed with quilted ribbon, and the ends finished with silk to match. Cord and tassels of mixed silk to match the embroidery. The same design makes a handsome tobacco bag, when lined with oil-silk.

In conclusion, it must be remembered that every

INVALID'S POCKET.

style of embroidery in any material depends entirely for its beauty upon the perfect evenness of the work. Irregularity of stitch is never intended to imply a straggling character of work, and roughness of surface must be always avoided. The outlines must be carefully drawn, distinctly defined, and then followed in working with the most exact accuracy.

Next in importance is the selection of good material. Embroidery being a luxury at best, it is better to do without it entirely than to have it upon inferior material or worked with poor wool or silk. In cotton embroidery it is best always to wash and iron the articles before the edges are cut, as the scallops have a firmer and more even appearance than when they are cut before washing. This, of course, does not apply to such work as can be worn before washing, but this should be carefully pressed before the edges are cut.

## SHAWL STRAP IN CANVAS WORK.

The pattern is worked upon canvas in bright-colored Berlin wool, and sewed down upon wide strips of leather, which is afterwards lined with silk, a crochet border knit all round, and made up as shown in illustration.

When canvas work is finished it should be taken from the frame and beaten carefully upon the wrong side until every particle of dust or loose thread is removed, but very gently, or the work will look dented. Prepare a table by laying out several thicknesses of woolen, covered first with white muslin, afterwards with canvas the same texture as that in the work. Over this, right side down, stretch the work, confining it with pins, to be perfectly even. Cover with a damp cloth (not wet) and press lightly and rapidly but thoroughly with a warm iron, not hot enough to injure delicate coloring.

If the work is then to be put in a frame to hang, stretch it firmly over the sides, perfectly even, and fasten with very fine upholsterer's tacks.

Very elaborate pieces of canvas work for framing are not now in fashion, excepting for school girls, but every kind of smaller work is very popular. It is an accomplishment that dates back to remote ages, and which has never gone entirely out of use. The many new varieties of material in use at the present day, greatly reduce the labor of working, and simplify the designs, while the effect is as good, in many cases better, than the elaborate workmanship of those wonderful specimens of patience and skill handed down from our grandmothers.

**A Wall Protector** for hanging at the back of a washstand is much better made of oilcloth than of any other material. Those of Swiss or colored muslins are pretty at first, but they soil readily, and are worth but little for daily use. The dark brown oilcloth or enamelled cloth, veined and shaded, looks best for this purposes.

Take a piece twenty-seven inches long and eighteen inches wide, and scallop the edges with a "pinking iron," or the scissors. On this can be made two, three, or four pockets for holding sponges, extra cakes of soap, etc. For each pocket cut two pieces eight inches long and three and a half inches wide in the middle, whence they are rounded to the ends on one side. Paste the two pieces together, both right side out, thus making the pocket double. Cut the straight upper edge in points, and sew the pocket thus made on the cover. To conceal the stitches, paste on a strip of oilcloth a quarter of an inch wide, cut the slope of the pocket, and pointed on both edges. If desired more ornamental, cut a scroll or leaf design from light brown oilcloth and paste on, forming a border around the edge of the protector, and along the upper edges of the same. If this is done, the pointed strip around the sewed edge of the pockets should also be of light brown. For pasting use thick gum.

**Spatter Work.**—I presume many of the lady readers of the CABINET understand the art of making "spatter work," which has become so popular. It is very pretty work to those who do not mind what some people call "tedious." I always use a sieve; an old flour sieve will do; the spatters are more even. Very

SHAWL STRAP IN CANVAS WORK.

pretty toilet sets can be made in this way on white Swiss or lawn. Line with pink or blue cambric and edge with fluting or a wide hem, which should be left white. A cornucopia can be made to match by arranging ferns on white perforated paper, and spattering. Line and trim with the color of the toilet. Those who can get the trailing ferns, will find them beautiful in this work, with a few of their delicate blossoms.

FANCY.

## Hireside Reading.

### A QUEER TEAM.

A traveller in the Western district, was struck by the absence of the usual tessellated language of a bullock driver, in the case of a man on the road with a small team, which he thus apostrophized: "Come hither, Baptist! Wo-o-o! Presbyterian," etc. This mode of address seemed so strange to the traveller that he entered into conversation with the man and asked him how these titles were applicable to a bullock team. Well, sir, you see," said he, "I calls this the 'clesias-

Mr. Whittier's simplicity of life and thought is illustrated by a story told by a writer in the *Boston Times*. She says: "A very elegant woman of Boston was walking with Col. Higginson—the fastidious man of culture, who understands how to smile and how to use the semi-color better than any man in New England. 'I want you to come in to Osgood's with me,' he said to his lady friend, 'and see Whittier, who is there to-day.'

They went in and found the poet. After a little while the conversation turned on a young girl with colored blood in her veins who had a place in the Freedman's Bureau at a small salary, and was rather petted by the philanthropists of a certain Boston clique.

son was at a loss for reply. He did not point to his elegant companion and say that that sum would hardly buy her gloves; and I suppose the poet accepted her splendor as a matter of course, and did not dream of the cost."

**After-Dinner Orator.**—"It's in the wonerful insight inter 'uman nature that Dickens gets the pull over Thackery; but, on t'other hand, it's in the brilliant shafts o' satire, t'gether with a keen sense o' humor, that Dickery gets the pull over Thackens. It's just this: Thickery is the humorist, and Daackens is the satirist. But, after all, it's 'bsurd to instoot any comparison between Daackens and Thickens." So none was "instooted."—*London Judy*.

THE YOUNG "ARTFUL."

tical team. You see that bullock on the off side leading; I call him Baptist. We'll be crossing the creek presently, and he'll be bound to make for water. That one on the near side, he's 'Piscopalian, 'cause he holds his head so werry high. That bullock on the off side of the pole, the one with the crumpled horn, I calls him Presbyterian. He is the most out-and-out knowing bullock of the lot. The brindle in the same yoke with him, he's Wesleyan. He's always a grunting and a groaning, as if he was dragging the whole load. Bless your life, sir, he's not pulling an ounce."

After a prolonged discourse on her virtues and social privations, Col. Higginson said, 'And, poor child, after her board and other expenses are paid she has only fifty dollars a year for her dress.'

Whittier drew up slowly about his spare figure the gray, woolen shawl that he wore. 'Fifty dollars,' said he; 'and does not thee think that is enough? I never spent more than that sum a year for dress in my life.'

Looking at the Spartan simplicity of the Quaker poet, one could readily believe him, and Col. Higgin-

"I never can enjoy poetry when I'm cookin," said an old lady; "but when I step out to feed the hogs, and h'ist myself on the fence and throw my soul into a few lines of 'Cap'n Jinks,' it does seem as if this airth was made to live on, after all."

A traveller in a steamboat not particularly celebrated for its celerity, inquired of a gentleman who stood next to him what the boat was called, upon which the latter replied, "I think, sir, it is called the 'Regulator,' for I observe all the other boats go by it"

"TREASURES OF GARDEN AND WOODLAND."

FRONTISPIECE TO

The Ladies' Floral Cabinet.

# THE LADIES' *Illustrated* Floral Cabinet

BY HENRY T. WILLIAMS.

NEW YORK, JANUARY, 1878.

NO. 73. PRICE 12 CENTS.

## TWO PRIZE TABLE DESIGNS.

At an exhibition of the Massachusetts Horticultural Society, a prize was offered for the best arranged table design, not exceeding four feet in height. I will endeavor to describe from memory the design that won the prize.

From a glass tazza, about a foot in diameter, arose a stalk of glass about two feet high, which ended in a trumpet, also of glass. From the stalk, about half way up, sprang three curved branches, each supporting a trumpet, also. The tazza and trumpets were filled with choice flowers most exquisitely arranged. With the exception of scarlet and white Fuchsias, I do not remember what varieties of flowers were used, but I shall never forget how delighted I was at the sight of the beautiful thing. There were just flowers enough; not an unnecessary one, and each one just where it belonged. I believe there was some Smilax used, though I am not sure; but the crowning grace of the whole thing was the delicate mist of Adiantum, which seemed almost to float in the air above the flowers in the trumpets, producing an effect impossible to describe. The tazza had an edging of

handsome Ferns, which showed to the best advantage on the white cloth cover of the table.

The same society awarded, in 1876, the first prize for a larger and showier one, and this I will describe

FERNERY AND ROCKERY IN AQUARIUM.

as well as I can. From a large tazza, forming the base of the design, arose a standard, composed of six small galvanized iron rods, surrounding a larger central rod. These rods were bound firmly together for about eighteen inches. At this point they separated, the six outside rods curving outward and downward, while the central one continued about a foot above the point of separation, and was surmounted by a small lute composed of choice light-colored flowers. The strings of the lute were formed of the scarlet and golden

bells of the Echeveria. Each of the branches supported a tiny oval basket filled with lovely flowers tastefully arranged, and having in the centre a blossom of Erythrina, whose peculiar blood red color produced a unique and charming effect. Three alternate baskets drooped a little lower, and hung a little closer to the centre than the other three, adding thereby to the effect. I noticed that the baskets were without handles, also that they had the appearance of being suspended by one end, by which means the flowers were all faced outward. The tazza at the bottom was filled with rich, bright flowers, and fringed with Ferns. From the base of the lute drooped strings of Smilax, which were caught up on the branches near the baskets.

I will add before I close, a word or two about the idea in table designs from *Tilton's Journal of Horticulture* for 1867:

"Such ornaments for the dining-table are confessedly the most difficult arrangements that taste has to achieve. If very dwarf, they are insignificant except to the guests beside them; if of medium height, and closely ornamented with foliage and flowers, they intercept all *vis-a-vis* communication, and destroy the effect which ought to be produced by the *tout ensemble* of the table; if tall, so that a portion of the floral decoration is above the heads of the guests, and the remainder on a level of the table, the effect of those separated portions is extraordinarily weakened."

A SIMPLE WARDIAN CASE OR AQUARIUM.

JARDINIERE, WITH HYACINTHS.

## Floral Contributions.

### WET SOIL—MISTAKES OF BEGINNERS.

People will too often kill their plants through extreme kindness, especially some of the ladies whose experience in floriculture don't reach much beyond a few house-plants. They believe—and it would take a strong-minded philosopher to convince some of them otherwise—that the only requirements necessary to maintain the health and vigor and blooming capacities of plants are simply wet soil and a large pot. This is a grievous mistake, and results too often in disappointment to the cultivators who see their plants die prematurely.

Plants growing in continually wet soil are puzzled whether to live or die. The water at the roots is rotting the young and old fibres equal to ever so many worms and pests gnawing at their very core. Water continues its mischief; it encourages the breeding of worms and washes the good substances that are beneficial to plants through the holes in the base of the pots and leaves nothing to nourish the life and vitality of the plants but mud and water.

Plants will sometimes live in this condition, but their quality will be in every respect inferior, their stems soft, and branches pendulous, leaves droop heavy, and are marked with tints of decay; if flower peduncles appear by accident, they seldom attain perfection. Keep the soil humid and moist; when the soil severs and parts freely between the two fingers, then is the time to water. By this mode the plants will receive sufficient moisture in a dewy vapor natural to nature, and encouraging to vegetation's fruits and blossoms.

The young thread-like roots are the principal supporters of plants; they penetrate and absorb from the soil the food necessary for the maintenance of plant life. Too much water will baffle these young roots on account of their pores being kept continually full of water; they are thus stifled and deprived of their breathing facilities. This also checks the usual quantity of evaporation, and the plants are in a poor condition indeed. Take care, then, that no more water is given than the pores at the roots can convey with ease for circulating through the plants.

Plants in the open air will of course dry quicker from evaporation than those in the humid atmosphere of a window garden or greenhouse; in either case the supply of water should be moderate; healthy and vigorous foliage, peduncles, panicles, and blossoms will be the result. Prefer water that has been exposed to the atmosphere at least twenty-four hours before using, and have it to average the same temperature with the situation that the plants are in.

Nothing looks more untidy than a small plant in a large pot; besides, they never do so well; the roots spread, and in many cases the branches and leaves partake of the same spreading nature; thus the compactness is lost unless dwarfed by artificial means. Better have pots and plants of corresponding sizes. Plants should not be left any great length of time on window sills with sashes hoisted, or in door or hallways where strong currents of air would evaporate the moisture from wood and foliage quicker than the roots could with ease furnish it. The leaves of plants in this situation will droop heavy and untidy, devoid of natural texture and vitality, let their treatment otherwise be ever so judicious.

Pot plants arranged on porches, piazzas, porticoes,

roofs, etc., in summer suffer from the extreme heated condition of their roots. The pots should be shaded with moss, cotton, or leaves, anything to break the direct rays of the hot sun. The foliage and branches will bear from ten to twenty degrees more of heat than the roots will.

Lime water applied once or twice a week is a successful remedy to destroy worms in pots. The foliage also may be syringed with a weak solution of the same kind; it will remove any pests that are inclined to feed on the leaves; besides, the ammoniac substances contained in lime are healthful and beneficial to plants.

The keeping plants in a dwelling house in winter is sometimes perplexing; hot air from furnaces, coal fires, gas, and dusty dry atmosphere all contribute their mite of mischief to the vegetation that is confined under their influence.

A spare room is a capital place to keep plants in, or any nook in the building that has a sufficiency of light, and where the winter night temperature will not fall below forty. The spare room or nook detailed for this purpose should be sprinkled occasionally to keep down the dust and give a gently humid atmosphere. If a very cold night threatens destruction, line the windows on the inside with blankets, bags, or carpets, or let artificial heat into the room.

The readers of the FLORAL CABINET are already well acquainted with the art of window gardening if they obeyed the directions given in former issues of this paper, especially those who have read Mr. Williams' book on that subject, and practised the instructions contained therein.

The first thing to be attended to in this department is the procuring of proper plants. I will herewith give the names of a collection that is suitable for window gardening, or for the spare rooms or nooks above-mentioned. They are easily obtained, and not hard to manage:

*Ficus elastica*, *Lysimachia*, *Hydrangea*, *Fuchsia*, *Feverfew*, *Coleus*, *Carnation*, *Dianthus*, *Abutilon*, *Tropeolum*, *Passiflora*, *Geranium*, *Calceolaria*, *Heliotrope*, *Lobelia*, *Mignonette*, *Myrtle*, *Petunia*, *Verbena*, *Antirrhinum*, *Lantana*, *Violets*, *Ivy*, *Vinca*, *Begonia*, *Cobaea*, and *Pansies*.

The above-named plants, with the exception of two or three, can be readily increased from cuttings. Those who have not the convenience of a bottom-heated propagating bench, had better do their propagating in summer. The latter part of August, or the early part of September, is a good time, so that the cuttings may be well rooted and ready to move into the house-garden at the prospect of frost. The following will be found a simple, cheap, and successful mode of propagating:

First, prepare a bed of light, sandy soil to any dimension you please, out-door in a shady place. Then make a frame same size of the bed; sink the lower portion in the soil, and have the upper edge six inches higher than the surface of the bed within; on the cuttings from the plants you choose to propagate from, make a horizontal cut below the second or third joint of the cutting. Remove the leaves from the two lower joints, and in all cases give no more than two or three joints to each cutting. Sink the cuttings two-thirds their length in the prepared bed. Press the soil around their base, and water immediately; cover with glass, window sash, hotbed sash, anything that will give light and confine moisture.

Take care now that the cuttings don't mildew and rot from too much moisture. Keep the soil damp, and admit a small portion of air daily. Remove the sash

entirely at night, as the calm dewy atmosphere of the night will not permit evaporation, and will have a healing influence on the cuttings, such as will strengthen their vitality and hasten callousing. The sash may be taken off for good in a week, and ten days later the cuttings may be transferred into pots. Cuttings will also strike roots in a fern case, or any other glass structure of a like capacity, in the house in winter, if a bottom heat averaging sixty to seventy degrees could be maintained. A healthy situation, with plenty of light, is needed for this purpose.

Another mode of propagation that may be resorted to and practised with equal success is that of causing the branches to strike root by layering, before they are separated from the parent plant. This can be effected by sinking the pot to the rim's level in soil; then the branches laid and pegged into the soil. As the soil may be raised in pots and small boxes, and the branches pegged as above directed, strip the leaves from that portion of the layer that goes under soil. Make an incision in the lower part of the joint that you intend the roots to emanate from; extend the incision half an inch above and below the joint, doing the whole in one clean cut. Now bury the fractured joint one inch in the soil. Keep moist and separate from the parent plant when roots are effectually struck.

Soil best suited for plants now in common and general cultivation, is very well known to the readers of this paper. I will only suggest that the compost heap should receive more chicken mould and less sand than is generally prescribed.

Beds and borders should be seen to before hard frost sets in; remove the rubbish, and dig into the soil a liberal portion of fresh manure. Rake the surface soil smooth, and see that there is no room for water to lodge, and have things look clean and thrifty as a prospectus for future operations.

Rotten manure is not at all what it is represented to be for plants. In fact, any decayed matter is very inactive, especially manures that have decayed under the influence of the weather; rains wash the pure and wholesome substances away, and the sun and air attracts the ammonia and gases; consequently nothing is left for the nourishment and perfection of vegetation but scorched refuse. Observe a heap of manure while in the state of fermentation. Smoke and invisible fluids emanate in swift currents from the decaying heap, and we may look with certainty to this kind of heated manure for the origin of the different forms of fungi that are so destructive in the garden and orchard.

I don't pretend to teach that the application of fresh manure to the roots of plants should be made a rule. My aim is to show that fresh manures are reliable fertilizers if applied to the soil a period previous to using the same for plants.

By this method all the gases and invigorating substances contained in undecayed manures will be retained in the soil.

Plants in the beds and borders in summer require but little attention. Destroy the insects while yet in their seed leaf. Cut back tall and uncouth branches, and permit not the surface soil to bake into a hard crust. In dry weather water the beds every third evening; then water thoroughly.

Pack the soil firmly around the roots of plants wherever they are planted. It is not necessary to pack tender bulbs in sand or sawdust for winter preservation. They will live in any dry place where the temperature will not fall within five degrees of freezing.

JOHN QUILL.

## Answers to Correspondents.

**Laurestinus Unhealthy, etc.**—Please tell me the treatment of Laurestinus; the leaves of mine turn brown. Have showered them often. Is that the cause? Please tell me what is the temperature for Euphorbias, and if they require much water?

*Answer.*—The Laurestinus (*Viburnum tinus*) is a cool greenhouse shrub, hardy in England, where it is used for hedges. Your plant probably needs repotting, or is kept too hot. Showering did no harm unless, perchance, you exposed it to burning sun under glass when wet.

Euphorbias will stand any degree of heat and need very little water, except *E. jacquiniiflora*, which is more a stone flowering plant.

**White Water Lily, etc.**—Why did not my Water Lily bloom? I planted it in a tub and followed all instructions. How shall I start Violets and Forget-me-nots from seed.

Galva, Ill.

EMILY BRALS.

*Answer.*—The root of your Water Lily was probably too weak to bloom; another year it will do better.

Sow the seed of Violets and Forget-me-nots in the spring in a cold frame. The latter will bloom the same year. Protect the plants during winter in a cold frame, and they will flower well the following spring.

**Seeds, etc.**—When in London last year I bought of Carter & Sons, the great seed dealers, a large lot (\$25 worth) of seed of double Petunias, Balsam, Portulaca, etc., and I find but very little of it comes double. Is it my fault, or have they swindled me? A few did come double, but a large proportion are ordinary.

ALFRED BURNETT.

Cincinnati, Ohio.

*Answer.*—If the Balsams were from a good strain they ought to be nearly all double. The other plants mentioned often come single from the best seed; there is a great deal of "luck" about double flowers.

**White Water Lily, etc.**—Where can I get White Water Lily, and what does it cost? How soon will a Lantana bloom from seed? Will Ferns taken from the woods in spring, and which grow all summer keep fresh and grow all winter? How shall I make an Eupatorium bloom in winter? Does a Dusty Miller require much water?

Granville, Ohio.

MRS. M. E. MACY.

*Answer.*—J. E. S. Crandall can supply you with the Water Lily. Address Rockville, R. I. Cost about one dollar.

Lantana seed sown in early spring may bloom the same autumn, if well grown.

If the Ferns are of evergreen species they will keep bright all winter, but if deciduous they will lose their leaves in the autumn.

Grow the Eupatorium in full sun; it should bloom about February.

The Dusty Miller, be it a *Cineraria* or a *Centaurea*, does not require much water.

**Angle Worms in Pots, etc.**—I find little pellets on the top of my pots. They tell me they are caused by earth-worms. How shall I get rid of them? I find scales like bed bugs on my English Ivy. How can I get rid of them? Can you tell me the treatment Bouvardias require in summer? I have been

told I must not put Chinese Flower Food on my Calla. Is that true? MRS. E. C. M. FLAGG.

Cedar Grove, R. I.

*Answer.*—Take a bit of quick lime, as large as an English walnut, and slack it in a quart of water. Put this on the plants and the worms will come to the surface.

The scales are insects, and must be removed by washing with soap, or by picking off.

Bouvardias rest during the summer, but must not dry up. Set the plant out in the garden, taking it up again before frost comes.

Callas will stand "Chinese Flower Food" as well as any other plants; but as a general rule, if well potted in good soil, house plants need no manure.

**Lime for Earth Worms, etc.**—In watering with lime water for worms in pots, how much lime must I take, and slacked or unslacked? How much Peruvian guano must I use in making liquid manure for my house plants? Do common Ferns require shade and little or much water? I have a hanging fernery in a south window, and do not have much success.

F. C. RYHNER.

Highland, Ill.

*Answer.*—A lump of unslacked lime, as large as an English walnut, to a quart of water.

A spoonful of Peruvian guano to a quart of water.

All Ferns require partial shade and should not be dried up. A south window is not a suitable place for a fernery.

**Propagation of Dracænas, etc.**—How are Dracænas propagated? Do they flower? Is there any book on the Linnaean system?

Fall River, Mass.

SHANE BAWN.

*Answer.*—Dracænas are propagated by cuttings off the tops, or by burying a stem in bottom heat, when the eyes make young plants. They frequently bloom. The flower is a branching spike of white pink or purple small blossoms.

We know of no book on the Linnaean system. Botanists now use only the natural system.

**Name of Vine.**—Please tell me the name of a beautiful vine we raised from seed, last summer, sent us from the South. They were exactly like grape seed. Our plant completely covered a pillar thirty feet high and two yards around at its base. The foliage was like the Maypop, the flowers very small and white, the seed vessel a beautiful little ball, striped with white, and bright red when ripe, and about the size of a Catawba grape, always three in a cluster; each seed, and there were eight in a ball, was enclosed in a pulp. It grew until checked by frost, but was not killed by it, two or three frosts. No one could tell us the name.

SALLY H. WILSON.

City Point, Va.

*Answer.*—Your plant is *Bryonopsis laciniata erythrocarpa*, a native of India, belonging to the natural order, Cucurbitaceae. It is very ornamental, but not at all common, though easily grown, and one of the most beautiful of annual climbers.

**Petunias for Window Gardens.**—A Connecticut lady, purchasing some seeds of the Petunia, was delighted in her experiments to find that it could make a charming window and house-plant. She writes Mr. Vick how she did it:

"Last spring, when making out our list of seeds, we sent for a paper of 'Petunia hybrida' (choicest mixed, from show flowers,) little thinking what a rich

treat was in store for us. We sowed them in a pot in the house, and transplanted them to the garden early in the season, and the result was a bed of the finest and largest Petunias I ever saw. They were a constant source of delight to us, and the wonder and admiration of all our friends. In September we took cuttings from them, and, when they were well rooted, put them in three-inch pots, in good soil, where they have bloomed all winter as freely as in the summer. I think they do not require much soil, as the roots are very small and fibrous, and the advantage of the small pots is they will stand on the window-sill of any ordinary country house, thus bringing them near the glass and keeping the earth warm. Some of them we have trained to the window sash, and a few of them in this way will fill an entire window. If there are any who have not tried the single Petunia for winter blooming, I hope they may be induced to give them a trial, and I am confident their efforts will be repaid by these lively and free bloomers.

**Cacti, etc.**—Last winter I was unfortunate enough to lose a great many of my choicest plants, and that discouraged me greatly, but in the spring I could not resist "trying my luck again;" so I had a good many kind friends to give me cuttings, and now I am quite proud of my collection. I have two large trailing Abutilons in bloom now, that I kept, and my pink Bouvardia bloomed beautifully in the spring. I kept nearly all my Cacti, and as I am particularly fond of that class of plants, I was delighted that I did not lose them, for I find them a little harder to get than any thing else.

Every one who likes flowers, ought to have the Crab's-claw Cactus. I think it when in bloom the loveliest thing I ever saw. I have about fifteen varieties of Cactus. Some I don't know the names of. My Pope's-head Cactus grows very well, but don't bloom. Can any one tell me if the Snake and Rat-tail are the same thing or not?

I received a pretty Clove Cactus from Vermont, and it is growing nicely, and I am so proud of it! There is a large round Cactus, a native of Texas, called, I think, "The Devil's Foot-stool," that has red berries on it in winter. I have never seen one, but would like to ever so much. I wonder if any of the readers of the CABINET have ever seen one?

MRS. ELEANOR JORDAN.

**A Little Greenhouse.**—My greenhouse is simply a pit three feet deep. It is weather-boarded up six feet above the ground at the back and each end. The front, to the south, is glass, the roof covered with shingles. I keep all my plants in safety during the winter. I have steps leading down into it, and arrange the plants on steps in such a manner that I can go in and enjoy them at any time. The plan is cheap and well suited to our climate. I cannot have house-plants, as we have our houses warmed by open fireplaces. You don't know how I would like a house arranged as you have them North, so as to be able to keep my flowers around me in the winter. We have, however, such a fine display in summer, it reconciles me somewhat.

I have a Cactus which is now about six feet high have had it several years, and it has two buds on it at last, after waiting so long. I am in a quiver of expectation to see them open. I have written to several florists, but so far have not been able to find one who could tell me if it ever flowered. It will now answer the question, if nothing happens to it.

MRS. H. M. BREEDEN.

## Floral Hints.

## FLORAL HINTS.

Few realize what may be acquired, in the course of years, by a taste for flowers. While seeking the best for these household companions, knowledge flows in, a refining influence, pleasant acquaintances are formed through mutual interests, and in the family a perverted taste is often converted into a pure one. The presence of these beautiful creations cannot but have an elevating effect on the mind. They are companions in solitude, a resource to the invalid, a recreation for the tired business man, and an education for the young.

A woman much given to the study and cultivation of flowers, is seldom given to vanity, or a surplus of personal adornment. One appreciating natural beauty generally desires it in the household arrangements, and makes neatness beautiful.

In preparing for the culture of flowers, if some system is practised it will save time, loss of plants, and much confusion.

To treat flowers rightly, we must learn their needs, and to do this we should know their nature, their haunts, and the degree of heat needed. For this we must have books, or the experience of others. It is, therefore, well to try, in however humble a way, to accumulate books of reference. Catalogues may form a beginning. These frequently describe new plants and their culture, and can be had for the asking by postal card, by sending a stamp, or for a trifle in money. Lists of desirable books are published in floral or agricultural papers.

Next to these is a note-book in which to jot down your own experience, and those of the flower-loving sisterhood about you. One lady has, perhaps, a special fancy, and she is sure to know how the plant she loves is to be treated, or what promotes success with her. You will be surprised, in time, at what you have learned in this way; for many ladies experiment, and therefore learn new ways to success. Note the time of putting in and out of your plants, the repotting of rare ones, and the earth used; also the consequent success or failure. Put down the time of the budding and blooming of flowers, and if the time varies, the cause of the delay, or hastened maturity.

Make a list of your plants each year, using their proper or botanical names as fast as you learn them, so that they may become familiar to you in catalogues and books of reference or travel.

Label your plants carefully, or you will be liable to mistakes in the identity of your pets. The labels should be painted white, as they last much longer if painted, and retain the pencil marks, which soon wash off, otherwise.

Try to have a few new plants each year, as they will add to the interest as well as to your knowledge and experience. If you have special fancies, try to get the best varieties of each favorite. It is wasting time to spend the care of a season on an indifferent specimen. "Well loved, well served," says the proverb, and it will apply to plants as well as friends. Let, then, the thrifty appearance of your plants testify to your thoughtful care and a true knowledge of their needs.

There should be, if possible, always at hand some good earth, or better still, a variety of mixed earths suited to different plants. If these are ready, it is easy to repot a plant, or put a new one into congenial soil, thus promoting a healthy and vigorous growth.

For general use a barrel may be filled in the fall with one-fourth manure, one-sixth sand, and the remainder with good garden soil, well mixed. A little lime, well rotted tan, woods earth, or well rotted weeds, add to the excellence of the compost.

We know a lady who did this every fall, using the earth in the spring. She had thrifty and beautiful plants.

When the manure is old more can be used, even half to Zonale Geraniums, Fuchsias, bulbs, etc. It is, when two or three years old, a good substitute for woods earth. It should be well covered in order to retain its strength, as otherwise its best properties evaporate or are washed away.

Where sea-sand can be had, it is much to be preferred, as it does not sink in the pot as most coarse sands do. We should prefer fine coal ashes to the latter, and it has been used with success. Fine charcoal would be a good substitute also, as it purifies the earth, and makes excellent drainage.

A compost heap of weeds, leaves, bones, manure, sweepings of the house, parings, etc., is very enriching, if thoroughly decomposed, and should be riddled before using. The earth for pot-plants is in better condition if well aired by sifting, than if put in in lumps.

Boxes, or glazed pots, if filled with rich loose earth, are convenient for slips; but if small pots are preferred, they should be set in boxes filled with sand, sawdust, tan, or earth, so as to preserve a regular moisture about them; for if the earth dries as the young roots are forming, it may kill them at once.

In repotting, clean the pots well before using again, or if new, soak them well, or they will absorb all the moisture from the plant.

In watering plants, great care should be taken not to over-water those which cannot evaporate freely through the leaves, some seeming to need more watering overhead than at the roots. Plants which endure a great deal of dryness at the root generally dwell in a moist atmosphere, or are subject to heavy dews. It is best to use warm water in winter, as it helps to keep warmth at the roots. Scalding hot water can be used on Callas with excellent effect; also on Cacti. Bulbs should have the earth heaped up around them, and be watered at the edge of the pot, wetting the bulbs as little as possible. They are subject to the attack of both small and large worms, which may be ejected by strong soap-suds, or lime-water. Cacti and bulbs at rest need but little water during the winter, once a week being often enough to give it, unless the atmosphere is very dry.

If heat is not easy to obtain, or is irregular, do not cultivate delicate plants, as one night's frost might bring destruction to all. Cultivate hardier plants, such as Roses, Chinese Primroses, Ivies, Sparaxis, Zonale Geraniums, etc., which can bear a great degree of cold, and flourish best in a coolish atmosphere. Lilies of the Valley can be forced, also Deutzia, etc. If, however, you have sufficient heat and plenty of sunshine, still keep your delicate plants from drafts, open cracks, and open windows. On severe nights put newspaper curtains between them and the glass, or cover them entirely, if necessary.

Turn your plants frequently so as to promote symmetrical growth. If the atmosphere is very dry, put boxes of wet sand about, or saucers of water.

If you cannot command sunlight in your windows, try Ferns, ornamental-leaved Begonias, etc., or winter choice plants there. Water all plants overhead at least once a week.

Plants must have a period of rest, or wholesome

neglect, in order to bloom well; at night, too, the temperature should be lowered. The circulation is said to diminish then. Tropicals plants bear a much greater decrease of temperature at night than cultivators are generally aware of, approaching nearly to frost at times. If, therefore, we know how to put them to rest properly, we may have better bloom. We knew a lady who completely neglected her Zonale Geraniums in summer, and they became dried up, forlorn, and miserable-looking plants; but a short time after they were brought into the house they commenced blooming, and were full of flowers when other plants were almost dormant.

Try to have a succession of bloom by studying the time of rest for some, and bringing others forward. Much depends on arrangement to bring out the beauty of plants, such as placing vines where they will hang or cling in natural festoons, stately plants by themselves, blooming ones amid greenery, etc. Use wall-pots, or hanging-boxes, for trailing plants. Hanging-baskets should be hooked into the loop of a cord or chain, at an easy distance for lifting down, as they need daily syringing or soaking. Baskets, too, can be used with pretty effect. Stands of Ferns are a beautiful addition, or even one well grown, such as the Lomaria gibba, a small tree Fern, which we have found will thrive well under sitting-room culture. It is from New Holland, and will bear a cool atmosphere quite well. We have seen Ferns kept healthy and thrifty during the winter, in a moderately heated sitting-room, and without the aid of glass or extra moisture.

In closing we would say, be not discouraged at failures; the best florists have these. We have known of one who cultivated some plants for years without any extraordinary success, but one winter he happened on the very treatment which secured a brilliant show of flowers.

ANNA GRISCOM.

**The Aloe.**—The Aloes form the strongest contrast to the light grasses growing in proximity to them by their stately repose and the strength of their thick, fleshy, and inflexible leaves. They generally stand solitary in the parched plains and impart a peculiarly melancholy character to the landscape. The real Aloes are chiefly African, but the American Yuccas and Agaves have a similar physiognomical character. The Agave Americana, the usual ornament of our hot-houses, bears on a short and massive stem a tuft of fleshy leaves, sometimes not less than ten feet long, fifteen inches wide, and eight inches thick. After many years a flower-stalk, twenty feet high shoots forth in a few weeks from the heart of the plant, expanding like a rich Candelabrum, and clustered with hundreds of greenish yellow aromatic flowers. But a rapid decline follows this brilliant flowering and the exhausted plant soon dies.

The Agave is indigenous to Mexico, and from thence it has found its way to Spain and Italy, and it is considered one of the most valuable productions.

M. J. CUMMINGS.

**Window boxes** of growing plants are particularly beautiful when Lygodium Scanden, in thick cordons, are festooned about the heavier plants.

The white doves, so long popular, have been exactly imitated in pottery, and are now sold in floral shops. They have an aperture for growing plants, and can be filled with these or cut flowers.

## Flower Gardening.

### FLORAL MEMORIES.

I saw an arrangement of flowers that went straight to my heart. It was a flower stand having a receptacle for flowers, and in the centre was a showy, bulbous plant, (I know not the name), but having pale, purple, bell-shaped flowers, lined with pink, and dotted with white. Around it, in pleasing contrast, a delicate, purple-veined Claytonia was blooming profusely; the Mitchella dropped its glossy, green sprays around the edges of the vase, or stand, brightened occasionally with its scarlet berries.

I felt a tender feeling toward these wild-wood flowers that their more showy sister-flower in the centre could not call forth, though I admired it exceedingly. But what lovely visions appeared before me, aroused by those simple, wild flowers: of cool, damp woods, carpeted with moss, and an irregular stream terminating in a quicksand spring, shaded by hemlocks; snowy Beth flowers, turning to vivid rose color, are there found, and the yellow Erythroniums, white, blue, and pink Hepaticas, Uvularias, and Violets, yellow, purple, blue and white; of a light maple grove beyond the fence, where the Claytonias completely covered the ground.

I saw high, rocky banks, where the June berry or Wild Service flowers grew, some on trees tantalizingly out of reach, and others on shrubs so that we might gather an armful of the fragrant branches of delicate white flowers; a boat was moored along the bank that we might row up to the Big Bend, where the bright Cardinal flowers tempted us in the slush; and of the snowy Arrowhead blooms, the willow-lined banks, and the Ferns' luxuriant growth.

Lake Ontario, with its beautifully wooded banks, appeared before me in a panoramic show. A little island, one mass of rose-color when the fragrant Azalias were in bloom, and beyond it the water hidden from sight by the large green leaves and snowy blossoms of the Pond Lily. On the opposite bank, where everything is loveliest, moss greenest, flowers brightest, and wintergreens thickest, a little picnic appears vividly before me. Only four (what shall I call them? not boys), enchanted princes they seemed to us, and four daintily robed girls, taking a little lunch of great golden, downy plums, purple grapes, biscuit, pressed chicken, and cake. Above us the sun shone serenely; peeping brightly through the trees; below us the water was deep and clear; beyond were the Water Lilies, still farther was the rose-colored island, and we looking on all with our rose-colored spectacles, listening to birds' songs and Love's soft tones, were supremely happy.

Growing under an old tree near some rocks, we found a handful of the curious white flowers, with their white stem, called Indian Pipe. Upon pressing them they turned as black as ink.

Having had a difficult time trying to transplant wild flowers to my flower-beds, one day in autumn I pressed a younger brother into my service, and with a bushel basket we went "over the hills and far away" to the woods. With a trowel we dug up earth where the flowers had been, occasionally finding a bulb and a few roots, filling the basket full; and by dint of hard labor we got it home.

The next spring I was delighted with a fine wild-wood-flower-bed growing in a shady place. There were Squirrel Corn, or Dicentra Canadensis, and D.

Cucularia, Claytonias, Violets, Erythronium, etc., blooming as though perfectly at home.

The white Beth flower, grown in a clump, makes a handsome flower for the yard. The Cardinal flower will also bear transplanting by watering frequently for a while.

The loveliest spring flower garden I ever saw, belonged to a lawyer; a hard, sharp-featured, unprepossessing looking man. I was but a child and unacquainted with him, but I felt he must have a little of the "milk of human kindness" in his composition to love and cultivate flowers. His yard was a perfect blaze of beauty as soon as the snow was gone.

First purple, yellow, and white Crocuses, Hyacinths, and Snowdrops, and later were beds of gorgeous Tulips. In a corner of his garden was a Japanese Quince with its bright Cardinal colored flowers.

Offering once to make a buttonhole bouquet for a country cousin, as he was going to spend the evening with his inamorata, he said, as I commenced putting a firm delicate frond with a spray of Lily of the Valley, "Oh, I do not like these little flowers; what do they amount to? You cannot see them a little ways off. I like a big clump of Pinies growing in the grass."

I dubbed him a barbarian, but I have since thought he was right in admiring a handsome, well-trained Peony on a lawn. The pink, white, and red placed at intervals make quite a little garden of themselves.

I call to mind a handsome flower-yard cut into beds of various shapes, the presiding genius of which was a very illiterate, very fat old lady. She weighed three hundred and fifty pounds—a very mountain of flesh. Do not think I am exaggerating; she was truly larger than the "mammoth queens" on exhibition.

To have seen this old lady on a sultry summer day stooping over her flowers, you would have known she loved them; it was really her only point of refinement.

A large Rose bush grew close to the fence and profusely covered with great crimson Roses, and as I went by to school, I used frequently to pick a bud for my hair. But the old lady was on the alert, and one day as I was passing, she hailed me:

"I seen you pick them Roses," she cried, her huge form quivering like jelly in her excitement, "and I don't like it very well, neither; if you want a posy, why don't you come and ask me?"

I apologized, telling her I admired them so much, and in fact, I thought her whole yard was lovely. Of course, I did wrong to take her Roses.

She showed signs of relenting immediately, and the next day she called me in to admire her flowers, and ended by gathering me a handful. She called my attention in this wise, pointing to a bed of Pansies, she said:

"I think these 'ere Tanzies is nice, and this bed of Cromperals (Crown Imperials) is pooty."

If immediate answer was not given to her remarks, she emphatically called the attention thus:

"I say."

The best arranged flower garden, having a succession of bloom all summer, was cut into beds of various shapes and sizes. The sods were carried to the rear to be used in future for enriching the earth. The beds were enriched and filled up. Along the walk were beds of Verbenas of every hue. At one side was a bed of large, variously colored Pansies, another of Portulaca, a long bed was filled with the different colored Ten-Weeks stock, another of Carnations, another of Candytuft and Sweet Alyssum, a little bed of blue Forget-me-not, and still another long bed

filled with double Petunias and Gladiolus. Near the house was a bed of house-plants, mainly Geraniums, which bloomed profusely.

These plants bloomed until after the severe frosts and were the admiration of all beholders. The presiding genius of this mass of beauty was a lady with a large family to work for, and who only worked in her yard a little while before dinner and an hour in the cool of the day, but yet with what astonishing results.

I saw a pretty door yard ornament. A large tree had been cut down, leaving the stump about three feet in height. This was hollowed out a few inches, and the cavity filled with earth, in the centre of which was placed a scarlet Geranium and some vines around the edges which soon nearly covered the stump. At the base was planted some bright-colored Phlox. Another yard had a stump, a gnarled, curious looking affair from the woods. A large chopping bowl was covered with apple tree twigs, grape vines, lichens, etc., and varnished. A handle was made of grapevine, and this bowl filled with flowers and vines, twining around the handle and stump in a lovely manner.

But if time permitted, how many delightful memories of flowers, those "smiles of angels" might be brought before the mind's eye. And while we love and admire them, our hearts should turn in grateful love to the Maker of the beauty that may gladden our view on every side.

### AN EVERLIVING JESSAMINE.

I have often thought it somewhat strange that more has not been said or written about this beautiful evergreen climber, which grows so rampant and wild throughout the Gulf States. It is by far the most valuable climbing plant we have, being easy of culture, hardy, of rapid growth, and an evergreen. Nothing can exceed the beauty and magnificence of a well-grown specimen, with its large clusters of bright yellow delicately scented flowers, massed in the utmost profusion against its dense glossy evergreen foliage. I have been told that it is difficult to propagate them from the cutting, though I doubt whether it is more so than any other variety of Jessamine. It throws out no shoots or suckers from the root, and we propagate altogether by layers. It does not grow wild here, as in a more favored clime, and we obtain it just as we do other flowers which are not to the "manor born." I once owned a very large vine, given me by a friend when it was quite small, who remarked at the time that I must get a plant from a neighbor who had a variety which bloomed in the spring and fall. I failed to get it, however, but carried home the one I had, and put it out just where I wanted it, without any thought as to the fitness of the position, on the southern side of an eastern porch. Well, my plant grew and grew, and flourished exceedingly, until it covered the framework, the side of the porch, and began clambering over the roof, when it was stopped in its wild career by the keen edge of the pruning-knife. My friend afterward inquiring about my success with it, was much surprised when I informed her that it bloomed not twice only, but every month in the year, January excepted; but, of course, not near so profusely as in the "month of flowers." This lady had planted her's on the western side of a north porch, while her neighbor's occupied the south side of a large oak, south of the dwelling.

I have never seen this vine advertised by any florist north of Washington City. Can it be that it is tender above that latitude?

MRS. JULIA A. POWELL.

## The Home Circle.

## ANSWERS TO QUESTIONS, AND GOSSIP ABOUT HOME AFFAIRS.

**Painting.**—Mrs. R. J.—Will you please tell us whether your painting is on white velveteen? We will give you a list of colors for this work, which were purchased by the members of a class in Chicago a few years since, each one paying \$12.00 for the list, which at the time we were bound not to make public in any way for three years; so we hope you will appreciate the effort made to aid you through the CABINET.

For the colors, use the various pigments we will name, mixed with gum, alcohol, etc., as named and gum-tragacanth.

**Black.**—India ink, well rubbed with water, mixed with gum-tragacanth.

**Blue.**—Prussian blue, or cobalt, rubbed in soft water and thickened with the gum. Dark-blue—grind Prussian blue in soft water, thickening it with gum-tragacanth boiled to a jelly. Where very light tints are required and a little ivory-white ground in gum-water, this produces a prettier tint than merely weakening the blue.

**Brown.**—One-quarter of an ounce of pulverized Brazil wood, making a decoction by macerating it in one gill of alcohol (spirits of wine.) You will find this an unusually rich tint. Use no gum.

**Crimson.**—Take one drachm of powdered earmine and dissolve it in a quarter of a drachm of spirits of ammonia. You will use this tint for the deep colors of rich crimson flowers, such as roses, and for the deepening of pink in the higher lights. It will require no gum.

**Pink.**—The loveliest tints of pink are produced by the use of pink saucer with a little acetic acid or lemon juice.

**Purple.**—Mix the pink from a saucer, with the blue from Prussian blue, with gum.

**Yellow.**—One ounce French berries in half a pint of soft water infused for several hours by standing in a vessel of hot water, then boiled until reduced to one-half the quantity, adding a piece of alum, that when powdered will rest upon the point of a knife.

**Greens.**—Very light yellow green leaves must first receive a coat of this yellow, then one of light green made by rubbing a little blue with it, and adding gum.

Various blue and yellow greens are made with French yellow and Prussian blue.

Orange is produced by a mixture of crimson and yellow, best produced by rubbing up a little of the color from a pink-saucer with gum-water, and giving a smooth coat of this, then covering with yellow.

We use the stiff Poonah brushes for this work; they are round in form, and the color is put on by what is termed stippling; that is, a succession of taps, holding the brush in a perpendicular position, then when necessary giving the softening touches.

We can safely advise the Poonah method of painting, called some years ago Theorem painting, for this purpose. This is done by means of sets of a kind of stencil cards, through which the various colors are applied, and by which means the work is so simplified that a very tyro in the art of painting may achieve wonderful success.

In answer to your question regarding the introduction of white, we would say, that among other colors, it is exceedingly pretty even on white grounds. Use

India ink, weakened with water, and applied as just directed, tinging and touching up with French yellow and gum-jelly.

We direct your attention to a few suggestions and hints on this subject in a back number of *Harper's Bazar*, No. 38, Vol. IV. You will obtain the materials for the work from any artists' colorman.

**Exterminating Moles.**—Mrs. J. B. S., Nashville, Tenn.—We received your letter, and though questions regarding floral subjects do not belong properly to this page of the CABINET, we feel inclined to tell you very briefly of our own experience regarding moles, or at least give you an easy and most satisfactory mode of exterminating them, which is by planting the Rieinus (Castor Oil Bean) in the ground wherein they make their "runs." Since ridding our own grounds of the nuisance, we have given and sent seeds to many persons, and in every single case have received information of the perfect success of this remedy.

One gentleman writes us that in his neighborhood (in Tennessee) the common Castor Bean is called "the mole-plant" from the fact of its possessing this peculiar property. It is at least an easy experiment.

**Courses for a Dinner.**—An Inquirer.—Your questions are just such as gave rise to this "Home" department, which is now working such an immense amount of good. The following two—selected from your five—we answer this month:

1st. Will some of your readers in "the world of fashion," tell me how many "courses" are proper for a dinner company? Not an ultra fashionable one, but with a few chosen friends and a family gathering?

2d. Should a lady take one of the meat dishes; and is it considered proper for her to carve?

("Query: Is by "lady" mean the hostess? We presume so.)

3d. What is "Javil" or "Javelle water?" and will it remove mildew? I should be glad to have this question answered as soon as possible, as a quantity of my linen has been ruined by mildew.

**Answer.**—The Javelle water sold by druggists can be easily prepared by yourself, and it will remove mildew if perseveringly used, though one application may not.

Take two pounds sal-soda and one pound of chloride of lime; put them into a jar and pour on one and a half gallons of rain water; allow to stand uncovered for twenty-four hours; then bottle for use, first stirring well and allowing to settle. When required for use, take one pint of the Javelle water to a gallon of soft water (for removing mildew, iron-rust, indelible ink, etc.), make boiling hot, and put in the mildew or stained article for ten minutes; then take them out, and place them in hot water; add two gallons of soft water, in which an ounce of oxalic acid has been dissolved, to the Javelle water; stir well, and as soon as it comes to a boil, put the washed pieces in and boil until the stains disappear, which will soon be effected, as the first scald will start the process of bleaching. Afterwards wash in two warm suds; rinse well, and the fabric will be white as snow, yet not injured in any wise.

**Oranges.**—Alice B., New Orleans, writes us a most pleasant letter, and asks: Will you tell me of some tasteful and nice dishes of oranges? We have abundance of them, and I should be glad to do something besides simply preserve them.

**Answer.**—There are many beautiful modes of utiliz-

ing oranges, and I will give you one or two of them, though from mere description you can form no idea of their charming appearance. Take some fine oranges and with the point of a penknife cut out from the top a piece about the size of a "nickel," or a "dime," perhaps; then with the handle of a salt or egg-spoon empty the skins of their contents, using great care not to break them. Throw the rinds into cold water as emptied; take the juice and pulp; squeeze out all juice and strain it through a jelly-bag until clear; add to the juice, for each coffee-cupful, the juice of two lemons and zest rubbed on hard lump sugar, also the zest of one orange; one package of gelatine, one pint boiling water, two and a half cupfuls sugar, including the flavored lumps, and a glass of brandy, or water, if brandy is not used. Stir all well together, soaking the gelatine in two cupfuls of cold water for an hour previously. Pour the boiling water over, and allow to infuse on the back of the stove for another hour; then bring to a boil and strain through a jelly-bag until clear; color one-half of it with sufficient cochineal, dissolved in water, to make it a fine rose-pink color, but leave the remainder quite pale. When it is nearly cold, drain and wipe the orange rinds, and fill them with alternate stripes of the two jellies. When they are perfectly cold cut them into quarters and dispose them tastefully in a dish with a few light sprays of green between, such as myrtle, ferns, or curled parsley. You can scarcely imagine the beauty of this dish.

**Oranges Moulded.**—Put a half dozen oranges, being careful not to break the thin skin which covers and separates the parts. Divide into quarters or sixths. Boil a half pound of loaf sugar in six tablespoonfuls of water until at "crackling," or "candy height;" dip the quartered fruit in this and fasten them together, one overlapping another, against the sides of a well oiled plain mould; (we use a tin pail;) arrange one layer running to the right, the next above it to the left. There may be two or three other layers, (only on the sides of the mould.) Put plenty of the candy to bind the pieces in a solid mass. When they are solid, turn them out carefully on a dish, and fill the centre with a nice whipped cream made of one coffee cupful of cream, three eggs, three tablespoonfuls of sugar and a little almond or other flavor.

**Orange Jelly Baskets.**—Take a very sharp penknife and mark out a ring round the centre of each orange, horizontally. Then a strip, one inch or less wide, across the top, simulating a handle; cut just through the rind; then remove the sections between the handles and top, also diamond-shaped pieces on the basket, leaving the rind in lattice work; then with the handle of a salt-spoon, remove all the pulp, slipping the thin knife or handle beneath the basket-handle and loosening it from the pulp. Press this pulp through a sieve, and use a part or the whole of it for filling the baskets, first putting a layer of orange then cocoanut, grated with sugar, sprinkled over both; you may add a little wine to the orange, if liked. The snow-white cocoanut looks lovely on the orange-colored baskets, but they should be intermingled with others containing red, white, amber, and green jellies. A large dish full makes a beautiful table ornament.

AUNT CARRIE.

**How to Make a Feather Chair.**—Procure good large turkey feathers and cut them in points; take and form them into an old-fashioned armed chair (it is a pretty ornament), fastening them with small pins; put a cushion of bright silk in the bottom, a wee bit of a tidy on the back.

Subscribers will confer a favor, if, when answering Advertisements, they will mention "The Floral Cabinet."

## THE Ladies' Floral Cabinet

AND  
PICTORIAL HOME COMPANION,  
THE HANDSOMEST ILLUSTRATED JOURNAL OF HOUSEHOLD ART, FLOWERS AND HOME LITERATURE IN AMERICA.

## A GOOD OFFER. \$19.15 for \$11.45.

The Manager of THE INTER OCEAN of Chicago, makes the following offer to new subscribers—

### ON THE RECEIPT OF ONLY \$11.45

We will send you THE WEEKLY INTER OCEAN for one year, postage paid, price \$1.65.

"INDOOR AND OUT," an illustrated monthly publication, price \$1.50, and **AN ELGIN NATIONAL WATCH, PRICE \$16.00.**

These Watches which we offer are made by the ELGIN NATIONAL WATCH COMPANY of Chicago, and each is GUARANTEED by the Company's own MEDAL CERTIFICATE, which will accompany the same. The very superior value and workmanship of these Watches are too well known, and their reputation too firmly established, to need any praise from us.

They are manufactured expressly for us, engraved "Inter Ocean," put up in warranted silver hunting cases, and are good, reliable timekeepers, no pains being spared by the Company to make them trustworthy and reliable.

THE INTER OCEAN is a large, eight-paged quarto newspaper, and one of the BEST AND MOST POPULAR published in the country. It has the largest circulation of any paper published west of New York. Remit in money order or registered letter.

Address THE INTER OCEAN,  
119 Lake St., Chicago, Ill.

## HOUSEHOLD HINTS AND RECIPES.

BY "DAISY EYEBRIGHT."

136 pages, paper covers,  
PRICE, FIFTY CENTS.

This is a charming little book, devoted to House-keeping Topics, and full of useful items, hints, and directions about the house in all its departments, from the kitchen to the parlor, bed-room and attic. It contains a wonderful amount of real good practical information about house work, and there are recipes by the hundreds, so valuable that no prudent house-keeper can afford to do without them. The following are some of the subjects practically described:

To take out stains; cleaning jewelry; restoring craps; to clean gloves; to extract grease spots; to clean marble; recipes for paste, ink, blacking; to wash ribbons; cements; to take out paint from a dress; to preserve books; to make shoes water-proof; to destroy ants, cockroaches, and household vermin; to dye cloths all colors; to clean stoves; to clean combs; to prevent stoves from rusting; hints on ironing; hints for the toilette; hints on papering, house-cleaning, good health, etc., etc.

These recipes are so well tried and so useful that no lady, willingly, will neglect to procure them, as a single hint may save her many dollars in money, or much wasted time and trouble.

## EVENING AMUSEMENTS, OR, MERRY HOURS FOR MERRY PEOPLE.

By S. ANNIE FROST. Editor "Godey's Lady Book."

No. 5. WILLIAMS' HOUSEHOLD SERIES.

This volume contains over

**250 Games and Ways of Entertaining Company,**

and amusing YOUNG PEOPLE, at SCHOOL, at PARTIES, in SUMMER SPORTS, PICNICS, for CHRISTMAS, CHARADES, TABLEAUX, and all social occasions.

### LIST OF CONTENTS.

### FIRESIDE GAMES.

Over 100 are fully described. All the old favorite games are described, yet exceeded in number by many new and interesting ones, which will be very popular. Parents, Teachers, Young People, will find a rich supply of amusement, fun and frolic in these pages.

### TRICKS OF MAGIC, MYSTERY AND CONJURING.

Over 40 excellent and beautiful ways are described, by which any one can learn ways of performing which will puzzle the oldest head. Cnps, Coins, Balls, Rings Handkerchiefs, Ribbons, Knives, all are made to disappear, reappear, and do such queer things, that many are led to wonder, "how in creation did he do it?" the secret of which "Evening Amusements" fully explains.

### TRICKS WITH CARDS.

Over 50 interesting and charming modes are given how to use cards, to produce fun, frolic, mystery, puzzles, and tricks, in wonderful cleverness and variety. Guessing, Telling Fortunes, Vanishing Cards, Sending Cards through Tables, Cards in Eggs, Calling Cards, Cards under Hats.

### RIDDLES, &c.

An abundance of several hundred of the best Riddles, Enigmas, Rebuses, Puns, Anagrams, Acrostics, Double Charades, and their Answers.

### TABLEAUX.

General directions for managing these, with description of several scenes, also Charades and Proverbs in Tableaux.

### ACTING CHARADES.

A list of 14 excellent charades with dialogues, conversations, and description of characters, in full.

As all the incidents are pure and sensible, and all games, tricks, and amusements of vulgar or low nature are avoided, it is a book to be commended to families everywhere, as full of healthful enjoyment, and innocent recreation.

**JUST THE THING FOR WINTER EVENINGS, CHRISTMAS FUN.  
WORTHY A PLACE IN EVERY HOME.**

NOW READY.

300 Pages, price \$1.50. Holiday Edition, price \$2.00, full gilt.

Address **HENRY T. WILLIAMS,**

46 BEEKMAN ST., N. Y. Publisher.

Sent by mail on receipt of price. Also for sale at all Book Stores.

NEW YORK, JANUARY, 1878.

## FLORAL DECORATIONS.

I want to tell your readers about some rustic wood I made lately. I went to the woods in the spring and selected two kinds on trees, one large enough for a stand, instead of a wooden bowl, the other for a hanging-basket. I carefully scraped off the loose bits of bark with a knife, and then fastened small grape vines on it for handles, twining them together, and my basket was complete.

The stand took more work. I procured knotty branches of locust and gum and grape vines. I arranged four of them for the legs, fastened them to the bark bowl, twining the grape vines and smaller crooked branches among them, fastening them with nails and strong wire. I gave them all a coat of varnish. Every one said, "Oh, how beautiful!"

I forgot to say the bark was peeled off the knots, being in the form of a wooden bowl. Any one can make them and plant them to their own pleasure. I selected a bouquet of Geranium branches and some sprays of Ivy and Jacob's Ladder—I know no other name for it—and placed them in a vase of water, changing it once or twice a week. The blossoms and some of the leaves soon wilted and fell off, but new leaves and bunches of buds have appeared and are now coming into bloom. Not a sign of buds were to be seen when they were placed in water two months ago. Try it and see.

Every one knows how inconvenient it is to water baskets. The water will be sure to run over the sides, dripping over everything. The last basket I started I placed in the centre of an essence box, with sides and centre perforated with holes; pour this full of water, and your basket is watered nicely. I had very long wires on mine and nothing in it but parlor or Maple Ivy; when the vines had run all over it, I placed in the centre a small pot with a pink Maurandia in it, the vines were dropped gracefully around the basket, and the effect was beautiful. I pinched off all the large leaves and ends of runners of the Ivy, and it is all covered with short clustering tendrils.

I must tell you how I arranged some Ferns before

I was in possession of a wardian case. I took a large turkey plate and covered it with moss, letting the moss hang over the edges about two inches. I placed some soil on the plate, and planted a row of small Ferns around the edge, the fronds drooping over the sides. I then placed some more soil on the plate, heaping it up high in the centre. A large bunch was planted on the top and several smaller ones around the sides; the ground was then all covered with different varieties of moss, and several bunches of Mitchellia repens, or Partridge Berry Vine. The plate was then placed on top of a parlor stand a little larger than the plate. With an occasional watering, it lived and grew for months. It was so much admired, that a dozen or more of my friends went and did likewise. You had better take the plate to the woods, and send one to carry it home, unless you are strong.

While I am on that inexhaustible subject, ferns, I will tell you of one or two ways of using them that I have never seen in print. A cluster of small Ferns, with some moss and a little soil, was placed in a handsome shell; with a little care it grew for months. I often placed a Rose, or couple buds in the shell, and the effect was most beautiful. A spray of Fuchsia, a Lily, a bunch of scarlet or pink Geranium, or Verbena, was often tried.

A bunch of Ferns, with the roots rolled in moss and placed in a goblet of water, will grow nicely. I have seen bulbs blooming in the house, late in winter, placed in a flat dish with Arbutus—Epiga repens—Ferns and moss. The blue and pink Hyacinth, and wavy, white Narcissus forming an elegant contrast to the sweet Arbutus and rich green of the Ferns. The bulbs were grown in wet moss and sand. The Arbutus was brought from the woods, and the Ferns taken out of the fernery.

A few bulbs planted in the garden five or six years ago, now give abundance of bulbs for house culture and garden blooming.

There were not more than one bulb of each kind—Oxalis, three or four kinds of Narcissus, and half a dozen kinds of Tulips. Hyacinths deteriorate in our garden. We seem compelled to depend on the Dutch of Holland for them.

I saw such a handsome aquarium lately. A large Calla was standing in the centre. Specimens of fancy colored stones and handsome shells were grouped around the pot and scattered over the bottom. Vines of trailing Moneywort were twined among the rocks and shells, and tiny white roots were thrown out at every joint.

Rushes and Calamus are very pretty in a fresh water aquarium. If you want a variety of Geraniums, procure a paper of seed from a reliable seedsman. I got a paper of it for half a dollar, out of which I raised forty plants, sixteen beautiful distinct varieties.

I saw a pretty hanging-bracket to place against the wall for growing plants in. Seventy-five cents was the price. I invested the seventy-five cents in a Cape Jessamine, and went home and took an old coffee-pot, split it in two from top to bottom, took a half-inch board, wedge-shaped, with hole in the top to hang on a nail, to fit the tin and nailed the tin on it. I then had something the shape of a nutmeg grater, only wider at the top than bottom. I glued moss and lichens over it, and then planted a Fern and some long Ivy branches in it.

I hung it under a picture, and twined the vines around the picture frame. It was handsomer than the ornamented terra cotta ones I had seen and holding more soil, about two quarts of soil.

LIZZIE STEWART.

**Propagating Roses.**—I have been a reader of the FLORAL CABINET for some time past, but have never seen any account in it of a way of propagating Roses, that may be quite common, but to us was unknown until within the past four or five years.

It has proved so easy and satisfactory here, that I would like all your lady readers to have the pleasure of trying it for themselves. The cuttings may be taken any time between the 15th of September and the last week of October in this latitude; but we prefer the latter part of September.

Take long cuttings, say fifteen or twenty inches, of well matured wood; trim as for other slips. Dig deep holes and insert the cutting to within four or five inches of the top. Pour two or three pints of water around it, and draw the earth close about the stem; then cover with a glass jar—a common fruit jar will do—pressing the mouth of the jar down into the soil to keep it firm.

As the cold weather approaches, place a few inches of manure about the jar, giving an additional covering as the weather grows more severe, until about Christmas you have nothing exposed but the bottom of the fruit jar, which will afford sufficient light for the plant. Keep them thus covered until all the frost is out of the ground in the spring, and then remove the manure gradually, and the glasses.

P. O.

## PUBLISHER'S ANNOUNCEMENTS.

**Perfectly Delightful.**—The response to our offer of sketches, pictures, etc., of pretty rooms, window gardens, floral decorations, etc., has been very numerous, and the pictures are so lovely we are delighted. It seems at this date as if all must be accepted, but as many are coming while our paper goes to press, we cannot announce prizes until next issue. These interior views of our prettiest and most comfortable American homes, are so enjoyable, that when the illustrations are engraved and published, our subscribers will find them a rare treat. We shall publish them during the entire year, and consider them the best series ever produced in the FLORAL CABINET.

**Missing Papers.**—Do not hesitate to drop a postal-card should your paper fail to arrive. We are as anxious to have every subscriber receive his papers regularly as the subscriber is. We mail a copy every month, but Uncle Sam's mails meet with so many accidents, and get burned up or get lost, no one knows how, that we cannot know nor control our papers after put into the postoffice.

**Claiming Premiums.**—Many subscribers send us a club, and expect us to send them a premium. We will always be glad to do so, but please tell us *what you want*. We do not know; we must wait to hear from you before we can send anything.

**Prizes for Household and Floral Articles.**—Our offer of prizes is now renewed again for 1878. The following prizes will be given for articles on Flower, Window Gardening, Housekeeping, Elegancies, Needle Work, and kindred subjects relating to the comforts, pleasures and advancement of Home Life and Household Taste:

For best article on Floral Subjects.....	\$10 00
For second best article on Floral Subjects.....	5 00
For best article on Household Subjects.....	10 00
For second best article on Household Subjects.....	5 00
For each of next 20 best articles of Flowers, prize of book, "Window Gardening."	
For each of next 20 best articles on Household Subjects, choice of one book, "Household Elegancies," or "Ladies' Fancy Work," or "Beautiful Homes," or "Evening Amusements."	
For each of next 20 best articles (10 of each class of subjects), one Silk Book Mark.	

Contributors will notice the following rules: 1. Label all articles. "For Competition." 2. Each article not to exceed three to five foolscap pages long. 3. Articles all to be forwarded to this office before March 15. 4. Award of prizes will be announced in April number, and prizes forwarded to the fortunate competitors April 1. 5. Articles contributed, not specially marked for return, may be understood as having the desire of writer to be used in FLORAL CABINET, as a voluntary contribution whenever convenient.

The object in offering these prizes is not so much to induce the writing of articles for the sake of pecuniary remuneration, as it is to encourage our readers and writers to contribute really useful information, which will be a help and benefit to others.

**Treasures of Garden and Woodland.**—This is the title of our Floral Frontispiece this month, a fit companion to the purposes and tasteful appearance of the FLORAL CABINET. It is a tasteful group of autumn leaves and flowers, with their brilliant hues and perfect form, and is suggestive of floral decorations in many a rural home. As a work of art, it is of special merit, and as a floral group it is unusually tasteful.

**Illustrations of the Month.**—The floral illustrations on the first page are suggestive of convenient ways to decorate our rooms during the winter. The little jardiniere is full of earth, in which are growing full-blown Hyacinths. The parlor table is occupied with a large aquarium, rockery, and ferns growing above. While to those who have not means for the greater elegancies, we give a design for a simple wardian case, or aquarium, which any carpenter can construct.

IDEAS OF WOMEN.

A recent work published at Brussels contains, among other interesting matter, a collection of aphorisms by various authors, mostly French, of which we append a few:

**CHAMFERS.**—In the choice of a lover a woman considers more how he appears in the eyes of other women than in her own. Love is more pleasing than matrimony, just as romance is more entertaining than history.

**BOUGUEART.**—If we speak ill of the sex generally, they will arise against us; if we do the same of any individual woman, they will agree with us.

**CHARLES LEMESLE.**—Most of their faults women owe to us, whilst we are indebted to them for most of our better qualities.

**STERNE.**—Most women are endowed with such naturally endearing charms that even their presence is generally beneficial.

**MADAME DE STAFL.**—Love in a woman's life is a history; in a man's, an episode.

**CATALANI.**—Only he who has nothing to hope from a woman is truly sincere in her praise.

**DIDEROT.**—There exists among women a secret tie, like that among the priests of the same faith. They hate each other, yet protect each other's interests.

**STAHL.**—No woman, even the most intellectual, believes herself decidedly homely. This self-deception is natural, for there are some most charming women without a particle of beauty.

**Married Life.**—Good counsel from a wife and

mother: "I try to make myself and all around me agreeable. It will not do to leave a man to himself till he comes to you, to take no pains to attract him, or to appear before him with a long face. It is not so

the suffering virtue? The tear of a loving girl, says an old book is like a dew-drop on a rose; but that on the cheek of a wife is a drop of poison on her husband. Try to appear cheerful and contented, and

your husband will be so, and when you have made him happy you will become so, not in appearance but in reality. The skill required is not so great. Nothing flatters a man so much as the happiness of his wife; he is always proud of himself as the source of it. As soon as you are cheerful you will be lively and alert, and every moment will afford you an opportunity to let fall an agreeable word. Your education, which gives you an immense advantage, will greatly assist you."

**Chinese Sermon.**—The following discourse by a converted Chinese tailor, with reference to the merits of Confucianism, Buddhism, and Christianity, is worth preserving:

A man had fallen into a deep, dark pit, and lay in its miry bottom, groaning and utterly unable to move. Confucius walked by, approaching the edge of the pit, and said, "Poor fellow, I am very sorry for you. Why were you such a fool as to get in there? Let me give you a piece of advice; if you get out, don't get in again." A Buddhist priest next came by, and said, "Poor fellow! I

am very much pained to see you there." Next the Saviour came by, and hearing the cries, went to the very brink of the pit, stretched down and laid hold of the poor man, brought him up, and said, "Go, and sin no more!"

THE PROPOSAL

difficult as you think, dear child, to behave to a husband so that he shall remain forever in some measure a husband. I am an old woman; but you can still do what you like; a word from you at the right time will not fail of its effect; what need have you to play

## Household Hints.

## HOW WE PREPARED OUR CHRISTMAS GIFTS.

Christmas was coming all too fast for us unprepared elders, too slowly for the eager young ones. So many sisters, brothers, nieces, and nephews to be provided with gifts, and from where, oh! where should they come?

Our house was grandma's, and we were grandma's single daughters. Money, that in antebellum days was so plentiful, was now, alas, hard to get, and must be spent on necessities, not luxuries. But the question was, are not Christmas gifts necessities? So, at least, we resolved, and agreed to hold a convention and decide as to ways and means, for the gifts must be forthcoming if we had to evolve them from "the inner consciousness."

The preacher's wife was boarding with us, and she was called to join the conclave. She, too, longed to pour out gifts like water, but was stopped by the same barrier, the needful. Having sojourned awhile in the West, she had learned that many pretty things could be made with little or no cost, but with considerable trouble.

We were some time in deep consultation, and the result of the confab was—Resolved, that in this house must be made a gift for each of the twenty grandchildren, and some twenty more for the elders here and at a distance. That the said gifts be pretty and appropriate, and the cost but trifling. That was the last of November, and the time seemed very, very short for the work to be done. Fortunately the chinchilla zephyr shawl, with its fancy purple border, for the preacher's dear mother, was almost complete, and the rose and white toilet mats for Katie darling, were finished and laid away, waiting for the 21st to be mailed with the shawl. All else was to be done. Oh, the wrinkled brows, cogitating novel and lovely presents, the busy fingers, the sighs for money that did not come for the sighing, the merry laughs over failures, and kind assistance from each other. Those busy days, teeming with work and bright with Christmas green, Holly, Ivy, Magnolia, Mistletoe, and Cedar, will always be a pleasant memory, and the merry workers enshrined in the chamber where forgetfulness never enters.

To appreciate our dilemma, you must know we lived in a little Tennessee town, twenty miles from the railroad, but on the winding Tennessee, where pretty materials for fancy work were not brought, and many of the graceful etceteras, so common in cities, were almost unknown. The great crochet fever that raged from Maine to California had not then become contagious here.

Fortunately for us our city niece had been spending the golden autumn days with us, and had initiated us into the fascinating mysteries of crochet. Our first move was to collect the "loose change" and order thirty ounces of zephyr; we used it all and wanted more.

"Blessings on the man that invented zephyr!" How many delighted women over the land will echo that.

Three pairs of pink soled dainty baby feet were on Christmas morning treading air in soft, bright socks knit by grandma's kind hands. That day Flora's baby May and little Will's dimpled wrists were adorned with blue and pink wristers. Bobbie and Jamie displayed their arms protected from the cold by

the same worsted comforters, only dark red and blue, as suited big boys. Grandma could not forget her boys, bearded men they were, and they declared, all four, they did not know how they ever endured the winter's cold without the pulse warmers.

There were six sets of zephyr mats of as many different colors and patterns for the sisters, and four sets of washstand mats of snowy Dexter thread No. 8, with borders of scarlet Saxony yarn, for the brothers' wives. There were two phantom baskets, and they were "tedious and tasteless" in the making, but most fairy-like and lovely when completed. Then three chair jewel cases were fashioned for the girls just budding into womanhood. I must describe one of these.

You know the ladylike, artistic work taught by the Moravians, called crape embroidery, and which is lovely as a flower painting? A dear lady, aged sixty-seven, taught me this dainty work, and her soft white hands and delicate touch seemed just suited to the task.

A piece of silk or velvet is traced with the figure of the article to be made, and then sewed securely to a small wooden frame. The flower pattern is then selected, marked on the material, and squares of the best Italian crape cut of the size and color suited to the flower to be made. No matter what flower is to be made, the crape is cut in squares and sewed on over or under, as the case may be, always taking care to hide the stitches and imitate nature. Leaves of bright green crape are interspersed and tendrils of all colors of split silk floss intermingled.

The chair of which I spoke, was of graceful Gothic shape, of white silk embroidered with bouquets of Pansies, Roses, and Violets on back, cushion, and sides.

This same crape work furnished a watchcase for a certain fastidious youth, whose visits to grandma's furnished the little ones with many a sly joke and teasing comment.

I think we reduced the wheelbarrow pincushion to a science, for what else could we make the hobbled-hoys, too large for playthings, too small to be neglected. This is a dainty gift when deftly made, and the remains of Leonora's grey silk poplin furnished the exteriors, while pieces of fresh blue and pink silk lined the little beauties.

The pastor's wife made her father a sofa pillow cover that was noticeably pretty and cost but twenty cents. Dark, bright and light pieces of worsted were cut in small hexagons, arranged in groups with an eye to contrast and effect, and pieced together till a hexagon, the cross width of the pillow, was made; then the length was filled in to correspond with the rest, the corners like the centre; this was lined with strong cloth; the under side was of cardinal red alpaca, and cost the twenty cents. The two parts were bound with a large cord of bright plaid.

For the College boy, exposed to the weather, a nicely fitting pair of brown yarn gloves with blue gauntlets were knit. Louis was an only child, so something different could be given him. A spirited black horse with flowing mane, erect ears and startled eyes, was fashioned for him of black alpaca, red braid, raw cotton, fringe, and an old broomstick. This toy sells for fifty cents in the store, and can be as nicely and more durably made at home. The head and neck cut in a single piece, sewed around, turned and the head stuffed, care being taken to preserve the likeness to a real horse while stuffing. The stick, just long enough to ride conveniently, is then inserted and the neck stuffed around it, otherwise the stick will turn; when as full as it will hold, a notch is cut around

the stick and the cloth gathered and firmly attached with strong thread. A piece of fringe furnishes mane, the ears are cut of the cloth, with an inner lining of wiggans to hold them erect; the eyes of white wiggans, eye-shaped, with hole in centre to represent pupils; this is sewed with invisible stitches. A red alpaca braid, put on real bridle style, finishes this fine looking animal.

We had smokers in our family, and for them barrel cigar-holders were made, too particular work for any but Leonora's neat fingers; so four of the troublesome stands fell to her lot.

Elizabeth is practical, and the scrap-bag was ransacked for pieces of silk, and cravats were made to please the male fancy. Old numbers of *Peterson* were looked over to furnish models; in one was a spool-case, made to imitate a red wagon, spools furnishing wheels. This struck Elizabeth's fancy, and she vowed to make mother one. All the red stuffs being used, she decided black would be serviceable. It was her first, and somehow, instead of resembling a wagon, bore a melancholy resemblance to a coffin on wheels. When she held it up, in all the pride of her heart, as something unique and useful, how we laughed till the tears came, and only stopped when we saw hers were coming in earnest. It is but justice to say she succeeded admirably after that, and rejoiced the hearts of several with the possession of spool wagons.

There were many more gifts, ingenious and pretty, but the rapidly-filling sheets warn me to desist. We worked early and late, and the Saturday night before Christmas found us laughing, talking, completing our work, and admiring it. Mother had caught the contagion, and never shall I forget her look of horror when some one coming in informed her she was working on Sunday; it was one o'clock A. M. We were tired but happy when the gifts were distributed. We spent but little money, and gave much pleasure, especially to the little ones for whom Christmas should always be a crowning joy.

The preacher and his wife were not forgotten, but their hearts were gladdened by presents from young and old, and the stranger feeling passed away as they all met around the generous Christmas board and partook of the Christmas feast.

BELLE.

**Housekeepers and Friends.**—Gladdys Wynne in her household talks, insists that the under-clothing is a matter of great importance. "Many," she says, "go shivering all the winter, simply for the lack of sufficient and suitable under-clothing. Boys and girls—especially girls—are sent off daily to school, through cold and snow, with scarcely more under-clothing than was worn during warm weather; while in this respect, wives and mothers at home are often equally disregardful of their own health and comfort. In our cold and changeful climate, this will not answer; it is ruinous to health."

The most satisfactory under-wrappers I have ever had are of white sale flannel, made "sack shirt" fashion, whole on the shoulders. The bottom of the wrapper is "pinked," and just above the pinking a small tuck stitched in all around; the neck finished off simply by being pinked and a strip of narrow tape stitched around on the wrong side, just below the pinking, to "stay" the neck; then a strip of flannel over half a finger in width, pinked at both edges and across the ends, is stitched the whole length of the wrapper front, left side, just inside the pinking at both edges, and in the centre of this the button holes are made; the right or bottom side is faced with a strip of muslin.

## Household Art.

### THE OLD ROCK HOUSE.

At the close of a short article entitled "Rugs," published in the June number of the CABINET, I partly promised its readers at some future time to tell them something more about housekeeping in the Old Rock House, and as my experience differs widely from any I have seen given in the CABINET, perhaps while it may not interest some, it may prove beneficial to others under similar circumstances.

A few words about the house. It was built nearly forty years ago. Rock walls, clay mortar, oaken floors, small windows, warped out of shape by the walls settling; walnut doors, hung awry from the same cause; only one story high, still covering enough ground for a small mansion.

In my girlhood's delightful day-dreams and castle-buildings, this same old house occupied a prominent place, and now after three years' pleasant sojourn in sunny Nebraska, even now, my pen would fain drop idly down as face after face of dear tried friends flit past my mind's vision; and tears almost start to know how some of the most comforting and pleasant of friendships, together with the endearing associations of Cedar Farm, must now be numbered with joys that are past. Separated miles from them, I am brought back to occupy my childhood's ideal home in eastern Iowa.

How romantic, you say. Yet it was with a start, bordering on dismay, that I beheld the many changes visible in and about the house. The bright-hued fancies and fairy-like adornments had vanished, and Father Time's ruthless traces were plainly seen in the crumbling plaster, uneven walls, blackened fire-places, and warped floors, and, when I add, that money was a scarce, almost minus article, you may imagine it took some courage to repress the "Well, this is a dismal old place, sure; but I really cannot see how I can make it look any better."

Then it was that the information gained from the pages of the CABINET came to my aid. I took a different view, and reasoned thus: While we all desire and would enjoy living in modern houses, some old ones must be occupied. I would look over my trunks, bureau, and boxes, to see what I could find with which to change the appearances of these gloomy old rooms.

I gave the walls and ceiling a good coat of white lime wash, and put down the carpets. Finding there would be five places wanting groups of pictures, I arranged what I had framed as follows: two photographs in oval frames, with my wax cross for a centre piece, and photographs in square frames above; two small walnut brackets, with ornaments on them, formed one group. Two landscape chromos in rustic frames, with a much larger chromo for centre, formed group number two. Two spatter-work pictures, one a cross, the other a deer in the act of jumping a chasm, with a colored picture of the Centennial grounds and building, each in gilt frames, formed group number three.

A medley of Scripture views, steel plates, with two certificates, each in walnut and gilt frames, with two quite large walnut brackets and wall vases, filled with painted grasses, formed group number four. My Prodigal Son, walnut and gilt frame, hangs over my work-stand. The Glee Maiden and Rustic Wreath, with a larger steel engraving, each in rustic frames, formed group number five.

Now my sitting room walls looked quite pretty, and the unevenness scarcely noticed. I placed white muslin shades at the windows (Cap, my husband, trimmed me lath for rollers, and also made those brackets and rustic frames I have described,), and old lace curtains, puffed on green stuff, with a ruching of green, formed quite pretty lambrequins.

My flowers are sufficient ornaments for my windows. An old-fashioned cupboard, left in the wall, I converted into a huge what-not; a green tidy and cushion for my rocker, a green cover for my music-stool, green covered footstool and mats or rugs for doors, organ, and work-stand, and now my friends exclaim, when entering this room, "How cosy!" and, "I never thought you could make it look so comfortable."

I will only tire you long enough to describe my bedroom. White walls, white windows shades, with scarlet lambrequins. A glass fruit dish, minus the stand, with crochet cover, cord and tassels, white and scarlet, forms a hanging-basket for vines or cut flowers. White mats for bureau, and a large mirror. Washstand with toilet set of marbled oilcloth, edged with scarlet (a present), watch pockets, white, bound and embroidered with scarlet; two moss brackets, holding sea-shells, and collars and cuffs holder, made of brown paper, then stained and varnished. One quite large oil painting hangs in a nook, and four steel-plate Scripture scenes, framed in cherry-pit frames, hang each side of the mirror. Two catchalls at the foot of the mirror and comb-case between them at each side. Between pictures and mirror hang pineushions and match-cases, two of each, strung on cord, with scarlet balls. My braided rugs for washstand; bed and bureau, barrel chair, with white tidy, log cabin cushion, and scarlet-topped ottoman. Bed draped in white, and, as friend Anna said, while visiting me, "How restful it looks."

And now, if in one single item I have encouraged any one, I am well repaid for striving to make home-like the Old Rock House. EMMA TREICHLER.

### ZEPHYR FLOWERS.

Since the article by E. A. R., to whom I owe thanks for the success I have had so far, I have been looking over my CABINETS for something more on the subject of Zephyr Flowers. Can Rosebuds, Fuchsias, and Tuberoses be made, and if so, will she please tell me how?

I have read of various ways for washing flannels, and wish to tell your many readers my way. I wash and rinse in cold water, not cold enough to make the hands ache, but not at all warm, and I use as much soft soap as I wish, and never have them to shrink or fade. Try it some of you when you have soft white flannels that you do not want spoiled.

M. J. YOUNG.

### CARD CASE.

Take a piece of perforated cardboard, say eight inches square, worked around the edges with zephyr (leaving one hole from the edge), notches one inch deep; work another piece of cardboard half an inch deep, say nine inches long and three inches wide; bind all the edges with ribbon or silk, using the same color as you do zephyr. Fasten the small piece of cardboard across the large one, making it so it will hang in the shape of a diamond; sew both ends down on the large piece, and directly in the middle, making a

puff; for a bottom take zephyr and draw it backward and forward through from the small piece to the large one. If you want a back on it, take a piece of pasteboard and bind it down with ribbon; flowers on the puffs look well. This will serve for a match-box; nice for either.

MYRA JONES.

### A COURT PLASTER CASE.

This is a handy thing to have about the house, and a most desirable adjunct to a gentleman's shaving apparatus. A pretty and ingenious one, designed for a Christmas gift, was made in this way: From white perforated cardboard were cut two equal pieces about five inches long and four wide. A narrow border was worked on the edges of each with light green split zephyr. On the piece intended for the front of the case was worked the following appropriate motto: "I heal all wounds save those of Love." The two pieces were then laid evenly together, the right side of each outward, and joined on the two sides and at the top with zephyr stitches deftly taken along the worked bordering. Cords and tassels of zephyr were attached to the upper corners of the case for hanging. Next, the holder for the plaster was formed of two pieces of perforated board, cut a little less than the case, worked around the edges, and joined at one end by stitches "whipped over," so that the pieces opened and closed like a book. A piece of court plaster nearly as large as the holder was folded in the middle, and the fold laid in the hinge, as it may be termed, a zephyr cord fastened at each edge of the holder keeping it snugly in place, like a newspaper in a patent file or holder. The holder, being just the right size, slips in and out of the case quite readily, but does not fall out. When slipped in, the case is complete.

MRS. M. F. ADKINSON.

### AN HOUR-GLASS STAND.

I suppose I may tell you of my hour-glass stand, which has been very useful to me. It is simply a cheese box and lid, with a strong upright piece of proper length or height between, small castors screwed on below, and a covering of plain calico. I have also made an ornament to hang up in a window, or wherever preferred. Mine is in the centre of a lace lambrequin.

One of my neighbors, one day, said to one of my little girls, "What have you in your window? They look for all the world like bunches of grapes."

I made them of old kid gloves by stuffing the fingers with cotton, filling in enough to form one grape, then tying close up and firmly; and so continued, one against another, until fingers and thumbs were all filled, without cutting apart. If desirable, and you have old kids enough, these grapes can be made to resemble the remarkable specimens about which we have read that the spies brought over from the land of Canaan.

Strong brown paper will answer for leaves, with wire for stems; the tendrils are made of wire, also twisted into natural shape; the bunches are tied into as natural shape and size as possible, then painted with several coats of green paint (I think about five cents worth). The brush for the paint I made by tying a bunch of short bristles, which were left off my air-castle, very tightly to a stick for handle.

MARY PASTER.

## Household Elegancies.

## WHITE EMBROIDERED TIDY.

The charming little tidy shown in miniature in our illustration is exceedingly beautiful, as will be imagined from this sample.

It is not made, as might be supposed, by applying a border of interlaced pieces around an embroidered centre, but by marking out an interlaced design, working the edges with buttonhole stitching, and cutting out the spaces between.

To do this, take a half yard of white linen or pique, mark out a circular scalloped centre, with sprigs of leaves or sprays of small flowers in the centre of each scallop. These embroider in satin stitch, as also the border around the edge, buttonhole stitching the scallops. Then arrange the crossed-bar border as previously described. The tidy is extremely delicate, and when freshly laundered is peculiarly dainty and elegant-looking.

## NEEDLE CASE OF PERFORATED CARD.

The cover of this needle-case consists of slanted squares of perforated card, fastened with ribbon bows, and measuring five inches in length and three and one-half in width.

This is of silver-faced perforated card, worked in long lines of colored silk, fastened with one white bead at each crossing, and with three white beads in each diamond.

It is trimmed with ribbon to match the silk, drawn down in puffs with a string of five white beads on each side.

Two or three leaves of fine flannel, cut out in scallops around the edge, are fastened in.

## SOFA CUSHION IN KNITTED EMBROIDERY.

The groundwork of this cushion is of deep crimson, and the pattern in shaded brown Berlin wool. Lined with damask, and trimmed with silk cord and tassels.

WHITE EMBROIDERED TIDY.

## HOUSE CONVENIENCES AND HOW TO MAKE THEM.

## TO MAKE STRAW PICTURE FRAMES.

Pick out from a bundle of straws those without flaws. It takes five for each part of the frame. Arrange them thus: Put one long straw in the centre, a

short one on each side, and a shorter one on each side of those; sew them together on the back with some strong cotton. When you have the top, bottom, and sides ready, fasten them together at the corners in the

NEEDLE CASE OF PERFORATED CARD.

form of an Oxford frame, placing the top and bottom ones in front of the sides. Then make four small pieces of three straws in each, the centre on the longest, and fasten crosswise to each other by means of a piece of ribbon tied round; the ribbon is to hide where the parts of the frame are joined together. The picture is fastened in with a narrow ribbon, crossed over at the back and brought through between the straws on each side of the frame, then passed over the centre straw through to the back and firmly sewed. This ribbon has a very pretty effect. A loop of ribbon should be sewed on to the top by which to hang the frame. This makes a lovely little present.

## A SHELL FRAME.

First make a frame of some light kind of wood. Then stick your shells all over it with white lead to fasten them. Put them on smooth, and at each corner have a little cluster of periwinkles; or if your frame is oval, put a cluster at the top, bottom, and sides. When you have finished, give it a thick coat of varnish. But be sure and place a bright colored picture in this frame, so as to make it look cheerful.

## FEATHER LAMP MAT.

Cut out a round piece of cardboard about fourteen

inches in circumference, and cover it with a piece of purple velvet. Then all around the edge, and about an inch from the outside, fasten white chicken feathers closely together by sewing them to the velvet. In the centre of the mat embroider a bunch of flowers and leaves with white silk. This is something new and quite pretty.

## A FAIRY BASKET.

Take strips of cloth, linen or muslin, from your scrap bag, cut them about half an inch wide, draw threads out from each side until only two or three are left in the middle; take a piece of large size wire and form a hoop; wrap around it a piece of plain muslin, and twist a strip of fringe around it; next take the other strips and place them over the hoop in succession, forming loops; after the hoop is well covered (the loops must be eleven inches long) tie them together about four inches from the bottom with strong thread; then take four more strips, slip them under the hoop at equal distances, draw them together and tie them two inches from the top; you can have the strings as long as you desire; all over it tie little pieces of pink worsted.

## SOMETHING FOR THE BABY.

Forget the baby? Oh, dear, no! that would never do. Here is something you can make for it: Buy five cents' worth of worsted, not the most expensive kind, but some bright color; then take two large cards and ask your mother to lend you a wine glass for a few days to make some things with; put the top of the wine glass down on one of the cards, and run a pencil point close around against the edge; do the same to the other, and you will have two circles drawn. Cut them out, and you will find them just the same size. Then put your thimble right in the middle of each round piece and draw a line around that and cut it out; then you have two little things like the wheels of baby's cart; then lay them together, face to face, and pulling your needle in and out of the hole, draw the worsted around the card, tying the pieces together with threads that lie like the spokes of a wheel, only close together; and go on until the card is covered up and the worsted heaped high and you cannot get your needle in any longer. Then take a piece of cord and thread it in a bodkin and tie the worsted together in

SOFA CUSHION IN KNITTED EMBROIDERY.

the centre, taking up every little loop, drawing it tight, and if it is a bright, pretty cord, you may leave it for the baby to catch hold of. Then cut the outside edge exactly on the edge, and you will see the cardboard, and can pull it out and puff your worsted up into a large beautiful ball; where it is not even you can trim it down with the scissors. Baby will be delighted with it.

R. B. HAYDON.

## Hireside Reading.

### BE SOCIABLE.

Men who isolate themselves from society, and have no near and dear family ties, are the most uncomfortable of human beings. Byron says that "happiness was born a twin," but the phrase, though pretty and poetic, does not go far enough. We are gregarious, and are not intended to march through life either in single or double file. The man who cares for nobody, for whom nobody cares, has little to live for. You must have a heap of embers to have a glowing fire. Scatter them apart, and they will become dim and cold. So, to have a brisk, vigorous life, you must have a group of lives to keep each warm, to afford mutual encouragement, confidence, and support. If you wish to live the life of a man, and not of a fungus, be sociable, be brotherly, be charitable, be sympathetic, and labor earnestly for the good of your kind.

Dear Laura, when you were a flirting young miss, and I was your dutiful swain, your smiles could exalt the summit of bliss, your frowns could o'erwhelm me with pain; you were dear to me then, love, but now you're my wife, it is strange the fond tie should be nearer; for, when I am paying your bills, on my life, you seem to get dearer, and dearer!

**A Farmer** once hired a man to assist in drawing logs. The man, when there was a log to lift, generally contrived to secure the small end, for which the farmer rebuked him, and told him to take the butt end. Dinner came, and with it a sugar-loaf Indian pudding. Jonathan sliced off a generous portion of the largest part, giving the farmer a wink, and exclaimed: "Always take the butt-end!"

**Sensible Parents.**—A young lady of Ballarat, about contemplating matrimony, was asked by her friends what kind of wedding presents she would like, and replied that she would prefer useful to ornamen-

tal ones. Her wedding journey consisted in going from the house of her parents to a cottage in the vicinity, and upon arriving there she found a barrel of flour, a jar of butter, a complete set of cooking utensils, a piece of merino, a set of crockery ware, knives, forks, spoons, and glassware, enough household groceries to last six months, and on her table a receipt for the prepayment of a year's rent for the cottage, with two ten pound notes pinned on a paper, on which was written, "To purchase something useful."

**Art of Living with Others.**—It is not well for us to cherish the habit of dwelling much on the faults and shortcomings of those with whom we live. It

**Bishop Morley** was fond of a joke. Once, when the footman was out of the way, he ordered the coachman to fetch some water from the well, to which the coachman made a grumbling objection that his business was to drive, not to run errands. "Well, then," said Morley, "bring out the coach and four, set the pitcher inside, and drive to the well;" a service which was several times repeated, to the great amusement of almost all the village.

During a recent revival excitement in the outskirts of this country, a request was made for all who desired the prayers of the church to rise. A shaggy old miner, burning with a desire to do his part, arose, and putting his hand down into his buckskin, meekly inquired, "How much will it be, boss?"—*Canon City (Col.) Avalanche.*

"The password is 'Saxe;' now don't forget it, Pat," said the Colonel, just before the battle of Fontenoy, at which Saxe was Marshal.

"Sacks? Faith and I will not. Wasn't my father a miller?"

"Who goes there?" cried the sentinel, after the Irishman had arrived at his post. Pat was as wise as an owl, and, in a sort of whispered yell, replied, "Bags, yer honor!"

"Ours."—Coachman (on being told by his lordship that he will not want to drive out to-day): "Well, me lord, then perhaps I had better take our children out?" His Lordship: "Now, Johnson,

look here; I don't mind you saying *our* carriage, *our* horses, or *our* house; but I must draw the line—and I draw it at *our* children.—*Fun.*

**At the Cattle and Dog Show.**—"Haw—by the by—a—Lady Mawiah, I don't see your sistahs—Lady Wachel and Lady Fwedewica?" "They're gone to the dogs, Sir Wobert." "Haw! So sawry!"

**Kissing Goes by Classes.**—Guard (to old lady taking leave of her daughters)—"Now, then, m'um, jump in if you're goin'. This ain't a kissin' train! 'F you want to kiss, you must go by the Parliamentary.—*Punch.*

AN INTERESTING GOSSIP.

makes us more critical than generous. It affects the cordiality of our manner toward them. It insensibly lessens our confidence. It interferes with the delicious ease and freedom of our intercourse with them. It colors the remarks that we make about them to others, and then reacts with double force upon our own feelings and our relations to them. It is said of the virtuous woman, whose price is above rubies, that the law of kindness is in her tongue. But in order to be in her tongue, it must first be in her heart, and the habit of dwelling much on the imperfections of our friends and associates will soon drive it from us.

## Housekeeping.

## PRIZE RECIPES FOR COOKING.

**Spiced Beef.**—Take any of the cheaper pieces of beef (the brisket, etc.) that will give you about eight pounds of solid meat. Rub the surface with the following mixture: four tablespoonfuls salt, two of black pepper, half a teaspoonful cayenne, one teaspoonful saltpetre; pulverize all and thoroughly mix before applying. If the meat is in long flat pieces, with scraps of lean and fat added, lay it out on the meat-board and arrange all the loose pieces upon it, both fat and lean, but use only one-fourth fat. Remove all pieces of bone, and, rolling the meat up into a long scroll, tie it firmly with bands of muslin bound firmly around. Place in a stew-pot and cover with soft water, one inch above the meat; add two onions, in each of which stick six cloves, one sliced carrot, a bunch of pot herbs, one teaspoonful of peppercorns, a small piece of red pepper, four blades of mace, and one teaspoonful of allspice. Cover closely, and after coming to a quick boil, place on the back of the stove to simmer slowly until quite tender. If the meat is of such form that the bones cannot be removed prior to boiling, this may be done after removing from the pot, when the meat should be placed in a deep bowl, and after straining off the liquor from the vegetables, herbs and spices, it should be boiled down until only one pint remains, which must be poured over and through the meat, a plate and weight set on it, and placed in a cool cellar or pantry until quite cold, when it will be found perfectly solid, and may be cut into thin slices for luncheon or tea; or will be found delicious for sandwiches, if touched lightly with a little "made mustard" and catsup, or some savory sauce.

**Stuffed Beef Steak.**—(An old French recipe from a manuscript cook-book.) Take a "round steak," weighing six or eight pounds, spread it out on the meat-board and pound carefully with the "steak tenderer." Make a stuffing thus: Take bread crumbs, from the centre of the loaf, and rub fine; then if the crusts or stale bits are too hard to crumble, dip them for a moment or two into cold water, squeezing out all the water possible. Put a cup of butter into a frying-pan, and when hot, add two medium sized onions minced quite fine, and fry until soft, putting in a tablespoonful of water, if there is danger of scorching; add these to the crumbs, with a handful of salt, one teaspoonful of black pepper, and a salt-spoon full of nutmeg, making about one quart of stuffing. Spread it over the meat, and commencing at one end, roll it into an oblong scroll, binding together with strips of new muslin about half an inch wide. Sew up the ends, or bind over with a skewer in each. Put some bits of butter, rolled in flour, in the bottom of a baking pan, with a pint of water, and place in a moderate oven for one hour, covering closely half the time, then browning off toward the last by removing the cover and making the oven very hot. Place on an oval platter, and garnish with balls of mashed potato, browned in an oven. Stir the gravy over the fire, adding water until of proper consistency. This will be found a most delicious mode of cooking a tough steak.

**Veal Rissoles.**—(Cold meat cookery.) Take a few slices of cold roast veal, a few slices of cold ham, and mince them very finely, and add one tablespoonful of minced parsley, one blade of mace pulverized, a little grated nutmeg, cayenne, black pepper, and salt to the

taste. Beat two eggs very light, and with it form the hash into balls or cones, brushing them over with the same, sprinkle with finely powdered nutmeg, and fry a rich brown. Serve with brown gravy, and garnish the dish with parsley fried crisp and arranged with taste.

**A Nice Fowl Salad.**—Take the meat from any cold fowl, sufficient to make a quart bowl full, wash and drain two fresh crisp heads of lettuce, and place in the middle of a deep dish or platter; arrange the chopped meat around, and pile on the top eight hard boiled eggs chopped finely; pour over all a rich dressing made thus: scald half a teacupful of vinegar, into which stir very gradually the yolks of two eggs beaten light with one teaspoonful of made mustard, one teaspoonful white sugar, four tablespoonfuls cream, three tablespoonfuls salad oil, a dust of cayenne, and a tablespoonful salt. This dressing, if properly made, will be light and creamy, for in making salad dressings the ingredients can scarcely be added too gradually, or stirred and beaten too much. Let the dressing be perfectly cold before pouring over, and garnish the salad with hard boiled eggs, cut in rings, one cucumber, sliced very thin, and boiled beetroots, cut with an ornamental cutter, dotting the yolks of the eggs, finely chopped, here and there upon the green and white. This dish should not be put together, until a short time before the meal.

**Croquettes of Fowl or Meat.**—Mince the meat finely, removing the skin and bones, and fry four small onions in one tablespoonful of butter until brown, then mix them together and dredge the whole with one tablespoonful of flour, and add pepper, salt and ground mace or nutmeg at pleasure. Beat two eggs with one teaspoonful of powdered sugar, and stirring lightly through the mass, set it away until cold. Then make into oblong balls the size of a large pigeon's egg; dip each one in beaten egg and then in crumbs rolled very fine; fry a rich brown in plenty of boiling lard, butter, or dripping, and serve on a bed of mashed potato, with a light feathery border made by quickly grating a boiled potato directly on the platter.

**Eggs.**—(Delicate scrambled eggs.) Take a quantity of bread, sufficient to make one pint when crumbed, and soak them in one pint of milk. Beat eight eggs very light, and stir with the soaked crumbs, beating the mass five minutes. Have ready a sauce-pan in which are two tablespoonfuls of butter, thoroughly hot, but not scorching; pour in the mixture, and dust with pepper and salt, as the mass is opened and stirred with the "scrambling," which should be done quickly with the point of a knife for three minutes, or until thoroughly hot. Serve on a hot platter, with squares of buttered toast. Another delicate "scramble" is made by either breaking the eggs into boiling water until the whites begin to "set," boiling for two minutes prior to the "scrambling." Eggs thus prepared are far lighter and more delicate than prepared in the usual way.

**Plain Omelette.**—Separate the yolks and whites of ten eggs, and beat the yolks to a cream, the whites, stiff; mix in a pan one small teaspoonful of cream or rich milk, and one even tablespoonful of sifted flour, with pepper and salt to taste; stir in the yolks and beat for ten minutes, then add the whites as lightly as possible. Have a small straight-sided, cast iron frying-pan, in which put two large tablespoonfuls of nice butter, and make "sizzling" hot, but do not allow to scorch the least particle; into this pour the mixture, and commence almost immediately, if over a very hot fire, to open the mixture with a round pointed knife,

making little incisions over the whole surface, and touching the bottom of the pan with a slight scraping movement each time; this will give the mass a rough puffy appearance, and will allow the uncooked portions of the eggs to reach the bottom of the pan. A very few moments suffice to cook the omelette, and it will become quite brown over the under surface, which will be ascertained by merely slipping the knife under the edge; as soon as this is the case, even should the upper surface appear a little soft, prepare to finish it, as it will cook sufficiently from the heat occasioned by the folding, which is done by slipping the knife under and around the edge of one half and passing it along to the centre, turning the one half over upon the other. This gives you a golden-brown omelette, shaped like a half moon, and if the pan is of proper size—about ten inches in diameter, or even less—and the omelette a success, as regards making and cooking, it will have assumed a puffy appearance and a height of four or five inches. As soon as the mass is turned, place a warm oval platter over it, and with a quick, dexterous movement turn the pan upon it, leaving the omelette bottom side up, and in all its beauty and deliciousness, upon the platter. Dress with curled parsley, and serve as quickly as possible.

**The Hidden Mountain.**—(A pretty dessert dish.) Beat separately the yolks and whites of ten eggs; add to the yolks two teaspoonfuls of rich cream, and thin slices of candied citron, lemon, and orange peel (sufficient to fill a coffee cup), stir in one cupful of corn-starch mixed in half a pint of milk; beat very light and add the whites with flavoring of lemon, orange, or almond. Make one cupful of butter very hot; pour in the mixture and fry until a nice brown on the one side, and the eggs barely "set" on the upper; then put upon one-half several spoonfuls of raspberry or other jam, and, folding the other half upon it, turn upon an oval platter so that the pan is bottom upward. This requires a dexterous movement in order not to scald the hand holding the plate, yet easily done, if the pan is sufficiently small to be held upon each side, with the plate under the thumbs and the fingers upon the bottom of the pan protected by a large "stove-towel." French cooks have a skilful way of tossing such omelettes from the pan by turning them directly out upon the plate, but I always adopt the safer plan of laying the platter upon the pan, then throwing the towel over, turning it as I have described. This dish is served cold. Ice the surface or cover with jam, and stick blanched sweet almonds thickly over the whole top and sides.

**Wine Sauce for Plum Pudding.**—(Excellent.) Put one cupful of fresh butter rubbed into one teaspoonful of flour, and rub to a cream; add one cupful of pulverized sugar, half a teaspoonful of salt, and half a pint of sherry or Madeira wine, and stir well together over the fire. Separate the yolks from four eggs, beat lightly and turn a spoonful at a time into the hot mixture, stirring briskly all the time; when on the point of simmering, remove, and pour into an open sauce-boat.

**Wine or Brandy Sauce.**—Take one-fourth pound sweet fresh butter, well washed; cut into small pieces with one dessert spoonful of flour dredged over; stir to a smooth paste, and add one wine glassful of water and a pinch of salt; stir one way until smooth and creamy, then add one wine glass of wine or brandy, three large teaspoonfuls powdered sugar and the grated rind and pieces of one lemon. Allow to come to a simmer, stirring constantly; then remove and serve in a boat or tureen.

**MUSIC BOOKS!**

**The World of Song.**

Magnificent Bound Volume of Songs of the most popular and musical character.

**The Sunshine of Song.**

Magnificent bound Volume of the most recent and popular songs.

**Gems of the Dance.**

Splendid bound Volume of the most Brilliant Piano Music, by Strauss and others.

# THE LADIES' *Floral* *Ediment*

BY HENRY T. WILLIAMS.

NEW YORK, FEBRUARY, 1878.

No. 74. PRICE 12 CENTS.

## LOVING FLOWERS.

Who does not love flowers? And how can we have them in abundance unless we cultivate them? To do this successfully we must have a love for it. How often we hear it said, "I would so like to cultivate them, but have no time."

Now, I think if one but possesses a love of the beautiful as seen in flowers, they can find time at least for a few of them. There are so many that are easily cultivated, and it takes so small a place to grow them.

A small plot will suffice to grow quite a variety. Verbenas, Geraniums, Petunias, Carnations, and Phloxes are very easily grown, and there are many florists who send them by mail so cheaply. Can any other beautiful thing be so easily obtained?

A profusion of lovely flowers about a home is a true index of taste and refinement. Plant them everywhere—climbing over the porch, running along the lattice, twining around vases and hanging baskets, their grateful fragrance and delicate colors abundantly repay all the labor and care they demand.

Their cultivation is a pleasant task; so many points of interest connected with their care and culture, that much might be written upon the subject.

In order to have a great display of flowers, we must select seeds adapted to the climate in which we live, and also those which give a constant bloom. I prefer hardy annuals, such as Asters, Balsams, Dianthus, Pansies, and Stocks. A bed of Phlox Drummondii is indispensable. We get the quickest display

from these, though we cannot well get along without perennials.

We want white flowers in plenty; as we cannot make the tiniest bouquet without them. They are also in great demand for wreathing the pale yet still beautiful forms of the loved and lost. Their culture is not an irksome task, but a delightful and healthful recreation. It helps to relieve the tedium of farm life

Any florist can supply Ferns for such a structure. Choose the smaller growing sorts, and avoid those which branch widely. Small Ferns of different varieties can be procured from the woods, and other little woodland plants of pretty foliage; also different kinds of mosses, which add greatly to the beauty of the structure, and keep the plants moist. These answer for green, but we must have something bright. Geraniums of the single sorts, as they blossom early and continue in bloom through the whole summer. For the sides choose the low-growing plants, such as Moneywort, double Portulacca, Sedum, Escholsia, and a few varieties of the Coleus. It requires but very little care. Give a good watering at night and it will repay

you well and be a thing of beauty throughout the whole season.

How can we best extend the cultivation of flowers, and encourage this love of the beautiful and of home ornamentation? By discussions with our friends at our homes and our social gatherings, encouraging them to join us in sending for choice seeds and rare plants, selected from the catalogues of our best seedsmen and florists, and more

than all by inducing them to subscribe for some good floral paper, which, having once become acquainted with, they cannot afford to be deprived of.

In this quiet, unobtrusive way we may and can do much to refine and elevate our friends and society around us, and help make their homes and ours more pleasant and attractive.

MRS. E. D. ALLEN.

DESIGN FOR GARDEN OR LAWN GATE.

and tends to make our homes attractive, cheerful, and happy.

A rockery is especially interesting, and combines many things of rare beauty. I do not mean a pile of stones thrown together in the centre of a lawn. It would look badly and be hardly possible to remedy a bad location by any skill in planting. It must have a good and appropriate position, and be furnished with suitable and healthy plants.

## Floral Contributions.

## HOUSE-PLANTS AND FLOWERS.

It is becoming so customary nowadays for every lady that has the facilities for doing so, to cultivate plants—some for love of them, some, as I once heard a lady express it, because it is so fashionable to have plants—I fear for their success; but for whatever purpose they are desired, any information in regard to their care or treatment, and the varieties best adapted to such purpose, is gladly received by those of less experience.

It is a study, a most beautiful book, which never grows tiresome or monotonous, and with the turning of every leaf we behold new wonders, we learn new lessons, and with the opening of every lovely bud or blossom, find fresh cause to praise the glorious Creator of such blessings given to cheer our path through life. Do we ever think, should they be suddenly withdrawn from us, what a blank it would create that nothing else can fill? What else could so comfort the bereaved heart of the mourner, as seeing the beloved dead enshrined in these beautiful emblems of a Saviour's undying love? They are comfort and joy everywhere.

It is a delight to me to hear of a new plant that will bloom in a window. My window is enclosed from the rest of my sitting-room by glass doors, which are always left open, so the temperature of the two rooms is almost the same, and year after year I cultivate plants and experiment with them in my little window garden, and I would like to tell the readers of the CABINET about the plants that I am most successful with.

Early in the fall and until now, December 4th, I have had a fine show of young Geraniums; one or two will continue to bloom all winter. I put my Geraniums into their winter quarters the last of August, and, hardening my heart, cut off every bud and blossom, and water once a week with manure water, and in a month or so they will be filled with buds, and after cold weather sets in will blossom as long as there are any buds left. Beautiful Luna, with its variegated foliage and scarlet blossoms, will bloom all winter. Others I rest until February, when they are ready for spring blooming. Chinese Primroses I raise from my own seed, which I ripen myself every year, and I find my own seed never fails to come up. The flowers on young plants are much larger than on old ones; it is such an accommodating plant, giving equal satisfaction in sunshine or shade. The seed pods are not very ornamental, therefore are cut away before the seed ripens.

Bouvardias do exceedingly well in the house with proper treatment. They require frequent showering, and show a decided antipathy to coal smoke or gas. I have been very successful with a plant called *Imatophyllum Miniatum*, called by some *Clivia*; is like the *Amaryllis* in style of growth, only the leaves are much larger and longer; it is an evergreen, and has large clusters of erect, large salmon or flame colored blossoms, and with me it has never failed to bloom. Last winter it had twelve beautiful lilies on it. It can be procured for \$1.00, and is well worth it. The beautiful *Begonias*, cultivated for the foliage, are exquisite and grow with the simplest treatment, and it is so interesting to watch them grow from the leaf. Take a box of the finest sifted sand, with good drainage in the bottom, and good-sized stones scattered all

through the sand, and half covered, so the leaves will not rest entirely on the damp sand and rot before they root.

As the leaves grow old on your *Begonias*, lay them lightly on the sand, and put a pinch of it in the middle of the leaf; cover the box with glass and give a little water occasionally, and some sun, and in a little while a tiny shoot will spring up from the old leaf. I have learned with perseverance, and the loss of several fine bulbs, how to treat the *Cyclamen*. I never dry my bulbs entirely now; nor set them out in the border, as a wet season will kill them. I set them away on an out of the way shelf in my window, and when they are looking very dry, I give them a little water, which keeps them plump without rotting them; in the fall they will begin to sprout, when they require more water and all the sun they can get.

*Amaryllis Lilies* I treat the same way in winter, giving now and then a very little water to keep the roots from drying up entirely, and my experience is they do better, and one is not so apt to lose their bulb by rotting, in starting it.

I prize my *Sedum*, or *Echeveria*, because it never fails me, and it seems to need just no treatment at all, will bloom in the warmest room, or in a cool greenhouse; flowers scarlet and yellow; they look like wax.

Last winter I thought I would have a crock of the fragrant White Violet; so I took up a nice large clump in the fall; all winter it grew and thrived luxuriantly, but did not show a flower; I was disappointed, but tried again, and during a January thaw I took up another clump, which began to grow as soon as brought in, and the flowers came up with the leaves. I was soon rewarded with an abundant bloom, so this winter my Violets are out getting a rest and a good freeze, before bringing into the house. Lily of the Valley I treat in the same way. *Fuchsias* I put in the cellar until near spring, then I pot them in rich earth, giving one-half well rotted manure with plenty of powdered charcoal and burnt bone; try it, and see how they grow and bloom.

*Oxalis* bulbs I seldom dry off, as I find those that have grown all summer, and bloomed, too, do just as well as the others. *Lobelia*, if once introduced among plants, particularly if grown in a basket hanging over the other plants, will seed itself among all the crocks, and by transplanting it you can always have a supply without any trouble. Last winter I transplanted a quantity of it into a large rustic basket, setting it on a little projecting shelf above all the other plants, keeping the ends nipped out as it grew. Early in the spring it bloomed, drooping over the rest like a beautiful veil of blue.

In the spring I make for my cuttings a miniature hot bed. I take a shallow box, have an upright piece nailed to each corner, with grooves cut in them to slip pieces of glass in, giving glass sides; provide a pane also to cover over the top, fill the bottom with fresh manure, and several inches on top of rich earth, and plenty of fine sand mixed; let it steam for a few days, then put in your cuttings, and you will be surprised to see how quickly they will root.

For a long time after my plants were brought in they looked so well, and bloomed so freely. I thought my window almost an Eden; but, alas, for human hopes! as of old, the serpent's trail was discovered; I found tracks of my persistent old enemy, the red spider. Now, it is no wonder I was in despair, for last winter I fought this same army all winter, and they gained the battle, and I was obliged to see many a cherished bud fall without opening. I kept my

window as damp as I could. I sprinkled, I showered, I steamed it twice a week; I even burned sulphur as much as I dared; still they came, and seemed to enjoy the damp atmosphere. Well, when I found them again on my choicest plants, I set my teeth in grim determination, resolved, if they *did* like water, they should have enough of it. I procured several large pieces of iron, and an old kettle, and with these weapons I prepared to attack the enemy. Heating the irons red hot, and putting them into the kettle, I set it in the enemy's camp-ground, pouring a kettleful of boiling water over them. This I did at night, after tea. I did the same the next evening, and the next, for over a week. It was a great deal of trouble, but vengeance is sweet, and after a few days of steaming, I examined the spiders with a glass. I found them still alive, but dull and quiet. I never relaxed a day, my vigilance; now I have the pleasure of looking for them in vain. I feel quite victorious, but the plants prove so well under the steaming, that I still give it to them quite frequently.

If one wants a lovely *Abutilon* that blooms well, let them try *A. Centana*; it is a good winter bloomer. I am trying several new plants this winter. I cannot help experimenting, and at another time I hope to be able to give my experience with a set of entirely new plants, not so extensively cultivated as those I have just mentioned.

S. B.

## ROSES.

Late in April last I got a dozen small *Roses*; I had another dozen I had started from slips the fall before. I had ready a bed four feet wide, twelve feet long and eighteen inches deep, piled with equal quantities of garden soil, well rotted chip dirt and sand; in planting the *Roses*, I put a little hen manure around each, shaded them for a few days, but did not water until they showed signs of growth, then only once or twice, but forked them frequently, and never allowed insects of any kind to stay about them. They soon commenced blooming, and I can assure you it was a bed of *Roses*, indeed.

Until frost got them, I was never without blossoms; but I failed to say they were ever-blooming varieties. I have a *Marchal Neil* which I bought from a Maysville nursery. It was about ten inches high, and had one bud on it. I had been told it was hard to raise, and had made up my mind to make a desperate effort to raise it. I got some leaf mold, sand and good soil, mixed them well, about one-third of each, cut off the bud, then cut the bush till it was only five or six inches high, put it in a six-inch pot, with three or four rusty nails stuck in the soil from the top.

In a short time my *Rose* commenced growing, and I discovered five small buds, which I cut off so as to throw the strength into the plant. Towards fall it made another effort to bloom, having thirteen buds on it, twelve of which I cut off. The other I let bloom, as the *Rose* looked so showy and healthy. I cut it when it was about three-fourths out, and it filled one of my coffee cups; it was a clear sulphur color, and of a delightful fragrance.

It is now three years old, is in a water bucket with the same kind of soil, and bloomed three times last summer; it had from twelve to twenty large buds on it each time. I rarely ever allow them to develop fully; I enjoy them much more in the bud, and I think it is better for the bush.

F. C.

Young *Ferns* are propagated from the leaves of old ones.

## Answers to Correspondents.

**Aquaria Window Gardening.**—Will some one give me full and explicit directions for making an aquarium; also plants for the same. Please give full directions for making a pretty and attractive window garden; also for decoration of house and yard.  
Union Point, Ga. MAY and BERTHA.

*Answer.*—These two questions are fair specimens of many received by the Editor. A moment's thought will convince our fair correspondents that to comply with their requests would far exceed the limits of our pages. The space we can give to answers is limited; we can only reply in brief, and on many subjects, of which those mentioned are examples, it would require a long article to give "full and explicit directions." Aquarium tanks can usually be bought at any "natural history" store. The water, whether fresh or salt, must be kept pure and clear. This is usually done by proportioning the animal and vegetable life. Snails are great scavengers, and eat the green slime which so commonly infests aquaria. Do not overstock, that is, attempt to grow too many things; a few in good health are better than many sickly. Keep the water well aerated; if you cannot force air through it, turning portions of the water back and forth will do it. Light must be regulated according to the inhabitants of the aquarium. The plants will also depend upon whether your aquarium is fresh or salt; any aquatic plants may be grown, and some of the coarser plants, such as fresh water yard weeds, Potamogeton, become wonderfully delicate. There are books published upon aquaria, and chapters may be found on this subject in Hibbard's Rustic Adornments, Rand's Flowers for Parlor and Garden. Mrs. Agazzis' Common Objects of the Sea Side, is a valuable book for consultation. In the two volumes first above mentioned you will find many pages on Window Gardening. The Window Garden, published at this office, will give you every possible direction. We cannot give plans for laying out and decorating grounds or yards without we have some idea of scene and location. A volume giving many plans of garden decoration will probably soon be published at this office.

**Sweet Peas not Blooming.**—My Sweet Peas dry up and give but little bloom. What is the trouble?  
H. W. M.

*Answer.*—Plant your peas as early in spring as possible, even if you have to break through frozen ground to do it. Plant them four inches deep, and do not let the flowers go to seed. Keep the roots moist, and gather the blossoms.

**Scale on Ivy, etc.**—What is to be done with English Ivies that are troubled with these apparently lifeless scales, that won't leave the plant even after a faithful washing with a stiff brush and water? When the new leaves of a Maranta Zebrina come out with their edges shriveled and dried up, what is the cause? My Wax Plant (Hoya) has been frozen so I have been obliged to cut it down, leaving only the two lower leaves, and the roots protrude above the soil. Ought it to be repotted at present?  
ALICE.

*Answer.*—Scrape off the scale with a fine knife, being careful not to wound the bark of the plant. The Maranta is a tropical plant requiring heat and moisture; you probably have allowed the atmosphere to become too dry. Repot your Wax Plant, but if frozen

it is doubtful whether you save it. All the Wax Plants are natives of hot countries, and will not bear the least frost.

**Culture of Cactus.**—What treatment do Cacti require to make them bloom? Are they better if root-bound? What soil do they need?  
Winchester, N. H. MISS H. S. SOWER.

*Answer.*—All the Cacti need heat and sun; they are natives of dry plains, and do not require rich soil; all pots should be well drained to allow any superfluous water to pass off. Even when growing, they require but little water. The soil should be sandy loam. They bear being root-bound better than most plants, but we should not advise it, except in the case of some of the large free-growing species, when it might force them to bloom. There are many species, all requiring the same general treatment, but some do not bloom until very large and old.

**Calla Lily, etc.**—Does it injure a Calla Lily to cut off its leaves and flowers? How can I make a Cactus bloom? What treatment does a Night Blooming Cereus like?  
S. R. M.

*Answer.*—No plant is injured by cutting off the flowers, but cutting the leaves will injure your Calla. If you strip the foliage from a plant it will die sooner or later; a plant breathes through its leaves. See our answer above. Cactus usually blooms in spring or summer. A Cereus requires similar treatment to a Cactus; it is of the same family. It does not bloom until large.

**Drainage for Hanging Baskets, etc.**—Shall I make holes in the bottom of a tin basin, for drainage, that I wish to use for a hanging basket? Must all earth for flowers have manure mixed with it, and is horse manure good; how deep must a box be for Pansies, Asters, Phlox Drummondii, and Zinnias?  
New York. M. S. WANDALL.

*Answer.*—You need not have holes in the basin, but you must be careful not to give too much water, as it cannot run off, and few plants do well when the roots are sodden in water. All earth for parlor plants should be rich loam; any manure should be well rotted and thoroughly mixed with the soil; horse manure is not suitable unless well decomposed. You can get suitable earth from any florist in New York. A box for the plants you mention should be about a foot deep and fit the window. You must not allow the plants to dry up, and they must have all the sun possible.

**Azaleas.**—Does an Azalea want much water, and is it hardy? Does it grow from slips?  
MARY N. Y. HOLLY.

*Answer.*—Azaleas need moderate waterings. The soil must be well drained, for if it becomes sour the plant becomes unhealthy. The Indian Azalea, which we suppose yours to be, is not hardy. Azaleas grow freely from cuttings taken off in spring.

**Rockery.**—Having seen several pieces in the CABINET about rockeries, I have concluded to ask a few questions myself. I have a natural one in my yard, which is formed by four large rocks, the sides of which touch, leaving an irregular, nearly round, space in the centre, about a yard in diameter, and nearly three feet deep. This I have partly filled with rich earth, and intend to plant in it Geraniums, etc. Now I wish to know what plants will suit best; for the

rockery has no trees near it, and consequently gets the full benefit of the sun all day, and in our southern climate that is no light matter. So I shall have to select plants that can stand a great deal of sunlight and heat, and would be glad to learn what to select.

GEORGIA.

*Answer.*—We fear Geraniums would be burned up; few flowering plants will stand such a heat as would be shed upon them by the refraction from the rocky sides. You could lay out a very pretty garden of succulent plants, such as Echeverias, Cacti, Othonna erassifolia, which would bloom beautifully. House Leeks and Prickly Pears would do well and survive the winter. All these plants are suitable for a rockery.

**Spanish Moss.**—Mrs. D. Tuttle, Canto, California, offers to send Spanish Moss in exchange for plant of the "old-fashioned red Pæony," or for a Calla Lilly.

**Smilax, etc.**—Can you tell me what to do with my Smilax? It has stood still, tall and green, all winter. Does Smilax need sun or shade? What shall I do with Chinese Primroses which have done blooming?  
Washington, D. C. M. S. HARTMAN.

*Answer.*—Your Smilax has made its growth and is ready to rest. Dry it off in the pot gradually, and let it rest until autumn; then give water and it will make fresh growth. It will do well both in sun and in shade, but does not like much heat. After blooming, set your Primroses in a shady place out of doors, if all danger of frost is over. Water very moderately during the summer. Pick off all flower-buds; in September repot the plants, and grow in the window as before.

**Red Bugs, etc.**—What will kill red bugs on Geraniums? Are Geraniums propagated by slips in sand?  
KATE.

*Answer.*—If you mean red spiders, moisture is sure death to them. Sprinkle the foliage, also dust a little flour of sulphur over it. Geraniums are best propagated by cuttings or "slips" in sand.

**Echeveria Metallica.**—What soil does the round leafed metallic Echeveria need? Does it require much water? Is it a winter-blooming plant, and how is it propagated, by leaves or otherwise? How can I make Mahernia Odorata bloom. I have a fine plant now (January) about a year old, but no sign of bloom.  
Cincinnati, O. MRS. S. G. B.

*Answer.*—The Echeverias need a sandy loam, with good drainage in the pots; they need but little water. E. metallica blooms in winter, but the flower is not beautiful; it is best propagated by seed; the leaves do not root readily, or are plants so obtained as good as seedlings. Mahernias bloom in winter and spring. It is a little early for your plant to show bloom if grown in the window; about the last of February it will probably bud.

**Orange Tree.**—I have an orange tree three feet high and three years old. Should it be grafted or budded, and at what time?  
Haverhill, O. FANNIE DALE.

*Answer.*—If your orange was raised from seed it will not bloom until very large unless it is budded. This should be done in the spring. You can have it done at almost any greenhouse.

## In-Door Gardening.

### FLOWER STANDS AND BOXES.

One of the elegant flower-stands or wardian-cases, which are so often advertised, would be an agreeable acquisition; but many ladies, who love and appreciate the beautiful, can with difficulty meet the expense of such a purchase.

Almost any one, by using a little ingenuity, can make a very respectable flower-stand, which will give her greater real pleasure than one far more expensive, for she has planned and made it herself.

Let me tell you how I made mine. It consists of two parts, viz.: a warming-pan and a box for the flowers. Of the former I shall first speak. By means of shave and plane I made the legs of some chestnut logs taken from a pile of wood; when completed they were perfectly square at the top, but soon changed to a round form, tapering gradually toward the base, in which some casters were inserted. I then nailed two boards, nearly two feet long and four inches wide, on the inside of the legs at the top, letting the corner of the leg project one inch beyond the end of the board. This space is for the fastening of the ends. From the desired width of the box, when finished, I subtracted twice the side of the leg, thus obtaining the dimensions of the end pieces, which, like the sides, should be four inches wide and one inch thick to meet the outer corner of the legs.

In this way I made one end. For the other I cut a place one inch deep in the upper side of the side boards, and in these hollows firmly fastened a narrow board of the same length as that used for the first end, thus making this framework even as to itself, and also as to the top of the legs.

I then nailed boards over the upper and the lower side, as one would put the top and bottom on the box, being careful to have them very firm, thus making the cavity within a tight box, which, being beneath the plants, was intended for a pan of hot water to give bottom heat. The top of this "warming-pan" has holes bored quite thickly in order that the steam may more easily penetrate the soil above.

In making the flower-box, I nailed on the end pieces, first having cut a place in the bottom of one for the opening in the "warming-pan." I placed the side boards even with the bottom of the ends, and nailed them firmly to these, the bottom and the legs.

For the end door I fitted a board to the opening of the pan beneath and hung it with a hinge. I now had the plain box in a state of completion, but wishing for some ornamentation, with a knife I cut a design in some thin butternut boards, and overlaid the whole box, letting the scalloped edge fall below the bottom, thus giving it the appearance of carved work. After the door in the end has been covered with this trimming it is scarcely perceivable.

The flower-stand is twenty-two inches wide, eight inches deep, and nearly four feet long. When stained with asphaltum, it was very pretty and satisfactory, and has been much admired.

For soil, I used two parts of leaf mold and rich loam from the woods, one part street scrapings and compost, one peck of pulverized charcoal, one pint each of slacked lime, wood-ashes, and soot, thoroughly mixing the whole. With this I filled the box, first lining it with moss, over which I placed a layer of pounded charcoal.

In the centre I plunged a thrifty Calla; on one side I planted a Rose Geranium, on the other a Coleus, filling the remaining space with China Pinks, Florists' Pinks, Stevia, double variegated Petunia, Begonias, and other small plants. About the edge of the box I set some Gypsophila Muralis, that had seeded itself in the border; I also scattered some seeds of the Linaria Cymbalaria among the other plants. I put Maurandya and Adlumia cirrhosa in the ends. All of these are now growing finely, and bid fair to cover the soil with their delicate green. I plunged my Calla in the pot that its feet might be constantly kept wet without injury to other plants.

Last winter I gave it the same treatment, and it grew exceedingly well, blossoming all through the winter and spring, and even in the summer. One summer I turned the pot on the side, and left it to care for itself, when one day I looked, and lo! there was a fine large blossom; since then I have set it in the ground in the summer that it may gather strength for the coming winter; but it always blossoms just the same. I pot it early in September, using sand, sod and cow manure, each being well rotted, in equal parts. I keep it in the shade for a few days and water sparingly until it gets established, then give it hot water in abundance, but with care, for if it receives too much at a time the roots will become cooked. Press the earth up a little around the stalk that it may not be injured.

On a shelf, next the window, I have some Geraniums in five-inch pots, which were started from slips last spring; they are already in bud. The shelf hangs below the window from screens fastened in the walls.

Last winter I wanted a shelf for small pots placed across the window in such a way that the shade might be dropped between it and the window. After considerable thinking and planning, I sawed out two small brackets with a fret saw, leaving one side of each plain to fit the window-casing. I made the shelf long enough to reach across the window and rest upon the brackets. From the back side of the shelf, between the two brackets, I cut a strip one inch in depth, rounded the corners on the front and nailed the brackets close to the ends of the shelf; sawed out a pretty design to nail on the ends, which gave it a finished appearance. After it was stained and hung upon screws put in the wall, I thought it very pretty, and have since found it quite serviceable.

I have seen advertised a patent portable window garden; but the one I am about to describe is unpatented, so any one can make a similar article. For the bottom a board two feet and six inches long and one foot wide is necessary. The end pieces are twelve and one-half inches long and eight inches wide, and should be carved or sawed in some pretty design; nail these on the ends of the bottom, making the fronts even; but letting them project one-half inch beyond the bottom on the back side. Make the front board, which should also be carved, eight inches wide and long enough to lap by the edge of the ends, to which it should be nailed.

Our box is now finished, with the exception of the back, for which make three small brackets, placing one in the middle and one at each end; the brace of each bracket should be eight inches in width at the top.

This box should also be stained with asphaltum and hung by the brackets against the wall under the window. Either pots or a plain box of nearly the same size may be set within. It will contain quite a number of plants.

We have various devices for hanging-baskets; but the prettiest I have made is of pine boards in the form of a hexagon larger at the top than at the bottom. I nailed small silk spools, split in halves, on the corners in a vertical row, thus making them look as if turned out. On the sides and bottom I nailed deep thread spools, with some larger silk spools; then stained, varnished, and put screws in near the top for the cords. If the basket is large, three at equal distances will be necessary; if small, two are sufficient. Cords may be made of twine and covered with old dress braid which can be put to no other use.

C. J. A.

### WINDOW GARDENS VERSUS CURTAINS.

I have four window gardens, and, seen as they are, are lovely. I will describe one of them. It is a large bay-window, situated on the "sunny side," filled with plants delighting to bask in full sunshine, and as a matter of course there is an abundance of bloom. In the top casing six bird cage hooks are inserted, from which suspend as many pots of trailers, some of which nearly trail on the floor. These hooks carry the plants so far from the glass, there is no danger to be apprehended from frost. One of these plants, a Lobster Cactus, has just delighted our vision with fifty beautiful carmine and white blossoms.

Half way down the window I have a shelf all the way round for the accommodation of more stately and aspiring plants, that are always getting mixed up with "things above;" in the same pots are trailers also, so thickly matted as to make them invisible, thereby rendering covers of cloth or pasteboard unnecessary, an article I have always looked upon as a nuisance when there were a hundred or more pots of plants to be sprinkled every two or three days.

At the bottom I have two window boxes, one at the right, the other at the left, filled with vines, trailers, and vining plants, that need supports; for these I make trellises of different styles. Here, again, my trailers serve as ornaments, for I can find no glue that will secure cones and other ornaments for any length of time, and leather work curls up in a little while, giving the appearance of rags hung along the boxes, but trailers are all right always.

The vines soon after commencing to grow, discover they have been "sent on a mission," for, awaiting their pleasure, are cords arranged, simulating drapery curtains, looped back over flower pot holders, each holding a pot of plants.

The groundwork and flowers of this curtain are all to be woven by the graceful interlacing of four twining vines, but their zeal from the first shows that the task will soon be accomplished, and ample time remaining for a circuit of the room, besides stopping to drape each picture they come in contact with. Cobea scandens is a rapidly growing vine and profuse bloomer, but I think it a rather coarse plant for house culture; at least I prefer finer ones.

The tassel at the top is a goblet with the stem broken off, set in a basket made of beads strung on twine, finished with a tassel of beads. The goblet is filled with water, and a bunch of Lobelia blossoms inserted, which are expected to grow and bloom all winter.

In front of the middle sash stands a rustic vase containing a large Cactus, with vines and trailers wreathed together so closely as to conceal its originality.

At the left of the vase is an Oleander which blossoms during a greater part of the year; at the right an Abutilon always in bloom.

MIN.

## Floral Hints.

### CULTURE OF HOUSE-PLANTS.

Thinking a few practical remarks on the culture of house-plants may interest some readers of the CABINET, I will give a little of my experience. I could have fine thrifty plants, but not enough flowers in winter to suit me; so I have been studying and laboring until I have at last a prospect of success, even against adverse circumstances; the worst being a limited amount of "the root of all evil," as I belong to that class of whom a florist speaks as having "fine taste and little money." And it is for the benefit of such persons I write, as I think it is the aim of the CABINET to instruct those who, like myself, have a love of all things beautiful, without opportunities of enjoyment.

I have only had five years' experience with house-plants, and, after reading this, no one need be afraid to try it.

My home is in a small village on a high, bleak prairie, without shelter from north winds, and a fearfully cold climate. Our house is a frame, plastered, a mere shell, and my sitting-room is very small, thirteen by fourteen, heated by an air-tight stove; a carpet on the floor, and lighted by one south window, three by six feet, and a glass door north; and I do all my own housework, and have very poor health.

Now, could any circumstances be more "adverse," unless—ah, yes, unless—I had no south window, and no post-office, and no "John" to help me. So the "moral of this mournful tale" is, no conditions are so bad but might be worse. A true love of flowers will overcome all obstacles, and the labor they exact soon becomes a pleasure.

A few plants, neatly arranged, imparts an air of refinement to a room nothing else can. And the conditions they require are beneficial to our own health. Plants need cleanliness, pure, moist air, and sunshine, and these are necessary to the enjoyment of vigorous health of human beings. Science teaches that plants during the day absorb carbonic acid gas, the poisonous principle of the air, and give out oxygen, the vital principle of life, and it is easy to understand that a few plants, not to produce too much moisture, would keep the air of a room pure, and therefore be useful in a sanitary point of view.

Now about my plants. First, I had them on a table in front of the window, but they did not do well; some were shaded by others from the sun, though a few would bloom. Nothing is so capable of artistic effects, in arrangement, as plants, so I set my wits to work to improve their surroundings; to evolve something out of nothing, as Darwin and Huxley teach. I took an old kitchen table, had the legs sawed off till it stood fifteen inches from the floor, even with the window-sill; the top was sawed off within two inches of the frame all round, leaving it three feet long and two wide. Inside of the frame was placed a sheet-iron pan two feet and two inches long and eighteen inches wide, to hold hot water, a small spout at the corner to draw it out, pan fastened in with boards nailed underneath. Around the top was nailed edgewise boards five inches wide, nicely carved on top edge. Then under this, on both ends and front side against the frame, were nailed small carved brackets five inches apart, giving a nice finish. Small holes were made all over the top with an auger to let steam up round the plants; a large one in one corner to put in water; the whole then stained a walnut color and given two coats

of varnish, and behold! a window-garden that would cost \$10, at least, at stores.

An old table, a few boards of dry-goods box, with the aid of "John's" skill in carving, transformed into "a thing of beauty," and a joy for the present. But apart from its beauty, its utility is of more importance. The side-boards protect pots from cold air of the floor, and the hot water gives bottom heat needed to make plants bloom in winter, and the steam supplies warm moist air for tops, and counteracts the dry heat of the room. I also keep a pan of water on the stove.

Along the window, under the table, I put bright oilcloth two yards long and over a yard wide, so I can sprinkle tops without soiling the carpet. My husband gave me two pairs of window brackets, holding six pots, and on these, fastened to frame on upper part of window, and two small wooden ones for lower down, I put my vines and drooping plants, and with hanging basket of Smilax for centre of top, and my beautiful window-garden of blooming plants for lower part, I have a lovely window.

Now, unfortunately, in this climate these plants would not last long at a window in a frame house, with the fire gone out on a piercing cold night. This, too, I have provided for. A large wardrobe for hanging clothes, standing a few feet from the window, has been fixed to hold them nights. I first pasted paper all over inside, and tacked newspaper over that, six or eight thicknesses, and on inside of doors and outside of back, which is drawn a few inches from the cold wall, and filled the bottom a foot or more with old papers, or folded clothes, to keep out the cold from the floor, making it frost-proof even if the fire goes entirely out. It was then filled with shelves to hold pots, which does not hurt it, as they are made and set in and easily taken out in spring, but I let the lining stay. Ladies may object that this is too much trouble, but ten minutes will suffice to put in at night, and same to take out; and before taking out in the morning, I can open all the doors while sweeping and dusting, and this ought always to be done for the sake of our lungs, while the room gets a good airing and cleansing, which could not be done if plants were exposed to frosty air, besides saving time it would take to wash or clean them after dust of carpet sweeping. And then the pleasure of arranging plants around the window each day with new and charming effect. This plan, too, saves the trouble and expense of keeping fire all night, and the dread lest plants be frozen, and keeps one from getting too many, the great error of amateurs.

A few plants well cultivated are a delight, but too many makes a toil of a pleasure. Keep no plants that will not bloom in winter; it does not pay to keep them all winter in the house for next summer's bloom, unless they bloom in winter too. Most all winter plants make good bedders, and the old roots will make a gorgeous bed all summer.

To have flowers in winter, I start cutting early in spring, or even winter, and give good cultivation all summer, keeping all buds pinched off till September, and by winter the roots are strong and well established, the main thing.

Give final potting in September, in pots one size larger than taken from. Almost all plants bloom better in small pots that confine the roots, except a few, like the Fuchsia, which must not be pot-bound. The hardest lesson to learn is how to water, not to give too much or too little. This can only be learned by experience, and studying the habits of plants. However, it is safer in winter to give too little than

too much; no plant will do well if the roots are kept in a wet, soggy soil very long. The general condition of soil should be merely moist. If barely enough water is given to wet the soil through, the roots soon absorb it, and again need water, thus keeping them active and healthy.

I use no saucers, and rarely have water run out of pots, and this saves strength of soil from being washed. I have tried to make this plain, as it is important. Warm water is best in winter, and tepid water for sprinkling.

I use no stimulant, unless a plant is pot-bound, or soil poor. Then I use liquid hen manure, very weak, and give once a week or so. Some plants, like Geraniums, will not bear it. For them I use common garden soil with one-fourth sand, as they bloom better in poor soil; for Roses a heavier soil, well rotted stable manure, and garden soil with a little sand. I go to the woods every year and get a supply of leaf-mold. This is light and porous; never packs or gets heavy, enabling roots to run easily, and air and sunshine to enter, and is splendid for Coleus and Begonias, and all vines and plants wanted to make luxuriant leaf-growth; but is too rich for blooming plants; and should be mixed with garden soil and sand.

Washing and sprinkling is my remedy for all ills of plant life; have no red spider and very few green lice, which keep from getting a start, and the scale insect, too.

I paste paper over cracks of window to keep out cold air, but keep a door open a little all day if not too cold, and where the air cannot strike plants till warmed; this, too, is good for ourselves.

I use water sparingly on the Calla, the books to the contrary, and think it blooms better than with such enormous leaves, if the roots are strong and well confined. I bought two Calla bulbs three years ago, and planted them in a box holding two gallons, the last of November, and gave plenty water all winter, and such large leaves they had in spring, but they did not bloom till July, and staid in same box, till, in October, they were frozen, every leaf killed. Thinking the roots dead, I gave no care for two months, when a leaf peeped up. Then the box was brought in the sitting-room, and watered a little once in a while; this was about Christmas, and the second week in January two large buds started up and kept ahead of leaves all winter, each bulb giving three large flowers by April, with very small leaves, and the roots had filled the box, and were pushing the soil over the top. That gave me the key to the best way to make it bloom. In spring, after the leaves die down, I repot in rich soil, set on north porch, watering a little all summer, enough to keep roots growing without top growth; by winter the pot is full of roots, and the plant ready to bloom.

Shade is recommended for Begonias, but one I had on a bracket last winter, in full exposure to sunshine, bloomed better than others in shade. It was Hybrid Multiflora, and its waxy scarlet flowers are splendid. The Geraniums, though old-fashioned, are among the very best winter-bloomers, very healthy, and never troubled with insects, and if right varieties are obtained, and small pots used, will bloom all the winter.

I have General Grant, rich scarlet, Jean Sisley, and Master Christine, all good for winter, and a white with scarlet eye, that beats all to bloom; and my beautiful Roses, more trouble than all the others, and more loved; one flower will repay for all care taken for them.

MRS. B. B. N.

## The Home Circle.

## ANSWERS TO QUESTIONS, AND GOSSIP ABOUT HOME AFFAIRS.

**China Painting.**—Mary and Addie B.—You will find china painting a most captivating recreation! indeed, sufficient cannot be said in its praise, and it is our ardent desire that every girl in the land should be on the alert to make herself acquainted with all such artistic work. Surely, you may succeed; why not? You have hands, deft fingers, good sense, and we verily believe, would not put a green ribbon on your hair, and a red one below on your breast, and you testify from your dainty note-paper that you possess an innate sense of the delicately beautiful. Oh, yes; you will learn to paint. One will aid the other, too, as there is a pair of you. In commencing painting on china there is one advantage that a very tyro possesses; there is no need of carefully graded shades, extreme accuracy as regards perspective, or strict regard for precision in form, truthful copying, or delicate strokes.

Examine the celebrated relics of ancient times, and you will find that though the ceramic art was perfect as a whole, it does not appear so if judged by the standard of excellence exacted for delicate painting on paper, velvet, or other such material; and even in the French schools, where the lovely Rose du Barry and Pelissy china show exquisite touches, and the most charming combinations of form, if closely examined, though the general effect is perfection, the outlines sharply defined, the colors finely balanced, the forms graceful, yet the manipulation is not of the pre-Raphaelite order by any means. In an article such as this, it is not possible to give you clear directions on this subject, but we hope the day will come when we shall feel able to do it justice, for several articles on the subject, published in one of our leading art papers, has brought us so many letters on the subject, that we believe this charming art-work is awakening our beauty-loving people to a sense of what may be done in this line, for no other offers so wide a scope for beautiful household elegancies in form of dinner, tea, breakfast, and dessert sets, plaques, tiles, jardiniere, slabs, etc.

**Laundry Work.**—Mrs. A. W. M.—We know well the perplexity young housekeepers have concerning the simple and homely duties of their new avocations, especially when, as in your case, they are obliged to perform them with their own hands. The very first piece of advice "Aunt Carrie" offers you is, save yourself in every possible way; because you of necessity perform your own household labor, and are nurse to your two little ones, is no reason for your becoming a mere "drudge," for in this day, and with a house such as the cottage you describe, you may so arrange your duties that each day you will secure an hour or two, at least, for reading and the musical practice in which you so delight. But we will at once answer the questions you ask.

1st. As regards the laundry question. We at one time were so situated for several months, during the dreadful "war epoch," and while residing in one of the slave states, that we were obliged to attend to our own washing, household work, four little children, and to assist daily in the hospitals; so we can give you a "leaf from the book of real experience." We would advise you to wash on Tuesday, when obliged to do it yourself, for the reason that Monday invariably brings so many extra duties. There are numerous things to be picked up, and the house to be adjusted, the larder has grown low and must be replenished, and above all, there are preparations to be made for the wash which will materially aid you. First collect all the clothing, and, sorting them into three separate groups, fine, medium, and coarse white clothing, put them loosely into large thin muslin bags; we use two thin flour-sacks opened and sewed together, with a string at the top. We then place the wash-boiler on the back of the stove, and in it put soft water and the following washing-fluid, using one teacupful to eight gallons of water: 1 lb. sal soda, 1 do. borax, ½ do. chloride of lime, boiled in 6 gallons of water. When cold add half a pound of salts of tartar, which acts upon any grease, paint, etc., and dissolves them.

It is the ingredient which produces the lather in hair washes, making a saponaceous compound. Heat the water in the boiler and stir in the fluid; place one or two of the sacks of clothes in a tub and well cover with the water; if the wash is not large, the entire lot may be put into the tub, but it is better to make a little more prepared water and place the coarse clothes, towels, etc., in a separate tub. Brown towels, and any very dirty pieces, we put into the boiler; make the water rather stronger, and add a cupful of soft soap, allowing them to remain on the back edge of stove or range all day.

One tablespoonful of fluid to about two gallons of water is a good proportion. The following morning make a boiler of water quite hot, stir into it sufficient shaved soap to make a thick lather, and pour it over the fine pieces, first turning them out into a tub; take your clothes-stick, and, lifting them up and down in the water, let the suds act well upon every part; next pass them through a washing-machine, of which there are several good ones; we have used a "Doty" for years, and with great satisfaction, though many have these same lying idle in their cellars or garrets. When examined after this you will find most of the articles ready for the rinse tub, and beautifully white, but should any streaks or spots appear, rub a little soap on them, add one tablespoonful of your fluid to two gallons of water, and boil them for a little time. Then rinse through two waters, each slightly blue, putting the wringer on the washing-machine and then on each tub in succession. Two light-blue waters are better than one clear and one heavy blue one. For many years we have made our own "blueing," using one-fourth pound of Prussian-blue and two ounces of oxalic acid; add sufficient boiling water to dissolve the acid; then mix the blue smoothly in and gradually add a half gallon of soft water; this will make a large quantity, but it is easier to make it once for a length of time, as it requires no more trouble. It is best to obtain a sheet of "filtering paper" from your druggist, and, folding it round the inside of a funnel suspended in a pitcher or jar, allow the fluid to slowly percolate through, thus retaining all the sediment. While rinsing allow your starch to be boiling, in readiness for those articles requiring it, for it is much the best way to finish the bag of fine articles first, before commencing the second, as thus they may be dried before the colored clothes are ready for the line.

Keep a bar of pure white soap purposely for your starch, for by shaving off a teaspoonful and making a thin lather, with a quart of water, for your starch you will have no trouble with "sticking-irons."

## STARCH.

Mix three tablespoonfuls of dry "Laundry Starch," to a cream, with sufficient cold water, then stir it quickly into the boiling soapsuds, and allow it to boil five minutes, when stir into it a piece of spermaceti, or "star-candle," and one teaspoonful of fine white mucilage of gum arabic, made by putting two ounces of best gum-arabic in a half-pint bottle of cold water. It will require several days to dissolve. Bring to a boil, then at once remove. Dip shirt-bosoms, collars and cuffs, the right sides together, then rub the starch well into them, and, passing them through a loose "wringer," stretch and clap them, then place in the basket on a towel. Starch your vests in the same manner, passing the backs first through the wringer.

If you have laces do not rub them, but after starching and wringing, place them between two sheets, folding each piece smoothly, and with a clean new broom, wrapped in a pillow, towel, or encased in a pillow-slip, gently pound in all over for about ten minutes; this will make curtains quite clear and impart the transparent lightness of new lace. Rich thread laces, dip in starch boiled in clear coffee, mixing it also in the same, cold. When ready to hang out the clothes, have an apron with a pocket across the front for holding the clothes-pins and a pair of white mittens, made with a thumb and finger. Every lady should care for her hands, not only on account of her sewing, but also because a smooth soft hand is pleasant both to sight and feeling!

Hang all pieces carefully, for it gives much trouble to have them dry in crooked, gnarled knots, especially those stiffly starched. Having scalded the last bagful of clothes, and passed them through machine and wringer, you will be ready to attack the colored arti-

cles, which saturate one at a time in any clear suds you may have, that is barely lukewarm. This for any common pieces, but for your children's pretty piques, muslins, and Marseilles suits, dissolve a half pound bar of fine washing soap in a gallon of water, making it boiling hot; then stir the thick suds into a half tubful of cold water, and add half a pint of ox-gall; wash each piece carefully by lifting it up and down and pressing it well in the water with a smooth maul, kept for the purpose; then do the same in the two rinse waters, passing each piece, smoothly folded, through the wringer; this done several times from the suds-water, will aid materially in extracting the dirt without much manual labor. Starch heavy fabrics with thin starch, but muslins, lawns, etc., with that about as thick as cream. Dry by hanging dresses between two lines placed about five feet apart, pinning one-half the bottom of the skirt to one line, the neck and sleeves to the other.

Wash navy-blue, black, dark brown or myrtle green dresses, in water in which a handful or two of bran has been boiled, straining it through a bag, then grate a half dozen potatoes previously pared, into a half tubful of warm, not hot, water; add a tablespoonful of aqua ammonia, and wash them through this; rinse in very deep blue-water, in which three or four potatoes have been grated, and wring carefully; use no starch, but dry as directed. For ecru, boil hay in soft water, adding bran, and rinsing in cold clear water. Wash your flannels in cold suds, then rinse in two cool blue-waters and well shake them. If very dirty, add a teaspoonful of powdered borax to a little tub of water, about three gallons.

For blankets, put two large tablespoonfuls of borax into a half tubful of soft water, then stir in a bar of nice washing soap dissolved in boiling water, and add a cupful of the washing fluid; stir all well together, then lay in your blankets, and, lifting them up and down a few times, cover the tub closely and leave for twelve hours. In the morning stir and press them with your clothes-maul, and when all the dirt is extracted, rinse through two blue-waters, passing each one through the "wringer" after each process. Shake thoroughly, or pin on the line and whip gently with a supple switch. As the water runs to the bottom edge, squeeze it down between the hands. Never wring by twisting, but invariably use a wringer, folding each one straight.

## FOLDING DOWN AND IRONING.

Always fold your clothes down several hours before ironing them, using an atomizer, or a little whisk-broom, and clean water, stretching and smoothing out each piece; the tablecloths require careful folding. For shirts, bosoms, collars, cuffs, and vests, dip in cold starch, mixed quite smooth in soapsuds, until like milk. The general trouble is, persons use cold starch too thick. Use a board eight inches wide and eighteen long, neatly covered with two or three thicknesses of flannel, then with a muslin cover, tied smoothly over, and frequently washed. The underside should have merely a cover of Canton flannel pasted smoothly over, and when dry covered with a piece of heavy muslin also pasted, and while damp ironed until dry and smooth; this hard side is for polishing the bosoms, first stretched and held smoothly over; while the soft padded side will be found admirable for embroidered collars and cuffs, Vandyke ruffles, Marseilles vests, etc. A patent shirt-board now sold, is the very best thing we have ever used for this purpose. Iron the bosom of your shirts the last. Have a board for skirts one foot wide at top and two at the bottom, five feet long, and covered with an old doubled blanket, then a muslin cover furnished with strings.

For gentlemen's pants a narrow board of the same kind. After ironing quite dry, fold each leg up the front to the knee, then press the upper part crosswise, without any fold, wrapping up the seams. Tablecloths should be but slightly starched, and folded lengthwise, after ironing quite dry on the right side, first down the middle, then putting each selvege edge to the centre, pressing them down on the right side; next placing the two double parts, thus folded, together, and then doubling the other way in the same manner. Use a kerosene stove for ironing by all means. You have no idea of the real comfort there is in one of these little conveniences.

AUNT CARRIE.

Subscribers will confer a favor, if, when answering Advertisements, they will mention "The Floral Cabinet."

## THE Ladies' Floral Cabinet

AND  
PICTORIAL HOME COMPANION,  
THE HANDSOMEST ILLUSTRATED JOURNAL OF HOUSEHOLD ART, FLOWERS AND HOME LITERATURE IN AMERICA.

PUBLISHED MONTHLY.

### A GOOD OFFER.

\$19.15 for \$11.45.

The Manager of THE INTER OCEAN of Chicago, makes the following offer to new subscribers—

### ON THE RECEIPT OF ONLY \$11.45

We will send you THE WEEKLY INTER OCEAN for one year, postage paid, price \$1.65.

"INDOOR AND OUT," an illustrated monthly publication, price \$1.50, and AN ELGIN NATIONAL WATCH, PRICE \$16.00.

These Watches which we offer are made by the ELGIN NATIONAL WATCH COMPANY of Chicago, and each is GUARANTEED by the Company's own MEDAL CERTIFICATE, which will accompany the same. The very superior value and workmanship of these Watches are too well known, and their reputation too firmly established, to need any praise from us.

They are manufactured expressly for us, engraved "Inter Ocean," put up in warranted silver hunting cases, and are good, reliable timekeepers, no pains being spared by the Company to make them trustworthy and reliable.

THE INTER OCEAN is a large, eight-paged quarto newspaper, and one of the BEST AND MOST POPULAR published in the country. It has the largest circulation of any paper published west of New York. Remit in money order or registered letter.

Address THE INTER OCEAN, 119 Lake St., Chicago, Ill.

### To Buyers of Seeds.

Our Annual Catalogue and priced list of seeds will be published in January, and sent free to all our customers without writing for it, and to all others enclosing stamp for postage. As the best seeds are always the cheapest, we invite the attention of Farmers, Market Gardeners, and others, to our specially fine stock of Home Grown Vegetable Seeds of all the staple kinds; and also of Florists, and others, to our very large collection of the best strains of Flower Seeds, Novelties, &c. Seeds sent by express and mail to all parts of the United States and Canada, and guaranteed to reach purchasers.

HOVEY & CO., 16 South Market Street, Boston, Mass.

### ONLY \$1 FOR THIRTEEN EverBlooming Roses

By mail, paid. 40 Varieties, 4 choice for \$3. Also 500 choice blooming plants for house and garden at same price. 10 packets choice Flower Seeds for 25c. Catalogue Free. Address Innisfallen Greenhouses, Springfield, Ohio.

ROSES.—PLANTS BY MAIL, 10 beautiful ever-blooming roses, postpaid to any address for \$1.00. Purchasers' selection of all the best varieties. The best inducements offered to purchasers of greenhouse and bedding plants, flowers, seeds, &c. for Spring of 1878 in the U. S. Catalogue-free. Don't fail to send for one before ordering elsewhere. Address W. H. BRENNEMAN, Harrisburg, Pa.

## COLGATE & CO.'S VIOLET TOILET WATER.

My annual Catalogue of Vegetable and Flower Seed for 1878 will be sent FREE, in January, to all who apply. Customers of last season need not write for it. I offer one of the largest collections of vegetable seed ever sent out by any seed house in America, a large portion of which were grown on my six seed farms. Printed directions for cultivation on each package. All seed sold from my establishment warranted to be both fresh and true to name; so far that, should it prove otherwise, I will refund the order gratis. As the original introducer of the Hubbard and Marblehead Squashes, the Marblehead Cabbages, and a score of other new vegetables, I invite the patronage of all who are anxious to have their seed directly from the grower, fresh, true, and of the very best strain. New Vegetables a specialty.

JAMES. J. H. GREGORY, Marblehead, Mass.

### SEEDS! BULBS! PLANTS!

Superior Quality, by mail, postpaid.

10 Double Tuberoses, fine flowering bulbs, 75c. 12 different sorts of Gladioli, with name, \$1. 5 choice Roses, 50c. 4 Lilies, including the beautiful double Tiger, 50c. CATALOGUES FREE. Send for one at once. We sell all kinds of Flower and Vegetable Seeds at FIVE CENTS per paper. Our seeds have proved to be the best that the world affords, and are planted by thousands in all parts of North America. Bulbs and Plants in variety at extremely low prices. JOHN LEWIS CHILDS, Queens, N. Y.

### EXTRA CHOICE PANSY SEEDS

Fresh Seeds which will produce flowers of the greatest perfection in size, form, and substance, and of the clearest and most beautiful colors. Assortment of fifteen separate varieties for \$1.50. Mixed Seeds, 15cts. per packet. Catalogue sent free, or with a packet of this Pansy Seed and a packet of equally choice Verbenas, for 25 cts.

E. WYMAN, Jr., ROCKFORD, ILLS.

minutes, thoroughly, working out buttermilk and mixing the salt. Agents Wanted. Send for circular. A. H. REID, 6 N. Eighteenth St., Philadelphia.

FLORAL GUIDE FREE Tells How to Grow Vegetables. Best Seeds in the market; fresh and sure to grow. Large packets, low prices, liberal discounts. Books and Papers as premiums. Address COLE & BRO., Seedsmen, Pella, Iowa.

### JOHN SAUL'S CATALOGUE OF

### New, Rare and Beautiful Plants,

Will be ready in February, with a Colored Plate. Many New and Beautiful Plants are offered for the first time, with a rich collection of Greenhouse and Hothouse Plants, Bedding Plants, new and choice Roses, Dahlias, well grown and at low prices. FREE to all my customers; to others, price 10 cents; a plain copy free.

JOHN SAUL, Washington, D. C.

### ROSES

6 for \$1, 14 for \$2, postpaid. Bedding & Greenhouse Plants by mail. Catalogue free. J. T. Phillips & Son, West Grove, Chester Co., Pa.

### Excelsior Latest Improvement.

Double Treadle, including one doz. Saws, thirty imitable Fret Sawing Patterns and Prepared Wood, to the value of \$4. A new device for tightening Saw, Power Drilling attachment, Wrench, Oil cup, and Screw driver. Speed, 800 strokes per minute. Saws 1 1/2 inch thick. Price, complete, cased and delivered on board cars or at Express office, 12 Dollars.

SMALL STEAM ENGINES, with copper Boiler, to drive light Lathes, Scroll Saws, &c. 100 Scroll Attachments, \$9. GEORGE PARR, BUFFALO, N. Y.

\$5 to \$20 per day at home. Samples worth \$5 free. STINSON & Co., Portland, Me.

### ANY LADY

OR GENT THAT SENDS us their address will receive something of great value free by mail. Only about 200 left. INVENTORS' UNION, 173 Greenwich St., N. Y.

Roses, Greenhouse and Bedding out Flowers, small Evergreen Trees, Bulbs, Small Fruits, etc., sent by mail at lowest rates. Special Catalogues for mailing plants sent free. Cumberland Nurseries. HENRY S. RUPP, SHIREMANSTOWN, CUMB. CO., PA.

### The "EAGLE CLAW,"

The Best Trap in the World for catching

Fish, Animals, and all manner of Game.

One bait will catch thirty fish, and no handling is required to free them from the trap. No. 1, for catching fish, small animals and game, 35c. No. 2, for large fish, musk-rats, mink, &c., 75c. Sent by mail, on receipt of price. Exclusive territory granted to Agents on liberal terms. STENT & CO., Sole Manufacturers, 132 Nassau St., New-York.

### ROSES TUBE ROSES EXTRA

\$1.00 per Dozen. 50c. per Dozen.

BEDDING PLANTS, 75c. per Dozen.

All first class, guaranteed. Send for Catalogue FREE. Address, B. P. Critchell, Cincinnati, O.

### PIANO-ETTES.

THE LATEST Novelty. Over 3,000 SOLD During Christmas week.

Price, complete, \$2.50.

This is an entirely new article of Swiss invention designed to take the place of a PIANO where one cannot be afforded, or to give a knowledge of Piano playing before purchasing a piano or organ. The keys and tongue are of METAL, carefully tuned and pitched, and WILL NEVER GET OUT OF ORDER. The case is hard wood, finely covered, imitation of inlaid Mosaic. It will make a handsome ornament for any room. Any tune can readily be played upon it in less time than it takes to learn the scale on a piano. It is at once amusing, instructive, and a great help to a musical education. The music produced is soft, melodious, and very pleasing. A more appropriate present cannot be made one, and nothing will serve better to enliven the long winter evenings. Parents, if your child has any musical taste and you cannot afford a Piano, buy him or her a Piano-ette. You will not regret it. Sent by express on receipt of price. Address

C. H. SPAULDING & CO., Importers, 73 Water St., Boston, Mass.

A complete instruction book, with twenty beautiful melodies set to music, sent to purchasers for 25c.

NEW YORK, FEBRUARY, 1878.

**MY CHEAP GREENHOUSE AND FLOWERS.**

Last year my collection of plants became too large to be kept during the winter, as had been their previous misfortune, in my room. It was a great problem with me what to do with them. True, we had a cellar in which Geraniums, etc., had been preserved, minus their leaves, but there was no room for so many even if their beautiful foliage could be retained. A pit was thought of, but decided to be impracticable in my case.

It was desirable that the receptacle, whatever it might be, should give ample space for the full enjoyment of its treasures. Greenbacks were none too plentiful, and the cost was an item to be gravely considered. A greenhouse or conservatory was out of the question.

After pondering the subject, I concluded to get "Uncle Lewis," a Jack-of-all-trades, and neighbor of ours, to build me a log house. I found him at leisure, and quite at my service. Armed with an axe, he went to the woods and soon cut pine poles enough to build a log cabin 12x12. The place selected for it was at the south of the kitchen, which would be a protection against the north winds. The logs all put up, the first ones on the ground, the flat roof given the proper inclination, it was thickly covered with pine poles, over which were layers of straw and earth to the thickness of two feet, and the whole closely covered with slabs. An eighteen-light window was carefully fitted in on the south side, a narrow door on the sheltered north side, and a daubing of mud inside and outside rendered it almost as warm as a stove. Shelves were placed around three sides and a stage in front of the window, when my beauties were committed to its protecting care, and there has been no reason to regret it.

Our more fortunate friends who have conservatories and bay-windows, will naturally shrink from the thought of their pets having such surroundings, but it is not for them this is written, but for those, who, like

myself, must have their plants preserved, and with as little expense as possible. For the benefit of such the entire cost is given, \$7.40.

The temperature was at all times uniform, and during our coldest weather it was the pleasantest place on the premises. My plants were not checked at all in their growth, but continued to throw out shoots and in many instances flowers during the whole winter. Two Geraniums, a white and a salmon, bloomed from the first of December until late in the spring, when I compelled them to rest. A Calla behaved admirably in a small box filled with wood mould; it grew to quite a commanding height, and bloomed prettily in April. I am trying now to coax it into bloom. Good soil, cleanliness, and copious supplies of water will satisfy all its wants.

An especial favorite of mine is the ever-blooming Oxalis, and we do not properly appreciate it until the frost-knig has extended his icy sceptre over the vegetable kingdom, and rendered the prospect without so dreary that we welcome every hint of summer; then its tender green leaves and bright, cheerful-looking flowers gladden our hearts. They are not at all fastidious; give them plenty of room and they will not require an analysis of the soil, but will reward you by myriads of flowers.

A dwarf Cape Jasmine, which is decidedly a Tom Thumb, not more than six inches high now, seemed determined to bloom last spring, but thinking it would weaken the plant, I pinched the buds off. It is again full of buds, and now it shall have its own sweet way. I have heard of so many complaints of the difficulty in rooting Cape Jasmynes, that I will give my plan and its success. Plant the fully expanded flower with the leaves surrounding it, turn a glass over it, water sparingly, and it will seldom fail to root readily; it should not, however, be transplanted in several months.

Last spring I made a capacious hanging-basket of large wire, much to the detriment of my hands, and after lining it with moss, filled it with rich soil and

DESIGN FOR A LITTLE ROCKERY AND TRELLIS FOR VINES.

well rotted leaf mould, then planted Tradescantia, Moneywort, Scarlet Verbena, and a few seeds of Convolvulus to twine around the wires suspending it, and in a short time it was the admiration of every visitor,

and a source of delight to us at home. The Tradescantia grew like "Jack's bean stalk," only in a contrary direction, for it trailed on the floor for weeks before it was removed to winter quarters.

The grotesque Cactus is a subject of daily increasing interest. When their cultivation was first commenced, like most amateurs, I used just such soil as Geraniums delight in, and consequently was much disappointed in their growth, which in some species is marvellously rapid and in others provokingly slow. A few failures taught me my error, and now I find one-half good soil and one-half bricks broken up and mixed with white sand, epicurean food for them.

L. E. F.

**PUBLISHER'S ANNOUNCEMENTS.  
GRAND OFFERS IN SEEDS.**

Our offer of Flower and Garden Seeds is good to any one. Send us the \$3 and certificate, and you will get not only \$3 worth of seeds, but also any \$1.50 Book we publish or any three Books worth 50 cts. each, or THE LADIES' FLORAL CABINET free one year. Any one who is now a subscriber of THE FLORAL CABINET, who will get three friends to each order \$1 worth of Seeds, and thus make up a club of \$3, we will give to them any \$1.50 Book we issue, or any three 50 ct. Books, or a club of three may each have for the \$3 not only \$1 worth of seed each, but in addition each can have any 50 cent Book we publish. Remember, these are seeds only, and do not include plants, or implements, or tools. Likewise we give with the Seeds Books only as Premiums, and nothing else, except THE FLORAL CABINET. By telling of this to your friends, you will see what a splendid opportunity it is. See January number for advertisement and certificates.

**Award of Prizes.**—The Prizes offered for Pretty Windows last fall, has now been decided as follows:

- PRETTIEST WINDOW GARDEN.**  
1st Prize: To Mrs. Clara F. Sweetser, Peabody, Mass.  
2d " Mrs. T. C. Hayden, Sun Prairie, Wis.  
3d " Mrs. W. A. McAllister, Goshen Ind.  
4th " Mrs. M. J. Giddings, Weston, Mass.  
5th " A. H. Mundt, Fairburg, Ill.

**PRETTIEST FLORAL DECORATIONS.**  
1st. Mrs. E. L. Freeman, E. Orleans, Mass.  
2d. Mrs. Mary P. Guild, Lynn, Mass.  
3d. Pauline Alexander, Quincy, Ill.  
The Engravings for these are now being made, and we will begin to publish some in each number, beginning with March.

**Covers.**—The Cover to FLORAL CABINET is much liked. It will be used occasionally when we are most crowded with business, but it is not intended to be used with each issue.

**New Plate of Flowers.**—Any subscribers for this year who have paid for the CABINET without Frontispiece, and who may desire to obtain it, will please remit 15 cents, as it must now be sent separately from the paper, and postage prepaid at higher rates. Trial subscribers can obtain it also by remitting this price.

It is so handsome a Plate of Flowers, that we predict every one will want it, and it only needs to be seen to be thoroughly enjoyed. Every one who loves flowers should have "Treasures of Garden and Woodland." It is one of the prettiest colored plates of flowers ever seen.

**Prize Recipes.**—The Recipes which were sent in last year were submitted to a lady who is familiar with all the Cook Books in the United States and England, and her unbiased judgment sent to us was this: "I never saw such a splendid collection of Receipts. It is the finest ever published. They are the rich cream of the very best this country has ever seen." Our readers will thus see why we continue to publish them, because they are so superior and contributed by the very best housekeepers in the United States. We shall soon issue them in book form, and make it the Model Cook Book of the country.

**COMPLIMENTARY.**

THE LADIES' FLORAL CABINET, with its "Treasures of Garden and Woodland" for 1878, is as lovely as the day that ushers it in, and the whole artistic picture, from its background to the tiniest stem and tendril, is in our eye faultless; every flower, bud, and leaf, perfectly drawn and painted and arranged, full, and yet a little fly is not forgotten, for there it is, lightly lit on a delicate flower. Thank you, thank you for this "thing of beauty." It is a joy. With admiration, gratefully yours, Mrs. M. M. WELBY, Baltimore, Md.

I must tell you a little compliment. The gentleman to whom I carried my CABINETS for binding, said when I called for them, "I never saw so handsome a book as they make: I carried them home for my wife to look at." Mrs. ANNABEL C. ANDREWS.

THE CABINET ranks higher, in my estimation, as a family paper than any that has come under my observation. Housekeepers can not find time to read long at a time, and when tired of the routine of every-day life, her spirits are buoyed up on taking the CABINET and finding this and that little item which enables her to give this bedroom the finishing touch, or the very receipt she wishes to fix a savory dish for him who will come in tired and hungry. How well repaid she feels as praise by looks or word is bestowed for her trouble (which is pleasure to her) since it pleases her better half.

A. E. WITHERS.

THE CABINET is a perfect treasure. I would sooner do without my Sunday shoes than to go without my lovely FLORAL CABINET. Estes Park, Colorado. Mrs. M. M. S.

I consider the CABINET the most beautiful ladies' paper in the world. Seabeck, W. T. Mrs. FANNIE E. HALE.

The CABINET is most emphatically one of those articles which every woman wants her very own, and a borrowed number is never quite so interesting. I begin to feel impatient to see a fresh, sweet CABINET filled to overflowing with beautiful things. But the English language has been exhausted by your many admirers to express their admiration of your paper. Mrs. S. M. HUFF.

Wytheville, Va. I am so much pleased with the music in the January number of FLORAL CABINET, that I cannot refrain from expressing my appreciation. You have given us many, many heart-stirring pieces, but the last affords to me a satisfaction fully equal to the price of the CABINET. A. W.

The Frontispiece, "Treasures," is exceedingly beautiful. These Floral Memories have a fascinating fragrance of the right sort—an aroma æsthetic.

# THE BIBLE AND THE FLOWERS.

On a fine summer day, an unexpected shower drove two or three little parties into a cottage for temporary shelter. A Bible and a bouquet of flowers lay upon the table. A shrewd looking man, one of the company, approached the table. He was an infidel. He opened the Bible, then closed it again with a smile that was mingled with derision. He took up the bouquet.

"This suits me best," said he, with an exultant air, for it has no mystery; I can understand it. Its colors are fair and its scent delightful."

Saying this, he pulled a flower from the bouquet and stuck it in his bosom. A pause succeeded; but it was soon broken by an old gentleman whose meek and merciful face was grateful to look upon, and whose gray hair entitled him to respect. He had heard the observation of the infidel, and felt anxious to counteract its influence. Advancing to the table he took up the bouquet.

"How beautiful in His gifts," said he, "is the Father of mercies! How delicately formed are these beautiful flowers! how rich are their varied tints, and how sweet is the fragrance they exhale! But shall we forego the joy of inhaling their fragrance, and the delight of gazing upon their beauty because we can not explain the hidden mysteries of their existence? We know not how the dry, husky, unsightly seed when set in the ground, could start up in such glorious forms; we can not tell how it is that from the same soil such different stems should spring, and on the

same flower such varied tints appear; nor know we why some of the fairest and sweetest of flowers should be thickly pointed with thorns. These things are mysteries; but if we wait till we can comprehend them, the flowers will fade away for their life is short.

ing over them, and the greater part which is quite plain, and overlook the manifold mercies it proffers for our acceptance? Let us leave, then, all mysteries both of nature and growth, till it shall please God to unravel them to our understanding; and in the meantime, let us, while rejoicing that God's works and word both show that he is 'the wonderful,' gratefully place the glowing beauties of the bouquet in our bosoms, and the gracious consolations of the Bible in our hearts."

A WOMAN'S DEFENCE OF DRESS. For myself, I should be thankful to return to the habits of our grandmothers—buy a bonnet which would do to wear ten years; have three dresses, two for every day and one "nice," and wear them year after year till they wear out, without alteration; also twist up my hair in the plain wad at the back of my head. I should then have more time for reading and study, and more money to spend in books, and traveling, to say nothing of the unlimited time and money for doing good. And I know of very many women who would be only too happy to throw aside the wearisome shackles of fashion. But what would be the result? With the maiden, no more beaux; with the wife, a cessation of devotion on the part of her husband. I have myself been to parties and economically clad, and I was despised and rejected of men; again I have been more expensively attired, and I had more beaux than I knew what to do with.

SPEAK!

And why should we not?" continued he, putting down the bouquet and taking up the Bible, "why should we not use the word of God in the same way? Mysteries it has, which its Almighty Author alone can explain. But shall we waste our short lives in brood-

devotion on the part of her husband. I have myself been to parties and economically clad, and I was despised and rejected of men; again I have been more expensively attired, and I had more beaux than I knew what to do with.

## Household Art.

## TABLE COVERS AND SHELVES.

So much has been written on the subjects of furnishing, home decoration, and home-made ornaments, that it seems almost impossible to write anything new. But in *my* sitting-room I have some things which I have never seen anywhere else, and which I am vain enough to think very pretty.

First, then, I will describe my table-cover. It is of fine gray ladies' cloth, one and a half yards square. After hemming nearly all around, I decorated it in the manner following: With a piece of chalk I drew the outline of a vine running all around the cloth, about two inches from the edge. Then I cut, from dark green cloth, a large number of ivy leaves. I took different sizes of real English Ivy leaves for patterns, so my imitation ones looked very natural. These I placed at unequal distances apart, along each side of the vine I had marked; a large cluster in each corner, and a simple spray running around the cloth. I tacked them all on first, then fastened each leaf down by buttonhole stitching it around the edge with zephyr the same shade as the leaves. This was much more quickly done than one would suppose, for I did not take the stitches very close together. Then I worked the vine with dark brown Berlin wool, simple over and over stitches, and the effect is really pretty.

My room is heated by an old-fashioned double box stove, set in the partition so as to heat two rooms; consequently, the high, narrow mantel-piece was anything but a "thing of beauty." I improved its appearance very much by tacking on a strip of cloth—like my table cover—about six inches in width, cut in deep scallops on the lower edge, and each scallop decorated with a little cluster of ivy leaves, such as I described above. The upper edge quite straight, and the tacks covered by a thick cord of gray and green. Looking up at this mantel-piece and the beautiful bouquets of grasses and everlastings thereon, I am reminded to inform all interested persons that if they wish a graceful bouquet for winter decoration, the grasses, after being carefully arranged, must be placed in a vase or jar and put in a dark cloth set to dry. This is a great improvement on the common way of tying the grass in bunches and hanging up to dry, for by placing them in a jar the stems droop naturally, and the other way they dry nearly or quite straight.

My book-shelves are decorated with autumn leaves. Now don't say you know all about autumn leaves, for I don't believe you ever saw any arranged just as mine are. If you would like to try my way, I will tell you how I went to work. In the early fall I gathered a great number of beautiful leaves; brown and yellow mottled ones from the elms, delicate wood-colored ones from the sturdy beeches, many-shaded crimson and gold from the maples—some beauties, too, with green centres and crimson borders—bright little strawberry leaves, and others too numerous to mention. These were put to dry between layers of newspapers, a heavy weight on top, and remained thus for some weeks.

The book-shelves are the common corner shape, four in number. Instead of being fastened together with cords, they have narrow strips of pine at each corner, to which the shelves are screwed. Across each shelf is a strip of pine about four inches wide in the middle, and tapering down to two inches at the ends, fastened on with small screws. These strips are what I decorated with leaves. Laying each leaf up-

side down on old newspapers, I brushed over the under side with very thin glue, then laying it on the strip prepared therefor, pressed it carefully in place. I began by taking some of the small strawberry leaves for the end, then some beautiful yellow maple—you know all sizes can be found, and I had many tiny ones—then dusky brambles, and so on, gradually using larger toward the centre of the shelf, where there is a beautiful cluster of elm, beech, and maple, some partially covering others, and all looking perfect. I think that is the only word I can use to describe them. When all were finished, the shelves were placed in a cool room to dry, and were afterwards given two coats of varnish.

The shelves were such a success, that I soon had some cornices for my windows arranged in the same way, only the strips of wood were under, and I used larger leaves; the effect, over the plain white muslin curtains, is decidedly brilliant.

In one corner of my room I have a shelf, which, to me, is prettier than many a costly bracket. It is about thirteen inches wide in the middle, and is of plain wood, unpainted and unvarnished. Across the front is fastened a strip of pasteboard even with the shelf on its upper edge, and reaching about five inches below to cover the unsightly pieces of wood which are fastened to the wall for the shelf to rest on. This pasteboard I covered with the beautiful gray lichen, found in such quantities on rocks in old pastures. Then a good-sized flower pot was set in the centre of the shelf containing a splendid Maiden-hair Fern. The soil was such as Ferns delight in; leaf mold from their native woods, mixed with a little sand, and plenty of charcoal in the bottom of the pot. On each side of this centre piece I placed a small pot of German Ivy. I fastened one end of a long piece of hoop skirt wire to the outside of one pot of Ivy, then bent the other end down and fastened it to the outside of the other pot for an arch over the Fern. To cover up the flower pots. I arranged a small fortification the whole length of the shelf, consisting of sheets of green moss, bits of old stumps covered with fairy-like lichen, small white stones, and as many dainty little "red cups" as I could find. The Ivy soon covered the arch prepared for it, and then ram- bled over the moss and lichens, finally hanging down in graceful festoons several feet below the shelf. The whole cost was exactly forty cents, the price of three flower pots.

I hesitate to tell you what my lounge is covered with, but it looks so well I think I may venture. Nothing more nor less than crimson gray wineey. I wanted something the same color as my table-cloth, and could not afford anything expensive, so a few yards of twenty-five cent gray wineey covered my lounge and two box ottomans. After having been used constantly for three years, and washed several times, I begin to think wineey a very suitable covering.

I would like to tell you about my home-made foot stools and tidies, but am afraid it would make this article much too long, so I leave them for another time.

MAMIE.

## HOW TO BEAUTIFY OUR HOMES ECONOMICALLY.

First of all commence with your lawn. Sow it thickly with white clover and blue grass; have the walks and flower-beds neatly kept. Fences and gates should always be in good order.

We will now proceed to the house. As the parlor is noticed more than anything else, we will commence with it. Of course you have plenty of old rags lying around, so you can get them and make a rag carpet. Sew more than you need, and sell enough to pay for the weaving; and as you will be compelled to dye it, let the colors be deep, having red and green predominate. Take some of the nicest rags, braid three together, and make some rugs to save your carpet and brighten the room. We have one made in an oval form with these rags, which is nice; another way is, color some wool and sew it on a heavy cloth in the form of moss and flowers.

Perhaps you cannot paper your house. If so, whitewash it, putting in a gallon of line one ounce of Venetian red.

You love pictures, do you? Well, cut some pasteboard for a frame, and glue on autumn leaves or shells. Your frames need cost nothing.

Make some brackets of wood, which is in almost every house; mark them out, and the boys or your husband will whittle them out. Now, the wood-box never looks well in a parlor. Make a triangular box, place in a corner, and curtain it, leaving the top for a favorite plant or book.

If you have no sofa, get some good boards, nail them together in the form of one, and cover all over with some thin green cloth, stuffing well with straw or husks or paper, torn in strips. For the windows, snowy curtains, even of muslin, are all that are necessary. Of course, if you can get them, ornaments are lovely, but we are not giving these directions to people of means. Now, if your room is carpeted, your stove polished, windows clean, curtains white, and pictures well chosen, your room cannot fail to be handsome.

If you can keep plants from freezing, you will add them to the list, especially the Ivy, which will do almost anywhere around your windows, pictures, etc., but if it requires your hardest efforts to keep a few sickly plants, do not try it, but prepare a cave for your plants, and do not kill yourself working with them. No one loves flowers better than ourselves, but we do not commend the work often given over a few plants that are so nearly frozen as to be ugly.

Your bedroom must have a carpet, rag of course. Make a small stand, and place a wash-bowl on it, and keep your bed clean, making a spread of white muslin, with candlewick drawn through in diamonds or squares. This will be easily kept white, which is the beauty of a bed. Place a few handsome pictures, brackets, and autumn-leaf-crosses in the room, and your work will be done.

Next we come to the kitchen. If you find it necessary to have the bare floor, oil it well with linseed oil. You will thus save many a weary hour. Now, there is one thing that always spoils the looks of a kitchen. That is the old clothes hanging in it. Make a cupboard as you made the wood-box, only higher. Curtain it, driving nails inside for all clothing which has to be kept in the kitchen. Do not scold, but ask your men folks, as a favor, to try it, and my word for it, you will have no trouble in keeping it full. Paint your wood-box and all the woodwork in the kitchen, if possible. Lead color would be handsome. Do not forget that curtains are nice for the kitchen as well as parlor.

The only trouble is the washing, but let me tell you how we wash. Take all the white clothes Monday evening and cover with lukewarm water, using plenty of soap. Tuesday you will find that all they require is rubbing through clean water, boiling, and rinsing.

## Housekeeping.

## AUNT ELLEN'S VISIT.

I had just begun to clean house, and oh, how I was dreading it! Two of the rooms were in dire confusion, and the rest were getting into the same state as fast as Norah and myself could possibly help them there. It was my first experience in house-cleaning, and Norah—whom I had engaged to “see me through,” as she called it—was mistress. She knew it, and I knew it, yet dared not rebel.

“Shure, mum, and it’s the parlor we’ll be afther doing to-day,” said she, one morning when she came.

“But,” I ventured to remonstrate, “if any one should come; ought we not to finish the other rooms first?”

“Shure, mum, I’ve cleaned house for Mrs. Judge K., and Mrs. R., and slews of others, and sorra a worruld did they ever fault me.”

That was enough; I went meekly to work under Norah’s directions, heartily sick of the whole business!

Just as Norah flung out the carpet for the mau to beat, I saw a carriage stop at our door. The driver handed out my husband’s aunt—a most notable house-keeper—and this her first visit to me in my own house. This was the cap-sheaf, and when I went to the door I felt like crying. I led the way to the dining-room, and while she laid off her things, she took in the surroundings with one rapid glance, then, putting her arm round me, she said:

“You are cleaning house, don’t know how, and are tired enough to go to bed this minute—eh!”

“Yes,” I answered, and began to cry like a goose.

“Now, my dear, if you will let me be mistress for a short time and go right to bed until tea time, I shall be infinitely obliged to you.”

“But auntie,” I began—

“Go right to your chamber,” she said, and without another word I obeyed.

When I went down stairs, I found a cheery tea-table, and auntie’s pleasant face to greet me.

“I’ve discharged Norah,” she said, brightly.

“Discharged Norah!” I gasped, while Mr. A. almost dropped his cup in surprise.

“Certainly, my dear; I’m mistress, you understand, and to-morrow I’ll teach you how to clean house easily.”

When to-morrow came, Aunt Ellen said:

“In the first place you didn’t begin right. You should commence always in the attic, and clean down.” So we left everything as it was, and set the attic to rights that forenoon.

Aunt Ellen said she never allowed herself to clean afternoons, so she taught me how to make some spatter-cloths for the chambers. She took black doe-skin for one, seal brown ladies’ cloth for another, and dove-colored ditto for a third. She cut them round, pinked the edges, and then drew a fanciful border on them from a magazine with copying paper; this was to be embroidered in chain-stitch, with saddler’s silk in all colors; they look quite oriental, and very pretty.

She made some rye biscuit for tea, which were nice. Into a pint of thick sour milk she put half a teacup of molasses, a teaspoonful of soda in her rye flour, stirred to a thick batter, and baked in gem pans in a quick oven.

As I took out the preserves for tea, she said:

“What do you do with your empty cans?”

“Set them away for another year,” I replied.

“I’ll tell you a better way—just fill them with apple marmalade; you’ve no idea how nice it is in summer.”

Next day we cleaned out all the closets in a room first, using ammonia in the water instead of soap; then cleaned pictures, ornaments, etc., and shut up in the closet away from dust. Next brushed the ceiling and walls, then swept, after sprinkling the floor with meal wet enough to be “crumbly;” sprinkled camphor and tobacco along the cracks, to keep out moths; while the carpet was being put down, polished the furniture with cloths on which had been rubbed warm beeswax. Then cleaned the paint and windows; then re-hung the pictures, replaced the furniture, etc., and finished before dinner.

For dinner that day Aunt Ellen took what is commonly called a “soup bone,” put it on in the morning, in just water enough to cover it, and let it boil until eleven; then she took the bone from the meat, and seasoned with pepper, salt, sage, and butter; by noon the water was boiled nearly all away, and the meat was juicy and delicious. Served with baked potatoes and stewed tomatoes.

In the afternoon she made what she called a “snow-flake mat.” Crochet a plain, square mat of white single zephyr, just the size of the lamp; make a chain of seventeen stitches, very loosely, and fasten into every stitch of the outside row. Make three rows of this fringe, and the result is a fluffy, dainty mat pretty to look upon.

Next day we took our chamber in hand; auntie took a remnant of tapestry carpeting, bound it with scarlet braid, tacked it on to a closet door with upholstery nails, and I had a shoe-pocket for three pairs of shoes.

A large trunk, in which Mr. A. keeps valuables, papers, etc., so he could remove them quickly in case of fire, we covered with a cushion of green rep, trimmed it with fringe to match, made a curtain of the same, and a roll pillow; it was now a neat little divan.

The match-safe, and watch-case, we hung, with little knobs, on the head-board of the bed; they are very handy if you wake up in the night, as I often do, and want to know the time.

For one window she made a hanging-saucer. A strip of silver perforated paper, long enough to reach round the saucer, and three-fourths inch wide; work in “Roman key” pattern in rose-colored worsted, crochet a bottom of the same, finish with heavy chain-stitch tassel, and hang with rose ribbons. In this we put wet sand, and filled it with “Fern-moss.”

For another window, an old-fashioned “light stand,” which we found in the attic, she painted in stripes of red, white, and blue; nailed a box, painted to match, on the top, filled it with rich soil, and planted striped Tradescantia, German Ivy, and Cobea scandens in it. In the centre of the box she placed an old copper bell, with a Hyacinth bulb in bloom inside, and said:

“My dear, you have now a Centennial plant-stand.”

I wish you could have seen it a month afterward—it was lovely.

A floor, which I thought needed a carpet, she informed me only needed boiled linseed oil and burnt umber; this I gave it, and have now a black walnut floor.

She—but there, I might fill pages with the hints and helps she gave me. I’ll just tell you about “washing day,” and close.

We put the clothes in soak at night, in the morning wrung them out, and put them, without rubbing, into the boiler in which had been dissolved one paper

of “washing crystal” and a piece of soap three inches square. Boil twenty minutes, rinse in two waters, and hang on the line. The flannels and colored clothes wash so easily in the first suds. You can buy the “crystal” of any grocer.

ANABEL C. ANDREWS.

## CHEAP CARPETS.

By saving the best pieces out of men’s clothes that are past service, and some bright woollen scraps and some worsted skirt braid, or alpaca, if preferred, you have the material, and with a little ingenuity and a sewing machine, you can make a handsome carpet.

Cut a pattern of any design to suit your taste. One pretty design is to take a square, seven or eight inches each way, and hollow out each side like a half moon, leaving an inch and a half at each corner straight. Baste your braid on, and be careful to turn each corner square, as it adds greatly to the looks. You can use one or more colors in binding; it makes more of a variety to use two colors, which I think is the beauty of the work. Bind one-half of your blocks of one color and the other half of the other, and put them together alternately. After basting on the binding, cut some pretty figures of your bright pieces to correspond with the size of your blocks, and fasten them in the centre of each block by working in loose buttonhole stitch all around the edge of each figure two or three green leaves for one block and a red flannel with a leaf or two in the next, and so on alternately, is a plenty; if you crowd it it spoils the effect.

Now join your carpet by laying your blocks on a contrasting color; if the blocks are dark use gray or drab under the oval space that is formed by laying the blocks together point to point; baste on smoothly and stitch down on the right side of the carpet, first on the edge of the braid, then on the double, with the machine, and I think you will feel well paid for your labor.

You can strengthen the carpet by lining it with some coarse cloth, burlap is good for that, and fastening through where the points meet.

Now I must tell you how I made my paper carpet, as you asked some one to tell you something of that kind. I first prepared a bedding of old newspapers, and then stretched a burlap cloth nearly tight and tacked it firm, then with a paste of two parts of flour and one part of melted glue, which must be used while warm, I put on a coat of stiff brown paper, and when that was dry I put on another in the same way, being very careful to let each dry thoroughly before applying the next, then put on the wall paper, which can be chosen according to taste, and after it was dry I covered it all over with thin flour starch never allowing the brush to touch the same parts twice while damp, but being equally careful to touch all parts, after which it stood all night, and then I applied three coats of varnish, letting each coat dry two days before putting on the next. Copal is the kind used, and if you take pains, you will have a carpet to be proud of. You can use plain flour paste for the wall paper if preferred.

B. E. O.

**A Pretty Frame for a Chromo.**—Cut four strips of silver perforated cardboard one inch wide, and cross them like a rustic frame. Crochet a flat border round them, with dark walnut brown single zephyr; work a diagonal pattern down the centre of each one with gilt beads. Hang with walnut brown worsted cord and balls.

## Household Elegancies.

## WALL-POCKET, FOOT RUG, SOFA CUSHION, SEWING CHAIR AND TABLE, AND HAIR PINCUSHION.

This wall-pocket is made of two panels of wood one-fourth inch thick, which can be easily shaped, as shown in the illustration, and must be carefully smoothed and ebonized. The ornamentation is of Chinese character, consisting of paintings in gold, and where a person does not understand this class of fancy-work, we would recommend them to use the gold figures in Decalcomania designs, which will be found well adapted to the work, and may be procured of any style desired.

The central oval panel on the front is ornamented with rich embroidery, such as the pattern. An oval panel of binders-board is the foundation for the embroidery, which consists of an outer piece worked on scarlet merino with a piece removed from the centre, into which a piece of black velveteen containing a monogram or other design is introduced, and the edges finished with cord and stitches in half-polka or button-hole. The ends are connected by triangular pieces (*souffles*) of scarlet morocco, with bands of elastic let into the upper part, which is pinked out, and has slits five inches below for the elastic bands.

WALL-POCKET.

Application embroidery forms a beautiful method of ornamenting rugs. A circular piece of drugget cloth is pinked out around the edges, and above it is worked a row of simple chain-stitching. In the centre is a star formed by cutting out two squares (hollowed out a little on the sides), and placing them on each other, on the light foundation of cloth cut out in form of a cross with broad rounded ends. Besides the central star, eight circular pieces of the same cloth are fastened around it with black worsted braid. (Alpaca braid folded and stitched on the sewing machine.) Between the four divisions of the cross are circular pieces of cloth of a different color from either the ground or central parts just described, which are held in place by bands of alpaca braid stitched down on the sewing machine. Beyond these is a circle of leaves cut from heavy cloth, and fastened on with a chain-stitching of coarse thread or wool. These leaves may be of various colored scraps. This mat, in shades of green and brown, with embroidery of golden tints, is one of the most beautiful that can be made.

A beautiful and easy kind of fancy work, is shown in the sofa-cushion, which will answer equally well for table-covers, curtain-borders, and chair-bolsters;

FOOT RUG.

indeed a complete set, made in this way, will be found exceedingly handsome, and at the same time inexpensive. This work consists of a foundation of printed

SOFA-CUSHION.

flannel, such as the imitation of ermine with black spots, bordered with a point Russe embroidery. This border is cut in four strips two and one-half inches

SEWING CHAIR AND TABLE.

wide, and embroidered on the edges in point Russe, chain and half-polka stitches.

The foundation of ermine, or flame dotted flannel, has each figure edged with button-hole stitching of green, scarlet, yellow, orange, violet, and blue; a

stitch of the same kind in contrasting color, and somewhat long, is taken across the dark place enclosed in each flame or spot; this centre should be about twelve inches square. The border of scarlet flannel is pinked out on each edge and worked with white. The transparent white flannel rosettes are pinked or embroidered in button-hole stitch, and are fastened on the scarlet stripe with colors, as black, orange, blue and and scarlet silk. This pattern also makes an elegant bed or cradle-spread, or is very ornamental thrown over the back of sofa or lounge as an Afghan or rug.

The pretty sewing-chair and table shown in the illustration, present such a tasteful and inviting aspect, that any lady might desire to take a pattern by them (which may be easily done, as we will endeavor to show), for no prettier arrangement can be made for the sitting-room. Both chair and table, so far as the frame-work is concerned, are so exceedingly simple in form, that they may be made with but little trouble or expense by any person with a little mechanical skill. To make the chair more comfortable, it might better have a thick padded cushion placed beneath the worked strip.

The table-cover and strip for chair are made of gray pressed flannel, with a lining of soft colored stuff of any kind convenient; which, tacked evenly together, is stitched in diamonds on the sewing machine. In the centre of the table-cover and down the centre of the chair-pad are bouquets cut from gay woolen goods and embroidered with application work, or, *petite-point*, zephyr, at pleasure. As a border, strips of

HAIR CUSHION.

scarlet and dark gray flannels are pinked out on each edge and fastened with half-polka and button-hole stitches, and a row of machine stitches on each edge. Heavy fringe finishes the edges of each.

For this pretty cushion, take a common collar box about six inches in diameter and two inches or more in height, and fill it with hair or wool so that it is raised well in the middle, and slopes gradually to the sides. Cover this with a piece of loose knitting, in any scraps of yarn or worsted on hand. Then knit an over cover of a bright color. Make a foundation of thirty stitches with fine wooden knitting needles, and going back and forth on these work thirty rounds, all knit plain, and then cast off. Or a circular piece may be crocheted in the usual short and long stitches. Having sewed both under and over-cover closely to the edge of the box, cut off the corners of the piece (if knitted, square), and trim the side of the box with a box-plaited ruche of ribbon, suiting the cover in color, and two inches wide. Above this fasten an embroidered border, worked on white flannel or merino, in chain, herring-bone

and point Russe stitches, with green silk of various shades, and flowers corresponding in color with the trimmings, using three or four shades. The edge is cut out in points, or pinked, as most convenient; above this, around the edge, is a ruching of ribbon one and a quarter inches wide.

MRS. C. S. JONES.

## Fireside Reading.

### THE CURE FOR GOSSIP.

What is the cure for gossip? Simply, culture. There is a great deal of gossip that has no malignity in it. Good-natured people talk about their neighbors because, and only because, they have nothing else to talk about. As we write, there comes to us a picture of a family of young ladies. We have seen them at home, we have met them in galleries of art, we have caught glimpses of them going from a book store or a library, with a fresh volume in their hands. When we meet them they are full of what they have seen and read. They are brimming with questions. One topic of conversation is dropped only to give place to another, in which they are interested. We have left them, after a delightful hour, stimulated and refreshed; and during the whole hour not a neighbor's garment was soiled by so much as a touch. They had something to talk about. They knew something, and wanted to know more. They could listen as well as they could talk. To speak freely of a neighbor's doings and belongings would have seemed an impertinence to them, and, of course, an impropriety. They had no temptation to gossip, because the doings of their neighbors formed a subject very much less interesting than those which grew out of their knowledge and their culture.

And this tells the whole story. The confirmed gossip is always either malicious or ignorant. The one variety needs a change of heart, and the other a change of pasture. Gossip is always a personal confession either of malice or imbecility, and the young should not only shun it, but by most thorough culture relieve themselves from all temptation to indulge in it. It is a low, frivolous, and too often a dirty business. There are country neighborhoods in which it rages like a pest. Churches are split in pieces by it. Neighbors are made enemies by it for life. In many persons it degenerates into a chronic disease, which is practically incurable. Let the young cure it while they may.—*Scribner.*

A priest was hearing confession, and a boy came to him and said he had a bad sin in his mind.

"Well, me good boy, come on wid it," said his reverence.

"Angh, den, your riverence, I do be always sayin' 'Be the Holy Father.'"

"You do?—that's very bad, me boy. Now how often do you be sayin' that?"

"Begor, more than forty times a day, your riverence."

"Go home now," said the priest, "and get your sister to make you a bag and hang it round your neck, and every time you say 'Be the Holy Father,' drop a little stone in it, and come to me this day week."

That day week his reverence was as usual in his

box, and he heard an awful noise in the church, so he looked out and saw his penitent dragging a sack.

"Tady Mulloy," says he, "what do you mean by such conduct as that in the church?"

"Sure, yer riverence," says the fellow, "dose is all 'Be de Holy Fathers,' an' the rest of uni's outside on the dray."

The success of individuals in life is greatly owing to their early learning to depend upon their own resources. Money, or the expectation of it by inheritance, has ruined more men than the want of it ever did. If you teach young men to rely upon their own efforts, to be frugal and industrious, you furnish them with a productive capital which no man can ever wrest from them.

A lady, living near St. Augustine, Florida, in a

"FAIR TREASURES."

lovely place, so tamed the wild birds of the woods by kindness, that mocking birds and blue birds, blue jays, robins, and brown birds used to come and feed out of her hands, and she was frequently visited by parties who wished to see the wonder. Not long ago some visitors to town, hearing of it, went out for sport, shot some, and so drove the rest away forever.

"George," said a maiden, as she smiled archly in her lover's face, "do you know what there is in a grand achievement that reminds me of you?"

George's eye lit with pleasure, and there was a loving tenderness in the glance with which he replied:

"No, darling; please tell me."

"Big feat," replied the maiden.

She now flattens her nose against the window pane and wonders whether George has committed suicide or gone to China.

The London *Punch* has this illustration of high life below stairs:

Master (snuffing)—"There seems a most extraordinary smell, James; I've noticed it several—"

Hall Porter—"I don't wonder at it, sir. I've spoke about it down stairs. The butler, sir, you see, is 'igh Chureh, which he 'as fit up a horatory in the pantry, and burnus hincense. We could stand that, but the cook is the Low Church persuasion, and she burnus brown paper to hobviate the hincense. It's perfectly hawful on saints' days, sir."

He was sitting silently by her side one chilly evening last autumn, thinking of something to say. Finally he remarked:

"How sad it is; the frost has come, and will kill everything green." Thereupon the young lady extended her hand and said in a sympathetic tone:

"Good-bye."

**Pay Your Debts.**—The *Laramie Sentinel* shows how a ten-dollar greenback is made to pay ninety dollars of indebtedness:

Mr. Brown kept boarders. Around his table sat Mr. Brown, Mrs. Brown, Mrs. Andrews, the village milliner, Mr. Black, the baker, Mr. Jordan, a carpenter, and Mr. Hadley, a flour, feed, and lumber merchant.

Mr. Brown took out of his pocket-book a ten-dollar note, and handed it to Mrs. Brown, saying:

"Here, my dear, are ten dollars towards the twenty I promised you."

Mrs. Brown handed it to Mrs. Andrews, the milliner, saying:

"That pays for my new bonnet."

Mrs. Andrews said to Mr. Jordan, as she handed him the note:

"That will pay you for your work on my counter."

Mr. Jordan handed it to Mr. Hadley, the flour, feed, and lumber merchant, requesting his lumber bill.

Mr. Hadley gave the note back to Mr. Brown, saying:

"That pays ten dollars on board."

Mr. Brown passed it to his wife, with the remark that that paid her twenty dollars he had promised. She in turn paid it to Mr. Black, to settle her bread and pastry account,

who handed it to Mr. Hadley, wishing credit for the amount on his flour bill, he again returning it to Mr. Brown, with the remark that it settled for that month's board. Whereupon Mr. Brown put it back into his pocketbook, exclaiming, that he "never thought a ten-dollar bill would go so far."

An old woman, on being examined before a magistrate as to her place of legal settlement, was asked what reason she had for supposing her husband had a legal settlement in that town.

The old lady said:

"He was born and married there, and they buried him there, and if that isn't settling there, I would like to know what is?"

## Housekeeping.

## PRIZE RECIPES FOR COOKING.

*Boston Brown Bread.*—One teacupful of Graham flour, one teacupful of white Indian meal, three-fourths teacupful rye flour, one-half teacupful of molasses, one pint thick milk, one teaspoonful each salaratus and salt. Mix well together with a spoon for five minutes. Bake in grease-covered pail for three hours in a moderate oven. Let it remain in the pail ten or fifteen minutes after taking from the oven.

*Tea Biscuit.*—In the morning boil one quart of milk; when boiled, put in one cup of lard and half a cup of butter. Let it cool a little and add flour to make a sponge and two large tablespoonfuls of yeast with a little salt. Leave in a warm place until light, then add quickly enough flour, and let it rise again. Roll, cut into biscuits, and leave to rise for a short time. Bake in a quick oven.

*Peach Tapioca Pudding.*—Steep in warm water two tablespoonfuls tapioca until perfectly soft; peel and stew whole two quarts of peaches; when tender, stir in the tapioca, cook about ten minutes longer, then sweeten to taste and cook slowly for five minutes. To be eaten cold. Prepared in a porcelain kettle.

*Suet Pudding.*—One cup of suet, one of raisins, chopped fine, one of molasses, one of sweet milk, one teaspoonful soda dissolved in the milk, three cups of flour, nutmeg, cinnamon, and cloves, one or all as desired. Boil or stew steadily for three hours. Liquid or hard sauce as preferred.

*Beef Loaf.*—One and a half pounds of lean steak, chopped fine, two eggs, one tablespoonful of salt, one teaspoonful of pepper, one small cup or rolled cracker. Mix well and form in a loaf; put bits of butter on top and bake. A delicious relish for lunch or tea.

*Chicken and Celery without Oil.*—Take two chickens, boil until quite tender, then chop fine. Take double the quantity of celery that you have of chicken, chopped fine, and mix; then take three eggs, beat well, and mix with a cup of vinegar a large tablespoonful of melted butter, a small teaspoonful of mixed mustard, salt and pepper to taste; stir the whole together over a moderate fire until quite thick; when cold, mix with the chicken and celery.

*Chili Sauce.*—Twelve large ripe tomatoes, one large onion, four red peppers; chop all together fine; two cups of sugar, one tablespoonful of salt, one tablespoonful vinegar, one teaspoonful each of ground allspice and cloves. Boil until quite thick, then bottle and seal.

*Roquet Pickles.*—One gallon chopped cabbage, two quarts chopped green tomatoes, six onions, sliced thin, half an ounce ground pepper, half an ounce whole allspice, half an ounce celery seed, half a gallon of vinegar, one-quarter ounce whole cloves, one-fourth cup of white mustard seed, half a gill of salt, and half a pound of brown sugar.

*Ginger Cordial.*—Bruise and mix nine pounds of red and white currants, eight ounces of pounded or ground ginger, the rinds of eight lemons, two ounces of bitter almonds, blanched and pounded, and one gallon of brandy; stir the mixture frequently; let it stand for a few days, then run through a jelly-bag; add four pounds of loaf sugar; when the sugar is dissolved, it is ready to bottle.

*Quince Wine.*—Grate the best and ripest quinces as for marmalade; strain the juice through a muslin bag, then carefully through a flannel one, and to every gallon of juice allow three pounds of loaf sugar; stir well after adding the sugar; let it stand in jugs, filling up from another as it froths over; when quiet, bottle it.

*Quince Jelly.*—Slice the quinces without paring; put into a preserving bottle and just cover with water; put over the fire and boil until soft; remove from the stove and strain off the liquor; to every gallon allow four pounds of white sugar, and boil very fast until it becomes a stiff jelly.

*Crab Apple Jelly.*—Cut out the eyes and stalks of the apples, halve them and put in a preserving kettle with enough water to prevent burning. Cook until soft, then strain through a sieve, and afterward through a muslin bag; to every pound of juice allow one and a quarter pounds of sugar. Boil gently for twenty minutes.

*Welsh Rarebit.*—One teacupful of chopped cheese, one teacupful of milk, one egg, butter size of a butter-nut; boil milk, butter, and cheese until smooth paste; add the egg well beaten and turn at once upon half slices of toast well buttered. Serve hot.

*Souffles.*—A French dish. Take four eggs, beat the whites and yolks separately until a thick froth is formed; then mix the two and add half a cup of powdered sugar and half a teaspoonful of extract of vanilla and stir in quick; pour into a deep dish and bake for fifteen or twenty minutes in a moderate oven. This dish should be made and put in the oven just as dinner commences in order to serve while hot. It falls when cold.

*Pickled Oysters.*—One hundred large oysters, one pint strong vinegar, one dozen blades of mace, two dozen whole cloves, two dozen whole black peppers, one red pepper broken into bits; put oyster-liquor and all into a porcelain kettle; salt to taste; beat slowly until very hot, but not boiling; take out with a skimmer and cool; to the liquor add the vinegar and spices; boil fairly, and turn over the oysters while scalding hot; set away in a cool place, and the next day put in glass jars with tight tops. Keep in a dark cool place; air and light turn them black.

*Ramequins of Pastry.*—Make a light puff paste with cream and butter; roll it out quite thin, and spread over it half the weight of the paste in grated Parmesan or any fine cheese; fold and roll the paste twice that the cheese may be thoroughly incorporated with it; then roll out one-half inch thick; cut in rounds, brush over with beaten eggs and bake for fifteen minutes.

*Green Pea Fritters.*—One pint of cooked peas, mash while hot; season to taste; make a batter of two eggs; one cup of milk; one-fourth teaspoonful of soda, one-half teaspoonful cream tartar; one-half a cup of flour; beat hard and cook as griddle cakes.

*Apple Snow.*—One pint of the pulp of roasted apples strained, one-half pint of pulverized sugar, whites of three eggs; beat the eggs to a stiff froth, then add the apple and sugar alternately, a spoonful of each, and beat all together until it stands perfectly stiff on the spoon. Serve in saucers on a custard made of the yolks of the eggs, one pint of milk, two tablespoonfuls of sugar, and flavored with vanilla.

*Newport Blanc-Mange.*—To one quart of milk add half a box of gelatine; soak until dissolved, not less than two hours; add a small cup of white sugar, and place over the fire; when the sugar and gelatine are

mixed with the milk and the blanc mange is gently boiling; remove and add one wine-glass of sherry and half a teaspoonful of extract of lemon; stir while cooling to prevent the cream rising to the top; when cool pour into moulds, and set on ice.

*Snow Eggs.*—Whisk the whites of six eggs with a little powdered sugar to a stiff froth; set one quart of milk sweetened to taste to boil; drop the egg-froth into it by spoonfuls; a few seconds will cook them; when all cooked strain the rest of the milk. Let it get cold and mix gradually with it the yolks of the eggs with any flavoring you like. Put the vessel containing this into a saucepanful of boiling water, and keep stirring on the fire until the custard thickens; to serve, place your custard in a dish, placing the whites upon it; a bit of jelly on each spoonful of froth improves the appearance.

*Fruit Cake.*—One pound of butter, the same of good brown sugar, one cup of molasses, six eggs, beaten very light; add one teaspoonful each of salt, cinnamon, cloves, allspice, nutmeg, and mace, one pint of brandy, flour enough to make as thick as batter; two pounds of stoned raisins, one pound of currants, one pound of citron, and one heaping teaspoonful of soda dissolved in cold water, then stir in flour until as stiff as can be stirred with a spoon. This makes three large loaves. Should be baked in a slow oven about two and one-half hours.

*Cocoanut Cake.*—One-half cup of butter, two cups sugar, three and a half cups of flour, one cup of milk, whites of eight eggs, three teaspoonfuls of baking powder. Bake in jelly cake tins. Filling: one grated cocoanut, the whites of three eggs, three-quarters of a pound of sugar. Beat the whites to a stiff froth, then beat in the sugar; put between the layers and sprinkle the cocoanut thickly over lower top sides, also with icing and cocoanut, a most delicious cake.

*Chocolate Caramels.*—Two cups of sugar, one cup of molasses, half a cup of milk, three-quarters cup of grated chocolate, piece of butter size of a hickory-nut, extract of vanilla. Boil until it crisps in cold water, then turn in buttered pans, and mark off in squares.

*Chocolate Drops.*—Four cups of white sugar, two cups of cream or rich milk, vanilla to taste; boil until it hardens in cold water; stir until cold, then shape in to balls; have ready half a cake of Baker's chocolate melted; dip the balls in it, and place on plates to harden.

*Ginger Snaps.*—Two cups of molasses, half a cup of sugar, a heaping cup of lard and butter, a tablespoonful of ginger, half a teaspoonful of salt, one and a half teaspoonfuls of soda, half a cup of warm water; mix stiff enough to roll out thin.

*Baltimore Delicious Bread.*—Two common tumblers of rice flour, two teacupfuls of wheat flour, three teaspoonfuls cream tartar sifted into the flour, two tablespoonfuls of butter rubbed into the dry flour, a little salt, two well beaten eggs, two teaspoonfuls of soda dissolved in two teacupfuls of rich sweet milk. Mix well and bake the same as stirred short-cake. Make it exactly by rule and you will never fail of a truly delicious bread.

*Snowball Cake.*—Half a cup of butter, two cups of flour, one cup of sugar, half a cup of sweet milk, the whites of three eggs, half a teaspoonful of soda, one teaspoonful cream tartar sifted with the flour; beat butter and sugar thoroughly together; add the whites of the eggs beaten to a stiff foam, then the flour, milk and soda last.

## Richardson's New Method

FOR THE PIANOFORTE.  
Price \$3.25. By NATHAN RICHARDSON.

250,000 copies sold. Sales have surpassed those of all other books combined. Be sure to order by the above full title, and do not accept instead of this, THE MODERN SCHOOL, which is an older book, by the same author. Mr. Richardson's opinion of the merits of this first effort may be gathered from the following, taken from the Preface to the NEW METHOD:

"Becoming at length satisfied of the truth of these criticisms (by many eminent composers and professors), and convinced that great improvements were obviously needed, I determined, if possible, to remedy the defects. Profiting by the experience and advice of the best practical teachers, I commenced a thorough and critical examination of my first method, and concluded that the only remedy would be to bring out a new work on an improved plan."

This new work, substituted for the defective MODERN SCHOOL, was Richardson's

### New Method for the Pianoforte,

which has been revised and re-revised, until it is the most perfect of music books, is a great favorite with the profession, and is the only true "Richardson."

OLIVER DITSON & CO., Boston.

## SAVE THE NATION!

For it is sadly too true that thousands of CHILDREN are STARVED TO DEATH every year by improper or insufficient FOOD.

Remember.

Is all and a great deal more than we have claimed for it. It is simply a HIGHLY NUTRITIOUS and easily assimilated FOOD, grateful to the most delicate and irritable stomach, and especially adapted for the INFANT and GROWING CHILD.

Invalids, Nursing Mothers,

and those suffering from Indigestion will find on trial that RIDGE'S FOOD is all they can desire. It is carefully put up in four sizes.

Constant users will find our No. 4 size (always the most economical size to buy) now much larger than formerly, thus materially lessening the expense. WOOLRICH & CO., on every label.

## J. M. THORBURN & CO.'S

SEED WAREHOUSE,  
15 John St., New York.

## NEW DEPARTURE.

At the solicitation of many of our friends, we, this season, publish our Catalogue of Vegetable, Agricultural, Flower, and Tree Seeds, together with all the Novelties of the Season, under one cover, free to all on application by mail.

EACH NUMBER will contain THIRTY-TWO PAGES of reading, many fine Wood Cut Illustrations, and one COLORED PLATE. It is a beautiful Garden Magazine, printed on elegant paper, and full of information. Published in English and German. Price, \$1.25 a year; Five Copies, \$5.00.

VICK'S FLOWER AND VEGETABLE GARDEN, 50 cents in paper covers; elegant cloth \$1.00.

VICK'S ILLUSTRATED CATALOGUE, contains Descriptions of Thousands of Flowers and Vegetables, and 500 Illustrations. Price, only Two CENTS.

JAMES VICK, Rochester, N. Y.

**HENDERSON'S**  
COMBINED CATALOGUE OF  
EVERYTHING  
FOR THE  
**GARDEN**  
Numbering 175 pages, with Colored Plate, sent free to customers of past years, and to all purchasers of four books, either Gardening for Profit, Practical Floriculture or Gardening for Pleasure (price \$1.50 each, prepaid, by mail). To others, on receipt of 25c. Plain Plant or Seed Catalogues, without Plate, free to all.  
**PETER HENDERSON & CO.**  
Seedmen, Market Gardeners, and Florists,  
35 Cortlandt Street, New York.

## FLOWER SEEDS

Ten varieties, in separate packages, for 25 cts. Choice Roses, 6 splendid specimens, securely packed, for \$1. postpaid. Elegant Illustrated Catalogue of Flower and Vegetable Seeds, Plants, Bulbs, etc., mailed free to all. It will pay you to send for it. BENSON, BUREFREE & CO., 223 Church Street, Philadelphia.

## SIXTY-SIX SPECIMEN COPIES of our BEAUTIFUL OIL CHROMOS.

We will send sixty-six copies of our oil chromos to responsible agents. They are in 14 to 18 different oil colors, bringing forth in bold relief all the lights and shades in nature with pleasing effect. Any live young man or woman can make from \$50 to \$100 in their own town. The following are among our specimens: "Esperance," "Asking a Blessing," "Blind Man's Buff," "Christ Blessing Little Children," "Nature's Lessons," "Speak the Truth," "Search the Scriptures," "God Bless Our Home," "Praise the Lord," "The Lord is My Shepherd," "Blessing Attend Thee," "Joy be With Thee," "Peace be With You," "Be Just and Fear Not," "Landscape Scenes," "Faith, Hope and Charity," "Country Scenes, &c., &c. Enclose 25 cents to pay charges.

STEIGELMAN & CO.,

104 W. 6th St., CINCINNATI, O.

## 10 FLOWERING PLANTS FOR 50 CENTS.

BY MAIL, POSTAGE PAID.

Your selection from the following: Ageratum, Bonvardias, Begonias, Callas, Cupheas, Colons, Daisies, Fuchsias, Feverfew, Fragraria, Geraniums, Gladioli, Heliotropes, Ivies, Lantanas, Pansies, Pomegranates, Tilia, Pinks, Smilax, Stevia, Tuberoses, Tigrisias, or Violets. Send for our new catalogue, (free to all,) containing a description of all the leading varieties of plants and how to treat them. We claim it to be the cheapest list ever offered to the public.

THOMAS ELVERSON,  
Hillside Greenhouses, NEW BRIGHTON, PA.

## CHOICE SEEDS! BEST OFFER YET!

I will send for trial to new customers who send 10c. and stamp this month, a packet of the choicest Double Portulaca, Double Asters, Striped Petunia and New Japan Cockscorn, a large packet and mixed colors of each. Catalogue free.

L. W. GOODELL, Amherst, Mass.

## THE DINGEE & CONARD CO'S BEAUTIFUL EVER-BLOOMING ROSES

Strong Pot Plants, suitable for immediate flowering, sent safely by mail, postpaid. 5 splendid varieties, your choice, all labeled, for \$1; 12 for \$3; 19 for \$3; 26 for \$4; 35 for \$5. For 10 cents each additional, one Magnificent Premium Rose to every dollar's worth ordered. Send for our NEW GUIDE TO ROSE CULTURE, and choose from over 300 finest sorts. We make Roses a Great Specialty, and are the largest Rose-growers in America. Refer to 100,000 customers in the United States and Canada. THE DINGEE & CONARD CO., ROSE GROWERS, West Grove, Chester Co., Pa.

40 Mixed Cards with name, in a Card Case 13c. Try us, H. LEE & Co., Middleboro, Mass.

VINEGAR. How made in 10 hours from Cider. Wine, or Sorghum, without using drugs. Name paper, and address F. I. SAGE, SPRINGFIELD, MASS.

20 Repp or Damask cards, with name, 10 cents post paid. J. B. HUSTED, Nassau, N. Y.

Will be mailed FREE to all applicants. It contains colored plate, 500 engravings, about 150 pages, and full descriptions, prices and directions for planting over 1200 varieties of Vegetable and Flower Seeds, Plants, Roses, Etc. Invaluable to all. Send for it. Address D. M. FERRY & CO., Detroit, Mich.

## ROSES AND BULBS

FREE BY MAIL. OUR SELECTION.  
50 Strong named Roses, Winter Blooming, \$1.00  
50 Choice Hyacinth Bulbs, double and single, 1.00  
15 Fine named TULIPS, double and single, 1.00  
30 Choice Crocus, named sorts, 1.00  
200 Roses, 3 Carnations, and 3 Hyacinths, 1.00  
200 Bonvardias, 2 Roses, and 3 Geraniums, 1.00  
3 Hyacinths, 6 Tulips, and 12 Crocus, 1.00  
1 Calla Lily, 2 Carnations, and 3 Roses, 1.00  
3 Roses, 1 Jessamine, and 2 Bonvardias, 1.00  
We warrant plants to arrive in good condition. Full Floral Guide now ready. Send for it. A. K. WILLIAMS, Richmond, Ind.

# THE LADIES' *Floral* Column

BY HENRY T. WILLIAMS.

NEW YORK, MARCH, 1878.

NO. 75. PRICE 12 CENTS.

## DESCRIPTION OF WINDOW GARDEN.

[This sketch and article received first prize.]

This room is seventeen by thirteen and a half, and eleven in height. The windows are provided with trellises of a peculiar construction, made very light, of white wood stained black walnut, and project into the room fifteen inches. They are attached to boxes very narrow in front, but widening at the window, and are supported by brackets. The first window has Lophospermum and Madeira Vines, and a Japanese Woodbine, which will soon throw out its leaves, also Tradescantia to train up as well as droop around the boxes. There too is Portulacca not yet out of bloom.

The stand is a revolving one, like that already described, and contains a variegated Abutilon in the centre, a Heliotrope, scarlet Begonia, two Carnations, red and white, a small Abutilon Striatum, a Fuchsia, all in bud and bloom; also a white Petunia. In the hanging pot is a golden variegated ivy-leaved Geranium.

The second window has Cobæas, green and variegated, a Madeira vine, Woodbines, which, like the Japanese variety, will soon start into rapid growth, and Tradescantia to droop and climb. On the top of the trellis is a large plant of variegated Vine (Strong's Seedling), its long, trailing stems being very effective for festooning.

The stand in the centre contains a large Calla in bloom, the Spotted Calla Maculata intermingling its leaves, Heliotrope, scarlet Bouvardia, pink Begonia, white Eupatorium, all in bloom, a fern-leaved Geranium, Centaurea, Golden Feather, and Coleuses, two dark and two crimson, grouped around the Callas. In the hanging-pot a blooming scarlet Tropæolum.

Between the windows, occupying the wall, are five black walnut brackets holding pots of Ivy and vari-

egated Tradescantia, a sketch in colored crayon of a scene among the Andes, two dark medallions, and a large Lily chromo. The corner is furnished with a broad shelf holding a large Crinum, Retinosporas, Plumosa, P. Aurea, and Squarrosa, five in number, and any occasional plants as required. The front edge has a very long and narrow zinc pan filled with Tradescantia, green and variegated, and at each end are pots of T. Febrina, which is very thick and long, the whole forming a very fine draping for a column of Colosseum Ivy, which stands directly in front, having for its base a double block of squares, the upper one the smaller. Directly over this hangs three moss baskets. The walls of the corner have four pictures,

Mingo beach. Directly in front is a square stand of black walnut, upon which is placed a part of the trunk of a small spruce tree, with a portion of its roots, forming irregular hollows and projections. Here are small ferns and mosses, with the bright berries of the Partridge Vine and other pretty little bits from the woodlands; choice sprays of variegated Tradescantia, its white and yellow markings thrown out in beautiful and effective contrast with the dark green of the mosses; the frosty Zebrina, with its crimson shadings and tiny crimson bloom, and Colosseum Ivy, its delicate foliage creeping down to the floor. On the top of the trunk a large flower-pot saucer, filled with Tradescantia, to droop down, and in it a large variegated

Yucca in a pot, also bordered with Tradescantia. On each side stands a pot of Ivy trained on a trellis, more than five feet in height. On each side of the trellis, and a little back of it, are two black walnut stands for single plants, ferns, or any others that suit. At present a Dracæna Terminalis, with striped Tradescantia occupies the one in sight in the drawing. The doorway at the left, from which the door has been removed, has a trellis with Akebias Quinata, and, hanging over the centre, a very fine Ivy (Rhomboidia Obovata.) Through it is seen a window trellised and surrounded with

WINDOW GARDEN OF MRS. CLARA F. SWETZER, PEABODY, MASS.

Autumn with its fruits in colored crayons, and a large oil chromo with figures and flowers, below, and two sketches of beaches in Manchester in colored crayons, above.

The wall garden seen in the drawing has for its central object a copy in oils of Landseer's "Two Dogs," surrounded by five large Ivies springing from pots on walnut brackets grouped on the wall underneath. Over it is a pair of antlers, around which the Ivies twine and droop. Above all a sketch in colors of

Ivies, with a large rustic hanging basket with Ivies in variety, English, and smaller leaved, Marmorata elegans, Chrysocarpa, Palmata aurea, and Lutea minor.

A stand of Geraniums is in the centre, which is draped like the rest with Tradescantia.

Between the doorways on the left, on a bracket, and trained to the wall, is a truly regal Ivy Regnoria, very effective in the size and texture of its heart-shaped leaves.

## Floral Contributions.

## THE CULTIVATION OF PLANTS FROM THE HOT BED.

In this I do not design to treat each and every variety that would come under this head, but of those only with which I have had several years' experience in cultivating, both in the open air and in the window, and the manner in which I have succeeded in collecting a sufficient number and variety that would stock a small greenhouse.

For the minutia of this I refer the readers to Williams's Window Gardening or Henderson's Practical Floriculture, or for those who cannot afford these, and belong to that oft mentioned class referred to by Mr. Vick, "those of much taste and little money," let them get the Home Florist, or Vick's Flower and Vegetable Garden; and let me here say, that one who attempts to grow flowers will save their price two-fold by having something of the kind for reference, as time of planting, pruning, potting, watering, soil, and fertilizers, etc., are systematically treated.

All can plant seeds, but can you make them grow? A man may lead his steed to water, but can he make him drink? Yet the tiniest one has the germ of life that it is in your power to kill, if not to develop; but provide it with the proper means, and in time it will bud and bloom.

It is understood that almost any one in these days knows how to conduct a hotbed, if not, almost any florist's catalogue will give directions, and in J. B. Root's Garden Manual are plans for hotbeds with fire heat.

I advise them to construct the bed as if for glass, plant the seed in soil, that should be a fine sandy loam. Sow in little drills, cover the small seeds with very little earth. It is recommended for such to sift on the slight covering, but it would always bake for me, so I have succeeded best by making a little drill with a small sharp stick, and then put back carefully on the seed the soil that formed the ridge; the larger the seed, the deeper the drill. When sown, label each row with a small piece of board with the name, which, if written on with a lead pencil if the board is dipped in water, the dampness from the earth will not efface.

Guard against putting in the seed too thick, for, unless the plants are thinned out they will damp off or be poor weak things, before they are old enough to transplant, and in very choice varieties this is an object to be considered. When all are planted, I take my clothes sprinkler, (cost twenty-five cents), as it is so much finer than the nose of a water-can, and dampen the soil; be careful, not too much, or the seed will rot; then lay on newspapers, putting on a little soil or stones to keep them down until the plants are up; then on mild days keep no cover on at all, unless it be the open lath cover; cover at night with boards, if cold, put the papers on top; if freezing, your mats or old carpets, or anything to keep out the cold. I prepare this bed the last of March or first of April, and we had ice here in Central Ohio, three-fourths of an inch thick, and snow six inches deep, when my plants were over an inch high, and when uncovered, they came out holding up their tiny heads to greet the sun, when I let him just peep in.

After being covered for several days, remove a little at a time and I think plants grow much faster, with this slight bottom heat, than in the open air, and are

still far better prepared to stand the shock of transplanting, than if raised in a hotbed, with glass, and I have tried all three plans, for they will be strong, stocky plants, and not have the weak-kneed habits of the Phlox Drummondii some lady mentions.

Of my choice and untried varieties, I keep a kind of register until I know the plants, and note the time of planting, blooming, height, color, etc., so I can thus select such from my seed beds that I wish for a definite purpose, without any trouble. Those I want for window plants I pot off, as soon as they have three or four leaves, in two-inch pots, for the "Thumbpots" so many use, dry out too soon for me, as an hour's delay has killed many, so I take a larger one with better success; I sink these in the ground; remember, do not let them dry out. When filled with roots, repot and continue to do so, always leaving the ball of earth unbroken; put them each time in a pot just a size large.

Use soil of well-decayed sod one-fourth, leaf mould and sand one-fourth, good garden soil one-fourth, and well-decayed manure one-fourth. This should be well mixed, and if you saved the weeds and cleanings from your garden walks and beds, they will be well rotted; add some of this and it makes an excellent addition, or the bottom of the spring hotbed can be used to a good advantage in making up the potting soil.

Transplant all annuals with due regard to light, colors, etc., and contrast it with some promiscuous planting and note the difference.

I can tell you of a lawn that was made entire, and much of the soil was hauled to produce the desired grade, and the whole cost, outside that done by the owner, for labor, seed and plants, did not exceed \$10, which received the credit of costing from three to five hundred dollars; of course, this does not include the walks and drives, just the grass plat and beds, and contain about one acre, with the building near the centre. Here were groups of Cannas, Zea Japonica, Cypress in a pyramid of six feet in circumference and nine feet high, a perfect mass of green, with its wealth of rose, scarlet, and white stars. Calladiums, whose leaves measured five and a half by three and a half feet, and whose bulb was as large as a medium-sized cabbage head when dried off. The Calla Richardia, with its spotted leaves. Roses, with nearly all the hardy bulbs and shrubs, with evergreens from one foot to thirty feet high.

Here the annuals vie with each other, and their finely mingled colorings, painted by that unseen Hand, and lovelier far than the richest of Parisian hues, covered with crystal gems, whose names were dew-drops, brighter far than Eldorado's shining treasure, and fairer still than the onyx stone.

The beds were four in number, one a star of five points, each alternate one of pink and white, with a trellis in the centre of each bed. Opposite was a moon, outside row Gladiolus, one foot apart; next Geraniums, one, a Gen. Grant, had at one time five clusters, and on one cluster one hundred and twenty-five florets and buds. In this was twelve different colors, both single and double; next Dianthus, then Verbenas, and it was indeed a beauty.

Now let me here say a word for Geraniums. I procured a paper of Zonale mixed seed, planted them in a box the last of March; first picked off the little husk, and I got twenty plants; transplanted to another box when they began to crowd, and into the bed in May, and they were in bloom the first of the second week in June, and were over eighteen inches in diameter through the top among the branches. I

let each one develop but one cluster of flowers, just to see what they were, and kept off the rest, and now one would fill half an ordinary window. Those that have made my beds gorgeous with their summer bloom, I lift before frost, prune off all the soft and very tender growth, and all the foliage, shake off the soil, and hang up by the roots to the ceiling of the cellar, free from frost, and they keep in fine condition. Do not throw them away in spring because they look dead, for with good soil, water, and plenty of sunshine, they will soon wake up from their winter nap.

Verbenas are grand because they last so long; the seed is sometimes three weeks in coming up, but will reward all care, and are as easy to raise as an Aster. The Lantana makes fine bedding plants; I had one raised from a cutting, whose branches spread six feet from May until August. The Abutilons are raised from cuttings, and are all fine. The Flowering Maple, flower scarlet and yellow, looks much like a large inverted Tulip flower, makes a fine single plant on the lawn. This and Boule de Nieve (white) will give the best satisfaction.

The Fuchsias are the regal queens, with their scarlet and royal purple, nothing can compare with these floral gems. I have two Speciosa six feet high, one year old, from the slip, and loaded with flowers. Carl Halt is a beauty, but a slow grower for me. These are my winter bloomers; I have several other varieties, one the V. de Puebla, which is very fine. These are all easily raised from slips of the tender growth. The Colens stands among the first for foliage. I rooted a small slip, about three inches long, in March, put in the bed in May, and when I took it up in August, it was ten and a half feet in circumference and four and a half feet high. The flower is very inferior, much resembling the wild herb catnip. But for growth, bloom, and easy culture, the Chrysanthemum is not half as much appreciated as it should be. Add a few of the Japanese to your collection, and see if they are not deserving of far more consideration. Balsams are next to Camellias.

My beds were of very rich and deep soil, the plants pruned to one and three branches, also much of the foliage removed, and oh! such flowers, as large and double as a Rose, and all shades of color, from deep scarlet to purest white; the latter always looked as though sprinkled with diamond dust. They make fine window plants, but their wants are imperative, deep, rich, mellow soil, and well pruned is the secret of their successful culture; they are very sensitive to frost or cold, and are easily grown from seed, and transplant well.

Pansies, those blue-eyed treasures; give them your secluded spots, and plenty to eat and drink, and see their great blue eyes open, and nod you a welcome good morning; can be grown from seeds or cuttings.

Then comes the Phlox, Dianthus, Carnation and Petunias. When we look upon each velvet petal and think that ere long they will be gone, we would fain inscribe upon each blushing flower and rustling leaf the words, "too lovely to die;" but a few more days can we admire, and their brightness will fade, their leaves will droop, their petals close, and we say, "too bright to last." But lo, see!

"Who splashed with red the sumach hedge—  
The Sassafras with purple stain;  
Gave Ivy leaves a ruby edge,  
And painted all their stems again?"

"Who blanched my Thistle's blushing face,  
And gave the winds her silver hair?  
Set Golden-rod within her place,  
And scattered Asters everywhere?"

MRS. J. PRACTICE.

## Answers to Correspondents.

**Insects on Roses, etc.**—An insect has eaten into the stems of my hardy Roses, causing them to die. How can I prevent it? Are the Passion Flowers Pfordii and Van Volxemi hardy, and what is their treatment? R. T. HENDERSON.

Newville, O.

**Answer.**—The injury to the Roses' stems is caused by the larvæ of some species of bores. Gather up and burn all dead stems; watch the bushes and you will find minute holes in the stems with a fine wood dust underneath; run a fine wire into these holes and kill the grub. The Passion Flowers you mention are not hardy. They are best grown planted out in the border of a greenhouse, as they are too large growers for pot plants.

**Calla Lily, etc.**—How large should a pot be for a Calla? Is a Canna suitable for winter in the house? Can it be grown in a pot in the shade? Can the root be cut without damage? MARY A. HATFIELD.

Caseyville, Ky.

**Answer.**—The size of the pot for a plant must always be proportioned to the size of the plant. A twelve-inch pot would usually be large enough for a Calla, although we have seen plants fill tubs three feet in diameter. Cannas are not suitable for window plants; the foliage gets shabby and the plants seldom bloom. The plant may be grown in summer in a large pot with plenty of sun and water; it should be dried off and rested in a frost-proof cellar in winter. The roots may be divided into as many parts as there are growing points.

**Plants for North Windows.**—I have three large light windows facing north. What plants will grow in my windows? MRS. M. E. ROOT.

**Answer.**—It is difficult to make plants bloom in a north window, but you can have foliage. English Ivy will do well. Many of the dwarf evergreens, such as Retinosparas, are very graceful. Camellias would live and bloom towards spring if the atmosphere of the room was not too hot and dry. The old-fashioned Pittosporum requires but little sun. Succulents, such as Sempervivums, Sedums, Aloes, Echeverias, Agaves Hawarthias, would all thrive if there was plenty of light, and prove very curious and interesting.

**Surplus Seeds.**—Will any reader of the CABINET who has seeds to spare send some of the more common kinds of garden flowers to Mrs. Miles P. Mitchell, Whiteville, Hardeman Co., Tenn., who is passionately fond of flowers, but has no money to buy them?

**Ivy Frozen.**—What shall I do for my Ivy? It is four feet long, and was frosted this winter; some of the leaves have fallen off. What is the name of the thick-leaved plant which I inclose?

Western Nebraska.

MRS. A. T. KING.

**Answer.**—From the leaf sent your Ivy appears to have been frozen when growing. Cut it down to about one foot and new shoots will start from the axils of the old leaves. Give light and sun. The leaf sent was all broken up; it seems to be a species of Sedum, and if so, is probably hardy.

**Name of Plant.**—Please find stem and flower of plant which came from Jacksonville; it has just bloomed, five years from seed. S. A. STORY.

Wilmingon, N. C.

**Answer.**—It is probably a species of Cassia, but we cannot identify it.

**Wax Plant Blooming, etc.**—How old must a Wax Plant be before it blooms? What culture does it require. What is the treatment for Cactus, and at what age do they bloom? What is the treatment of Crape Myrtle? A SUBSCRIBER OF MISSOURI.

**Answer.**—Wax Plants often bloom very young; give your plant plenty of sun, never let it get chilled, grow it well in rich soil and it will bloom every summer. For culture of Cactus, see our answer to Miss Lowe, recently published in the CABINET. What you call Partridge Cactus is an Aloe, but it requires similar treatment to a Cactus. Crape Myrtles may be planted out in the garden in summer and wintered in a frost-proof cellar; possibly they may prove hardy with you. We cannot undertake to name varieties of the Scarlet (Zonale) Geraniums from dried leaves; it is an impossibility.

**Name of Plant, etc.**—I have a Night-blooming Cereus and a Sword and Club Cactus, also a Snake and Hedgehog Cactus. How can I make them bloom? What is the name of the flower I enclose?

Paw Paw, Mich.

A SUBSCRIBER.

**Answer.**—Give plenty of heat and sun, not much water, and do not repot the plant. The Cereus will not bloom till old and large; from the others you should have flowers. Your plant is Cyclamen persicum, one of the best window plants; it has no "common name."

**Pæony Culture.**—I have a Chinese Pæony which I planted in a box; it had four shoots; all died down but one, which formed three leaves and then stopped growing and turned brown; now (October) on looking at the roots, I find two sprouts. What shall I do? LUCY MEREDITH.

Upper Lake, Lake Co., Cal.

**Answer.**—Pæonies are perfectly hardy plants, and are not suitable for box culture. Your plant is in good condition. Plant it out in the garden in rich, deep soil, about nine inches to a foot below the surface. It will hardly give you bloom next summer, as your culture thus far has weakened it, but if well grown now will grow stronger each year and give plenty of bloom.

**Seventeen Questions in One Letter.**—1. What sort of a trellis is suitable for a Wax Plant? 2. What is the treatment of herbaceous Calceolaria in the winter? 3. How should winter-blooming Oxalis be dried off? 4. How shall I train a Fuchsia slip very easy? 5. Do perennial plants, such as Phlox, Daisy, Roses, etc., blend their colors if set near each other? 5½. Will the variegated Astilbe lose its color if placed near the plain green one? 6. Is Euonymus radicans rare, and is Lonicera aurea reticulata? 6½. Is Privet hardy "with or without protection? 7. Does Lonicera aurea reticulata retain its foliage as a house plant during the winter? Does it make a good house plant, and treatment? 8. Same questions as to Ampelopsis Veitchii? 9. Will double Feverfew bloom in the house in winter? 10. Summer and winter treatment of Hibiscus rosa sineus and coccinea? It buds but soon blasts; will it bear the cellar? 11. Does it improve soil for plants to bake it? 12. Will soap suds, made from borax and sal-soda, injure house plants if applied freely? 13. Why do Fuchsias drop their buds before blooming? 14. Should plants received by mail be wet only enough to settle the soil, or be wet so water is seen on the saucer? 15. Are hardy

plants protected in winter as early as the same not protected? 15½. Should covers be taken off hardy plants, such as Tulips, Pæonies, Larkspurs, etc., before they start, or afterwards? 16. Do you know any remedy for a worm, reddish color, like an angle worm, and an inch or more in length, which burrows in Aquilegias just under surface of soil? 17. I want a true scarlet perennial Phlox, any striped or eyed variety, a Hallian Honeysuckle and a Chalcedonicum Lily. Who will exchange the above for almost any other kind of Lily, fine Phlox, Fuchsias, etc.

MRS. W. WICKWIRE.

Oneonta, Otsego Co., N. Y.

**Answer.**—1. Any light trellis of wood or wire will do for a Wax Plant. 2. Keep them rather dry in a light, airy place, free from frost, but cool. 3. Dry the Oxalis gradually, and when the foliage is yellow cease giving water entirely. 4. Keep pinching out the leading shoots so as to make eyes break. 5. and 5½. Of course not; think a moment and you will see the absurdity of the questions. 6. Neither of the plants mentioned are rare. 6½. The common Privet is perfectly hardy, the Japanese is tender. 7. and 8. The Lonicera and Ampelopsis are both deciduous and wholly unsuitable for house plants. They are tall climbers; you might as well grow apple trees in the parlor. 9. Double Feverfew will not bloom in the parlor until the spring; keep it through the winter in a cold frame. 10. Your Hibiscus drop their buds because they are too cold. Give a moist, warm atmosphere. They will damp off and die in a cellar unless very warm and dry, and even in such would be much injured. 11. Soil is sometimes baked to kill insects; it is not desirable to do it. 12. Your soap suds would probably kill any plant to which it was freely applied. 13. The air is too dry where your Fuchsias are grown. 14. Give the plants a free watering so as to well moisten the soil, but water should not stand in saucers. 15. Yes, just as early if the covering is removed. 15½. Remove covers as soon as danger of severe frost is over. 16. We have never seen the worm. Plant your Aquilegias in another part of the garden.

**Name of Plant.**—Please give me name of enclosed plant. It blooms in winter; is very tall and is covered with bunches of white flowers. Will it do to cut it back after blooming? KATE.

Broderickville, O.

**Answer.**—Your plant is an Eupatorium; from the specimen sent we cannot determine the species. It may be cut in after blooming, indeed, it is better to do so.

**Clanthus Seed Sowing.**—Will some one tell me about Clanthus seed, how to sow it, and when? Ripley, O. A. G. D.

**Answer.**—Sow in May in a spent hot bed, and water well; draw on the sash if the nights are chill. Do not attempt to transplant. The roots will find their way into the manure and the plants will grow rapidly, blooming freely in August and September.

**Name of Lily.**—What is the name of the enclosed Lily? It came from California. In six weeks after planting the dry bulb it had three stalks of flowers, very sweet and pretty. THOS. STACEY.

Horseheads, N. Y.

**Answer.**—Only a small fragment of a plant leaf was received, which was wholly unrecognizable. The plant is probably a Crinum, not a Lily.

## Floral Hints.

## A NEW PETUNIA.

A very desirable new variety of the Petunia, called *Petunia Grandiflora sinbiata flore pleno*, has just been introduced from Europe. It is most beautifully fringed, retaining the three characteristics of the *grandiflora flore pleno*, and the raiser has stated that among the seedlings "might have been seen flowers rivaling in double size and form those of the Double Garden Poppies, and emulating in color the richness and delicacy of tints of the finest Carnations."

This new variety has been obtained by most careful fecundation of the large-flowering, single fringed Petunias, with pollen taken from blossoms of the newest and best double fringed sorts. Blooms have been raised from these seedlings of striking beauty.

Messrs. B. K. Bliss & Sons have the credit of importation from Erfurt, Prussia.

## A VOICE FROM THE WEST.

A few items from my own experience may not be amiss; as with most things I have been successful, and my failures in a few may save others from loss and vexation. To begin with the Rose, I put out quite a number of fine plants in the month of February, principally of the ever-blooming class; they began to grow and bloom most beautifully, but, alas! in my anxiety to see their unfolding loveliness, I had not courage to pick off the flower-buds; so, many of them died, the vitality of the plant being exhausted by the flowering, before being well established and rooted in the soil.

For diversity of color and constancy of bloom, I can recommend this class of Roses; we find no yellow tints among the Mosses or Hybrid Perpetuals; with the Washington for white, Madame Falcot for yellow; Giant of Battles and Madame Chas. Wood for crimson, we have Roses all the time.

The two latter, though classed among the Hybrid Perpetuals, are ever-blooming in this climate. Who has not heard of the Green Roses? and some are skeptical about its existence, but we have had it in bloom for about six months, and can testify that it is really green. I have heard that it was produced by budding the ever-bloomer on the oak, thus producing the color of the oak leaf in the flower together with the continual bloom.

The Mosses and Hybrid Perpetuals have grown splendidly, and in October the General Washington, belonging to the latter class, surprised me with a beautiful crimson flower; in the spring I transplanted a large Cabbage Rose bush—florists and Rose growers have discarded this old-fashioned name; it failed to bloom, in consequence of its removal, until October, when it was covered with blossoms.

With other shrubs I have been more successful. A short time ago I saw an inquiry in the CABINET about

white Oleander as a bloomer. I have one that was transplanted last spring, which flowered freely for five months; give it plenty of water and sunshine and it will reward you richly.

Cuttings from Oleander root readily in bottles of water, or by the side of a ditch where there is water all the time.

I have another which I raised from the seed planted last spring. Acacias, also, have grown from seed five feet high in one summer. Snowball, Crape Myrtle, Deutzia, Honeysuckles, Clematis, Hydrangeas, and many others have grown beautifully; but I have observed all the time that those from which I picked the buds to prevent blooming, immediately after being transplanted, have been most thrifty. With budding plants I have had no trouble, save to put them out in the soil.

Verbenas and Sweet Allyssum, Periwinkle, Ground Ivy, and Tradescantia, have transformed a dusty yard into a green carpet all bespangled with flowers. Keep

the young shoots pinched off as fast as they become about four inches long.

Time and space would fail to tell you of all our Geraniums. How the Rose Scented grows into a miniature tree in the open grounds, and the scarlet flowering varieties bloom continuously, can be trained on a trellis or frame, like a vine; break off a slip and plant it ever so carelessly, soon it is quite large and the double varieties look like immense Rose bushes in bloom.

I attribute much of the beauty of my plants to the daily sprinkling they receive from our Chinaman, who is a firm believer in water and manure applied on the surface of the ground; this seems to imitate nature as closely as possible as the decay of vegetation and all other natural sources of enriching the soil are necessary on the surface.

And speaking of Chinamen, reminds me to tell how they grow Polyanthus Narcissus in water. They force them into early bloom to mingle with their New

Year's festivities, having a national superstition that if they flower well, the New Year will be crowned with success to them. Take two or three large bulbs and keep them in a basin of warm water for a few days until tiny green shoots begin to appear; then place them in a china or glass dish, or whatever you wish them to bloom in, with heads erect and surrounded by small rocks sufficient to hold them in place; fill the dish with water, and keep in a room where the temperature is mild, giving them the sun if possible, as that prevents them from growing too tall.

Every morning the bulbs, rocks and dish must be cleansed thoroughly with pure water. In a few weeks they bloom most beautifully, their beauty and fragrance repaying one well for the trouble.

I have not mentioned the half of our floral beauties, nor said how the grand old Century Plant becomes a nuisance in this climate; unless some enterprising florist will persuade it into bloom oftener than once in a century, we will be compelled to banish it from our garden; for ambitious California, with her enormous

vegetables, semi-tropical fruits, ever-blooming flowers, and sublime scenery, to say nothing of her intelligent and enterprising population, cannot afford to wait on anything that withholds its beauty for a hundred years. CALIFORNIA LADY.

**Variegation** in any plant indicates effeminacy, or inclination to "sport." Plants that are healthy will soon return to their original color, and lose their variegation if placed out of doors long enough.

**The Begonia** (*glaucophylla scandens*), which is a climbing vine, bearing a salmon and pink blossom, is one of the prettiest of that family for hanging-baskets.

DOUBLE-FRINGED PETUNIA.

the old flowers picked off the Verbenas and they will bloom for six months. Sweet Allyssum blooms here all the time. Give the Ivy and Tradescantia plenty of water and shade and they will grow most vigorously. The latter plant is called by various names, Jacob's Ladder, Wandering Jew, Joint Plant, Inch Plant, and Corn Geranium; it grows finely in water, and has a delicate waxen bloom in the spring.

With annuals I have been equally successful; even now the buds of Zinnias, Petunias, and Sweet Scabiosa, are gorgeous; only let us be generous to cut the flowers regularly for bouquets, and they will not fail to bloom.

But the glory of our garden now is the Chrysanthemums; to have plenty of bloom, one must keep

## Home Gardening.

### A NEW MIGNONETTE.

A new and very desirable Mignonette has just been introduced this season, for the first time, being imported by B. K. Bliss & Sons, from England. It became of great notoriety when first shown in public at the Horticultural Exhibition of So. Kensington, in May, 1877, and was specially noticed then by Queen Victoria.

It is known as Miles' new Hybrid Spiral Mignonette. It is a remarkably robust grower, very abundant bloomer, and produces the largest flowers of any variety yet seen, which grow in erect column spikes of six inches or more, covered with fully expanded blossoms. Its habit is dwarf, with branches of eight to fourteen inches in length. By pinching the side shoots the centre spike will attain a length of from eighteen to twenty-one inches. It is found to be quite hardy, fully as fragrant as any other variety, and being so distinct in appearance is very desirable for decorating purposes.

It should be sown in the open ground in the months of April or May, covering the seeds about quarter of an inch deep. For winter and spring flowering, sow in pots of loam, mixed with a little leaf mould, in August or September, and protect in a cold frame. Thin out or transplant before the plants get crowded.

### GARDEN FLOWERS.

Success in the cultivation of out-door plants depends in a large degree upon the selection of varieties suited to the climate, location and soil in which they are to be placed.

The choice having been made, care should be taken to procure good seed or cuttings, and if to these requisites be added a real love and interest in the work, the battle is half won.

Indeed, without the latter, the others would be of little value, for from the preparation of the soil and planting of the seed, until florescence, a constant war is waged with sun, wind, weeds, and insects to keep the plant alive. If the sun be too burning, the young seedlings must be shaded; if the wind threatens to tear them limb from limb, they must be staked and tied securely, weeds and insects must be fought with a vigorous hand. In short, it seems as if every vegetable production had its enemy ready to destroy it as soon as its leaves are above ground. Each cultivator will find peculiar difficulties to encounter, but patience and experience will conquer them all.

One of the charms of gardening is that one has something to plan and hope for continually; that he can make preparation this year for the next—that the mistakes of one season, will show the improvements of another summer.

While snow covers the garden, spend a few winter evenings in searching the catalogues of seedsmen and florists, in learning how to properly prepare the soil, to plant and care for the seed, and to transplant the young seedlings. Make a list of such flowers as seem most easy to raise, and when spring comes go forward

with a brave heart, letting each failure be an incentive to more strenuous exertions.

As much as possible, I save my own seed and add to it each year a dollar's worth of new varieties. Then for a small expense I obtain a large collection of flowers, which is increased by the addition of house plants and slips. I find no difficulty in rooting almost everything in sand. I have a shallow wooden box about four inches high; this has pebbles placed in the bottom for drainage, and is filled with sand that is free from sticks or stones. This I keep always wet, not muddy, and in the brightest sunshine. Whenever I have a cutting to root, I stick it into the sand, and when it is rooted, which is known by the growth of new leaves, I take it out carefully and plant in a small pot. Shade, a day or two, until well established, then let it go on unto perfection.

I usually germinate seeds in a hot-bed, but have

from the resemblance of the pericarp to a small cucumber, which opens at one end, disclosing a lace-like lining holding the four seeds.

The flower is deliciously sweet. Plant the seed in the fall in a rich bed where you wish it to grow, and in the spring you will find plants looking like young squash vines, which will climb like Jack's bean stalk, and amaze you with their rapid growth and long feathery white flowers.

Do not forget foliage plants in planning your garden. The bright yellow-green Golden Coleus makes a charming border, or any of the red-leaved species. If seeds are started in a hot-bed be careful to plant the finest, such as Petunias or Portulacca on the surface, and pat them into the soil with a light tap of the trowel. Water very gently lest they be washed away or drowned. Shade them by a covering over the glass lest the heat of the sun dry them while sprouting, which is sure death. Remember, within each little black shell there is life, for which you are responsible, and any neglect after the embryo starts to grow is destruction to its vitality.

The plants being well up, they must still be shaded from the most intense rays of the sun, watered by gentle drops, not showers, and given a breath of fresh air lest they damp off. Some sturdy growers like Balsams and Zinnias, will stand like sentinels and take a shower-bath without winking, but the delicate and most beautiful ones need petting and tender care.

We transplant in this northern climate as soon as the late frosts are over, about the middle of May or first of June, then if you would have vigor and quick growth and luxuriant bloom give them plenty of water, not once a week, but every evening during the dry season until the welcome showers relieve you from duty. I have no faith in the lazy plan of withholding water because "if you begin you have to keep it up." I have seen too many baked, starved-looking plants that had been tortured with such treatment. If I am thirsting, I want water, and I believe my plants like it as well as I do. Neither do I boil the tea-kettle before giving them their supper. I pump nice cool water from the well, and give them a good supply. I do not see that they take cold or go into consumption, but they laugh up into my face as if they enjoyed it, and grow faster and faster, and stouter and stouter, just like healthy children that are out in all kinds of wind and weather.

To those who wish to cultivate plants with little trouble, I would say, try perennials. These brave-hearted veterans will bear almost any treatment and live through it, but like everything else they enjoy a little attention. Choose such as will give a succession of bloom from early spring till fall. Fill the vacancies with hardy annuals that will soon sow themselves. Then by stirring up their bed in the spring, and giving them a covering for the winter you will be encouraged to go farther, and try a little more work with a proportionate amount of pleasure and satisfaction.

Much seed is lost if left to dry out of doors. It should be gathered when fully grown, and dried in the house, and then put up in labelled packages for future use.

E. L. E.

NEW HYBRID SPIRAL MIGNONETTE.

been successful in the house by taking a box of finely pulverized soil, which has been warmed in the oven, covering the seeds lightly, and placing over them a newspaper wet with warm water. Place the box on the urn of a coal stove or where it can get under heat; allow the paper to remain, and keep it wet until the plants appear. Thus the two essentials of germination are obtained, namely, warmth and moisture.

In selecting plants, the size of the yard, or the place to be ornamented, should be considered. Tall, large foliaged plants, like Ricinus Cannas and Caladiums, are too cumbersome for small quarters, but give a tropical aspect to a broad lawn.

Vines of rapid growth are desirable to cover unsightly walls or buildings. One of the best for this purpose is the Wild Cucumber or Lace Plant, so called

## The Home Circle.

## ANSWERS TO QUESTIONS, AND GOSSIP ABOUT HOME AFFAIRS.

A. M. L.—As your "handsome" table-cloth has lain away so long, the best way to remove the fruit stains will be to take some tartaric acid, and, putting it on the places, gather them up and tie each one into a little bag with the acid within, then put into boiling hot water, one after another, holding each place until it disappears; then wash and rinse. Wine stains you may remove by rubbing with salt and soft soap, or if claret, by at once rubbing salt on the spots.

Floor Covering.—Mrs. Anderson.—Matting would be the best material for covering your floor; with a few mats placed before each large piece of furniture, and a large one, or a piece of drugget, in the middle of the floor.

Stippling in.—Miss N. M. Merrill.—1st. By "stippling in" is meant introducing the colors by means of certain manipulations with the brush held in a perpendicular position and applied by innumerable light taps upon the surface to be painted, this produced a soft velvet-like appearance, very different from sweeping strokes. The best brushes to be used in your case are the stiff round bristle brushes, with flatly-cut bottom.

2d. No pearling is done by means of foil, but with thin pieces of mother-of-pearl, cut into shape, and fitted into spaces cut for them.

3d. A "set finished," as you suggest, in "ebony and ivory" would be beautiful. We would suggest your applying simple designs, as by this means it will appear more like the genuine inlaid work.

4th. Put gilding on after you finish up the entire work, staining, painting, etc.

5th. If you expect to stain your wood in imitation of walnut or ebony, plain pine will answer as well as any, and be very much cheaper than chestnut.

6th. Rub your wood first with emery paper, then stain; dry well, then varnish; rub down with powdered pumice stone, rinse thoroughly; dry, varnish again; and repeat as before until you have a surface as close and solid as ebony, though many only give the one varnishing and polishing which will make a surface fairly smooth, but not solid.

7th. We should advise for an organ, to finish in ebony, then send to Chas. Moller, 36 Maiden Lane, N. Y., for his Decalcomanie Catalogue, and select a set of musical characters, or devices, with antique borders, with which we would embellish any panels or flat spaces, or if you have talent and artistic skill, sketch for yourself; before staining and having your characters arranged, paint them yourself with oil colors. We are pursuing this pretty work, of painting on wood panels, largely in our own family this winter, and are delighted with it, but a few specimens in decalcomanie are also so exceedingly elegant, that one feels inclined to pursue the easier and less artistic method sometimes.

8th. As regards the patterns, you may copy from various things; sometimes a border in a book, a frontispiece or title-page; designs on wall-paper, fret-sawing patterns, etc., which you can easily mark off on paper by means of colored tracing paper, then prick the outlines, and, tying a little powdered chalk in a piece of thin muslin, pounce the pattern by dusting the powder on the paper; then upon lifting it

you will find the entire design in minute dots, and, having a soft pencil or crayon, mark it carefully out upon the wood.

Wax Crosses.—Mrs. Alfred Maxwell.—You will find full directions for making various wax crosses in "Ladies' Fancy Work;" it need not be an expensive art, for you may make various colors for "blooming" by the following method: Obtain aniline dyes, a few cents' worth of various colors, also a package of corn-starch, or arrow root, as preferred; put a teaspoonful of the latter into a saucer, and having dissolved the dye, unless you use the liquid kinds, pour on enough to color the starch, mixing it quite smooth. They allow it to become quite dry, when powder it quite fine, then sift through fine Swiss muslin, and bottle, when you will find it quite as nice as the expensive colors sold in the stores. The liquid dyes of Leacou's may be had in all colors, and by diluting with water, several shades of the same colors may be made. These dry colors are much the finest for wax flowers. Scarlet geraniums should be made of yellow wax covered with dry carmine. This for the Mrs. Pollock type, but for crimson reds, in geraniums, roses, Euphorbia, Amaryllis, etc., pure powdered carmine is best, as giving the richest, clearest tint. The most natural patterns are obtained by cutting them from dissected flowers, which practice we have successfully followed for many years. Such flowers as the Passion Flower, Pond Lily, Amaryllis, etc., may be easily cut in this way, and the entire formation understood by examining an entire flower. After cutting the paper-pattern by placing each petal on it, marking round with a lead pencil, and then carefully cutting, it is best to take another pattern from thin Bristol board, marking each petal 1, 2, 3, 4, etc.; put them in a little envelope, and, writing the name of the flower on the back, make any notes necessary, as the number of stamens and pistils, etc.

For minute flowers, the tin-cutters are indispensable. In "blooming" do not color the lower end or the wax will not adhere to the calyx, or ovary. All leaves may be copied by taking a natural leaf, laying it face downward on a table, then wetting the wrong side, and, placing a piece of warm green wax upon it, press it on every part, then with a small knife or large needle cut round the edges, place a slip of wax down the centre, lay on a piece of fine wire, for the stem, lay on another piece of wax covering the wire, then cover with wax a shade lighter for the back; press it firmly, cut off the edges, lift the whole and carefully remove the natural leaf. You will find a perfect impression. We like the gilt leaf-moulds, but often wish a leaf of some plant that cannot be obtained, or cannot wait, perhaps, or wish to save the expense, then we are glad to be able to make our own impressions. Stamens and pistils are made of finest wire, covered with wax, wax rolled between the fingers, or thread waxed and colored.

Some thick leaves, like Begonias, Water (Pond) Lilies, etc., are best made in a mould, thus: Make a little case of paper, which place round the leaf on a wet or oiled pane of glass; make a batter by mixing fine French plaster, such as dentists use, with water in which a little salt has been dissolved, which pour over the leaf until well covered; allow to "set," then lift the cake of plaster, and, picking out the leaf, you will have a neat mould, which varnish with shellac, dissolved in alcohol, to make it durable and give an enamelled surface.

Moulds of fruit, tiny cucumbers, etc., are made by embedding the one-half of the fruit in fine sand encased with a card frame, then liquid plaster poured

over; first oil the fruit. This operation must be rapidly performed, or the plaster will harden before putting it on the leaf or fruit. Lift out the fruit, trim off flatly, and cut three grooves across them; take a mould of the other half in like manner. For petals that require a shimmering sparkle on their surface, arrow root is required, and where a cross is wanted to look like marble, add a little diamond dust to the arrow root, which imparts a brilliant marble-like surface. Further inquiries will be cheerfully answered.

Miss Annie M. A., New Orleans.—Thanks for your kind and appreciative answer. Be assured it will always give us pleasure to answer any questions you or any reader of the CABINET may desire to ask, and we hope you will feel no hesitation in doing so.

Diaphanie.—A housekeeper, with some skill and small means, who loves to make home beautiful, would make some inquiries through the CABINET, if she can gain a hearing. Will "Aunt Carrie" explain more fully to a country housewife what vitromania or diaphenie plates are, and will she give more complete instructions as to how the work of ornamenting is done? My sitting-room has two windows looking east, one north and one south, opening to the floor like doors; now should the two windows that do not open to the floor, be curtained like those that do? Also will Augusta Larued tell the readers of the CABINET how those curtains of Canton flannel may be made to look like something so much richer. The idea is entirely novel to me; any light on these subjects will be gratefully received.

Answer.—1st. Vitromania or diaphenie plates may be obtained at the office of the FLORAL CABINET. Mr. Williams will select suitable ones if the size of the glass and class of subject desired be described. Or you may by sending stamp obtain a catalogue, containing illustrations of all varieties of subjects from copies of windows in XIVth, XVth, XVIth, and Renaissance styles, scenes in Europe, figures, or floral, with suitable borderings, groundings, corners, etc. All the materials necessary for this beautiful art-work, as well as full descriptions of the work, and extracts from foreign papers concerning its beauty, will be found in the catalogue. In "Household Elegancies" we have given many different methods for making transparencies by means of transferred engravings, colored or plain; painting with transparent colors; imitation of statuary, and many other really artistic modes. We have made several windows, desired to be private, extremely elegant, by the following methods: Cut from Swiss muslin or tarlatan any designs of some geometrical style, perhaps, or a regular diaper pattern, diamonds, stars, circles, etc., united at certain points, but with open spaces, showing the glass between. Paint these on one side with Damar varnish, and apply them to the glass, pressing it very closely against the glass. Allow to dry, then wash with a hot saturated solution of Glauber's salts, sal-ammonia, or Epsom salts, which will give different forms of crystallization. The one will give minute, scintillated stars of eccentric forms, the next six-sided prisms, broken into thousands of thread-like rays, the third four-sided prisms, crossing and recrossing each other in brilliant confusion. Apply with a varnish brush and keep the solutions hot during the process, then allow to dry. By a saturated solution is meant, to allow the water to take up all that it can possibly dissolve. 2d. Drape all the windows to correspond. Nothing gives such a "one-sided" appearance to a room as to see two windows with long and two with short curtains. The best arrangement for you, if your windows open in the "French style," with hinges like doors, is to hang your drapery to run on a rod of wood or strong wire. If you use a cornice, let the wire extend behind it, but if large fancy rings are used, support the heavy pole on brackets fastened at each end of the window frame.

Subscribers will confer a favor, if, when answering Advertisements, they will mention "The Floral Cabinet."

## A GOOD OFFER.

\$19.15 for \$11.45.

The Manager of THE INTER OCEAN of Chicago, makes the following offer to new subscribers—

ON THE RECEIPT OF ONLY \$11.45  
We will send you THE WEEKLY INTER OCEAN for one year, postage paid, price \$1.65.  
"INDOOR AND OUT," an illustrated monthly publication, price \$1.50, and  
AN ELGIN NATIONAL WATCH,  
PRICE \$16.00.

These Watches which we offer are made by the ELGIN NATIONAL WATCH COMPANY of Chicago, and each is GUARANTEED by the Company's own MEDAL CERTIFICATE, which will accompany the same. The very superior value and workmanship of these Watches are too well known, and their reputation too firmly established, to need any praise from us.

They are manufactured expressly for us, engraved "Inter Ocean," put up in warranted silver hunting cases, and are good, reliable timekeepers, no pains being spared by the Company to make them trustworthy and reliable.

THE INTER OCEAN is a large, eight-paged quarto newspaper, and one of the BEST AND MOST POPULAR published in the country. It has the largest circulation of any paper published west of New York. Remit in money order or registered letter.

Address THE INTER OCEAN,  
119 Lake St., Chicago, Ill.

### THE NEW PROCESS. WAX AUTUMN LEAVES.

Each box contains 80 varieties richly colored leaves, 1 doz. sheets green wax, stems, moulding-pin, &c., with full directions. We will send the above articles, neatly packed, by mail (postpaid) for \$1.00. These goods, by the usual process, cost from \$5.00 to \$10.00. Satisfaction guaranteed. Address,  
H. T. HARTLEY & CO., 265 Broadway, N. Y.

### Bind The Floral Cabinet

and other periodicals with the new Wire Newspaper Binder. One sent by mail, postage paid, for 25 cents, or two for 45 cents. Mention the length desired. Agents wanted. Illustrated catalogue of wire novelties free. Address,  
H. R. VAN ERS, Peoria, Ill.

NEW YORK, MARCH, 1878.

## A GOOD PLACE FOR YOUR FLOWERS.

Many people in this life are so situated that they have no money to spend for flowers; yet, if they knew it, flowers are like love, free to all. First consideration is to select a place for your flowers, and, if possible, the place should be southeast windows. I start my slips, all through the summer, as my friends give them to me. I never call on a friend who has choice flowers and come away without a slip of some kind. We do not term this begging, as I have often heard it termed, because we all keep slips to give away. Every lover of flowers that I have ever met loves humanity; this is the reason that flowers are free.

Now for these slips, I take a box six feet long and three wide and eighteen inches deep, and fill it with good loam, and set in my slips and remove to a shaded place where it will get only a little morning sun; and moisten by watering good at night, and only a little in the morning. After these have rooted and look hardy, I have ready three-inch pots, and transplant with care, so not to injure the young roots; then I have a box, similar to the first, half full of sand, in which I place all my new plants, watering them once a day. I let all remain out doors until frost.

Now I will come to my windows again. I have heard ladies say, "If I have flowers this winter, I will have to take down my curtains." That will depend on the kind of curtains you have up. Your curtains must be white muslin, no lambrequins allowed; have the muslin the size of your windows, with deep hem, cord and tassel, and I will show you a pretty design: fasten up your curtains and bring in your flowers and flower-stand, which can be made in many styles. My stand is a half circle, each circle being smaller than the other. A goods box taken apart and made in a square table, and the whole painted bright green, will look nice and answer well your purpose; any boy ten years old, with mother's help, could make either; or you could raise slips, and make hanging-baskets and sell them and get money and have a carpenter make you one.

You will fill your windows with the flowers you want to bloom first; as a plant blooms, remove it to the stand, and so on, until all have bloomed; but another suggestion, you can no more neglect these flowers and expect them to bloom than you could neglect your babies and not expect them to cry.

My hanging baskets I start the last week in August. I wanted new hanging-baskets last year, so all I had to do was to make them. I took an old washpan, and painted brown by mixing equal parts of putty and sealing wax; after heating, applied, and what was left I put on the fire, adding rosin and more sealing wax. To ornament my basket or pan, I had ready some cones, shells, and moss; filled out after my own taste; when dry, finished with good varnish. This all complete, you will be surprised; it is really beautiful. Put holes in and hang with scarlet cord. I fill with rich loam, and round my basket I have Wandering Jew, purple and green, Golden Feverfew in centre, and German Ivy for each cord. This basket is suspended as low as top of second sash. The German Ivy has grown thrifty; the whole upper window is one mass of green. You can imagine the effect over the white curtain. Then the curtain protects from sun and cold; too much of either is injurious to a rapid growth of vines.

I trained the Jew up either side of the window, and they now reach the top. Just above my stand I have another basket; it is made of a large gourd cut in two and notched round with a sharp knife and painted green, with holes in the bottom and at the top, and hung with green cord. I have Wandering Jew round it, pink Begonia in the centre, and Ivy for the cords. The Ivy has reached the top and gone over to look out at the window.

I must tell you what kinds of flowers I have in one window. I have a Calla Lily in bloom, an Acharanthus, "Blue Ella," its botanical name I do not know; Scotch Ivy completes the scene. In the other and on my stand, I have blooming Geraniums, scarlet and white, double and single, six varieties, Arbutus, Gilly, double Petunia, several Carnations, Roses, Chinese Ivy, Fuchsias, Coleus, and many small plants of less note, yet things of beauty. "A thing of beauty is a joy forever;" so I find my few flowers and plants, and would sooner part with anything I have, except my CABINET, than my flowers.

I have heard so much said about flowers not blooming; now under anything like fair treatment I cannot know how you can keep them from blooming; this is my experience. People who love flowers, take a little courage and have patience, and with little or no expense you can beautify your homes and learn your children to cultivate flowers; they soften down all that is harsh in nature, and if they love flowers, they will love the God that gave them.

LEONIA.

## PUBLISHER'S ANNOUNCEMENTS.

**Chromo.**—Subscribers ask if the Chromo and the Frontispiece, with the same title, "Treasures of Garden and Woodland," are the same, or each different. We answer yes—there are not two but one, which is both a chromo and is sent to our subscribers in the form of a Frontispiece. If it were mounted it could not go safely through the mails. Still it is a chromo as much as any that ever were made, just as pretty and useful, and made in the same way as chromos always are.

**Purchasing Agency.**—Should our subscribers wish any purchasing done for them in this city, we will execute their orders for anything, if the value is one dollar or over. New York prices for articles are so cheap, purchasers can save considerable by getting their orders filled here.

**Are You Going to Buy Any Seeds this Spring?**—Our offer of Seeds and Books in January and February Nos. is very fine. All who intend to plant seeds this spring should improve the opportunity. For every dollar's worth of seeds bought there is given fifty cents worth of books beside. Thus you get for your money honest value in seeds and good books beside for nothing.

**Prizes for Household and Floral Articles.**—The articles for which we give Prizes this year we want to be practical, and relate somewhat to experiments in growing the different varieties of plants and flowers, old and new. Our flower-lovers need a little more information about *what varieties to choose*, as well as how to grow them. Also how to lay out and ornament lawns and flower beds. In Household Topics, the articles should relate to anything connected with Housekeeping and the making of the little Household Elegancies and necessary articles in and about the house. As we have had so many Recipes, it is not worth while to send any for a few months. Good articles on Entertaining Company, Social Recreations, Christmas Presents, Home Enjoyments, Ladies' Work, etc., are all acceptable.

For best article on Floral Subjects.....	\$10 00
For second best article on Floral Subjects.....	5 00
For best article on Household Subjects.....	10 00
For second best article on Household Subjects.....	5 00
For each of next 50 best articles on Flowers or Household Subjects, choice of one book, "Household Elegancies," or "Ladies' Fancy Work," or "Beautiful Homes," or "Evening Amusements," or "Window Gardening."	
For each of next 50 best articles one Silk Book Mark, or choice of one book, "Household Hints and Recipes," "Every Woman Her Own Flower Gardener," or "Ladies' Guide to Needle Work."	

Contributors will notice the following rules: 1. Label all articles, "For Competition." 2. Each article not to exceed three to five foolscap pages long. 3. Articles all to be forwarded to this office before April 15. 4. Award of prizes will be announced in May number, and prizes forwarded to the fortunate competitors. 5. Articles contributed, not specially marked for return, may be understood, as having the desire of writer to be used in FLORAL CABINET, as a voluntary contribution whenever convenient.

The object in offering these prizes is not so much to induce the writing of articles for the sake of pecuniary remuneration, as it is to encourage our readers and writers to contribute really useful information, which will be a help and benefit to others.

**Advertisements.**—Quite a number of advertisements are published in the FLORAL CABINET, offering many articles to our readers. So far as we can, we admit nothing but from people who will send the goods they advertise. The quality of the articles advertised seem to be worth the money asked. We do not suppose anyone will ever be able to get more than his money's worth, although many things appear very cheap and attractive. Articles of gold or silver must necessarily be *plated or washed*, or they could not be afforded for a few cents. If solid they would cost \$5 to \$10 each. We have taken pains to publish nothing deceptive, although we are not always able adequately to judge, but we mean nothing shall appear in our columns but from examination seems to be worth the price named, and that the subscriber will receive the article ordered; neither do we knowingly admit anyone of doubtful character and responsibility. Subscribers must, however, bear in mind that any gift offers are not made by us, but by the advertiser. We have refused, and still continue to refuse all advertisements which we are satisfied do not give subscribers the worth of their money.

**Cinnamon Vine.**—Subscribers who obtained them last year and the year before, will find that it takes two years to grow sufficiently strong to produce any perfume in blooming. Many who were disappointed last year, will find it much more promising this year. This name is simply a very popular name for what all florists call the *Dioscorea batatas*, or Chinese Yam. It is a very profuse grower, and is a valuable climber, often growing fifty to sixty feet in a season. We will send any who wish, for 50 cents, either a yearling Tuber or a package of Seed Balls.

Several of our subscribers have written as follows respecting it:

Miss Emma A. Field, of Elyria, Ohio, writes:

It is a splendid vine, of rapid growth, beautiful foliage, and a perfume that is perfect.

Mrs. Elizabeth Sbauberger, Maumelle, Ark.:

The Cinnamon is doing well this year. It bloomed profusely, with the delicious cinnamon odor.

Mrs. Emma B. Mead, of Macedon Centre, N. Y., writes:

Our Cinnamon Vine has more than met our expectations. Its rapid growth, its fragrance, and amount of its perfume is truly wonderful.

Mrs. A. Walsley, Lansingburgh, N. Y., says:

My Cinnamon bought of you in 1876 grew this year eight or nine feet. When I nipped it off at the top it bloomed beautifully, and the flowers lasted a long while.

Mrs. H. B. Woodhury, Ashtabula, Ohio, says:

My Cinnamon Vine is a great success as far as being a lovely vine. It has grown at least twenty-eight feet this summer, but has not blossomed.

L. Baumgarten, of Buffalo, N. Y., says:

The vines are exceedingly thrifty and beautiful, but as yet no blossoms. I think there is nothing so pretty and ornamental as the Cinnamon Vine. Every one that saw the vine could not but admire its beautiful glossy foliage.

Mrs. M. C. Balcom, Steward, Ill., says:

The Cinnamon Vine tubers obtained from you in the spring of 1876 have this year come up fully to my expectations, having climbed over twelve feet and blossomed very profusely—the blossoms having a delicate cinnamon odor. Both vines and odor admired by all who saw it while in bloom.

J. F. Rung, Tyrone, Pa., says:

The vine grew about six feet in 1876, and did not flower. This season it has grown about eighteen feet, and was very full of bloom, with a delicious odor, scenting the air for a long distance. The foliage is very much admired, and is, withal, a desideratum in the way of vines.

Jas. E. Badger, Jr., St. Joseph, Mo., says:

This year the Cinnamon Vine is a success. From one stem a dozen branches have started, ranging from twelve to twenty feet each, and blooming profusely; very fragrant. The root you sent was broken in two. Both were planted and grew fairly last year. There were no flowers and but little foliage. Then it looked very like a humbug, and we could not imagine where the cinnamon came in. This year, however, we are more than satisfied.

John W. Webb, Manhattan, Kan., says:

Vine received in the spring of 1877 has made fine growth, but no blossoms. Hope it will blossom next year. Vine alone is very attractive.

### A GREEK WEDDING.

Weddings among the Greeks are for the most part solemnized in the evening and at home, and from the nature of the rite must be very trying to the persons principally concerned. A small table is placed in the centre of the room, on one side of which stand the bride and bridegroom, each holding a long, lighted candle; on the opposite side the officiating priests. Behind the former the best man takes his place; he has an important part to fill in the ceremony, and is ranked as a relation from the time of the marriage. The room is of course brilliantly lighted, and the numerous guests throng as closely as they can towards the centre, in order to gain the better view.

Many prayers are chanted by the priests and their assistants, unintelligible even to the ears of a classical scholar, with the exception of the often-repeated "*Kyrie eleison*," which forms so prominent a part in almost every Greek service.

There is very elaborate ritual—the signing bride and bridegroom on the forehead three times with the ring; the blessing two wreaths, which are afterwards placed on their heads by the best man, and, at a later part of the rite, interchanged over and over again; the drinking of wine three times from the same cup; the kissing by both

of the office book and of the priest's hand who has made them one; and, finally, the strangest part of the ceremony, when the clergy, closely followed by the bride and bridegroom hand in hand, the best man and the nearest relatives of the newly-married couple, make

festive part of the evening begins. Servants appear on the scene, carrying large trays heaped with bon-bons, sugar-plums, and artificial fruit of different sorts. These are presented to the guests, who are expected to help themselves liberally, and to take to their friends at

home as much as they care to carry. Cooling drinks of various kinds are also bro't in never-ending supply, and the evening ends, sometimes with a ball, sometimes with the departure of bride and bridegroom for their own home.

### The Violin for Girls.

—A recent number of the *London Queen* contains an article commending the violin as an instrument peculiarly appropriate for the use of ladies. It protests against the custom of teaching girls to play the piano forte only, arguing that they should have a larger field in music. There is certainly no reason why girls may not gracefully handle the bow, and it is stated in the article referred to that "they can learn the violin in half the time the boys can" —a state-

ment which indicates that a goodly number of girls somewhere have had the opportunity of learning. In this age of progress girls may certainly have a choice of instruments, and an opportunity to pursue the delightful art of music in whatever way they choose.

ENGLISH COURT LADIES OF OLDEN TIME IN PROMENADE.

the tour of the table three times. This is said to be a relic of heathen days, while the drinking of wine from the same cup has been continued from the Jews.

When the ceremony, which lasts three-quarters of an hour, is over and the young couple have been duly kissed and congratulated by their assembled friends, the

## Household Hints.

## HOUSEHOLD ECONOMY.

I noticed in the October number of the CABINET a description of a rug made of lambskin, with a border of applique. The design is beautiful; but I think it could be improved by coloring the wool on the skin some bright color. This can easily be done with fuchine or Leanon's dye. The prepared dye is best, but fuchine is cheaper, and green and red can be colored with fuchine.

Wash the skin in a strong soapsuds, so as to cleanse it from grease; rinse in warm water. Use rain-water for washing and coloring. Stretch it on a clean board. Have your dye ready, not too hot or it will injure the skin. Wet the wool thoroughly, using a sponge for this; let it dry, and if it is not dark enough repeat the process until it is the color you desire.

For a cheap carpet, I think straw matting is the best; it is cool and pleasant in the summer, and can be made to look warm and cosy for winter by the use of rugs.

A very pretty rug can be made from a coffee sack. Cut the rug the size you desire, then work in the centre a cat, dog, or any figure you fancy, with German-town yarn, in simple cross stitch the same as on canvas. A border of leaves, worked with green yarn, would be very pretty for fringe; ravel the sacking to the depth of an inch or more, with bunches of the yarn worked an inch apart, using the same color in fringe you used in working on the sacking.

A pretty way to train vines on a long porch or portico, is to have strings from the ground to the roof of the portico. After they are half way up, draw them apart and loop them like a curtain; in the arch thus formed is a beautiful place to hang your bird cage. Another way is to tie a large hoop in making a green wreath, or you can hang hoops from the ceiling of the porch; and if you have Madeira vines growing outside, you can bring in enough branches to cover them.

A very pretty summer-house can be made by driving four cedar posts into the ground, with one in the centre; it is better to have them forked a little at the top; lay strips across the top and plant honeysuckles or Wisteria vines outside; train them up to the post in the centre.

Not having a convenient place for my wardian case, except where there is only fire occasionally, I took the ferns and plants out and put them in the cellar, sent to the woods for a nicely shaped cedar, put it in the centre of the case, gathered a quantity of Chrysanthemums of all sizes and colors, cut off all of the leaves, as they turn brown very soon; put the flowers among the cedar, hiding the stems; the flowers are as bright and pretty as when put in two months ago, and my case is as pretty as when I had growing plants in it.

A pretty way to decorate your portico in the winter is to grow Ground Ivy in a shady place during the summer, and in winter fill your hanging-baskets with it; all it needs is a little water occasionally, as freezing does not hurt.

For your vases use Arbor-vitæ; this can be grown from seed sown in the spring. Thus when winter, with its icy breath, has killed all of your delicate flowers, you can still have something to supply their place.

A pretty bracket for the porch can be made and

trimmed with burs. Make the frame of the bracket large and strong enough to hold a good sized pot. For the lambrequin take heavy cloth; white pine burs are the best; boil them in water to soften them; sew the scales on the cloth carefully, lapping them so as to show only the brown ends; finish with a bouquet of small burs in the centre; birdoek burs make a pretty finish for the edge of the lambrequin. A chain made by stringing small burs, and hung in festoons, make a nice addition to it; give two coats of varnish and you have a bracket impervious to the weather: it makes a very suitable shelf to set a pot of Ivy to decorate the front door. Another pretty and unique bracket can be made by cutting out a nice frame, to which fasten three shells of the land terrapin in the same way as coconut shells are described in "Household Elegancies."

A very interesting and instructive pastime is to collect a cabinet of curiosities. With the aid of a fret-saw any lady can decorate one after the frame for it is made, which would cost but a trifle. To fill, put anything you think interesting or curious in it. I saw one on a visit to the eastern part of the State that afforded entertainment to guests for several hours. Many of them the family had collected, quite a number of them had been given to them by friends. They had every kind of birds' eggs, from a little wren to a hawk. The large eggs had been opened at the small end and the egg taken out, leaving only the shell. Among other things was a small bird's nest with three eggs in it that were petrified as hard as a rock. They had a number of small purple rocks; they said they had given the largest of these to a physician from the neighboring town; he gave it to his daughter who carried it to Washington city to a jeweler, who pronounced it an amethyst, and made it into settings for two rings, making her a present of one. We may not often have the opportunity of picking up real jewels, but in collecting things of this kind we encourage a taste for it in the minds of the children, and gain much useful information.

Now that poultry feathers are used for trimming hats, it has been a matter of surprise to me that country people will pay an extravagant price for them when by the use of a little ingenuity and taste they could prepare them as well. A lady was showing me her hat. I remarked upon the cost; she replied the feathers made it cost so much; it was trimmed with *plume de coqs*. I had made equally as pretty one out of the tail feathers, finished off with the neck feathers, a few days before, at no cost at all. Many chicken feathers are of that peculiar bronze-green that is so fashionable this winter, and you can color a beautiful cardinal red with Leanon's scarlet dye. Another pretty ornament for a hat is to color three or four long feathers a dark blue and some neck feathers a pale blue, shading out into white; to make the feathers bend in the shape you desire, shave off the under side of the quill, or to make the feather curl up in small rings, scrape them with a penknife.

Pigeons' wings make pretty ornaments for hats; you can get them pure white and color them. A pretty wreath for a young girl's hat can be obtained from the small green feathers of a pea fowl, the long feathers are too glaring; sew them on a strip of cloth, use care in lapping them, and then to extend over the edge far enough to hide the cloth.

Of course, wealthy people have no need of these small economies, but to people with large families and limited income, it is necessary to save; and this can be done and yet present a nice appearance. Country people waste their resources.

A nice dessert can be made from pigs' feet. Soak all the salt out of them, or use before salting; boil until tender in plenty of water. Strain the liquor, after removing the feet, through a jelly bag; flannel is the best; sweeten to taste, as sugar is not necessary to make it jelly, and to every quart of liquor add the juice of one lemon. If you have jelly moulds, mould it in them; if not, use egg shells for moulds; to color it add a little tumeric for yellow, or beet juice will color it red; nice jelly moulds add greatly to the appearance; those I saw were in the shape of an ear of corn; nothing could be prettier than jelly colored with tumeric and moulded in the form of an ear of corn. To be eaten with cream and sugar. Blane mange, and the different kinds of jellies from gelatine, can be moulded and colored in the same way.

Another nice dish for dessert is to pare and slice six large cooking apples; put alternate layers of them and bread crumbs in a baking dish, a small quantity of water, tablespoonful of butter, a cupful of sugar; less would do; grate nutmeg on top; bake in a hot oven; before it is quite done, beat the whites of two eggs to a stiff froth; season with lemon, sweeten with sugar, and spread over the top, and let it slightly brown.

AUGUSTA.

**A Barrel Chair.**—I am a subscriber of the CABINET, and think a great deal of it. I should feel quite lost without it. In it I first got the idea of a barrel chair among the many other things. I tried it quite to my satisfaction, only instead of putting ropes across for the seat, which is some trouble, I leave the bottom in, and fill it up with any soft material, which makes it more comfortable.

We have discovered a new way of making mottoes which look very pretty. It is simply to take three or four sheets of cotton wadding, lay them together, and cut from them the letters required; then wet the surface a little with muelage and sprinkle with diamond dust. Of course the wadding should be white, and the diamond dust, together with the thickness of the letters, make them look like marble. Then place on black, scarlet, or any colored ground desirable. We have the word "Welcome" made this way, and placed on a ground of scarlet in a frame made of walnuts cut in two and a slice taken from the centre and used, filled in with grape seeds. The frame should be made deep according to the thickness of the letters.

Can any one give me directions, through the CABINET, how papier mache work is made, also how to make hair pictures, such as were seen at the Centennial?

HATTIE SEARLES.

**Hanging-Basket.**—Take an old pint dipper, and with a pair of pincers wrench off the handle. Cut a strip of silver perforated cardboard long enough to go round the dipper and join, and about two holes wider. Join, and crochet a bottom to just fit the bottom of the dipper. With shaded orange single zephyr work the cardboard in rows, slipping a silver glass bead on each stitch. Crochet a border round the top with the worsted; also crochet four cords to hang the basket with. Fill the dipper with rich earth, and plant Tradescantia, or anything which will live without drainage. These sell rapidly at fancy fairs, etc.

ANABEL C. ANDREWS.

## Household Art.

## MOSS PAINTING.

Moss from pine woods or rocks is best; keeps its color best. Place the top of moss on paper, near the fire, dry it quickly, but don't scorch it. When dry keep it in a dark place till wanted. If dirty, wash it before drying.

Have good thin paste, paper muslin, pasted on pasteboard, glazed side up, or have fine Bristol board, the size you want your picture.

## PUTTING ON THE MOSS.

First put a thin coat of glue, just a small place at a time, so you can cover it before it dries, where you want the branches and leaves, also where the ground is, then around the old building, or in the crevices of rocks; pick the moss to pieces, place a leaf at a time on the glue with the lightest color, on the outside of the branches, and mix with the dark color for the ground, so that it will look like small patches of sunshine on the grass; have running moss for representing Ivy, then leave it flat to dry. For clouds get tubes of flake white, maple yellow, vermillion, ivory black. Light, fleecy clouds are made by working maple yellow, tipped with white; for dark clouds use white and black, edged with maple yellow. Water is edged with dark green. Use yellow ochre, black and white, for mountains. Get fine sand of different shades, have it sifted; bluish gray for mountains, dark reddish brown for rocks, a lighter color for roads. Take a small brush, put a thin coat of Spaulding's glue on the surface, where you wish to have the mountains, roads, and rocks, and next small places; where you intend for the beach of the ocean, put on the glue very true, sand the places thickly, take the lightest color; for the most distant mountains, darker for the ground; let it dry, then shake off all loose sand. For castles, get (a short time dead) some bark of birch or elm; scrape off all imperfections, then cut it the shape and size you want it for the castle, fit the light and dark together, that part of the building will look like it is in the sunshine, while part is in the shadow. After the bark is cut, place it between smooth boards, with weights sufficiently large, till it is flat and smooth, then glue them on the wrong side, put them in the place you design for the building; then put it under weights, and let it dry.

Take old rope for trees, untwist it, wet it well with glue, press out all superfluous moisture, then place it where you have marked it for the trees, divide the strands for the top and the branches of the tree. Take flake white, maple yellow, senna, burnt umber, vermillion, ivory black, for coloring.

If you want to make a rustic frame for your picture, go over your frame first with copal varnish, then put on putty and cover it with burrs, nuts, shells, or in any style that suits your fancy.

## RUSTIC ORNAMENT.

Take an earthen flower pot, five or six inches deep, have some holes bored just below the line for the cord to hang by fastened with a knot inside, spread over the outside some putty, thick; put some in the hole inside; then a large cone and little ones around it; put a row of large acorns around the top, with the points up, then cups below them. Then a row at the bottom with the points downward. Between these, half way down, put a row of acorns laying the points of each on the top of the last acorns, then on each side of these put a row of pine scales, fill up accord-

ing to taste or fancy. Then varnish with two coats of furniture varnish; when dry, fill up with crystallized grass, and running moss.

## A RUSTIC MOSS CROSS.

Gather leafy moss and ferns from the forest and garden, wash clean, spread it out to dry flat on boards in the shade. Have a Bristol board the size you want it; now cut a cross, the size to suit your fancy, out of white stiff pasteboard, cover this all over with moss, after you have put on some glue—or flour paste will do with a little glue in it—fasten each corner down to keep it from rolling up while drying. After it is dry put some Paris green in some gum-arabic solution, take a small hair brush, and go over the cross to keep it green. Then when it is dry, put some paste on the wrong side; then place it on your Bristol board just where you want it. Get some sprigs of fine white artificial flowers and leaves, place them over the cross like a running vine from the bottom to the top; now put each side of the cross some of the moss two or three inches high to represent grass, placing some ferns above it, and if you will make a rabbit or lamb, out of white cotton flannel, and set it close to the cross or to one side, it will be a pretty addition. Have a frame with a recess deep enough to receive the cross and lamb without crowding.

To make a pretty rustic frame, get the flat white moss such as grows on rails and old logs, some white and red lichens, nuts, or small acorns, or anything that would suit you. Glue or paste the frame, then cover with your ornaments, and place it under weights till dry; then varnish. I have made one, and it is very much admired, looking like wax work.

## A HOUSEHOLD CONVENIENCE.

Get a dry-goods box the size you want, have some one put plain strips on the corners and around the edge of cover. Then paint it black or dark brown, have it smooth as you can make it by rubbing with sand paper. Have ready some pressed flat autumn leaves, flowers, and ferns, also some small pictures that are painted; cut them out, have birds, flowers, and butterflies; glue these all over the box; when dry, varnish two or three times. If you like you can have the top covered with a cushion, also have some handles on each end, and castors under the bottom. For the inside you can have a pocket on the lid in the shape of an envelope. Then at each end have a narrow box fastened towards the top for holding ball of yarn, stockings, or anything and everything that gathers in a mother's basket. This is pretty enough for any one's sitting-room.

A handsome rustic frame can be made for a bouquet or a wreath of autumn leaves, with the buds of a common cherry tree. Glue them on the foundation very thickly, making it heavier through the middle than at the edges. Apply two coats of varnish, and you will have a frame the beauty of which will surprise you.

Few are, perhaps, aware of the value of some of the darker varieties of the Antirrhinum as a window plant. The smoothness of the leaves renders it very easy to keep clean, while their rich velvety texture presents a most beautiful appearance. They are very hardy, and will endure cold; and will also stand the dryness and heat of our living rooms to a remarkable degree.

## AUTUMN LEAVES.
